We are glad to see that the indefatigable managers of Marlborough House are about to make fresh attempts to spread purer taste in the provinces. During the past week, a beautiful collection of works in gold, silver, bronze and iron, medals, gems, lacquered work, niello and filagree, decorated arms, pottery, enamel, stained and cut glass, carvings, &c., has been on view at Gore House; together with several contributions from Her Majesty, Earl Granville, and other patrons of Art. This collection is to be sent round to the provinces,—beginning, we believe, with Birmingham, where rooms are provided. If the mountain will not go to Mohammed, Mohammed, we know, must go to the mountain,—and it is hoped that this Exhibition will not only illustrate the value and capabilities of Art-manufacture, but cultivate the public taste and furnish new objects of study to the students of the provincial schools. We hope this Exhibition will prove a huge hammer to break up old stereotypes of convention and ignorance. We are glad to see that past students are allowed to send in specimens to the next Exhibition, and that the designer is not allowed to elbow out the Art-workman, however uncreative. The hand is a good thing, though the brain is better. This is, we believe, the first attempt made to render a central institution useful to the provincial departments. The Museum of National Art, commencing with the 5,000*l.* spent in the purchase of decorative articles at the Great Exhibition, continues to increase, and promises soon to be of national importance. The collection is, in fact, an attempt to illustrate, by actual specimens, all Art which finds its material expression in objects of utility or in works avowedly decorative. These provincial Exhibitions of parts of this collection will stimulate our great towns to form museums of their own, and will furnish students with more opportunities of study than could be afforded by hurried visits to London. Among the articles are several costly pieces of old Sevres porcelain, the property of the Queen, together with copies of rare objects of Art by photography, electrotype and gelatine moulding. This itinerant experiment

has been made before on a small scale; but we have here a complete epitome of the whole collection.

From Paris we hear that great activity prevails among the engravers. The following important line engravings are in progress. M. Mercury is engaged on a work after M. Delaroche, 'The Execution of Lady Jane Grey,' the original of which, in the possession of Prince Demidoff, was commenced in 1835. The plate is now all but completed. "From my own knowledge," says our Correspondent, "I can speak of this engraving as a miracle of finish and of delicacy of execution." M. A. François is working on M. Delaroche's 'The Condemnation of Marie Antoinette' (belonging to the Count d'Hunolstein, a French nobleman). This picture was exhibited by Messrs. Colnaghi in 1852, and the plate is about to appear. The same engraver is working on the same master's 'The Virgin at the Foot of the Cross,' (belonging to the Public Museum of Liège),—'Christ in the Garden of Olives,' (belonging to Messrs. Gonssil & Co. of Paris),—'The Children in the Tower, Praying,' (the property of our countryman, Mr. Naylor, of Liverpool). M. H. Dupont is engaged on 'The Burial of Christ,' by the same painter, (the property of the Count d'Hunolstein), and on 'The Finding of Moses,' (belonging to Baron Rothschild, of Paris). M. Z. Prevost has in hand 'Mendicants at Rome,' also by M. Delaroche, (belonging to Mr. E. André, of Paris). M. J. François is occupied on 'Maternal Joys,' by the same artist (belonging to Mr. Pescator, of Paris, and the drawing of which is in the possession of the Queen). M. H. Dussan is employed on a Raffaele, 'Virgin and Child,'—a drawing in the Louvre; it is being executed for the Government; and on Correggio's 'Saint Catherine,' also a drawing in the Louvre, and also to order of the Government. M. Keller is working at M. A. Scheffer's 'Holy Women at the Tomb,' exhibited in the French Exhibition in London last year by M. Gambart, to whom it belongs. M. Lefebvre has in hand Murillo's 'Conception,' the picture in the Louvre. M. N. Lecomte is doing M. A. Scheffer's 'Dante and Beatrice'—a beautiful subject, the original picture of which is at Rotterdam. M. Broudou has in hand a Raffaele, 'The Virgin and Child,' (called Aldobrandini) which is in the collection of Lord Garvagh. Here, as our Correspondent says, "is a goodly list of line engravings—refreshing to a country like ours, once pre-eminent in that art—but where now, thanks to Mr. Jacob Bell and Sir Edwin Landseer—copyrights, the profession is extinct." Mr. George Deo, the engraver of 'Nature,' 'Lord Eldon,' &c., has become a portrait painter,—while Mr. Robinson, owing fortune and independence to sources unconnected with his noble calling, admires at his leisure the productions of Sharpe and Woollett, executed at a period when Art was unbled by native "painters of genius."

On the demand of the Mayor of Valenciennes, supported by M. Nieuwerkerke, Director of the Imperial Museums, the French Government—as we read in the Paris papers—has just accorded to the town of Valenciennes a fine block of marble for the statue of Froissart. M. Lemaire, who has been charged with this statue, has been ordered by the Government to make a second, which is intended to decorate the external part of the Louvre.

The French *Athenæum* furnishes some memoranda of the life of the late Swedish sculptor Fogelberg. His three great works were the equestrian statue of Bernadotte, that of Gustavus Adolphus erected at Bremen, and that of Berger Jarl, the founder of Stockholm in the thirteenth century. Of his ideal statues his best were the three Scandinavian divinities:—Balder, Odin and Thor, executed by him for Charles the Fourteenth. Of his Greek subjects the most admirable were his Cupid and Psyche, Venus, Hebe, Pandora, Psyche abandoned, and Mercury lulling Argus. In 1818 he went to France and studied under Bosio and Guérin. He then repaired to Rome, applying himself chiefly to the works of Thorwaldsen and Canova. In 1841, he was elected Correspondent of the French Institute, and received the decoration

of the Polar Star from the Swedish king. Wholly given up to Art, he never married, and in spite of delicate health passed a calm and happy life.

MUSIC AND THE DRAMA

MUSICAL WINTER EVENINGS.—Ernst, Pauer, Piatti, Hill, and Goffrie, are engaged for the First Concert, February 15, at Willis's Rooms. Single Admissions, Half-a-Guinea. For particulars apply to Cramer & Co., Chappell & Co., and Olivieri. Tickets will be sent to Subscribers with reserved places in a few days; hence, Sofas reserved for parties of five can be engaged on application to J. ELLA, Director.

PHILHARMONIC SOCIETY.—The Subscribers and the public are respectfully informed that the Concerts of the ensuing season will take place at the Hanover Square Rooms, on the 12th and 18th of March, the 16th and 30th of April, the 14th and 28th of May, and the 11th and 25th of June. Conductor, Herr RICHARD WAGNER. Tickets to the Subscribers of last season will be ready for delivery at Messrs. Addison & Hollier's, 210, Regent Street, on Thursday, the 3rd of February, and they will have the privilege (for a fortnight from the above date) of securing the same seats they held last season, as marked on the plan of the room. On and after the 23rd of February, tickets will be issued to the new subscribers.

NEW PHILHARMONIC SOCIETY. Exeter Hall, President, the Right Hon. Lord Suffield.—Wednesday, February 14, will be performed Cherubini's Grand Choral Work, in C; Beethoven's Symphony in A; Mendelssohn's Overture ('Ruy Blas'); Weber's Overture ('Euryanthe'); Beethoven's Overture ('Egmont'); Part Song (Mendelssohn), with chorus of nearly 300 voices; Violin, Herr Ernst; Conductor, Dr. Wyld. Subscription, 2*l.* 2*s.*, received at Messrs. Keith, Prowse & Co., 48, Cheapside, Messrs. Cramer & Co., 201, Regent Street.

AMATEUR MUSICAL SOCIETY.—Members are hereby informed that the First Concert of the Season will take place at the Hanover Square Rooms, on MONDAY EVENING, February 5, at half-past 8 o'clock. The tickets are now ready for delivery, at Robert W. Olivieri's Musical Repository, 19, Old Bond Street, Piccadilly. HENRY LESLIE, Hon. Sec.

EXETER HALL.—Mrs. FANNY KEMBLE will have the honour of reading Shakespeare's Play of 'THE SUMMER NIGHT'S DREAM,' on MONDAY EVENING NEXT, the reading will be accompanied by the whole of the incidental Music, composed by Mendelssohn, and performed by a full orchestra and Chorus, under the direction of Mr. Benedict. To commence punctually at 8 o'clock. Reserved Seats numbered, 7*s.* 6*d.*; Reserved Seats (not numbered), 5*s.*; West Gallery, 3*s.*; Area, 2*s.* Tickets and places may be secured at Mr. Mitchell's Royal Library, 33, Old Bond Street, and at the Music-sellers and Libraries; also at the Office, No. 6 in Exeter Hall.

NEW PUBLICATIONS.

Pianoforte Music. By Theodore Kullak. (Wessel & Co.)—Every child in Art knows that there must be light, elegant, and gracious works for the relaxation of passing moments, as well as those serious and severe creations which stir deep thoughts and excite strong emotions. Symphonies and *Sonatas* are fine things to listen to, affording strength as well as amusement; but any amateur who, because of his love for the fugue, the canon, the quartett, thinks it noble to despise the *notturno*, the melody, the prelude, by his contempt proves his pedantry—not his proficiency. Among light pianoforte music, we have not lately met with anything more agreeable than these compositions by M. Kullak. In some—especially the *Deux Valses de Salon*—there is a certain mixture of freakish elegance and sadness, which may have been imitated from Chopin. *Lénoir: a Ballade*, is less to our liking; though it is wrought with care, and contains passages which may interest players of the greatest powers. But the attempt to make a "song without words," on Bürger's fearful legend, is a musical mistake:—a forcible application of Art to purposes for which it is totally unfit. Possibly, however, it is merely a passing tribute to the humour of "Young Germany," which demands that 'Manfred' should be explained in a "Study for the left hand," that "Cologne Cathedral" should be described in a *Symphony*, that Crieshilt, or some other personage from the 'Niebelungen Lied,' should be set as a theme, with variations, to exhibit the proficiency of the newest violinist on his concert tour. We are thankful to say that there is not an intimation of *Valcyrieur* or of *Vehmish* mysteries in M. Kullak's *Songs of the Olden Time*; which are popular *lieder*, nicely arranged, and varied in the new mode. Next come *Six Illustrations of the Arabian Nights*.—Has M. Kullak, or M. Wessel, been the godfather in christening these agreeable characteristic movements? We ask, recollecting how wondrously poor Chopin's compositions were fitted out in London, with sweet names, of which their maker never dreamed. We ask, too, because the Oriental character seems to be not always maintained. *The Dance of the Bayaderes* might be danced by Signora Perea Neña. *The Gondolier* is a Venetian melody. A *Hymn* is noticeable, as the solitary

hymn in *♩ tempo* that we recollect. The melody, too, (*Andante Religioso*), is treated in a style to remind us of M. Thalberg at his devotions at the pianoforte before a fashionable audience; being amplified on its repetition by those *arpeggi* of which we confess ourselves weary. But enough has been said in qualification, as well as in recommendation, without our naming every separate composition in the collection submitted to us; and we need only repeat, in conclusion, that, excepting M. Stephen Heller,—whose best music is not well enough known here—no modern pianoforte works have reached us from the Continent more pleasing and more nicely made than M. Kullak's.

DRURY LANE.—Mr. Douglas Jerrold's exquisite cabinet drama, 'The Wedding Gown,' was reproduced on Monday with much success,—the part of *Beeswing* being capably represented by Mr. A. Younge. This drama was originally produced at this theatre,—which, we presume, has some sort of monopoly of its brilliant dialogue and pathetic story, for we do not remember to have seen it played at any other theatre. It is of the same class as 'The Housekeeper' and 'St. Cupid'; a class of dramatic effort quite peculiar to Mr. Jerrold; being a two-act drama conceived in the spirit and written with the purpose of the highest drama which assumes the proportion of five acts. Mr. Warlow, a new candidate for public favour, made his bow to a London audience in the part of *Junket*, and sustained the character with a fair share of knowledge. Miss Marriott and Miss Arden, as *Augusta* and *Margaret*, acquitted themselves excellently. If new dramas cannot be obtained, we think Mr. Smith is right in reproducing such sterling plays of our earlier years as 'The Wedding Gown.'

HAYMARKET.—Miss Cushman on Monday reappeared in *Romeo*, and manifested the force and discrimination which originally won for her popularity in the character. There is a tenderness and delicacy of sentiment in the Shakspearian idea which has always made it difficult of representation to the actor; but the strong opinion which we have declared against the assumption of male parts by female performers is not to be overruled. There is great variety in Miss Cushman's treatment of the passion and the fortunes of the hero. Retaining the punning repartees at the commencement of the play, Miss Cushman shows *Romeo* in his more cheerful as well as his more serious habit, and the frequent smile dissipates often the sadness of the love-sick youth. She thus obtains a contrast between the earlier and later scenes not generally attempted. When the passion has once set in, there is no lack of energy or purpose, but the onslaught on *Tybal* and the lamentations on the consequent banishment are both worked up to a pitch of rage and desperation which are greatly exaggerated. *Juliet* was performed by a Miss Swanborough, a *débutante*, who succeeded in rendering a pretty sketch; but the young lady wants force, both intellectual and physical, to support a tragic heroine of so much dramatic importance, so full of poetry and truth.

SADLER'S WELLS.—On Saturday, 'The Winter's Tale' was re-produced,—Miss Atkinson, who has been lately matriculating at this theatre, appearing as *Hermione*. This lady has yet to conquer certain provincialisms of accent, and the vice of over-acting,—which doubtless will be to her a task of difficulty, and will cost some time. But there is every reason in the promise that she now gives for making the attempt with seriousness and earnestness. In the statue-scene, also, she looked imposing enough; and the result of her effort was decidedly favourable.

MARYLEBONE.—Mr. and Mrs. William Wallack reappeared on Monday in 'As You Like It,'—a play which they have carefully illustrated by attention to scenery and costume, and otherwise provided with those external embellishments which modern playgoers require. The performance served to inaugurate the legitimate business of the season, and was well received by a numerous audience.

MUSICAL AND DRAMATIC GOSSIP.—It is said that the Board of Directors of the *New Philharmonic Society* has elected all the living composers whose works have been performed at past concerts as Honorary Members.—We hear from every side one and the same expression of protest and dissatisfaction at the amazing step taken by the old *Philharmonic* Directors in their choice of a Conductor,—nor need any one be surprised should it bring on disruption and destruction of the Society. It is possible that there may still exist a few old-fashioned amateurs and professors in the eyes of whom every musician with a "Herr" at the head of his name must be a "medicine-man," as the Indians say—a great German,—as such, an object of ovations, even as Weber and Mendelssohn were in their time. But the world of less credulous amateurs will ask for credentials. Now, as a composer, Herr Wagner (supposing him to be what he himself and his admirers assume—a second Gluck) is less presentable at an instrumental concert than most of his predecessors and contemporaries. His overture and march from 'Tannhäuser,' his *entr'acte* from 'Lohengrin' may be given, it is true;—but this is well nigh all the music from their composer's hand that is available,—since his operas, which are written on principle not to be sung, but to be acted, can hardly be conceived fit for a concert-room, even by Philharmonic sapience. Nor is Herr Wagner, we believe, a *solo* player on any instrument. In short, the more closely this appointment is looked into, the more clearly will its want of reason (if not want of right) as well as its want of courtesy become evident:—and the more expedient does it seem that the nomination should be sifted and judged, not by the few in council who may have agreed to split their own differences by affronting the entire body of resident professors, but by the members of the Philharmonic Society. We dwell on these and other new plans and performances, which so curiously mark the opening of this year of confusion 1855, because our times are strange and events call for no common vigilance. While orchestral execution in England has made vast progress, creation (as distinguished from destruction or imitation) is in a state of pause, and nice calculation and upright administration are required more than at any former period to keep interest alive in old Societies and to provide new ones with a special vocation. It would be grievous if our public were to lose the capacity for enjoyment of the best things, owing to want of sense, of independence, or of enterprize on the part of those who administer its artistic concerns,—but there seems danger of some such result. Want of principle, want of novelty, want of generosity are three very negative substitutes for uprightness, research, and enthusiasm,—and should their influence re-act on our audiences, the shame that Art is not properly patronized in England will lie not with "the million," but with the musician.

The *Harmonic Union* commenced its operations on Wednesday evening with 'The Creation.' The *solos* were sung by Miss Stabbach, Mr. Lockey, and Mr. Weiss. What we have to say generally in regard to this Society will be best deferred to some future occasion. Meanwhile, it will suffice us to give currency to the Directors' announcement, "that engagements have been made with Mr. and Mrs. Sims Reeves and Madame Clara Novello; and negotiations are pending with Mdle. Agnes Bury, Madame Rudersdorff, Signor Bellelli, and other eminent vocalists."—Just now all the Societies are "running" on 'The Creation' somewhat merclessly. The Oratorio was given on Wednesday by Mr. Surman's *London Sacred Harmonic Society*,—and last evening, at Exeter Hall, by the *Sacred Harmonic Society*.

M. Jullien's second series of *Promenade Concerts* was followed last evening, as usual, by a masked ball:—and Covent Garden Theatre may now be thoroughly swept and garnished in preparation for the Opera season.—Never have the oddly-compounded entertainments just over been so largely frequented as during this winter.

If memory does not deceive us, the *Pas de Quatre*, which Mr. J. Chalon sketched so airily, was put for-

ward as a jubilee regale on the occasion when Mr. Lumley extricated *Her Majesty's Theatre* from the toils of half-a-century's litigation and entered on its management with "a clear title,"—secured by the proceeds of a sale *in perpetuo* of certain boxes and stalls. To judge from our law reports of the past and the present year, the relief was only temporary—one succeeded by "confusion worse confounded"—by entanglements of a new and curious complication. The other day, we perceive, Mr. Lumley resisted an action of ejectment by calling in the aid of one of these co-proprietors. This "move," it is true, was not admitted by the presiding Judge (to the peace of mind of others who hold boxes and stalls), and a compromise was recommended.—But this dispute leads us to imagine that the reopening of *Her Majesty's Theatre* in 1855 is not a certain fact.

The amount of dissension let loose on so many occasions when an organ is to be built, whether in Cathedral, Town Hall, or Wesleyan Chapel, and at junctures when an organist should be elected, is such as to make us think of *Tubal Cain's* instrument as of a *Pandora's* box, out of which cometh more strife than concord. The following, for instance, is copied from the Oxford intelligence in the *Morning Post* of Saturday last.—

"Yesterday the Church Charity Trustees met and elected Dr. Corfe, organist of Christ Church, to the office of organist to St. Martin's Church, vacant by the resignation of Mr. B. Blyth. The same day the parishioners of St. Martin's met and elected Mr. Porter to the same office by a majority of 15 votes, the parish having been polled on the occasion. The consequence of these adverse decisions is, that the trustees and the parishioners are brought into collision, and an appeal to the Court of Queen's Bench to decide in whom the appointment rests appears to be the only alternative, as both parties claim the right of appointing the organist, and neither will forego it. It appears that many years ago Sir Charles Nourse, an old citizen, left a sum of money, the interest of which, amounting to 30*l.*, was to pay an organist at St. Martin's Church, the right of appointment being vested in certain trustees, consisting of the mayor, aldermen, assistants, and bailiffs of the old corporation. When the Municipal Reform Bill came into operation the management of the city charities was vested in certain charity trustees appointed by the Lord Chancellor, in the room of the members of the old corporation, which had become defunct. Under this authority, as well as the fact that the donor's will specifies that the trustees shall provide and pay an organist, which they have hitherto done, the trustees consider that the appointment is vested in them, and not in the parish. On the other hand, the parishioners contend that the organ is their property, and that no one can act as organist without their consent and appointment. The organist appointed by the trustees having received their written appointment, has communicated that fact to the rector, the Rev. R. C. Hales, who has forbidden him to play the organ, and informed him that he has, in accordance with the votes of a majority of the parishioners, authorized Mr. Porter to officiate as organist. The next step which it is probable will be taken will be that the organist appointed by the trustees will move the Court of Queen's Bench for a *quo warranto* against the rector, to show cause why he prevents his fulfilling the duties of organist, to which he has been, as he contends, legally appointed."

Mdlle. Jenny Ney, belonging to the Dresden Opera, is mentioned as engaged to visit London this spring.—It is said that Mozart's 'Idomeneo' may be produced during her visit—since that opera contains one of her favourite characters.

Miss Arabella Goddard appears to be playing her way through Germany with good success. We do not recollect a former instance of an English female pianist making an extended Continental tour.—While we are speaking of pianoforte-players, it may be mentioned that M. Henri Herz has completed a new *Concerto*, which is well spoken of in the Parisian journals.—Some of our pianists might do worse than produce this if they can, since, the best writings of M. Herz are too clever and too effective to be long so neglected as they are now. Nothing more sparkling, showy and elegant than certain of his variations and *fantasias* is to be found in the library of fashionable concert or chamber music.

New music seems to be stirring in Paris this year, besides such as is furnished in the theatres. A new Symphony by Mr. George Mathias,—a new Sextuor by M. Salvator (whose name is beginning to be heard among chamber musicians) are spoken of in terms of praise.—Madame Viardot is about to give a series of chamber-concerts.

MISCELLANEA

Paris Exhibition of 1855.—From the returns, published in the *London Gazette* by order of the Lords of the Committee of Privy Council for Trade, it appears that all the great branches of industry of the United Kingdom will be effectively represented in the approaching Universal Exhibition. Thus, we find that there will be 20 exhibitors of silk, 5 of shawls and fabrics, 15 gold and silver smiths, 18 of cabinet work and decoration, 11 of clocks and watches, 16 of musical instruments, 25 of general metal work, 15 of saddlery, &c., 13 tanners and curriers, &c., 12 of carriages, 17 of letter-press printing, &c., 5 of bookbinding, 8 of copper-plate, &c. printing, 29 of boots and shoes, 26 manufacturing chemists, 9 of carpets (London), 21 ditto (country), 4 of rope twine, &c., 15 of paper and stationery, 8 brush and comb makers and turners, and 6 of hats and caps. In addition to these a general supplementary list has been printed, containing 130 names of metropolitan exhibitors, whose various professions, and other causes, would not admit of their strict classification under any of the above heads. Twenty-nine Local Committees have been formed in the manufacturing districts of the United Kingdom, who have been, for the most part, energetically engaged in making a judicious selection of all that their respective localities produce which can add to the interest, usefulness, or embellishment of the Paris Exhibition. According to the returns received, there will be 10 exhibitors from Aberdeen, 11 from Arbroath, 26 from Belfast, 93 from Birmingham, 13 from Bradford, 5 from Bristol, 10 from Derby, 43 from Dublin, 15 from Dundee, 1 from Dunfermline, 13 from Edinburgh, 22 from Galashiels, 58 from Glasgow, 12 from Huddersfield, 21 from Leeds, 21 from Nottingham, 9 from Paisley, 2 from Preston, 85 from Sheffield, 22 from the Staffordshire Potteries, 22 from Sunderland, 4 from Trowbridge, 8 from Walsall, and 22 from Wolverhampton. Manchester has sent no return, the Committee in that city having determined to make a collective display of the staple manufactures of the district, without putting forward the names of particular firms. The districts where no Committees have been formed will be represented in the aggregate by upwards of 65 exhibitors. The number of contributors to the machinery department (both in motion and at rest) is 146, together with 25 of our most celebrated agricultural implement makers. A careful digest of these returns shows that if the Exhibition of 1851 had the advantage as regards the number of English exhibitors, the British Section of the Paris Universal Exhibition of 1855 will hold a far more prominent position in point of quality, as the limited space placed at the disposal of the British Government by the Imperial Commission has rendered unavoidable a rejection of all that did not attain to a high standard of excellence.

Reduction of Foreign Postage.—Twenty years ago the British and Foreign rates of postage could not be paid on foreign letters. In 1843, a convention was arranged between England and France by which a letter going to or passing through France could be paid to its destination; and international accounts were kept between Great Britain and the French Government. The following table shows the full postage on foreign letters in 1835 and 1855, viz. :—

THE YEAR-BOOK OF FACTS IN SCIENCE
AND ART for 1855: exhibiting the most important Discoveries
and Improvements of the Past Year in all branches of Science and
the Arts. By JOHN TIMBS, F.R.S.
"This book does for us what we have not done for ourselves,—it
stores up every useful bit of information to be found in the records of
learned Societies, or announced through scientific and news
journals."—*Globe*.
David Bogue, Fleet-street.

CORRECTED TO THE MEETING OF PARLIAMENT.
Now ready, price 6s. neatly bound.
**THE POCKET PEERAGE AND BARONET-
AGE OF GREAT BRITAIN AND IRELAND**, for 1855, with
Genealogical and Historical Notices, and all the usual lists. By
HENRY R. FORSTER, of the *Morning Post*.
"Of all the various editions of the Peerage which annually claim
our attention, Mr. Forster's is the best, not solely by reason of the
lateness of its information, but from the clear and lucid order of
its arrangement."—*Atlas*.
David Bogue, Fleet-street.

Just ready, 2 vols. post 8vo. with Portrait, 21s.
THE LIFE OF WILLIAM ETTY, R.A., with
Extracts from his Diaries and Correspondence. By ALEX-
ANDER GILCHRIST, of the Inner Temple, Barrister-at-Law.

CAPTAIN KING'S CAMPAIGNING in
KAFFIR-LAND; or, Scenes and Adventures in the Kaffir
War of 1845-2. With Maps and Illustrations.
"Captain King's book contains the best picture that has ap-
peared of the incidents and hardships which occurred to the troops
engaged in the war in South Africa."—*Spectator*.
The Government Map prefixed to this New Edition adds greatly to
the value of the work.
Saunders & Otley, Publishers, Conduit-street.

VOLTAIRE, ROUSSEAU, &c.
In demy 8vo. price 9s. cloth (500 pages), Copyright.
HISTORY OF FRENCH LITERATURE to
the EIGHTEENTH CENTURY.
By Professor VINET, of Lausanne.
"This book unites many of the charms of biography and history,
and is rich in an extraordinary degree in literary, philosophical,
and Christian criticism."—*British Quarterly Review*.
For literary estimate of Vinet, see article on his literary works
in new number of *Edinburgh Review*.
"The first attempt to estimate the literary age of Fontenelle,
Montesquieu, Voltaire, and Rousseau from a Christian point of
view. It is a work of great interest."—*North British Review*.

NOTICE.
Under the especial Patronage of Her Majesty and Prince Albert.
Corrected throughout by the Nobility,
**MR. LODGE'S PEERAGE AND BARONET-
AGE** for 1855
IS NOW READY.
The numerous changes in noble families and their collateral
branches, by descent, during the past year and in the recent me-
morable engagements, will render this New Edition of Mr. Lodge's
Peerage one of the most important ever issued, as it is the only
work in which the type being constantly kept standing—every
correction is made in its proper place to the date of publication.
Saunders & Otley, Publishers, Conduit-street.

THE COMPLETE WORKS OF DR. YOUNG.
In 2 vols. royal 18mo. price 10s. cloth.
THE COMPLETE WORKS, POETRY and
PROSE, of the Rev. EDWARD YOUNG, LL.D. formerly
Rector of Welwyn, Hertfordshire, &c. Revised and Collated with
the earliest Editions. To which is prefixed, a Life of the Author,
by JOHN DURAN, LL.D. With 8 Illustrations on Steel, and a
Portrait.
"We pay no slight compliment to this volume (Wilmott's
Copper) when we say, that the text appears to have been as care-
fully watched, if we may so speak, as that of Young by James
Nichols, the painstaking Editor of that poet's Complete Works."
Athenæum.
London: William Tegg & Co. 85, Queen-street, Cheap-side.

DR. DALTON'S NEW WORK.
THE HISTORY OF BRITISH GUIANA;
comprising a General Description of the Colony; a Narra-
tive of some of the Principal Events, from the Earliest Period of
its Discovery to the Present time; and an Account of its Cli-
mate, Geology, Staple Products, and Natural History.
By HENRY G. DALTON, M.D.
Member of the Royal College of Surgeons, London.
With a Map and Six Plates.
2 vols. 8vo. price 5s.; or (large paper) royal 8vo. 2l. 12s. 6d.
"The first really complete and systematic work, in which a his-
torical and descriptive account of British Guiana has been pre-
sented to English readers."—*Literary Gazette*.
"It must have cost the author vast labour, and essentially de-
serves to be cited among the useful works of modern literature.
Reliable accounts of English colonies must always rank among the
most important historical contributions to English literature."
Leader.

"An elaborate publication. That part which relates to medicine,
or its cognate topics, climate, temperature, &c., is most satisfac-
tory."—*Spectator*.
"The most ample and complete account of the colony that has
yet appeared."—*Observer*.
"A work of enduring interest, and not likely to be superseded."

Weekly Chronicle.
"A work of great value and importance, and will, doubtless, take
high rank among our colonial literature."—*Telegraph*.
"A work of great value to the historian, the ethnologist, the
naturalist, and the statistician, and combining an unusual excellence
of style and a lucid arrangement of matter."—*John Bull*.
"A text book and authority upon all questions relating to the
subject."—*Atlas*.
"The standard work on British Guiana."—*Daily News*.
"The latest and most comprehensive work extant on its subject."

Press.
"Dr. Dalton has brought a large share of ability as well as in-
dustry to his task. His work is, in reality, a full description and
general history of British Guiana from the earliest discovery and
exploration to the present time, together with notices of the natu-
ral history of the country, the various missions and religious esta-
blishments, &c., comprising a vast amount of valuable informa-
tion."—*Sunday Times*.
Longman, Brown, Green, and Longmans, Paternoster-row.

BEWARE! SHE IS FOOLING THEE.

New Song. Price 6d., post free for stamps. The Poetry by LONGFELLOW; the Music by the Composer of 'The Soldier and his Sword' (Duett), 2s. 6d., sung by Mr. Elliott (singer and Mr. Corn, &c.—London: Jewell & Letchford, 17, Soho-square.

THE SOLDIER'S BRIDE, (or, The Soldier

and his Sword. Vocal Duett, with German and English Words. The German Words by Körner, the Music by A. H. DENDY. "One of the most delightful duetts since poor Bellini's Suoni la tromba!"—*Brighton Guardian*. Price 2s. 6d., post free, for stamps.—Jewell & Letchford, 17, Soho-square.

THE CONCERTINA MISCELLANY.—Just

published, price 2s. 6d., the First Number of THE CONCERTINA MISCELLANY, a new Periodical of Popular Music for Concertina Solo, and Concertina and Pianoforte. To be continued every month. Subscriptions, per annum, 21s.; or postage free, 27s. The Number for January contains a Fantasia on Massanello for Concertina and Piano, by GEORGE CASE. Boosey & Sons, 25, Holles-street.

CASE'S CONCERTINAS, Manufactured under

the personal superintendence of Mr. GEORGE CASE, the eminent Professor, whose talent and energies have been devoted so many years to the improvement of this instrument. Price from 4s. 4s. to 12s. 12s. each. Case's Four-Guinea Concertinas are intended to supercede the imperfect cheap Concertinas which, being made with only half the proper number of notes, are really worthless as musical instruments. A Post-office order for 4s. 4s. will insure the delivery of a Concertina in a handsome mahogany case, carriage free to any part of England. Residents in London are respectfully requested to call between the hours of Three and Four, when Mr. Case attends to try over Concertinas and Music. Boosey & Sons, Sole Dealers in Case's Concertinas, 25, Holles-street.

HUGHES'S READING LESSON BOOKS.
—Mr. EDWARD HUGHES, Head Master of the Royal Naval Lower School, Greenwich Hospital, begs respectfully to direct public attention to his Series of

FIVE READING LESSON BOOKS,

well illustrated, and suited to the educational requirements of the present day.

These Books are carefully graduated, so as to lead the pupil step by step from the observation of the simplest to the comprehension of the more complex phenomena of Nature. They are now being practically tested in the school under the Editor's care. The First Book, which is now ready, 12mo. 448 pp. price 3s. 6d. contains—

- | | |
|--|------------------------------------|
| 1. How to get Knowledge, and the Use of Books. | 8. Political and Domestic Economy. |
| 2. Scientific Biography. | 9. Chemistry and its Applications. |
| 3. Physical Geography. | 10. Arts and Manufactures. |
| 4. Geology and Metallurgy. | 11. Mechanics and Mechanism. |
| 5. Vegetable Physiology. | 12. Natural Philosophy. |
| 6. Animal Physiology. | 13. Astronomy. |
| 7. Natural History and Ethnology. | 14. Fine Arts. |
| | 15. Literature. |

Influenced by the idea that no individual could do complete justice to the numerous and varied regions of knowledge necessary to be surveyed in such a series, Mr. HUGHES has sought, and obtained, the co-operation of men eminent in science and literature, as also of well-known and valued practical educators. In this way theory and practice will go hand in hand, and correct each other. The articles are written by—

Allen, Joseph, Esq. R.N.
Allman, Dr.
Arncliffe, T. G., Esq.
Baillie, Henry, Esq.
Bazley, Thomas, Esq.
Bell, John, Esq.
Buck, Dr. F.R.S.
Calvert, G., Esq.
Campbell, John, Esq. A.M.
Chorley, Henry, Esq.
Connon, Charles W., Esq. A.M.
Copper, Charles, Esq. C.E.
Crab, George L., Esq.
Cressy, E., Esq. A.M.
De Morgan, Augustus, A.M.
Dodd, George, Esq.
Ellis, William, Esq.
Forbes, E., Esq. F.R.S.
Franklin, Dr.
Glaisher, James Esq. F.R.S.
Hall, L., Esq. F.S.B.A.
Hill, Rev. Jas. A.M. F.R.A.S.
Hunt, Robert, Esq. F.R.S.
Jameson, Mrs.

The names of the contributors are a sufficient guarantee that the matter of the books will be of the highest class, and it will be the Editor's business to see that the form in which the various articles are presented shall be suitable for general instruction. The experience he has already had in preparing school-books, and the success which has attended his labours, inspire him with a confident hope that this Series will both supply an admitted want, and give general satisfaction.

Also, just published, price 3s. 6d.
OUTLINES of PHYSICAL GEOGRAPHY, descriptive of the Inorganic Matter of the Globe, and the Distribution of Organized Beings. Fifth Edition, 12mo. with 8 Coloured Maps, and an Etymological Appendix on Geographical Names. By Dr. ROBERT GORDON LATHAM, F.R.S.

London: Longman, Brown, Green & Longmans.
Edinburgh: A. & C. Black. Dublin: Hodges & Smith.

Price 3s. 6d. boards.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical acting force coincident.

Great Exhibition Jurors' Report, p. 274.
"Mr. Ross prepares lenses for Portraiture, having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."
"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.
A. Ross, 2, Featherstone-buildings, High Holborn.

THE IODIZED COLLODION, manufactured by J. B. HOOKIN & CO. 289, STRAND, LONDON, still remains unrivalled for sensitiveness and density of Negative—it excels all others in its keeping qualities and uniformity of constitution.—Albumenized Paper, 17s. 11s. per quire; Waxed photo. 7s. of very superior quality.—Double Achromatic Lenses, equal in all points to those of any other manufacturer: Quarter Plate, 32s. 2s.; Half Plate, 54s.; Whole, 104s.—Apparatus and pure Chemicals of all descriptions.
Just published, "PRACTICAL HINTS on PHOTOGRAPHY," by J. B. HOOKIN. 3rd edition, price 1s.; per post, 1s. 4d.

THE NEW COLLODION Manufactured by BLAND & LONG, 153, Fleet-street, London, will bear comparison with any other preparation offered to Photographers. Price 9d. per oz. Can be had in either of the following solutions. Nitrate of Silver, 4s. 6d. per oz.; Pyrogallol Acid, 1s. 6d. per drachm; Glacial Acetic Acid, 6d. per oz.; Hyposulphite of Soda, 1s. per lb. CAMERAS, LENSES, and every description of Apparatus, of first-class workmanship.

Chemicals of ABSOLUTE PURITY, and every material required in the Photographic Art, of the finest quality.

Instruction in all the processes.
Catalogues sent upon application.
BLAND & LONG, Opticians, Photographical Instrument Makers and Operative Chemists, 153, Fleet-street, London.

X-YLO-iodide of SILVER, exclusively used at all the Photographic Establishments.—The superiority of this preparation is now universally acknowledged. Testimonials from the best Photographers and principal scientific men of the day, warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action. In all cases where a quantity is required, the two solutions may be had at Wholesale price in separate Bottles, in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each Bottle is stamped with a Red Label bearing my name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to counterfeit which is felony.

CYANOGEN SOAP, for REMOVING all kinds of PHOTOGRAPHIC STAINS. The genuine is made only by the inventor, and is secured with a red label bearing this signature and address, RICHARD W. THOMAS, CHEMIST, 10, PALL MALL, Manufacturer of pure Photographic Chemicals; and may be procured of all respectable Chemists, in Pots, at 1s. 2d. and 3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Churchyard; and Messrs. Barclay & Co. 95, Farringdon-street, Wholesale Agents.

PHOTOGRAPHIC CAMERAS of EVERY DESCRIPTION CAN BE HAD AT OTTEWILL & MORGAN'S MANUFACTORY, 24 and 25, Charlotte-terrace, Caledonian-road, Islington.—OTTEWILL'S REGISTERED DOUBLE-BODY FOLDING CAMERA, adapted for Landscapes or Portraits, may be had of A. Ross, Featherstone-buildings, Holborn, Photographic Institution, Bond-street, and at the Manufactory as above; where every description of Cameras, Slides, and Tripods may be had.—The Trade supplied.

"Exquisite and unequalled—a most elegant treat."
Morning Advertiser.

STEREOSCOPE COMPANY, 313, Oxford-street, (A few doors West of Regent-street.)

BANK OF DEPOSIT,
NATIONAL ASSURANCE and INVESTMENT ASSOCIATION,
No. 3, PALL MALL EAST, LONDON.
Established A.D. 1844.

Empowered by Special Act of Parliament.
Parties desirous of INVESTING MONEY are requested to examine the plan of this Institution, by which a high rate of interest may be obtained with perfect security.

The Interest is payable in January and July at the Head Office in London; and may also be received at the various Branches, or through country bankers, without delay or expense.

PETER MORRISON, Managing Director.
Prospectuses and Forms for opening Accounts sent free on application.

COVENT-GARDEN LOAN OFFICE.

MONEY ADVANCED from 5l. 5s. to 100l. on Personal Security by the above Office, 17, BROAD-COURT, BOW-STREET. The difficulties which tradesmen feel in applying to a public loan office is avoided (the situation private) and the management being in one person, whose business habits for punctuality, secrecy, and despatch, qualify him for inquiry without the public so common in some offices.—Further particulars on receipt of 3 postage stamps.
**Approved Bills discounted.

LOANS, from 25l. to 1,000l., upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding 30 months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES.—Prospectuses, Reports, and every information, may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d. each copy, or 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

GRAND TRUNK RAILWAY COMPANY
OF CANADA.

NOTICE IS HEREBY GIVEN, that a CALL of 2l. 10s. per Share, on each and every share of the "A" series of the shares of this Company, has been made, and will be due and payable on SATURDAY, the 10th day of FEBRUARY, 1855.

A Call of 10s. will also be due and payable on each of the Certificates exchangeable for Company's Debentures, and 10s. on each without the public so common in some offices.—Further particulars on receipt of 3 postage stamps.

Interest at the rate of 6 per cent. per annum is paid on all sums received in advance of Calls, on either Shares or Debentures. All payments to be made at the Banking-house of Messrs. Glyn, Mills & Co. 67, Lombard-street.

By order of the Board,
WILLIAM CHAPMAN, Secretary.
Offices of the Company, 21, Old Broad-street,
London, Jan. 8, 1855.

PROVIDENT CLERKS' ASSOCIATION.

SIX MORE ANNUITANTS will be ELECTED at the forthcoming Special General Meeting in May next. All persons becoming Members (either as Assurers or Subscribers) previously to the day of Election will be entitled to vote.

Attention is especially directed to the very favourable position and proposals of this Association, as evidenced by the Report of the past year, and also to the great advantages offered to Assurers of all classes.

For Prospectuses and further information apply to the Agents of the Association; or at the Head Office, 15, Moorgate-street, London.
Jan. 23, 1855. WILLIAM THOMAS LINDFORD, Secretary.

ST. GEORGE ASSURANCE COMPANY,
118, PALL MALL, London.

Chairman—Viscount RANELAGH, Park-place, St. James's.
Deputy-Chairman—HENRY POWNALL, Esq., Ladbroke-square, Notting Hill.

Indisputable Policies, Annuities, and Provision for Families and Children on the most favourable terms. Unmarketable titles assured.

Loans granted on a new and liberal principle.
For further particulars apply at the Office as above.

W. C. URQUHART, Secretary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON.

Instituted 1820.
WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the Profits, are assigned to Policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future Premiums.

One Third of the Premium on Insurances of 500l. and upwards, for the whole term of Life, may remain as a debt upon the Policy, to be paid off at convenience, or the Directors will lend sums of 50l. and upwards, on the security of Policies effected with this Company for the whole term of life, when they have acquired an adequate value.

Security for those who effect Insurances with this Company are protected by its Subscribed Capital of 750,000, of which 140,000, is invested, from the risk incurred by Members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the Subscribed and Invested Capital, will be seen by the following statement:—

At the close of the last Financial Year the Sums Assured, including Bonus added, amounted to £2,500,000.
The Premium Fund to more than 800,000.
And the Annual Income from the same source, to 109,000.

Insurances, without participation in Profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

[ESTABLISHED 1841.]
MEDICAL, INVALID, AND GENERAL
LIFE OFFICE, 25, Pall Mall.

At the Thirteenth Annual Meeting, held on the 30th November, 1854, it was shown that there had been issued no less than 2,130 Policies, covering Assurances to the amount of 1,027,500l., and yielding Annual Premiums amounting to 50,110l.

By the Annual Report for 1853, it appeared that the number of Policies then in force was 3,134, insuring 1,387,500l., and yielding an Income of 53,207l.

The Number of Policies now in force is 5,248.
The Amount Insured is £2,298,027 8s. 2d.
The Income from Premiums is £100,510 5s. 12d.

Two Bonuses have been declared (in 1848 and 1853), adding nearly 2 per cent. per annum on the average to sums assured, and by which a Policy of 1,000l. issued in 1848 on a healthy life is now increased to 1,200l.

Profits divided every five years.
Assurances are effected at home or abroad on either healthy or diseased lives, at as moderate rates as the most recent data will allow.

Policies issued free of Stamp Duty, and every charge but the Premium.

Agents wanted for vacant places.
Prospectuses, Forms of Proposal, and every other information, may be obtained of the Secretary at the Chief Office, or on application to any of the Society's Agents in the country.

F. G. P. NEAVE, Esq., Secretary.
C. DOUGLAS SINGER, Secretary.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY.

Established at York, 1824, and Empowered by Act of Parliament.

The attention of the Public is particularly called to the terms of this Company for

LIFE INSURANCES.

And to the distinction which is made between Male and Female Lives.

No Charge for Stamps on Life Policies.

FIRE INSURANCES

Are also effected by this Company on the most moderate terms.

LONDON AGENTS:

Mr. William Pittman, Solicitor, 34, Great James-street, Bedford-row.

William R. Turner, Solicitor, 1, Field-court, Gray's Inn.

Agencies are also established at the various Towns in the Country.

W. L. NEWMAN, Actuary and Secretary, York.

SUN LIFE ASSURANCE SOCIETY, LONDON.

SHARE OF PROFIT INCREASED FROM ONE-HALF TO FOUR-FIFTHS.

Policies effected with this Society now will participate in FOUR-FIFTHS of the Net Profits of the Society, according to the conditions contained in the Society's Prospectus.

The Premiums required by this Society for insuring young lives are lower than in many other old-established offices, and Insurers are fully protected from all risk by an ample guarantee fund in addition to the accumulated funds derived from the investments of Premiums.

Policy Stamps paid by the Office.

Prospectuses may be obtained at the Office in Threadneedle-street, London, or of any of the Agents of the Society.

CHARLES HENRY LIDDERDALE, Actuary.

FAMILY ENDOWMENT LIFE ASSURANCE AND ANNUITY SOCIETY, 12, Chatham-place, Blackfriars, London.

Established 1835.

CAPITAL £500,000.

Directors.

William Dutton Bayley, Esq., Chairman.

John Fuller, Esq., Deputy Chairman.

Lewis Burroughs, Esq.

Robert Bruce Chichester, Esq.

Major Henderson.

Charles Henry Latouche, Esq.

An Annual Bonus is allowed to parties who have made Five Annual Payments on Policies taken out on the Profit Scale. That for the current year is 20 per cent. in reduction of the Premium.

Endowments and Annuities granted as usual.

INDIA BRANCH.

The extensive Assurance Business of the Agra and United Service Bank has been transferred to this Office, and the Society has Branch Establishments or Agencies at Calcutta, Madras, Bombay, Agra, and Hong Kong.

JOHN CAZENOVE, Secretary.

SPECIAL NOTICE.

TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD-OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1ST MARCH.

INSTITUTED 1831.

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters and Special Act of Parliament.

Head Office—EDINBURGH, 26, St. Andrew-square.

LONDON—126, Bishopsgate-street, Cornhill.

The SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is an Institution peculiarly adapted to afford provision for Families. It was established in the year 1801, upon the principle of MUTUAL CONTRIBUTION, the Surplus or Profit being wholly divisible among the Members; and the Additions which have been made to Policies at the Periodical Investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its Members. The following Examples exhibit the Additions already made:

A Policy for 1,000*l.*, opened in 1832, is now increased to 1,523*l.* 8*s.*

A Policy for 1,000*l.*, opened in 1836, is now increased to 1,491*l.* 16*s.* 10*d.*

A Policy for 1,000*l.*, opened in 1840, is now increased to 1,310*l.* 15*s.* 7*d.*

The Profits are ascertained and divided triennially among Policies of more than five years' duration.

The Annual Revenue is upwards of 150,000*l.*

The Amount of Assurances in force is upwards of Four Millions and a Quarter sterling.

The Amount paid to the Representatives of Deceased Members exceeds 600,000*l.* sterling.

The Total Amount of Vested Additions allocated to Policies exceeds 600,000*l.*

The Accumulated Fund is upwards of 830,000*l.*

Loans granted to Members to the extent of the office value of their Policies.

Copies of the Annual Report, Forms of Proposal and all information, may be had on application at any of the Society's Offices in Town or Country.

ROBERT CHRISTIE, Manager.

WILLIAM FINLAY, Secretary.

W. COOK, Agent, 126, Bishopsgate-street, London.

January, 1855.

Every description of useful CHINA, GLASS, and EARTHENWARE, at the lowest possible price, for Cash.—250, Oxford-street, near Hyde Park.

CONSTANT EMPLOYMENT GUARAN-

TEED.—Ladies or Gentlemen are instructed in the New, Elegant, Ornamental Arts of WHITE, GOLD, or OAK DECORATION, for articles of general use. "THE ARTS TAUGHT" for One Guinea each, and constant employment "GUARANTEED." By which from 2*l.* to 3*l.* may be realized weekly. Ladies wishing to increase their incomes cannot pursue a more elegant, artistic, or pleasurable occupation. Private Lessons given at Ladies' own residences. Mr. LAWRENCE, who is an exhibitor at the Stationery Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites Ladies to see his unique specimens at his open public buildings, or at Mr. L's Show Rooms daily, from Ten till Five, 25, Percy street, Bedford-square, near Rathbone-place. The Arts taught by correspondence.

CONTINUOUS EMPLOYMENT GUARAN-

TEED.—A limited number of LADIES WANTED IMMEDIATELY, to pursue the Fashionable and Lucrative Arts of "PLUMBLING, PAINTING ON VELLUM, and 'LITHOGRAPHY,' for objects at the Crystal Palace, intended for publication. Each Art is taught for One Guinea, either personally or by correspondence, and by which a handsome income can be realized weekly. Continuous employment guaranteed at the pupil's residence and private instruction.—The elegant specimens are on view daily, at Mons. LAURENT'S residence, 14, Torrington-square, near Russell-square; Royal Polytechnic, &c.—References to families of distinction. No knowledge of drawing necessary.

PAINLESS TOOTH EXTRACTION, with-

out Chloroform.—Mr. WALTER BLUNDELL is at home daily, from Ten till Four, for Dental Operations under his new patent process.—29, New Broad-street, City.

ARTIFICIAL TEETH of the best, cheapest,

and most durable description. Manufactured and adapted solely by Mr. THOS. LUKYN, with guaranteed success, on his improved French mode of mechanical construction. Read Lukyn's Essay on the Teeth, with illustrations, crown 5*s.* 2*d.*, by post, 3*s.* 4, Upper George-street, Bryanston-square.

A NEW DISCOVERY IN TEETH.

MR. HOWARD, SURGEON-DENTIST, 52,

FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION OF ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour, or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.

52, FLEET-STREET.—At home from Ten till Five.

CARRIAGES of the lightest Construction, best

build and finish, at reduced prices.—For SALE, or to be let on Job, a large assortment of New and Second-hand CARRIAGES, comprising single and double seated Broughams, Clarences, Steppe Barouches, Pilettums, Phaetons, &c.—PEARCE'S old-established Carriage Factory, 3, Lisle, or 11, Princes-street, Leicester-square.

CAMP LANTERNS for the CRIMEA, com-

binning every recent improvement, adapted for burning the Patent Fusee Candles, which can be instantly ignited as a lucifer. These Lanterns are equally suitable for warehousemen and others. Price 6*s.* each; Fusee Camp Candles, 1*s.* 3*d.* per box. Sold by all Lamp-Dealers by S. CLARKE, 55, Albany-street, Regent's Park; and wholesale by PALMER & Co. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES,

can be instantly ignited as a lucifer, are of different lengths, adapted for journeys of two, three, or four hours, and of two thicknesses to fit all lamps.—Sold in Boxes, at 1*s.* 3*d.* per box, by all Grocers, Candle-Dealers, and Chemists; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made

so that they can be instantly affixed to the Dashboard of any Gig, Drag, or other description of Vehicle, and can be as quickly removed and used for a Hand-Lantern in the stable. They are adapted for burning the new Patent Fusee Carriage Candle. The Price of each is equal to that of a carriage lamp of superior finish, but the price being less than half, these lamps are placed within the reach of every person requiring a light when driving.—Price 12*s.* 6*d.* each, at any of the Lamp-Dealers; and wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by the Patentee, S. CLARKE, 55, Albany-street, Regent's Park, London.

MODERATOR LAMPS.—IMPROVED

PRINCIPLE.—For simplicity, strength and general finish, the LAMPS sold by THOMAS PEARCE & SON are far superior to any other kind. They are all made expressly for their houses are tried before they leave the Manufactory, and have important improvements peculiar to only these Lamps. The patterns are singularly uncommon and beautiful, and for art, elegance and good taste, the assortment is quite unexceptionable, many of the designs belonging exclusively to T. PEARCE & SON.

Direct Importers of Oil of the finest quality.

T. PEARCE & SON, 23, Ludgate-hill.

PURE FRENCH COLZA OIL, 4*s.* 9*d.* per

gallon.—Messrs. LEMAIRE & CO. Manufacturers, Paris—Sole Depot in England, the London Soap and Candle Company, 70, New Bond-street.

NOTICE.—OVERCOATS, CAPES, &c.—

One of the largest Stocks in London of every description, first-class Garments, at lowest charges; also of COUTURES, ditto all made thoroughly impervious to rain, without extra charge, or made to order at a day's notice.—W. BERNDO, 96, NEW BOND-STREET, and 69, CORNHILL (only).

OLD RED LACHRYMÆ CHRISTI,

Falerian, and Capri Wines, 4*s.*; bright Ruby Vittoria, 3*s.*; superior Sherry, 4*s.* 4*s.* to 5*s.*; fine old Biscuiting Crusted Port, 4*s.* 6*s.* 6*s.*; best Marsala, 4*s.*; choice old pale Cognac Brandy, 4*s.*; and bottles and hampers, 3*s.* per dozen; allowed on return. All other first-class foreign wines and spirits. Country orders should be accompanied by a remittance to THOS. THOMPSON, 2, Botolph-lane, City.

LEA & PERRINS' WORCESTERSHIRE

SAUCE imparts the most exquisite relish to Steaks, Chops, and all Roast Meats, Gravies, Fish, Game, Soup, Cakes, and Sals, and by its tonic and invigorating properties enables the stomach to perfectly digest the food. The daily use of this aromatic and delicious Sauce is the best safeguard to health. Sold by the Proprietors, LEA & PERRINS, 6, Vere-street, Oxford-street, London, and 68, Broad-street, Worcester; and also by Messrs. Barclay & Sons, Messrs. Cross & Blackwell, and other Grocers and Merchants, London; and generally by the principal Dealers in Sauce.—N.B. To guard against imitations, see that the names of "Lea & Perrins" are upon the label and patent cap of the bottle.

TO THE CLERGY, ARCHITECTS, AND

CHURCHWARDENS.

GILBERT J. FRENCH, BOLTON, Lancashire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., replies immediately to all inquiries addressed to him at Bolton, from which place only orders are executed. He respectfully invites direct communications, as by far the most economical and satisfactory arrangement. Parcels free at the principal Railway Stations.

CHUBB'S LOCKS, with all the RECENT

IMPROVEMENTS; STRONG FIRE-PROOF SAFES, CASH and DEED BOXES.—Complete Lists of Sizes and Prices may be had on application.

CHUBB & SON, 57, St. Paul's Churchyard, London; 25, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley Fields, Wolverhampton.

AT MR. MECCHI'S ESTABLISHMENT, 4,

LEADENHALL-STREET, London, are exhibited the finest specimens of British manufactures, in DRESSING CASES, Work Boxes, Writing Cases, Dressing Bags, and other articles of utility or luxury, suitable for presentation. 29, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

TRY BATES'S VALUABLE AND CELEBRATED IRISH EXHIBITION RAZORS, only Two Shillings each; by post, Two-and-Sixpence, prepaid. They are the best now made for keen shaving. —Manufactured by JAMES BATES, at 63, South George-street, Dublin.

INFANTS NEW FEEDING BOTTLES. —From the *Lancet*:—"We have seldom seen anything so beautiful as the nursing bottles introduced by M. Elam, of Oxford-street. They are adapted to milk, biscuits, and all kinds of food; and, whether for weaning, rearing by hand, or occasional feeding, are quite unrivalled." —BENJAMIN ELAM, 196, Oxford-street. 7s. 6d. The bottle and mouthpiece are stamped with my name and address.

DECAYED TEETH and TOOTH-ACHE. —Patronized by Her Majesty the Queen, and H.R.H. Prince Albert. —MR. HOWARD'S PATENT WHITE SUCCEEDANEUM for filling decayed teeth, however large the cavity. It is placed in the tooth in a soft state, without any pressure or pain, and in a short time becomes as hard as the enamel, lasting many years. —Sold by Messrs. Sanger, Regent-street; Sanger, 150, and Hannay, 63, Oxford-street; Butler, & Cheapside; and Cornhill; and all Chemists and Medicine Vendors in the kingdom. Price 2s. 6d. with full directions for use inclosed.

DECORATION OF THE HEAD. —The admirable taste displayed in the *Head Dresses* of some of our leading belles, who are no less indebted to art than to nature for their superiority, may be imitated, but never equalled, without the *method* to work upon. The indispensable requisite is a GOOD HEAD OF HAIR. This, the skilful artist may embellish; but the lank, weak, and thinly-scattered locks he laboriously and vainly attempts to arrange in a manner befitting the requirements of the fashionable circles. For this, the Hair must be nourished and invigorated, and all relaxing tendencies overcome. *Oldridge's Balm of Columbia* is the only preparation, truly efficacious, without being in the slightest degree injurious.

By its frequent use the Hair is prevented from turning grey, is improved in appearance, strengthened, and receives, by frequent application, that beautiful gloss and luxuriance which so greatly adds to the grace and dignity of the human form.

Price 3s. 6d., 6s., and 18s. per Bottle; no other prices are genuine. Ask for OLDDRIDGE'S BALM, 13, Wellington-street North, Strand, London.

Sold by all respectable Chemists, Perfumers and Stationers.

TO PARENTS AND GUARDIANS.
THE return of Youth to the respective Boarding-schools induces a solicitude for their Personal Comfort and Attraction. Now it is that

ROWLANDS' MACASSAR OIL, for accelerating the growth and for improving and beautifying the hair.

ROWLANDS' KALYDOR, for improving the Skin and Complexion, and removing Cutaneous Eruptions, and

ROWLANDS' ODONTO, or PEARL DENTIFRICE, for rendering the Teeth beautifully white and preserving the Gums, are considered indispensable accompaniments for the attainment of those Personal Advantages so universally sought for and admired.

Sold by H. ROWLAND & SONS, 20, Hatton-garden, London; and by Chemists and Perfumers.

BEWARE OF SPURIOUS IMITATIONS.

BEAUTIFUL HAIR, WHISKERS, &c., and INVARIABLY PRODUCED IN TWO OR THREE WEEKS by COUPELLE'S CELEBRATED CRINUTRIAL, which is universally acknowledged as the only preparation to be really depended upon for the infallible production of Hair, as also checking Greyness, Baldness, &c., and rendering the Hair luxuriant, curly, and glossy. —Mr. Williams, 5, Louth-street, Liverpool. "I can now show as fine a head of hair as any person, solely from using your Crinutrial." —Sergeant Craven, Longford Barracks, Ireland. "Through using your Crinutrial, I have an excellent Moustache, which I had before despaired of." —Mrs. Carter, Pangbourne, Berks. "My head, which was quite bald, is now covered with new hair." —Price 2s. per packet, through all Chemists and Perfumers; or sent post free for 24 penny stamps, by ROSALIE COUPELLE, 63, Castle-street, Newman-street, Oxford-street, London. —Guard against imitations under closely similar names. Twenty pages of Testimonials, with list of Country Agents, post free for two stamps.

DO YOU WANT LUXURIANT HAIR, WHISKERS, &c.? —No other compound for the Hair has maintained such an enduring celebrity as EMILY DEAN'S CHINILINE. It is guaranteed to produce Whiskers, Moustachios, Eyebrows, &c. in a few weeks, and restore the Hair in baldness, from whatever cause, strengthen it when weak, prevent its falling off, and effectually check greyness in all its stages. For the nursery, Dr. Wilson says, it is unrivalled. —Price 2s. per Packet (clearly put up), sent post free on receipt of 24 penny-postage stamps, by MISS DEAN, 37A, Manchester-street, Gray's Inn-road, London. Sold by every Chemist in the Kingdom. —"In one fortnight it produced a beautiful set of moustachios." —H. Adams. —"It has prevented my hair falling off." J. Hickson. —"It has quite checked the greyness that was coming on." Mrs. Elder.

VIOLETS.
H. BREIDENBACH, Distiller of Flowers and Eau de Cologne to the Queen, has now in great perfection several EXTRAITS of that favourite flower the WOOD VIOLET. It has a lasting odour, and will not stain the handkerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet Powder, and several toilet preparations of the same flower equally fragrant.
157 A, New Bond-street, facing Redmayne's.

METCALFE & CO.'S NEW PATTERNS TOOTH BRUSH & PENETRATING HAIR BRUSHES. —The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is famous for the hairs not coming loose. Is an improved Clothes Brush, incapable of injuring the finest nap. Penetrating Hair Brushes, with the durable unbleached Russian bristles. Sleek Brushes of improved graduated and powerful friction. Velvet Brushes, which act in the most successful manner. Smyrna Sponges—By means of direct importations, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at METCALFE, BINGLEY & CO.'S Sole Establishment, 130B, Oxford-street, one door from Holles-street.

Caution.—Beware of the words "From Metcalfe's," adopted by some houses.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession as an excellent remedy for Acidities, Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient it is admirably adapted for delicate Females, particularly during Pregnancy; and it prevents the Food of Infants from turning sour during digestion. Combined with the GOLDPLATED LEMON SYRUP, it forms an Effervescent Infant Draught, which is highly agreeable and efficacious. —Prepared by DINNEFORD & CO., Dispensing Chemists, (and General Agents for the Improved Horse Hair Gloves and Belts), 172, New Bond-street, London, and sold by all respectable Chemists throughout the Empire.

DR. DE JONGH'S LIGHT BROWN COD LIVER OIL. Prepared for MEDICINAL USE in the LOFFODEN ISLES, NORWAY, and put to the test of Chemical Analysis.

THIS pure and unadulterated, transparent, light brown Cod Liver Oil, long known and justly appreciated on the Continent, has now acquired the general confidence of the Medical Profession in this country, by whom it has been extensively and successfully prescribed, and with almost immediate and remarkably beneficial results—in many instances where ordinary Cod Liver Oil had been copiously, though ineffectually, administered.

It owes its superior efficacy not only to its method of preparation, but to the fact—clearly established by chemical analysis and therapeutic experiments—that the Liver of the species of cod-fish from which it is exclusively prepared contains a larger quantity of iodine of the elements of the bile and other essential remedial properties, than is found in other kinds of the genus GADUS. It is of the finest quality, free from any admixture, or the usually repulsive, sickly, and nauseous flavour or after-taste of the Pale Oil, or of the coarse Brown Oil, commonly sold, though totally unfit for medicinal purposes.

Being sold by IMPERIAL MEASURE it is as low in price per ounce as any other genuine Cod Liver Oil, whilst its regular and speedy effects render it incalculably cheaper. Medical and Scientific Testimonials of the highest character delivered or forwarded, gratis, on application to Dr. de Jongh's Sole Agents and Consignees, ANSAR, HARFORD & CO., 77, STRAND, LONDON, by whom the Oil is sold Wholesale and Retail, in bottles capsuled and labelled with Dr. de Jongh's stamp and signature; and in the CONTINENT by respectable Chemists and Vendors of Medicine. Where difficulty occurs in procuring the Oil, four half-pint bottles will be forwarded to any part of England, CARRIAGE PAID, on receipt of a remittance of ten shillings.

Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s.

HENRY'S CALCINED MAGNESIA continues to be prepared, with the most scrupulous care and attention, by Messrs. THOS. & M. HENRY, Manufacturing Chemists, Manchester. It is sold in bottles of various sizes, with glass stoppers at 4s. 6d., Stamp included, with full directions for its use, by their various agents in the Metropolis, and throughout the United Kingdom; but it cannot be genuine unless their names are engraved on the Government Stamp, which is fixed over the cork or stopper of each bottle.

Sold in London, wholesale, by Messrs. Barclay & Sons, Farringdon-street; Sutton & Co. Bow Churchyard; Newbery & Sons, E. Edwards, St. Paul's Churchyard; Savory & Co. New Bond-street; Sanger, Oxford-street; and of most of the Vendors of the Magnesia, may be had, authenticated, by a similar Stamp, HENRY'S AROMATIC SPIRIT OF VINEGAR, the invention of Mr. HENRY, and the only genuine preparation of that article.

KNOW THYSELF! The secret art of DISCOVERING the TRUE CHARACTER of INDIVIDUALS from the peculiarities of their HANDWRITING, has long been practised by Miss GRAHAM with astonishing success. Her startling delineations are both full and detailed, differing from anything hitherto attempted. All persons wishing to "know themselves," or any friends in whom they are interested, must send a specimen of their writing, stating sex and age, inclosing 13 penny post stamps to Miss Graham, 10, CHICHESTER-PLACE, KING'S CROSS, LONDON, and they will receive in a few days a minute detail of the mental and moral qualities, talents, tastes, feelings, and character, in male or female of any age, many other things hitherto unsuspected. "Miss Graham is a most successful graphiologist." *Family Herald*.

RUPTURES EFFECTUALLY CURED WITHOUT A TRUSS!—All sufferers from this alarming complaint are earnestly invited to consult or write to Dr. LESLIE, as he guarantees them relief in every case. His remedy has been successful in curing thousands of persons during the last twelve years, and is applicable to every kind of single and double Rupture, however bad or long-standing, in male or female of any age, causing no confinement or inconvenience in its use whatever. Sent post free to any part of the world, with full instructions for use, on receipt of 7s. 6d. in postage stamps, cash, or post-office order, payable to the General Post-office, to Dr. Herbert Leslie, 37A, Manchester-street, Gray's Inn-road, London. (Home daily except Sunday) from 11 till 3 o'clock. A Pamphlet of Testimonials sent post free on receipt of one postage stamp.

TO MOTHERS AND NURSES.
MRS. JOHNSON'S AMERICAN SOOTHING SYRUP.—This efficacious Remedy has been in general use for upwards of Thirty Years, and has preserved numerous Children when suffering from Convulsions arising from painful Dentition. As soon as the Syrup is rubbed on the Gums, the Child will be relieved, the Gums cooled, and the inflammation reduced. It is as innocent as effluvia tending to produce the Teeth with ease, and so pleasant, that no Child will refuse to let its Gums be rubbed with it. Parents should be very particular to ask for JOHNSON'S AMERICAN SOOTHING SYRUP, and to the Names of BARCLAY & Sons, 95, Farringdon-street, London, to whom the Syrup is sold, and whose name is on the Stamp affixed to each Bottle.—Price 2s. 9d. per Bottle.

CHILBLAINS, RHEUMATISM, LUMBAGO.—Chilblains are prevented from breaking, and their tormenting itching instantly removed, by WHITEHEAD'S ESSENCE of MUSTARD, universally esteemed for its extraordinary efficacy in Rheumatism, Palsies, Gouty Affections, and Complaints of the Stomach; but where this certain remedy has been unknown or neglected, and the chilblains have actually suppurated or broken, WHITEHEAD'S FAMILY CERATE will ease the pain, and very speedily heal them.

CHILBLAINS—WHITEHEAD'S ESSENCE OF MUSTARD. —"The Rev. the Rector of Booton, Norfolk, to Mr. R. Johnston. —Hemington Rectory, Radstock, Bath. —"Sir,—Last winter my little boy was tormented for three months with chilblains, which scarcely ever allowed him to sleep at night, and which ultimately broke and covered his feet with wounds. I tried all the outward applications I could hear of without the slightest success. This year the chilblains appeared again, as bad or worse than before, and promised to run the same course, when chancing to catch my eye on the advertisement of Whitehead's Essence of Mustard, I made a trial of it, and, though the chilblains were on the point of breaking, the remedy stopped the itching, and in a day or two they were completely cured. I think it my duty to testify to the virtues of your medicine, that I may assist in making known a specific for a complaint which is both so general among children and so distressing to the parents. Yours obliged, R. Johnston." —Prepared only by the Executors of the late Robert Johnston, deceased, and sold in bottles, 2s. 9d. each (the Cerate in boxes, 1s. 1d. each), by Messrs. Barclay & Sons, 95, Farringdon-street, London, wholesale agents; and by every Druggist and Medicine Vendor in the Kingdom. The genuine has the name, "R. Johnston," engraved on the stamp.

DEAFNESS and NOISES in the HEAD.—Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London. Instant and permanent restoration of hearing guaranteed, without the use of ear-trumpets, instruments, or causing one moment's inconvenience to the most aged or nervous sufferer. Dr. HOGHTON'S new and extraordinary discovery, by one consultation enables deaf persons of either sex to hear immediately with perfect ease the lowest whisper, and magically removes all ringing in the ears. Hospital and private testimonials and certificates from the most eminent Physicians and Surgeons in England, in whose presence deaf persons have been cured, and many hundreds of private patients cured can be seen or referred to. Hours of consultation, 11 till 4 every day. Francis Robert Houghton, Member of the London Royal College of Surgeons, May 2, 1845; Licentiate of the Apothecaries Company, April 30, 1846.

Just published.
SELF-CURE OF DEAFNESS, for country patients; a stop to empiricism, quackery, and exorbitant fees, sent on receipt of seven stamps, free. Examination free. 9, Suffolk-place, Pall Mall.

FREEDOM FROM COUGHS.—One of Dr. LOCOCK'S PULMONIC WAFERS, allowed to dissolve in the mouth, immediately relieves the most distressing cough, and proves a powerful agent in the cure of the irritation of Coughs and Frosts. HAVE A PLEASANT TASTE. Sold by all Chemists, at 1s. 1d., 2s. 9d., and 11s. per box.

HOLLOWAY'S PILLS an astonishing Remedy for the CURE of ASTHMA.—Mrs. Newton, of Hyde, states, in a letter to Mr. Wild, Chemist, Hyde, that for many years she had been afflicted with severe attacks of asthma, attended with coughing, and violent attacks of violent pain in the side. She tried various remedies, and was under the treatment of several surgeons for months together, without obtaining any benefit. At length she was induced to try Holloway's Pills. The first dose gave relief, and by continuing them a cure has been effected. Being anxious that others so afflicted should obtain relief, she decided this fact to be publicly known. —Sold by all Vendors of Medicine; and at Professor Holloway's Establishment, 214, Strand, London; and 50, Maiden-lane, New York.

NATIONAL PROVIDENT INSTITUTION.

The NINETEENTH ANNUAL MEETING of the Members of the NATIONAL PROVIDENT INSTITUTION was held at the London Tavern, on Wednesday, December 20, 1854, S. H. LUCAS, Esq., in the chair.

The advertisement convening the meeting having been read,

The SECRETARY proceeded to read the Report of the Directors for the past year, which is as follows:—

"On this the 19th anniversary of the Institution, the Directors have great pleasure in submitting to their fellow-members the following gratifying Report.

"In the last twelve months, 1,545 proposals for assurance have been made to the Board; the number of Policies issued is 1,303, assuring the sum of 953,074*l.*; the Annual Premiums on which amount to 10,624*l.* 8*s.* 8*d.* The remaining 243 proposals have either been declined or not completed. This large amount of business during the year just closed affords satisfactory evidence that the high position which the Institution has so long held in public estimation is steadily maintained, notwithstanding the eager competition to which all life assurance offices are now subjected.

"The number of deaths this year has been 133. The claims arising from these, including bonuses added to the sums assured, amount to 70,051*l.* 1*s.* 4*d.*, being 4,377*l.* 17*s.* 3*d.* less than the preceding year. The total amount paid and in course of payment, since the establishment of the Institution, to the representatives of deceased members, is 441,369*l.* 11*s.* 11*d.*

"The accounts for the year ending the 20th of November last have been duly audited; the balance of receipts over the disbursements in that period is 117,669*l.* 6*s.*, increasing the capital stock of the Institution to the sum of 1,092,166*l.* 9*s.* 8*d.*, which is invested on mortgage of real estate, and on Government and other satisfactory securities; 46,372*l.* being advanced on loan at interest to members on security of their respective policies.

"The annual income arising from the premiums of 13,175 existing policies (after deducting the sum of 33,348*l.* 17*s.* 2*d.* for abatement of premiums at the last division) is 177,999*l.* 5*s.* 9*d.*, and from interest on invested capital, 44,073*l.* 7*s.* 7*d.*; showing a total annual income of 222,072*l.* 13*s.* 4*d.*

"The Acts relating to Friendly Societies, under which this Institution was originally enrolled, have of late years undergone repeated alterations. This frequent change in the law was productive of such great inconvenience that the Directors felt it incumbent on them to unite with certain other societies similarly founded in applying to Parliament for a special act, whereby they might in future be relieved from restrictions applicable only to local societies. This desirable object was attained at the close of the last session of Parliament, when an act (17 & 18 Vict. c. 56.) was passed, whereby this and other societies are henceforward relieved from restrictions, and are placed, in regard to the scope and character of business, on an equal footing with other Life Assurance Societies.

"A notice for convening a Special General Meeting of members, on Wednesday, the 10th of January next, has been issued, to consider the expediency of altering the quinquennial period of the divisions of profits to a triennial one. The Directors think it right to inform their fellow-members that this proposal has not been brought forward by the Board; and they trust the said meeting will be largely attended, so that the proposed change may obtain that deliberate consideration which a subject of such vast importance demands.

"The following statement shows the amount returned to the members, by abatement in premium, at the Divisions of Profits of the 17 years ending the 20th of November, 1853; in addition to which, the sum of 136,564*l.* has been added by way of bonus to the sums assured by those members who elected that mode of appropriation:—

	Reductions.
"At the division of 1842	£18,571 16 3
" " 1847	54,818 9 7
" " 1852	166,744 5 10

Total sum returned in abatement of premiums £240,134 11 8

"The following statement shows the progress of the Institution:—

"NUMBER OF POLICIES ISSUED.	
"From 15 Dec. 1835, to 20 Nov. 1842 (7 years)	3,215
"20 Nov. 1842, to 20 Nov. 1847 (5 years)	4,575
"20 Nov. 1847, to 20 Nov. 1852 (5 years)	7,066
"20 Nov. 1852, to 20 Nov. 1853 (1 year)	1,336
"20 Nov. 1853, to 29 Nov. 1854 (1 year)	1,302
Total number issued	17,494

"AMOUNT OF INCOME.	
"20 Nov. 1842	£39,340 9 7
"20 Nov. 1847	111,113 13 0
"20 Nov. 1852	206,700 11 5
"20 Nov. 1853 (after allowing the reduction on Premiums)	201,210 14 4
"20 Nov. 1854	222,072 13 4

"AMOUNT OF CAPITAL.	
"20 Nov. 1842	£139,806 1 7
"20 Nov. 1847	417,172 16 0
"20 Nov. 1852	875,486 5 7
"20 Nov. 1853	974,497 3 8
"20 Nov. 1854	1,092,166 9 8

(Signed on behalf of the Directors),
S. H. LUCAS, Chairman.
JOSEPH MARSH, Secretary.

"London, Dec. 12, 1854."

The CHAIRMAN.—Gentlemen, It is again my privilege to congratulate you upon the increasing prosperity of our Institution. In proposing to you the usual acceptance of the Report which has just been read, I feel confident that every member in this room, and every member throughout the country, as soon as he or she shall come to a knowledge of its contents, must participate in those feelings of lively satisfaction which the Directors derive from being able to put forth such a document. Gentlemen, notwithstanding

the very eager and active competition of some 200 life offices in this metropolis, we have received upwards of 1,545 new proposals for assurance in the course of the last year; 1,302 of which we were able to accept, and to issue policies of assurance upon, deriving annual premiums therefrom within a fraction of 20,000*l.* This I think a most cheering evidence, not only that the high reputation which the Society has attained is steadily maintained, but that it is yearly on the increase. (Applause.)

The next item in the Report is one of great moment—perhaps of the greatest moment—as an element of our success, is the low rate of mortality during the past year, and, indeed, during the whole period of our existence. I have the best authority for saying, that during last year, as well as in former years, the rate of mortality which we have experienced is considerably under that which might fairly be looked for. (Hear, hear.) This, I think, we may in no small degree attribute to the skill and watchfulness of our medical advisers. I know not whether they are present or not, but they deserve that it should be noticed, for if due vigilance in this respect were not maintained by them, and by the Board, any great accession of members from year to year, instead of proving an element of strength, would, I need not say, be an element of great weakness and danger. It is, therefore, gratifying to believe, from good authority, that the rate of mortality has been so favourable to the success of our Institution. We have passed through a year in which, as is well known, a very serious epidemic has prevailed in many parts of the country, and yet, notwithstanding the large addition of members, the number of deaths reported in the past year is very moderate.

The next circumstance I would notice is one which I always contemplate (as I am sure every member must) with the deepest interest, which is the large sum of 441,369*l.* that has been paid to the families or representatives of deceased members in the 19 years during which this Institution has existed. (Hear, hear.) I remember, in the early period of this Institution, the most hopeful among us ventured to predict that we should realize a capital of half a million at the end of 20 years. Now, after having paid away nearly that amount of money to the families of deceased members, we find that we have accumulated a capital of 1,092,000*l.* (Cheers.) I never will speak of it boastingly, but I do speak of it as most cheering, and as evincing the most conclusive evidence of success, so far as human ability can be brought to bear upon an Institution of this kind, and I say it in all humility, that I believe our success is unparalleled. I have here a copy of the first annual Report that the Directors presented to their fellow members on the 15th of December, 1836, and with your leave, I will trouble you with one paragraph only:—"The Directors have great satisfaction in stating that the balance of cash remaining in hand, &c., is 10,670*l.* 6*s.* 6*d.*, which sum is duly invested." I remember, on presenting that Report to the Annual Meeting, we were delighted to find that we had accomplished so much. That 10,000*l.* was the germ of the prosperity and magnitude to which the Institution has now risen; from that 10,000*l.* we have accumulated a capital of considerably upwards of one million sterling, after having paid to the families of deceased members, or their representatives, nearly half a million. (Cheers.) I advert to this as showing the fruits of our 19 years' labour. Here we see realized the great object for which the Institution was established; and when we contemplate the large amount of really substantial benefit thus diffused among hundreds, perhaps thousands, of families, it is most gratifying to think that the object with which we started has been so extensively realized; and I may state, from information on which I can rely, that a very large proportion of the sum so paid has been paid to families who, without this provision, would have been left comparatively destitute. (Hear, hear.) Hence, I say, the encouragement to every member to induce his friends and connexions to secure to their families the benefits which this Institution affords.

Passing from figures however cheering, I would just notice, in very few words, a paragraph in the Report relating to the Act of Parliament which was obtained at the close of last session. In common with four or five other societies similarly founded, we felt it to be our duty to endeavour to obtain an act which should relieve us from legislative interference year after year—alterations being often made mainly, and almost entirely, to suit small local societies; and while such restrictions were highly proper for them, and did not necessarily impose any difficulty upon them, they greatly impeded the operations of an Institution of this magnitude. We were restricted from various eligible means of investment, which it was extremely desirable we should be able to avail ourselves of. We must all see that it is of the greatest importance that the funds of the Institution should be as profitably and securely invested as possible; and I need not say that that object closely occupies the anxious attention of the Board.

I do not know that I need detain you longer in commenting upon this Report, which, I am sure, speaks well for itself. However, there is one subject, although not therein noticed, which it would hardly be right in me to pass over. In the course of the 19 years that the Institution has existed, the Board has never seen it right to resist a claim arising

from the death of any member, except in two instances (Hear, hear.) One was, I think, some ten years ago, on a policy for 500*l.*, and the other occurred during the current year, on a policy for 1,000*l.* I need not say that the Directors have always felt most reluctant to interpose any objection to the payment of a claim, unless upon substantial grounds, and where they also felt they would not be justified in paying it, unless compelled so to do. The claim which arose during the last year was on the death of a member who had only paid two premiums on his policy. Very soon after the death was announced, the Board received information which led them to suspect that some deception had been practised, and it shortly afterwards transpired that the same party had effected policies in several other offices to a large amount—nearly 18,000*l.* I am not going to mention names, nor need I dwell more particularly upon the circumstances, except to say, that at length such information was received by us that we felt, and were advised, that, in the discharge of our duty, we had no right to pay one penny upon that claim; and, feeling that, we had nothing to do but to resist it. An arbitration has been held on the case, and, owing to the peculiar circumstances, and the claimants bringing forward a great number of witnesses to invalidate the information that we had obtained, and to rebut the evidence upon which we relied, it occupied a very considerable time. I believe I am right in saying, that as far as we were concerned, four days only were occupied in our case, whereas something like nineteen meetings were taken up on the other side, occasioning a very protracted investigation. However, no longer ago than last week we had the satisfaction of receiving the unanimous award of the arbitrators in our favour. (Applause.) As I said before, this is only the second instance in nineteen years that we have found it right to resist a claim. In the former instance we were equally successful. We had the unanimous award of the arbitrators in that case.

These successful results will not lead us to be captious (hear, hear.)—they will not lead us to raise objections, except in such cases as our duty to our fellow-members may compel us to do; for if one thing is more necessary than another for upholding the character of our Institution, it is that we should keep good faith with all our members. (Hear, hear.) It was with extreme reluctance we were induced to resist this claim; but when we found facts accumulating so thick upon us, convincing our own judgment (whatever might be the judgment of other persons), we felt we were bound, in the discharge of our duty, to do as we have done; and I rejoice to find that the result has justified us in the course we have pursued. (Applause.)

Gentlemen, I am not aware of anything else that I need notice, except that a ballot is to take place, which will commence at 1 o'clock and close at 4, for the election of two Directors, in the room of two who retire by rotation, both of whom are eligible for re-election. Before I formally put the question to the Meeting for the acceptance of this Report, and for its being entered upon the minutes, if any gentleman has any observation to make, or any question to ask, I apprehend this is the time for him to do so.

After a few remarks from Mr. BENNOCH, in the course of which he congratulated the Meeting on the very excellent Report, the CHAIRMAN moved—

"That the Report be accepted and entered upon the minutes."

Which was carried unanimously.

Mr. BENNOCH, in pursuance of the notice he gave at the last Annual Meeting, moved, that the Directors be directed to apply to Parliament for powers to permit the members residing in the country to vote by proxy.

Mr. WATSON seconded the motion.

Mr. THWAITES dissented from Mr. Bennoch's views on this question, and felt bound to give his most hearty opposition to the motion. (Applause.)

The CHAIRMAN then called for a show of hands, when the motion was negatived, with very few dissentients.

The Auditors were re-appointed for the ensuing year.

The SECRETARY read the requisition for the meeting convened for the 10th of January next; also, one relating to the alteration of rules.

The Scrutineers on the ballot for the election of two Directors delivered in their report soon after 4 o'clock, by which it appeared the numbers were as follows:—

For John Bradbury, Esq. 382
" Jonathan Thorp, Esq. 287
" R. M. Holborn, Esq. 275

Whereupon the CHAIRMAN declared John Bradbury, Esq. and Jonathan Thorp, Esq. to be duly elected.

A vote of thanks to the Chairman for his able and impartial conduct in the chair this day, and to the Directors for their excellent management of the affairs of the Institution, was carried unanimously; which having been briefly acknowledged by the Chairman, the business of the meeting terminated.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 1424.

LONDON, SATURDAY, FEBRUARY 10, 1855.

PRICE
FOURPENCE
Stamped Ed. 5d.

The Meeting will be addressed by John Bright, M.P.; Richard Cobden, M.P.; George Dawson, M.A.; T. M. Gibson, M.P.; Apsley Pellatt, M.P.; Dr. Watts, &c. Doors open at 7. Chair taken at 8.

Tickets for the Platform may be had of Novello, Dean-street, and 24, Poultry; Cash, Bishopsgate; at Exeter Hall; and Office of Association, 10, Ampton-place, Gray's Inn-road.

THE GOVERNMENTS' INSTITUTION, 34, Soho-square.—Mrs. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools to her Register of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

HERR GUTZENBERG, who has executed several great FRESCO WORKS for different German Governments, and who has educated many young Painters, will be in his Studio, at No. 46, Berners-street.

BRIGHTON.—EDUCATION.—There are VACANCIES in a First-Class Establishment where only twelve Young Ladies are received. A Parisian Governess resides in the house. Signor F. Lablache, Herr Kuhn, Messrs. E. de Paris, Parents of other eminent Professors, attend. References to Misses B., care of Mr. Roland, 20, Berners-street, Oxford-street, London, where Prospectuses can also be had.—A Governess Pupils required.

FRENCH CLASSES.—Mr. AUGUSTE MANDROU, M.A. of the Paris Academy, Teacher of French, German, and Mathematics, will open in the first week of March 1855, at his Residence, 10, Great Street, Eaton-sq., EVENING CLASSES for the Practice of the FRENCH LANGUAGE. Each Class will be formed of Eight Gentlemen only, and will meet for two hours twice a week. Terms per Quarter, 1s. 10s. for each Pupil. Private Lessons on moderate terms.

EDUCATION IN GERMANY.—A LEGAL GENTLEMAN, of high standing, residing near one of the largest and pleasantest cities in Rhinish Prussia, wishes to RECRUIT TWO YOUNG ENGLISH GENTLEMEN of good family. The position and connexions of the Advertiser offer an excellent opportunity for completing the Education of a Youth, and at the same time imparting a thorough knowledge of the German language. Good Mastership in every branch of instruction can be obtained at moderate charges. The Advertiser's residence is pleasantly situated, and commands a fine view of the Rhine.—Full particulars, references and terms can be obtained by letter, post paid, addressed H., 340, Strand.

EDUCATION IN GERMANY.—A RARE OPPORTUNITY.—One or two English Children, between the ages of six and fourteen years, will be received into the Family of one of the Professors in the University of Berlin, where they will have all the comforts of a home, and all possible attention will be paid to their acquiring a correct knowledge of the German language, and where the best facilities will be furnished for their pursuing other studies. For references, terms, and other information, application may be made to Dr. Märcker, Oranienburger-str., 59, Berlin.

MISS H. S. PICKERSGILL, Professor of SINGING and the PIANOFORTE, has REMOVED to 8, BAKER-STREET, PORTMAN-SQUARE, where she requests her Pupils will address all communications.

INDIAN CIVIL SERVICE.—Candidates for these appointments, who are desirous of obtaining a thorough knowledge of ARABIC, are informed that they can receive LESSONS in that Language from Mr. JOSEPH CHURI, Maronite, from Syria, who is anxious to apply to him at his lodging, No. 5, Old North-street, Red Lion-square, London.

TO NEWSPAPER PROPRIETORS.—A Gentleman, of twelve years' experience in the several departments of Newspaper business, is open to an engagement as EDITOR and SUB-EDITOR, or will undertake the duties of Manager, or District Correspondent and Reporter.—Address JOURNALIST, Peel's Coffee House, Fleet-street.

PROFITABLE and USEFUL ACCOMPLISHMENT, to imitate elaborate Oak Carving in Leather, for Ladies or Gentlemen. Four Lessons will complete a Pupil. Terms, One Guinea, at their own residence or the advertiser's, by a Lady.—Direct A. D., 6, Church-street, Camberwell-green.

AS PRIVATE SECRETARY to a Nobleman or Gentleman, or as Secretary to an Institution.—The Advertiser, age 28, who holds a responsible Government Appointment, being at liberty early in the afternoon, is desirous of an ENGAGEMENT in either of the above capacities. He has acted as Private Secretary to a late Diplomatist; has received a Classical Education; understands French, German, and Spanish; is well experienced in Correspondence and Accounts, and is prepared with satisfactory references as to competency and respectability.—Address G. H., Post-office, Stockwell Green.

INSANITY.—A Lady who has had an afflicted Friend under the care of a Physician and his Wife, in a Private Asylum, a few miles from Town, is anxious to extend to those who have a similar anxiety the comfort she derived. A few Ladies only are received; and the quiet, home-like arrangements make it eminently adapted for all the alleviations that are possible to those labouring under the milder forms of this sad malady.—Particulars can be obtained by letter of Mrs. L., at Miss Creswick's, Stationer, John-street, Great Portland-street.

ORNAMENTS for the DRAWING-ROOM, LIBRARY, and DINING-ROOM, consisting of a new and elegant Assortment of Vases, Figures, Groups, Candlesticks, Obelisks, Inkstands, beautiful Inlaid Tables, Paper-weights, &c., in Italian Alabaster, Marble, Bronze, Derbyshire Spar, &c.—Imported and manufactured by JAMES FENNANT (late Maw), 149, Strand, London.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Messrs. COCKE & CO. respectfully solicit the attention of amateurs to the COLLODION, manufactured only by them from the formulae of Mr. W. A. Delferier. This Colloclon is superior to any other, and will not injure by keeping. Waxed, Iodized and Albumenized Papers of the first quality; also Photographic Chemicals of every kind from their own Laboratory.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Portraits, Copies of Pictures, Sculpture, &c. taken, and INSTRUCTION in the Art given daily, by Mr. A. LEBLANC, LEWIS COCKE. Photographic Apparatus of all kinds constantly on Sale.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyl-place. DAGUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

"Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life ** without the slightest sacrifice of definition, or the smallest approach to distortion—indeed, the errors and peculiarities of former impressions appear to be corrected."—*Athenæum*, July 22, 1854. "Mr. Mayall's portraits represent the high art of the daguerretype: they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut."—*Art-Journal*, Nov. 1853. More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

THE UNIVERSAL CIRCULATING MUSICAL LIBRARY.

Subscription, Two Guineas per Annum.

WHICH ENTITLES SUBSCRIBERS TO SELECT, AS THEIR PROPERTY,

One Guinea's worth of Music.

THE UNIVERSAL CIRCULATING MUSICAL LIBRARY, established at the commencement of 1853, has been attended with great success, and from that time up to the present, 15,000 different Works have been added to it; so that it now forms the most valuable, and perhaps also the largest Musical Library in the world. The Catalogue of the UNIVERSAL CIRCULATING MUSICAL LIBRARY contains at present upwards of 42,000 distinct Works, and forms a most complete, useful, and interesting Book of Reference to all cultivators of Music.

The peculiar advantages and distinctive features of the Universal Circulating Musical Library are these:—

- I.—It embraces all the Works of every eminent Composer, both English and Foreign.
- II.—Every new Composition of merit and general interest, published in England, Germany, France, Italy, and America, is added to the Library immediately on its appearance. Lists of such Works are issued quarterly, and added to the general Catalogue at the end of the year.
- III.—The present Catalogue of 42,000 distinct Works, with the above-mentioned quarterly lists, enables the Subscribers to the Universal Circulating Musical Library full and correct information of the whole field of Musical Literature; which information, without such means, it is impossible to obtain.
- IV.—Subscribers are entitled, at the expiration of their respective subscriptions, to select from the Library, Music to one-half of the amount of their Subscriptions; or to one-third, if books or other not articles be selected. Any Work out of this immense Library may be chosen, without regard to the Publisher.
- V.—Several copies of each Work are kept, and these are increased to fifty and more, according to the demand.
- VI.—Great care has been taken to procure the most correct and best arranged editions, both Foreign and English.

TERMS OF SUBSCRIPTION:

MR. BENTLEY'S LIST OF NEW WORKS.

I.

THE TURKS IN ASIA; or, **Anadol**, the Last Home of the Faithful. By the AUTHOR of the 'FRONTIER LANDS.' 8vo. 12s.
"Comes in the very nick of time, and offers information both new and important."—*Observer*.

II.

BENTLEY'S MONTHLY VOLUMES.

Vols. I. and II. (complete in Three) of **MR. JESSE'S COURT OF ENGLAND UNDER THE STUARTS**, including the Protectorate. Crown 8vo. with Illustrations, price 6s. per volume.
"One of those undertakings for which it is to the interest of the public to insure success by the heartiness of its support."
Examiner.

III.

The STEP-SON: a Domestic Romance of the Present Day. By F. N. DYER. 2 vols. 12s.
"Extremely well written, and the interest of the reader is sustained till the conclusion of the narrative."—*Press*.
"The story is vigorously and powerfully told."—*Morning Chronicle*.

IV.

Parts I., II., and III. of A HISTORY of CHRISTIAN CHURCHES and SECTS, from the Earliest Ages of Christianity. By the Rev. J. B. MARSDEN, A.M., Author of 'The Early and Later Puritans.' Price 3s. 6d. each Part. This Work will be completed in Eight Monthly Parts, price 3s. 6d. each.
"This work will supply a want long felt by the classical student; and as a book of reference it will be worthy a place in the library of the general reader."—*Morning Post*.
"A subject often discussed by theologians, but never so accurately and impartially as in the present work."—*Edinburgh*.

V.

HISTORY of the OTTOMAN TURKS, from the Foundation of their Empire to the Present Time. Chiefly based upon Von Hammer. By PROFESSOR CREASY, Professor of History at University College, London, and Author of 'The Fifteen Decisive Battles,' and 'The Rise and Progress of the English Constitution.' Vol. I. (complete in Two), 8vo. with Maps and Plans, 14s.
"Of all the histories of the Turks which the present war has produced, this is by far the best. Professor Creasy has brought to his task a mind more practised in historical investigation and raised nearer to the elevated tone looked for in an historian."—*Spectator*.

VI.

The DRUSES of the LEBANON: their Manners, Customs, and History. With a Translation of their Religious Code. By GEORGE WASHINGTON CHASSEAUD, late of Beyrout, Syria. 8vo. with Map, 14s.
"A volume of remarkable interest. To Mr. Chasseaud no scenes are more familiar than the Plains of Promise."—*Athenæum*.

VII.

NARRATIVES of PASSAGES in the GREAT WAR with FRANCE, from 1792 to 1810. By Lieut.-Gen. SIR HENRY BUNBURY, K.C.B., formerly Quarter-master-General to the Army in the Mediterranean. 8vo. with Maps and Plans, 15s.
"Will be read with interest both by the civilian and the military man."—*Athenæum*.
"It is as interesting as a record of brave deeds as it is valuable as a repertoire of historical facts."—*Britannia*.

VIII.

DR. DORAN'S NEW WORKS.

- 1. TABLE TRAITS, and SOMETHING ON THEM.** Second Edition. Crown 8vo. 6s.
- 2. HABITS and MEN;** with Remnants of Records on the Makers of Both. Second Edition. Post 8vo. 7s. 6d.

By Dr. DORAN.

From the *North British Review*.—"If books find readers in proportion to the interest which their subject-matter awakens in the universal heart of society, these volumes must soon find their way into general circulation. We lay them down with regret. They are full of pleasant facts and racy anecdotes charmingly told."

IX.

MEMOIRS of CELEBRATED CHARACTERS; to which is now first added, A LIFE of MILTON. By ALPHONSE DE LAMARTINE. Author of 'History of the Girondists.' Second Edition. Crown 8vo. 12s.

X.

The CRESCENT and the CROSS.

By ELIOT WARBURTON. Cheap Edition. 1 vol. with 15 Illustrations, 6s. bound.

"This admirable book of Eastern travel, alone sufficient to insure to the name of its author immortal fame, lies before us in an eleventh edition—a proof alike of its real popularity and of the good taste of the reading public. Its reappearance at this moment, when our thoughts and sympathies are so powerfully drawn towards the East, is singularly opportune."—*John Bull*.

THE MODERN ORLANDO. By

Dr. CROLY. Second Edition. Post 8vo. 5s. bound.

Published for HENRY COLBURN, by his Successors, HURST & BLACKETT, 13, Great Marlborough-street.

MRS. GORE'S NEW NOVEL.

Now ready at all the Libraries, in 3 vols.

MAMMON;

Or, THE HARDSHIPS of AN HEIRESS.

By Mrs. GORE.

"Mrs. Gore is certainly foremost among the female novelists of the day for wit, for acuteness of observation, for originality of remark, and generally for her graphic powers. These qualities ornament 'Mammon' in profusion."—*Observer*.

"'Mammon' is written with Mrs. Gore's usual vivacity. The novel is exhilarating in tone, and exhibits the follies and weaknesses of life in a spirit of playful sarcasm. The scenes of many-coloured life carry forward the story with animation, and broad dioramic sketches of society give reality to the whole composition."—*The Press*.

"A really good novel, that will attract every educated and observant reader."—*Messenger*.

"Mrs. Gore's style is always animated, light, and playful. It is sustained by originality of thought, and sparkles with satirical allusions. Her new romance exhibits English manners at the present day. It is thoroughly amusing, and is written with force and point."—*Sunday Times*.

Also, in 3 vols.

The SECRET HISTORY of a

HOUSEHOLD. By the Author of 'ALICE WENTWORTH.'

"Alice Wentworth" reminds us of the tales by Lady Scott, which had power and pathos enough to get a hearing and keep a place—even though Ister, Ward, and Butler were all in the field with their manly experiences of modern life and society."—*Athenæum*.

OAKLEY MASCOTT. By

L. HOWE. Dedicated to Professor AYTON. 2 vols.

"A very clever romance."—*Morning Post*.
"A deeply touching story, written with exquisite taste and feeling."—*John Bull*.

ANTIPODES; or, The New

EXISTENCE. A TALE of REAL LIFE. By A CLERGYMAN. 3 vols.

"This work has certainly the advantage of being different from every-day novels. It is seldom that so practical and useful a narrative is met with. Its interest is considerable, from being true and natural."—*Sun*.

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

REVIEWS

The Life of Mohammad, from Original Sources.

By A. Sprenger, M.D. Part I. Allahabad.

"THE Life of Mohammed has yet to be written for English and American readers," was the remark with which we, five years ago [see *Athen.* No. 1163, p. 154], concluded a review of Mr. Washington Irving's *Life of the Arabian Prophet*. We were obliged, whilst acknowledging the graceful style of that pleasing writer, to pronounce his work superficial and inaccurate; and a feeling of its deficiency in original information prompted our concluding remark. Prof. Weil, in the Preface to his well-studied work, '*Mohammed der Prophet*,' has observed that the advance of knowledge in these days requires the historical characters handed down to us from remote periods to be re-examined by the light of new and of better classified authorities, and recast upon a surer and more truthful basis. Among characters of world-wide celebrity there is not one that calls more loudly for a re-investigation of the "original sources" than that of Mohammed. Born in an obscure age, among a people whose antecedents are dimly shadowed out to us, in a country of all famous regions the least explored, his own career was a series of marvels and contradictions. While searching earnestly for truth, he taught millions of men to believe a gigantic fable; and, while tormented with doubts agonizing to his own breast, he inspired others with an invincible faith in his infallibility. With too little energy or too little ambition to support himself, except by the despised employment of a shepherd, he withstood for years the ridicule, the malice and the furious opposition of the leaders of his own family and of the nation, and finally vanquished all their efforts. Over this extraordinary and seemingly unfathomable character, the disciples and the opponents of his doctrines have alike combined to draw an additional veil of uncertainty. The first Mahomedans piously encompassed their Prophet with a cloud of miracles,—"the mythology," as Dr. Sprenger calls it, of Islâm. Western prelates piously distorted history to calumniate him; and philosophers, more impartial but equally unjust, endowed him with crimes of their own invention, such as they thought congenial to the character of an impostor. Thus, while Khadijah beheld him shaded by angels on his journey to Syria, Prideaux accuses him of robbing orphans of their patrimony, and Voltaire depicts him as yielding to the indulgence of his passions on his triumphal return to Mecca,—a triumph of which the greatest glory was his clemency and forbearance. Of those who have pretended to describe this singular being, one party has studiously disguised or perverted what they knew, and another has sedulously invented what they did but suspect or hope. In fact, the great difficulty of the Arabic language, and the rarity and inaccessibility of the MSS. of early Mohammedan writers, have been sufficient of themselves, if not to deter Europeans from undertaking the biography of the Apostle of Islâm, at least to cover the attempt hitherto with the disgrace of failure. The earliest and most authentic chronicles of the rise of Mohammedanism were not known, even by name, to those who have aspired to guide the opinions of Europe on that great event. Gibbon, for example, appeals to Gagnier's translation of Abulfeda, a prince who wrote in the fourteenth century, as to his "best and most authentic guide." But we now learn from a more reliable quarter that, "to consider so late an historian as Abul-

feda any authority at all, would convict an Orientalist of the most culpable ignorance in Arabic literature."

It is to far other and better authorities that Dr. Sprenger has had recourse; and, moreover, to him belongs the honour of being the first to discover two of the earliest and best chronicles of Mohammedan history. These are Wäckidi and the original Arabic of Tabari,—the former of which he brought to light at Cawnpore and the latter at Lakhnau. In addition to these, he has consulted the six canonical collections of traditions of the Sunnies and the Hayât al-qolûb, or Shiah collection of the same. To these must be added the Biography of Ibn Ishâq, or rather Ibn Hishâm's edition of it, completed before A.D. 828, and of which Dr. Sprenger remarks that, although by no means entirely to be relied upon, "it is the only original source which has hitherto been used by European historians." Dr. Sprenger further notices as among his "original sources" the traditions of Tirmidzy, who died in 892,—the *Kitâb al-Aghâny*, or Song Book, of Abû-l-Faraj, of Ispahan,—the Kash-shâf, a valuable commentary on the Koran,—and the Târykh Khamys, which has also been largely consulted by Prof. Weil.

Dr. Sprenger is better acquainted with the sources to which reference should be made for a biography of Mohammed than any writer who has hitherto dealt with this great story. The next question is, how has he availed himself of these sources? It is due to him to reply, at once, that, as far as his work has advanced (that is, to the arrival of Mohammed at Medina, 24th of September, 622), he has shown the greatest research and discrimination. So far, every reader must feel in following him through the difficult questions with which the subject is beset, that the way is threaded with a guide of rare caution and exactness. His conceptions are original and striking, and even those who will not unconditionally admit them must acknowledge themselves instructed where they are not convinced. We will presently state concisely his theory of the rise of Islâm; but ere doing so, let us lay before our readers a living portrait of the man whose disciples overthrew the thrones of the Cæsars and Chozroes.—

"Before speaking of the mission of the prophet, it is necessary to introduce him to our readers, and to acquaint them with his character. Mohammed was of middling size, had broad shoulders, a wide chest, and large bones; and he was fleshy, but not stout. The immoderate size of his head was partly disguised by the long locks of hair, which in slight curls came nearly down to the lobe of his ears. His oval face, though tawny, was rather fair for an Arab, but neither pale nor high coloured. The forehead was broad, and his fine and long but narrow eyebrows were separated by a vein, which you could see throbbing if he was angry. Under long eyelashes sparkled bloodshot black eyes through wide slit eyelids. His nose was large, prominent and slightly hooked, and the tip of it seemed to be turned up, but was not so in reality. The mouth was wide; he had a good set of teeth, and the fore-teeth were asunder. His beard rose from the cheek-bones, and came down to the collar-bone; he clipped his mustachios, but did not shave them. He stooped, and was slightly hump-backed. His gait was careless, and he walked fast but heavily, as if he were ascending a hill; and if he looked back, he turned round his whole body. The mildness of his countenance gained him the confidence of every one; but he could not look straight into a man's face: he turned his eyes usually outwards. On his back he had a round fleshy tumour of the size of a pigeon's egg; its furrowed surface was covered with hair, and its base was surrounded by black moles. This was considered as the seal of his prophetic mission, at least during the latter part of his career, by his followers, who were so devout that they found a cure for their ailments in drinking the water in which he had bathed; and it

must have been very refreshing, for he perspired profusely, and his skin exhaled a strong smell. He bestowed considerable care on his person, and more particularly on his teeth, which he rubbed so frequently with a piece of wood, that a Shiah author was induced to consider it as one of the signs of his prophetic mission. He bathed frequently, washed several times a day, and oiled his head profusely after washing it. At times he dyed his hair and beard red, with henna, in imitation of his grandfather, who imported this habit from Yaman. Though he did not comb himself regularly, he did it now and then. At first he wore his hair like the Jews and Christians; for he said, In all instances, in which God has not given me an order to the contrary, I like to follow their example;—but subsequently he divided it, like most of his countrymen. Every evening he applied antimony to his eyes; and though he had not many grey hairs even when he died, he concealed them by dyeing or oiling them, in order to please his wives, many of whom were young and inclined to be giddy; and whose numbers he increased in proportion as he became more decrepit. The prophet was usually dressed in a white cotton shirt, or blouse, (qamyç), with pockets, and sleeves which reached to his wrists. He had a skull-cap and a turban on his head, the extremities hanging down the back; and sandals, with two leather straps over the instep, on his feet. In the house he wore merely a piece of cloth (îçâbah) tied round his temples, leaving the crown of the head uncovered. Sometimes he wore, instead of the shirt, a 'suit of clothes' (kollah), which consisted of an apron (izâr), that is to say, a piece of cloth tied round the waist and hanging in folds down to the legs, like a woman's petticoat; and a sheet (ridâ), or square shawl, which was thrown over the left shoulder and wrapped round the body under the right arm. Sometimes he wrapped himself in a blanket (mirt)."

Some gastronomers may like to learn that the Founder of Islâm was exceedingly fond of "Polish stew," and so captivated by the charms of "bread soaked in gravy that he compared his beloved 'A'yishah with it;" but we leave these *deliciæ* for what is of more importance to his prophetic career. Here is the description of his mental qualities.—

"The temperament of Mohammed was melancholic, and in the highest degree nervous. He was generally low-spirited, thinking, and restless; and he spoke little, and never without necessity. His eyes were mostly cast to the ground, and he seldom raised them towards heaven. The excitement under which he composed the more poetical Sûrahs of the Qurân was so great, that he said that they had caused him grey hair; his lips were quivering and his hands shaking whilst he received the inspiration. An offensive smell made him so uncomfortable that he forbade persons who had eaten garlic or onions to come into his place of worship. In a man of semi-barbarous habits this is remarkable. He had a woollen garment, and was obliged to throw it away when it began to smell from perspiration, 'on account of his delicate constitution.' When he was taken ill, he sobbed like a woman in hysterics; or, as 'A'yishah says, he roared like a camel; and his friends reproached him for his unmanly bearing. And during the battle of Badr his nervous excitement seemed to have bordered on frenzy. The faculties of his mind were extremely unequally developed; he was unfit for the common duties of life, and even after his mission he was led in all practical questions by his friends. But he had a vivid imagination, the greatest elevation of mind, refined sentiments, and a taste for the sublime. Much as he disliked the name, he was a poet; and a harmonious language and sublime lyric constitute the principal merits of the Qurân. His mind dwelt constantly on the contemplation of God; he saw his finger in the rising sun, in the falling rain, in the growing crop; he heard his voice in the thunder, in the murmuring of the waters, and in the hymns which the birds sing to his praise; and in the lonely deserts and ruins of ancient cities he saw the traces of his anger. His imagination peopled these fastnesses with jinn, who were created like ourselves to praise God. His notions of the Divinity, however, are far from being as pure as they are generally believed to

be. The God of Mohammed is not the result of abstraction; he merely possesses those epithets, which man covets, in a superlative degree. His ascribing to him ninety-nine attributes would by itself be sufficient to convince us how concrete his ideas were respecting his divine nature. The Prophet was not free from superstition; he believed in jinn, omens and charms, and he had many superstitious habits. The jinn were, according to his opinion, of three kinds: some have wings and fly; others are snakes and dogs; and those of the third kind move about from place to place like men. Again, some of them believed in him, and others did not. He gave instructions to his followers, if a fly falls into a dish of victuals, to plunge it in completely, then to take it out and to throw it away; for in one of its wings is a cause of sickness, and in the other a cause of health; and in falling it falls on the sick wing; and if it is submerged, the other wing will counteract its bad effect. To make a bad dream harmless, he thought it necessary to spit three times over the left shoulder. He was very careful to begin every thing on the right side, and to end with the left; and he smeared the antimony first in the right eye. His ideas of omens, however, were more sensible; he admitted lucky omens, but forbade to believe in unlucky ones. The energy and enthusiasm of Mohammed claim our highest admiration. The following pages contain instances of his extraordinary firmness and perseverance. His followers, however, admit that in his trials he was greatly supported by the endurance of his wife Khadijah. His dark and bloody fanaticism fills us with horror, and his cunning weakens our faith in his honesty of purpose. When he was on the grave of his mother, he publicly declared that her soul was condemned for having worshipped idols; and his judgment on his uncle and protector, the noble-minded Abū Talib, was equally severe. His actions were, in some instances, as cruel as his poetry: some apostates from his faith were sentenced by him to have their hands and feet cut off, and their eyes pierced with hot irons. In this condition they were thrown on the stony plains of Madynah. They asked for water, and it was refused to them; and so they died. Such instances of cruelty are the more characteristic of his fanaticism, as he was naturally mild, and even soft."

Having thus exhibited the most prominent figure in Dr. Sprenger's canvas, the conception of which appears to us both original and truthful, we come to his general theory. It is a question which every one, versed or not in the history of those times, will have asked himself, How is it that Mohammedanism grew with such astonishing rapidity? We turn over the pages of the Koran and ask—can this be the book for which martyrs have died and which has shaken princes from their thrones? We are far, indeed, from agreeing with Gibbon in styling Mohammed "an illiterate barbarian"; but how could any individual personage, however great his talents, have so bowed the hearts of the nations as to produce the results his teaching did? Our author's theory, in reply to these questions is, that the great revolution of which we speak, was not the work of one man. He shows that Zayd and Warakah and others had discarded the idolatrous creed of the Arabs before Mohammed assumed his prophetic mission, and that still earlier Qoss of the Iyādites, the Arabian Wycliffe, had preached the unity of God at the great fair of 'Okātz. The Arabs, when Mohammed appeared, were already ripe for better things than a belief in Lāt and Ozzā. While the flame of Christianity seemed expiring in the West and thick darkness brooded over the rest of the world, there were men of earnest minds and determined purpose in Mecca, searching for truth, whose enthusiasm was not kindled by Mohammed, but by whose zeal he himself rather was hurried resistlessly along.—

"From the preceding account of early converts, and it embraces nearly all those who joined Mohammed during the first six years, it appears that the leading men among them held the tenets, which form the basis of the religion of the Arabic prophet, long before

he preached them. They were not his tools, but his constituents. He clothed the sentiments, which he had in common with them, in poetical language; and his malady gave divine sanction to his oracles. Even when he was acknowledged as the messenger of God, 'Omar had as much or more influence on the development of the Islām as Mohammed himself. He sometimes attempted to overrule the convictions of these men, but he succeeded in very few instances. The Islām is not the work of Mohammed; it is not the doctrine of the Impostor; it embodies the faith and the sentiments of men who, for their talents and virtues, must be considered as the most distinguished of their nation, and who acted under all circumstances so faithful to the spirit of the Arabs that they must be regarded as their representatives. The Islām is therefore the offspring of the spirit of the time, and the voice of the Arabic nation. And it is this which made it victorious, particularly among nations whose habits resemble those of the Arabs, like the Berbers and Tatars. There is, however, no doubt that the Impostor has defiled it by his immorality and perverseness of mind, and that most of the objectionable doctrines are his."

With a band of such disciples ready to his hand, the successes of Mohammed seem less surprising. Nor must the nature of his doctrines be forgotten. The unity of God, alms, good works, prayer, perfect resignation to the will of Heaven—these are high themes, likely enough to topple down the Dagon of idolatry. In thus detracting, moreover, from the all-powerful influence which others suppose Mohammed to have exerted on the rise of Islām, Dr. Sprenger does not fail to do him justice in some other particulars. He repels, for instance, the charge which has been brought against him, and which he himself, to magnify his mission, seems to have winked at, of being illiterate. Thus, in the well-known passage of the Koran, 7, 156, the Prophet is thought to style himself illiterate, where he says: "*Credito ergo in Deum et Legatum, ejus Prophetam idiotam;*" and on this Maracci, with almost ludicrous bitterness, observes, "*Imo! ultro concedimus Mahumetum idiotam idiotissimum fuisse!*" But, in explanation of the word *ummiy*, here rendered "illiterate" by Sale, Sprenger well adduces another passage of the Koran, Sura 2, 73, where the same word, *ummiy*, is defined to mean, "having no revealed book." Mohammed, therefore, might have styled himself Prophet of the *ummiys*, that is, of the Arabs, in contradistinction to the Jews and Christians, who had a previous revelation. Another passage in the 96th Sura is more doubtful; but the general argument is decidedly in favour of Dr. Sprenger's view. Mohammed was a noble, of the noblest tribe of Mecca, where even ordinary persons could read and write, as is proved by an incident in the war with Medina. We may suppose that he was at least as well informed as his wife, Khadijah; and we know from Tabari, "that when Mohammed entered on his office he had read the Scriptures and was acquainted with the history of the Prophets." Nor must Mohammed's early trading expeditions to Syria be forgotten, which he could hardly have conducted had he been wholly illiterate. In spite, too, of what Dr. Sprenger suggests "as to his instructors," we must continue to think that Mohammed composed the whole or the greater part of the Koran himself,—a work which, though tedious and insipid enough in translation to justify Gibbon's sneers, yet in the original, in poetical imagery and musical cadence, equals if not excels the best works in Arabic literature. And here we must, for the first time, find fault with our biographer, and unequivocally condemn his rhyming translations of the Koran. Take, for example,—

"By the star when it passeth away, your countryman does not err; nor is he led astray, in what he preaches; he has not his own way, but a revelation he does say; a mighty one, of great sway, personally

appeared to him in open day, where there rises the sun's ray; high in the sky he did fly; then he drew nigh in his array, and only two bows' distance from him he did stay, that the revelations, which he had to say, he might to his servant convey. How can Mohammed's heart a falsehood state? Why do you with him on this vision debate? He saw him another time in the same state; at the sidrah-tree of the limit he did wait; there to the garden of repose is the gate; and whilst the tree was covered, with what at the top of it hovered, Mohammed attentively looked, and his eyes from the sight did not deviate; for he saw the greatest of the signs of his Lord."

Sale's translation may appear flat, but this is a lower depth indeed. Surely here, if anywhere, Sadi's well-known lines are applicable.—

If in this fashion the Korān you read,
You'll mar the loveliness of Islām's creed.

We think that there is somewhat of inconsistency in the estimate of the subsequent career of the Prophet, and that the charges of fanaticism and of being a wilful impostor can hardly be, simultaneously, made good. Perhaps, too, there is more of dramatic effect than of truth in the following picture of the transition period in Mohammed's life.—

"This crisis of Mohammed's struggles bears a strange resemblance to the opening scene of Goethe's Faust. The poet paints, in that admirable drama, the struggles of mind which attend the transition in men of genius, from the ideal to the real—from youth to manhood. Both in Mohammed and in Faust the anguish of the mind, distracted by doubts, is dispelled by the song of angels, which rises from their own bosoms, and is the voice of the consciousness of their sincerity and warmth in seeking for truth; and in both, after this crisis, the enthusiasm ebbs gradually down to calm design, and they now blasphemously sacrifice their faith and God to self-aggrandizement. In this respect the resemblance of the second part of Faust to Mohammed's career at Madynah is complete. As the period of transition in the life of the prophet has hitherto been completely unknown in Europe, Goethe's general picture of this period in the life of enthusiasts, is like a prediction in reference to the individual case of Mohammed."

On the whole, however, we are bound to express our high sense of Dr. Sprenger's merits, particularly of his erudition and of his laborious accuracy. It is a strong feeling, indeed, of these merits which makes us regret some trifling blemishes. Among these must be included his spelling of oriental words. Such vocables as *Qocayy*, *Tamymyy*, *aphāb* are like nothing we have ever seen or heard of before. Dr. Sprenger is here a veritable iconoclast, for he destroys at a blow all the idols of former oriental systematizers. Nor does his style sustain a comparison with some of those who have preceded him as writers of the same biography. With these deductions, his Life of Mohammed must be admitted to be a remarkable work; and we should welcome its reproduction in this country, undisfigured by those typographical errors inseparable from a book printed in India.

A Summer's Excursion in New Zealand; with Gleanings from other Writers. Kerby & Sons.

Those who have a respect for ancient institutions, will regret to hear that the fashion of tattooing is becoming a sign of vulgarity, and is therefore gradually dying away in New Zealand. Few fashions have had so long a run. The mode began in Scythia, in dark mythological days, when dates were considered as matters unworthy notice. It began, not in honour but in dishonour. Some Thracian female captives happened to be in the power of certain Scythian ladies. The captives were pretty, which was more than their keepers were, and the latter determined to mar the good looks of which they were intensely jealous. Of course, neither guardians nor guarded were burthened with much costume: a fair

skin was the more prized, and this was the especial distinction of the Thracian ladies. Their Scythian mistresses seized and bound them as they slept,—and having effectually prevented all resistance, they proceeded to *tattoo* their flesh from forehead to hip, describing thereon a series of the most revolting figures. When the Thracian captives were left to contemplate themselves in their new adornments, they wisely made the best of their sorry condition. By a little ingenuity, they involved the figures drawn upon their skins in such a maze of additional tattooed lines, curves, zig-zags, and flourishes, that the original design was lost beneath them, and the captives were considered so irresistible in their novel embroidery that the fashion spread throughout a great portion of Asia, passed from Asia to the isles, and at length reached New Zealand,—where, as we have said, it is only now beginning to be considered ridiculous. A tattooed chief, in short, is now laughed at, and even New Zealanders look upon him with much the same feelings as the young dandies looked on old George the Second when, once a year, he presumed to stalk about his “drawing-room,” attired in the identical dress which he had worn in the days of his youthful chivalry, on the bloody field of Oudenarde.

The author of the modest and useful—and, we may add, agreeable—volume before us, thus speaks, in the course of his progress through the country, of the existing condition of the fashion to which we have alluded.—

“We reached the river Manawatu, a distance of about 16 miles from the Ohau, shortly after noon. We crossed in the canoe, the horses swimming alongside. While the horses were swimming across we indulged ourselves in criticizing the object of the various facial scarifications which we had met with in our excursion. We have seen some chiefs so entirely carved about the head as scarcely to have one spot unengraved, while we have seen others without a scratch; the same difference appearing in cases where the people were in the most menial employment. In some the tattoo appears as if the impression had been made by merely pricking the surface; in others, one would imagine that a portion of the flesh had actually been removed. In the case of women, the marking is generally confined to the lower lip, which is thereby rendered of a deep neutral tint colour. The different kind of tattoo has been regarded as a distinction of tribes, an armorial bearing, or a sign manual; but the question is apparently involved in considerable mystery. As far as I could judge, it appeared to be indicative of nothing beyond the peculiar fancy of the person so decorated, or disfigured. The rising generation do not submit to the mutilating process.”

The most useful portion of this volume is doubtless that which is devoted to giving information to settlers,—but the most amusing, and certainly not the least important, is that which describes the natives in their present transition state. Here is a scene which could only occur among a people in such a state. The travellers had arrived way-worn, at the village of Witta-Kau, where all the inhabitants vied with each other to give them welcome.—

“Fortune favoured the chief of the village, who appeared wrapped in a dog-skin cloak, alternately black and white, his face being so elaborately carved as scarcely to leave any portion which nature might claim as her own handy-work. We were duly ushered into a hut consisting of two rooms, having a fire-place in the inner sanctuary; at one end was a deal-boarded bed without mattress or furniture, and from the wall was suspended a dilapidated bookcase, on the dusty shelves of which were some well-worn portions of Scripture. Duly installed, a fire was lighted, but with a truly Maori disregard of all politeness, our porters surrounded the fire-place drying their clothes, leaving us in the outer circle to enjoy an occasional glimpse. To thrust them on one side was in vain, for throngs of all classes filled the room, and smoke,

dense and fearful, overpowered us. We entreated that a little more space might be allowed; we pointed to our streaming eyes; but no sympathizing action followed: so, unwilling to offend our host, but desirous of saving ourselves, we effected a precipitate retreat to the fenced enclosure, where we set to work and pitched our tent amid the laughing jokes of old and young, who regarded our proceedings with amusing interest. Success at length crowned our efforts; the tent was reared, and as a barrier against an irruption of the outside barbarians, a fire was lighted in the very vestibule. Futile were all our labours, vain our ingenuity: the sanctuary was stormed; around the fire a dense group was assembled, and some even took up a position inside. Extremes meeting, we roared with laughter; a counter cheer was elicited from their side: we appealed to their feelings; they could not readily find them: we appealed to the chief, intimating, with hand outstretched towards a neighbouring height, our intention to remove our encampment unless we were allowed a little privacy. Our entreaties are not in vain: a successful effort is made, silence reigns around. But oh! the transient character of all earthly enjoyment. We had scarcely begun to unpack and to remove our saturated clothes, when, lo! a woman's head appears from beneath the lower part of the tent: a fresh inroad is made, the citadel is taken; and we are obliged, in order to obtain a little quiet, to betake ourselves to a rapid retreat. With indignant remonstrances in English, impressive from their very unintelligibility, we strike our tent to the silent amazement of the assembled multitude, and learning that an Englishman's house was nigh, we shouldered our packs and started off in search of it. Wonder now gave place to triumph, and the ‘*tenā-koe*,’ which had welcomed our arrival, was changed into a derisive cheer at our odd notions in departing.”

The author tells us, that “every village, be it ever so small, has a church, and that without fail the very best house in it.” This is a gratifying proof of progress; but, on the other hand, we are disappointed by finding that the church is invariably used as a sort of caravanserai for travellers, and that matters of a very irreligious aspect are transacted therein. People eat, drink, and sleep there. This is the more remarkable as, previous to their conversion to Christianity, the Maori would not allow of any secular business whatever being transacted under the shadow of their religious edifices. We should be sorry to believe that they have less respect for the “house of God” than they had for the houses of their old idols and the shrines on which they stood in hideous ugliness. The author speaks of the ceaseless intruding curiosity of the natives being perfectly intolerable,—but this seems to us to be a more promising trait than the savage, stolid indifference of the aborigines of Australia. Besides, as the author remarks, these “curious” people were cannibals but yesterday, and “now you are treated only with an obtrusive inquisitiveness, while then they would have treated themselves to the most tender morsels about you.” Curiosity is, undoubtedly, better than cannibalism, and so far progress has been made. Cunning succeeds to violence, and it is only when divine and human philosophy has penetrated a people that a higher quality of mind or a better principle distinguishes them. Many a self-styled civilized nation is little further advanced in this respect than our brethren in New Zealand.

Lady Morgan's Works.—Vol. I. *The Life and Times of Salvator Rosa.* Bryce.

In the fullness of years and literary honour,—ere the brightness of her fancy dims, or the strength of her execution fails,—it is well that Lady Morgan should collect her works. A few hours may be well bestowed on the pleasant task of revising and reprinting books which are a portion of our literary history, and which,

therefore, even apart from transient tastes and changing canons, must always interest those who desire to know what books were popular in the early half of the nineteenth century. But the Lady and her works are not confined to the sympathies of the hour. So long as wit can fascinate—so long as beauty of style has power over the soul—and so long as goodness, gaiety, and dashing spirits are in the ascendant—so long may we expect a public for the works of this writer.—In the constellation of modern genius, the Author of ‘*Florence Macarthy*,’ ‘*O'Donnel*,’ ‘*Italy*,’ and the ‘*Letter to Cardinal Wiseman*,’ will hold her place as a bright particular star.

When the series of her works is before us in its final shape, we may venture to consider more in detail the claim which they establish; in the mean time, we announce the publication of Volume First, and transfer to our columns the few words addressed by Lady Morgan to her new public on the re-appearance of her ‘*Salvator Rosa*.’—

“It is the desire of the Publisher of this new edition of my works, that I should prefix a few introductory lines to the first volume of the Series, ‘*The Life and Times of Salvator Rosa*.’ But the great Artist will speak best for himself to the present generation, as he has done to so many others in the course of those two centuries of his triumphs which have swept on to

The years beyond the flood.

Painter, Poet, Musician, Philosopher, and Patriot, he combined in his fine organisation the supreme elements of high Art, with the noblest instincts of intellectual humanity. He worked through his great vocation with a spirit of independence that never quailed, and with unflinching resistance to the persecutions of despotism and the intrigues of professional rivalry. His moral dignity refused to pander to the licentious tastes of the profligate times in which he flourished, and, in this respect superior to many of his great predecessors, he left not one picture that,

—dying, he might blush to own,

while he exhibited in his great historical compositions, ‘*The Death of Regulus*’ and ‘*The Conspiracy of Catiline*,’ a graphic eloquence which Herodotus and Gibbon have scarcely surpassed.—The story of Modern Italy writhing under foreign rule, he depicted in those groups of outlawed gentlemen and an outraged people, who, being denied all law, lived lawlessly, and, driven into crime by necessity, peopled the savage scenery of the Abruzzi, or sought refuge in the caves of Calabria, where Salvator found and painted them, as the moral results of political misrule. But these *fuori città*, these *condottieri* of romantic history, whose graceful forms and noble bearing bespoke their high caste, natural and social, were capable of chivalrous deeds and generous sympathies,—unlike those banded serfs of modern warfare, of low instinct and Tartar aspect, who, with the sword in their hands, and the cross in their hearts, strike down their foe to murder him at leisure, as palpitating life moves one muscle more to impede the plunder of some bosom gem, the gift of love or maternal affection. As the poet of Liberty, Salvator takes his place among the high priests of her altars in Italy—Dante, Petrarch, Tasso, Filicaja. He rendered even philosophy familiar to the eye, when, by the double despotism of Church and State, its truths were prohibited from meeting the understanding; and while Galileo was condemned to death for proving that the earth moved, Salvator, unsuspected and unpunished, painted, in allegories of artistic excellence, theories at least as dangerous. Did Salvator live now, one might fancy him joining the ranks of the gallant defenders of national independence and civilisation; standing out, like one of his own bold figures, upon the heights of Balaklava, pencil in hand and revolver in belt, realising for the homage of posterity the grand battle raging below, till, borne away by his kindling sympathies, he flings down his pencil, and, plunging into the *mêlée*, meets a glorious death or shares a not less glorious triumph.—With respect to the Authorship of the ‘*Life of Salvator Rosa*,’ it was written *con amore* in the prime

of the Author's life, and of her enthusiasm for Italy. Of the principle which animates it, time has not 'bated one jot,' nor quenched one sympathy. The style in which it was written may now, perhaps, be deemed *rococo*, by the censors of the modern free-and-easy school, who write that those who *run* may *read*. Such as it is, it was the style with which the Author won her spurs, under the command of Field-Marshal 'O'Donnel' and other heroes, native and foreign, who 'championed' to their utmost the sublime cause of right and their country's independence. If, however, with the conceit of other veterans, she now

Shoulders her crutch and shows how fields were won, she pleads that she served, though only as a sub-altern, in times of the greatest literary enterprise and mental competitorship that British genius ever produced since the Augustan ages of Elizabeth and Anne!"

The volume thus heralded is printed in good type and on good paper; so that the work may take its place on the library-shelf after it has served its turn once more on the boudoir-table.

A Ramble through Normandy; or, Scenes, Characters, and Incidents in a Sketching Excursion through Calvados. By G. M. Musgrave, M.A. Bogue.

WE prefer to accompany Mr. Musgrave when he remembers that he is an amateur student of Art and Archæology, rather than when he forgets that he is not an historian and a wit. His portfolio, we suspect, is better filled than his diary,—indeed, the illustrations of this volume are clever and interesting. Norman landscapes, Norman architecture, Norman customs, and groups of Norman peasantry supply enough materials to render a tourist's journal amusing, without melancholy puns and deplorable conceits. Normandy is a region of the picturesque. Its towns are memorials of curious art and curious civilization. Where do studies for the painter abound more than in Honfleur, with its projecting roofs, its vast windows, its grotesque corbels, its gargoyles and images wrought in chestnut or oak? Where would a sketcher choose to sit who found nothing to admire in the stone towers of Normandy,—the bell-turrets of Caen,—the antique bridges of one arch,—the timber houses of many gables, mellowed to a warmth of colour by wood-smoke instead of being blackened by coal,—the ancient churches,—the buildings with ten feet of upright wall and fifty feet of sloping roof? For all whose fancies these street and city scenes fail to touch, Normandy has rural pictures, which Mr. Musgrave does not depreciate or neglect. In Liseaux he rambled through parts of the old town, which had more beauty for him than the richest Italian palaces, glittering in the lustre of the brightest Italian sun. So, also, his imagination was enchanted by the autumnal aspects of Calvados, with its surface covered by orchards and tinged with red, brown, and gold, and its hills crested with castles of the baronial age. Mr. Musgrave dwells on these panoramas; but he dwells, too, at tedious length, on the worn stories of William, Harold, and the Bayeux Tapestry. *A-propos* of this old subject, he ventures on a new joke, and sympathizes with "the worsted heroes" who fought with the English king. Hereupon Mr. Musgrave observes, parenthetically, that he has made "a pun." We know, and are sorry for it. Not that one absurdity of this kind ought to be reprov'd as a cardinal sin. There is no need to shoot at folly as it flies by railway. But Mr. Musgrave is laboriously perverse, and continually writes in a strain which convinces us that he is not an intelligent observer or a judicious diarist. Almost invariably he mars his sketches as well as his accounts of incidents by a ridiculous comment or still more hopeless pleasantry. We are detained on the Great Western Railway while

he jokes in dismal paragraphs on veal-pies and pickled walnuts: and when we find a characteristic fragment in his pages, it is an introduction to some new example of his infatuated humour. He had remarked the variety of employments devolving on women in parts of France:—

"But I was not prepared to see what passed before my eyes one morning, at the prison gates, alongside of the Palais de Justice in Caen: A woman arrived from the country with a man handcuffed, in a small spring cart,—she seated on the front bench, he on the hinder; and, delivering the reins to a trooper that stood at hand, she got down, lowered the backboard of the cart, and told her prisoner to jump down. This was done; the man was at once taken by two gens d'armes into the Court-house where the criminal judge was sitting, and, in about a quarter of an hour's time, brought out and consigned again to her cart, to be handed over to the tribunal of the district to which it was ascertained the village, where he had been pilfering goods, belonged; and away she went again, whip in hand, and malefactor *en arrière*, followed by two Gardes Champêtres on horseback. She would be allowed five-pence a mile, both coming and going, for this service; and I was told it was of continual occurrence."

And then Mr. Musgrave adds, that it would not surprise him to see a woman acting as public executioner. Now, for the application:—

"It would not be the first instance of woman casting off a man, to keep him in suspense!"

His account of a cider-vat at Caen is interesting.—

"On my arrival, the vast retort was dry; the robinet, or tap, had been removed from the extremity where it opened into the hall of entrance, or vestibule, together with the ponderous mass of iron pannel and its ten huge rivets, in which the said tap was inserted. The orifice thus left was large enough to enable me to creep through; which, after taking off my coat, and giving it into the hands of my conductress and a servant who had come to draw the cider from the second reservoir, I immediately did; to the great astonishment and delight of the two beholders. I thought of Belzoni in the Pyramids! I found myself in an apartment thirty-two feet long, eighteen wide, and eighteen in height, paved with granite, and exhibiting all the strength and solidity of a casemate rather than of a tank for liquor. The great Tun of the Heidelberg measures, I believe, thirty feet in length, and twenty in depth. But it is made of wood, and its inside measure cannot, in this case, exceed twenty-eight in length, and eighteen in height. It is twelve feet wide in its extreme diameter. It is stated to contain 800 hogsheads of wine, but some accounts mention 283,200 bottles. Allowing a pint and a half to each bottle, and fifty-four gallons to the hogshead, the latter estimate would make a total of 983 hogsheads. This is too large a quantity for the dimensions of the Tun which I saw in 1849. I conceive 800 is the correct figure. Each of the two mighty reservoirs above mentioned, contains 190,000 French litres, which amount to somewhat more than 878 hogsheads; and a dozen youths might be taught to swim in this 'Peerless Pool' of apple juice!"

Of course, the beer-vats of London are huge in comparison with this; but the construction of the French "cider-cellar" is curious, and it should be mentioned that it supplies only one establishment—a lunatic asylum. Mr. Musgrave notes, as a fact for temperance advocates, that a large proportion of the insane cases in this district are ascribed to the continual use of brandy. He then passes on to religious topics, and finishes off a page of pious declamation with a tail-piece representing Beau Brummel's cravat.

At Bayeux, however, Mr. Musgrave's politics came into play.—

"Close to the Cathedral is the Prison; and in the square open space of this precinct is a circular mound, artificially thrown up, to cherish and strengthen the roots of a superb Plane-tree, sixty-five years old:—the Tree of Liberty, planted here in 1789, when, 'nefasto die,' the men of the Revolu-

tion set up these emblems in every part of France; the rottenness and decay and fall of which, by stroke of lightning, frost, or axe, within the last half-century, have served more to exemplify the unsoundness and inanity, the perils and penalties of Democracy, than to deter the people from yielding allegiance to crowned sovereignty, or to revive in them a desire to live under many masters instead of one."

The logical confusion of this passage is astonishing; but it is a specimen of the writer's manner. As we have hinted, Mr. Musgrave is at fault whenever he breaks off his gossip—for gossip it essentially is—on antiquities, on landscapes and on picturesque effects, to generalize on a higher level. We are told that our "ecclesiastical tourist" "understands many more things than he has ability to illustrate or express." But why apologize for neglecting to descant on things in general in the narrative of thirty days' travel in France? For our part, we should have been satisfied to find in this volume a greater variety of Norman sketches, and less glorification of Mr. Musgrave.

The Literary Life and Correspondence of the Countess of Blessington. By R. R. Madden, M.R.I.A. 3 vols.

[Second Notice.]

WE last week spoke of the correspondence betwixt Lady Blessington and Mr. Landor, mentioning at the same time that some of the Lady's best letters are those addressed to the Author of the 'Imaginary Conversations.' Of these, a brief and graceful example may be given.—

"Gore House, Kensington Gore, March 10, 1836.

"I write to you from my new residence, in what I call the country, being a mile from London. I have not forgotten that your last letter announced the pleasing intelligence that you were to be in London in April, and I write to request that you will take up your residence at my house. I have a comfortable room to offer you; and what is better still, a cordial welcome. Pray bear this in mind, and let me have the pleasure of having you under my roof. Have you heard of the death of poor Sir William Gell? He expired at Naples, on the 4th of February, literally exhausted by his bodily infirmity. Poor Gell! I regret him much; he was gentle, kind-hearted and good-tempered, possessed a great fund of information, which was always at the service of any one requiring it, and if free from passion (not always, in my opinion, a desirable thing), totally exempt from prejudice, which I hold to be most desirable. How much more frequently we think of a friend we have lost than when he lived! I have thought of poor Gell continually, since I got Mr. Craven's melancholy letter, announcing his demise, yet when he lived I have passed weeks without bestowing a thought on him. Is not this a curious fact in all our natures, that we only begin to know the value of friends when they are lost to us for ever? It ought to teach us to turn with increased tenderness to those that remain. I always feel that my affection for living friends is enlivened by the reflection that they too may pass away. *If we were only half as lenient to the living as we are to the dead, how much happiness might we render them, and from how much vain and bitter remorse might we be spared, when the grave, 'the all-atoning grave,' has closed over them.* I long to read your book; it will be to me like water in the desert to the parched pilgrim. Let me hear from you, and, above all, tell me that you will take up your abode with me, where quiet and friendship await you. M. BLESSINGTON."

The letters from the Author of 'Pericles and Aspasia' illustrate the thought, the old-world courtesy, and the quaint humour of the writer,—also, the trenchant style of comparison and valuation, cordially appreciated and epigrammatically characterized by Sir E. Bulwer Lytton, at a later page of the Correspondence.—

"Landor [says he], thanks to your introduction, had no humours, no oddities, for me. He invited me to his villa, which is charmingly situated, and

smoothed himself down so much, that I thought him one of the best-bred men I ever met, as well as one of the most really able: (pity, nevertheless, so far as his talent is concerned, that he pets paradoxes so much: he keeps them as other people keep dogs, coaxes them, plays with them, and now and then sets them to bite a disagreeable intruder)."

Here is a specimen from Mr. Landor's hand, which attests the justice of the foregoing character.—

"January 13, 1835.

"Arnold is so mischievous as to show me, this moment, the portrait of the Duchess of —, and to say she ought to have been put in the Index or the Notes. Sure enough she never was a beauty. The Duke had so little idea of countenance, that he remarked a wonderful resemblance between me and —. Perhaps he thought to compliment both parties. Now you had better find a ghost than a resemblance. If an ugly woman is compared to a beautiful one, she will tell you, 'this is the first time I was ever taken for an idiot.' If a sensible woman is compared to Madame de Staël, she shows you her foot, and thanks God she has not yet taken to rouge. I have been reading Beckford's Travels, and Vathek. The last pleases me less than it did forty years ago, and yet the Arabian Nights have lost none of their charms for me. All the learned and wiseacres in England cried out against this wonderful work, upon its first appearance; Gray among the rest. Yet I doubt whether any man, except Shakespeare, has afforded so much delight, if we open our hearts to receive it. The author of the Arabian Nights was the greatest benefactor the East ever had, not excepting Mahomet. How many hours of pure happiness has he bestowed on six-and-twenty millions of hearers. All the springs of the Desert have less refreshed the Arabs than those delightful tales, and they cast their gems and genii over our benighted and foggy regions. B., in his second letter, says, that two or three of Rosa da Tivoli's landscapes merit observation, and in the next he scorns P. Potter. Now all Rosa da Tivoli's works are not worth a blade of grass from the hand of P. Potter. The one was a consummate artist; the other one of the coarsest that ever bedaubed a canvas. He talks of 'the worst roads that ever pretended to be made use of,' and of a *dish* of tea, without giving us the ladle or the carving-knife for it. When I read such things, I rub my eyes, and awaken my recollections. I not only fancy that I am older than I am in reality, (which is old enough, in all conscience), but that I have begun to lose my acquaintance with our idiom. Those who desire to write upon light matters gracefully, must read with attention the writings of Pope, Lady M. W. Montagu, and Lord Chesterfield—three ladies of the first water. I am sorry you sent my 'Examination' by a private hand. I never in my life sent even a note by a private hand. Nothing affects me but pain and disappointment. Hannah More says, 'There are no evils in the world but sin and bile.' They fall upon me very unequally. I would give a good quantity of bile for a trifle of sin, and yet my philosophy would induce me to throw it aside. No man ever began so early to abolish hopes and wishes. Happy he, who is resolved to walk with Epicurus on his right and Epictetus on his left, and to shut his ears to every other voice along the road.

"W. S. L."

In other epistles, we have Southey, and Wordsworth, and Lamb discussed—and "George the Fourth, the vilest wretch in Europe"—and Bonaparte, who could have been "hated," "if he had been a gentleman," and other living and dead celebrities. The last bit for which we can make room from this portion of the correspondence has the Attic grace of a stray leaf from Mr. Landor's Greek romance. The "NEVER," too, is a characteristic promise, happily for the world made to be broken.—

"I hope in the spring I may be able to pay you my respects. Where else can I find so much wit and so much wisdom? The rest of the earth may pretend it can collect (but I doubt it) as much beauty. Do not whisper a word of this to a certain pair of sisters. I hope I myself shall be in full bloom when we meet again. Indeed, I have little

doubt of it—I have youth on my side. I shall not see seventy, for nearly three months to come. I am very busy collecting all I have written. It may perhaps be published in another eight or ten months. Once beyond seventy, I will never write a line in verse or prose for publication. I will be my own Gil Blas. The wisest of us are unconscious when our faculties begin to decay. Knowing this I fixed my determination many years ago. I am now plucking out my weeds all over the field, and will leave only the strongest shoots of the best plants standing.

"W. S. L."

The Third Volume opens with letters from the Marquis of Wellesley during his residence at Kingston House. Even when an octogenarian, the Marquis had scholarship, fancy, and courtesy enough still to write charming notes and polished verses to his neighbour. Then appears his more famous brother, with another biographical notice, and a selection of notes,—from which we give the two following, as containing characteristic specimens of "the Wellington touch."—

"London, June 12th, 1838.

"Nothing will give me greater satisfaction than to receive anybody that you recommend to me. Foreigners are not exactly aware of our habits; they think that we sit up to receive visits and compliments as they do. Unfortunately, I don't find the day long enough to be able to receive all who are really under the necessity of seeing me. However, I will receive Mons. Rio, or anybody else you will send to me." * *

"London, March 2d, 1839.

"You are one of that kind part of the creation which don't feel the difference between conferring a favour and asking a favour. You are right; he from whom the favour is asked, ought to be as much delighted with the occasion afforded of gratifying the fair solicitor, as he would be by the favour conferred. I am very much amused by your recollection of my note upon your recommendation of Mr. Landor."

We have already treated the reader to a scrap by the Author of 'Rienzi.' We must give two other extracts from his letters. The first from Paris, without a date, is almost Walpolian, in the ease and felicity of its style.—

"This place seems in no way changed, except that the people, I knew, have grown three years younger; the ordinary course of progression in France,

Where lips at seventy still shed honey;

and even as much, if not more, honey than in the previous years. The politics of the place are simply these. The King, by setting each party against the other, has so contrived to discredit all, as to have been able to get a ministry entirely his own, and without a single person of note or capacity in it. Ancient jealousies were for awhile strong enough to prevent the great men who were out from uniting against the little men who were in. But present ambition is stronger than all past passions, and at last a league is formed of all the *ci-devant* ministers against the existing ones. I must tell you a *bon mot* which Madame de L — told me:—'Je n'ai pas besoin de tant de *rossignols* dans ma chambre,' said the King, speaking of the orators he despises.—'Mais, votre Majesté,' said Monsieur —, 's'ils ne chantent pas, ils sifflent.' E. L. B."

The second, dated April, 1846, has the value of a prophecy.—

"But Italy has improved since I was there last. Life is more active in the streets, civilization re-flowing to its old channels. Of all Italy, however, the improvement is most visible in Sardinia. There the foundations of a great State are being surely and firmly laid. The King himself approaches to a great man, and though priest-ridden, is certainly an admirable governor and monarch. I venture to predict, that Sardinia will become the leading nation of Italy, and eventually rise to a first-rate power in Europe. It is the only State in Italy with new blood in its veins. It has youth,—not old age, attempting to struggle back into vigour in Medea's caldron."

We cannot make room for what Dr. Madden has to say of Mr. Disraeli, "the eldest son of the distinguished *literati*," who compliment-

ed Lady Blessington, in a note, on writing "pure Saxon." Having peeped into Italian politics through Sir Edward Lytton's spy-glass, we cannot resist a picture of other Italian things by Mr. Dickens,—which we do not recollect to have found in the latter's 'Pictures of Italy.' The letter, of which the following forms part, is dated Milan.—

"The Roman amphitheatre there, delighted me beyond expression. I never saw any thing so full of solemn, ancient interest. There are the four-and-forty rows of seats, as fresh and perfect as if their occupants had vacated them but yesterday—the entrances, passages, dens, rooms, corridors; the numbers over some of the arches. An equestrian troop had been there some days before, and had scooped out a little ring at one end of the arena, and had their performances in that spot. I should like to have seen it, of all things, for its very dreariness. Fancy a handful of people sprinkled over one corner of the great place (the whole population of Verona wouldn't fill it now); and a spangled cavalier bowing to the echoes, and the grass-grown walls! I climbed to the topmost seat, and looked away at the beautiful view for some minutes; when I turned round, and looked down into the theatre again, it had exactly the appearance of an immense straw hat, to which the helmet in the Castle of Otranto was a baby: the rows of seats representing the different plaits of straw, and the arena the inside of the crown. I had great expectations of Venice, but they fell immeasurably short of the wonderful reality. The short time I passed there went by me in a dream. I hardly think it possible to exaggerate its beauties, its sources of interest, its uncommon novelty and freshness. A thousand and one realizations of the thousand and one nights, could scarcely captivate and enchant me more than Venice..... Your old house at Albaro—Il Paradiso—is spoken of as yours to this day. What a gallant place it is! I don't know the present inmate, but I hear that he bought and furnished it not long since, with great splendour, in the French style, and that he wishes to sell it. I wish I were rich, and could buy it. There is a third-rate wine-shop below Byron's house; and the place looks dull, and miserable, and ruinous enough. Old — is a trifle uglier than when I first arrived. He has periodical parties, at which there are a great many flower-pots and a few ices—no other refreshments. He goes about, constantly charged with extemporaneous poetry; and is always ready, like tavern-dinners, on the shortest notice and the most reasonable terms. He keeps a gigantic harp in his bed-room, together with pen, ink, and paper, for fixing his ideas as they flow,—a kind of profane King David, but truly good-natured and very harmless. Pray say to Count D'Orsay everything that is cordial and loving from me. The travelling purse he gave me has been of immense service. It has been constantly opened. All Italy seems to yearn to put its hand in it. I think of hanging it, when I come back to England, on a nail as a trophy, and of gashing the brim like the blade of an old sword, and saying to my son and heir, as they do upon the stage: 'You see this notch, boy? Five hundred francs were laid low on that day, for post-horses. Where this gap is, a waiter charged your father treble the correct amount—and got it. This end, worn into teeth like the rasped edge of an old file, is sacred to the Custom Houses, boy, the passports, and the shabby soldiers at town-gates, who put an open hand and a dirty coat-cuff into the coach windows of all Forestieri. Take it, boy. Thy father has nothing else to give!' My desk is cooling itself in a mail coach, somewhere down at the back of the cathedral, and the pens and ink in this house are so detestable, that I have no hope of your ever getting to this portion of my letter. But I have the less misery in this state of mind, from knowing that it has nothing in it to repay you for the trouble of perusal.

"CHARLES DICKENS."

Nor does this third volume contain only letters from persons, like the Lady whom they addressed, occupied in the gentle craft of authorship. Next to the Authors of 'Rienzi,' and 'Coningsby,' and 'Pickwick,' stands a knot of those graver wizards who have stood closest to

the cauldron of public affairs in England. Lord Abinger wrote—less complimentary than the Author of 'The Curiosities of Literature'—to set the Lady's "pure Saxon" to rights,—to protest against her using two words which he disliked, "*agreeability*" and "*mentally*,"—and, in 1837, to express his conviction of the obstinate love of place (no matter what the sacrifice of principle) maintained by the Whigs;—Lord Durham on Canadian appointments, and the dedication of 'The Children of the Nobility,' to Her Majesty. Lord John Russell's excuse for not writing in Lady Blessington's *boudoir*-book is too neat to be passed over.—

"Woburn Abbey, February 5, 1838.

"Dear Lady Blessington,—Although I am in *opposition*, I have got my head so muddled with politics, that I cannot turn my mind with any effect to higher and more agreeable pursuits. In short, I am quite unfit to contribute to 'The Book of Beauty,' and am almost reduced to the state of 'the beast.' This it is—to get harnessed in the state car.

"I remain, yours faithfully, J. RUSSELL."

So poetical an allusion to the weight of "the state car"—whimsically recalls the more homely character of the minister who "upset the coach," put forth somewhere about the same period, by the witty Canon of St. Paul's—the most patriotic of Sydneys—the neatest-handed of Smiths!

After all, the men of letters show to the best advantage in this Correspondence.—The next extract we shall give (and one of the last) is full of character.—

"Hatton, January 26, 1822.

"May it please your Ladyship to accept the tribute of my best thanks for the present of a gorgeous cake, which does equal honour to your courtesy and your taste. It reached me last night. It seized the admiration of my wife, and two Oxford friends. They gazed upon its magnitude. They eulogized the colouring and the gilding of the figures with raptures. They listened gladly to the tales which I told, about the beautiful, ingenious, and noble donor. I perceive that your Ladyship's gift was sent by the Crown Prince coach, which I had pointed out, and upon which I depend chiefly. My wife and my cook, and her auxiliary, are waiting with some anxiety, for a magnificent turbot, with which Lord Blessington intends to decorate the banquet. You may be assured that grateful and honourable mention of your names will be made in our toasts. I shall write to Lord Blessington when I know the fate of the fish. As it did not come by the Crown Prince, possibly it may be conveyed by the mail, which passes my door about nine, or by the Liverpool, which passes about the middle of the day. My village peal of eight bells is ringing merrily, and I wish that you and Lord Blessington were here, the witnesses of their music. I probably shall visit the capital in the spring, and with the permission of your Ladyship and Lord Blessington, I shall pay my personal compliments to you, in St. James's Square. I have the honour to be, with the greatest respect, my Lady, your Ladyship's faithful well-wisher, and much obliged humble servant, S. PARR."

We must pass epistles from Moore (one gracefully begging for assistance to his Byron Memoirs), notes from Campbell and Barry Cornwall—punning letters, somewhat elaborate, from Jekyll—rhymed jokes from James Smith—concluding our drafts on this book by a longish outpouring from the Author of 'Peter Simple,'—containing that fiery and fertile writer's notion of the proper way of dealing with the Reviewers.—

"And now permit me to enter into my defence with respect to the lady you refer to. I was fully aware that I lay myself open to the charge which you have brought forward, and moreover that it will be brought forward, as one in which the public feelings are likely to be enlisted; if so, my reply will be such in tenor as I now give to you. The lady has thought proper to vault into the arena especially allotted to the conflicts of the other sex. She has done so,

avowing herself the *champion* of the worst species of democracy and infidelity. In so doing, she has *unsexed* herself, and has no claim to sympathy on that score. I consider that a person who advocates such doctrines as she has done, at this present time, when every energy should be employed to stem the torrent which is fast bearing down this country to destruction, ought to be hooted, pelted, and pursued to death, like the rabid dog who has already communicated its fatal virus; and allow me to put the question, whether you ever yet heard when the hue and cry was raised, and weapons for its destruction seized, that the populace were known to show the unheard-of politeness of inquiring, before they commenced the pursuit, whether the animal so necessary to be sacrificed was of the masculine or feminine gender? I wage war on the doctrine, not the enunciator, of whom I know nothing, except that the person being clever, is therefore the more dangerous. As for your observation, that the lady never wrote a line in the *Edinburgh*, I can only say that, although it is of no moment, I did most truly and sincerely believe she did, and my authority was from her having been reported to have said to a friend that 'she had paid me off well in the *Edinburgh*.' That she did say so I could, I think, satisfactorily prove, were not my authority (like all other mischievous ones) under the pledge of secrecy; but the fact is, I cared very little whether she did or did not write the articles, though I confess that I fully believe that she did. As for the attacks of petty reviewers, I care nothing for them. 'I take it from wherever it comes, as the sailor said when the jackass kicked him'; but I will not permit any influential work like the *Edinburgh* to ride *me roughshod* any more than when a boy, I would not take a blow from any man, however powerful, without returning it to the utmost of my power. But a review is a legion composed of many; to attack a review is of little use—like a bundle of sticks strong from union, you cannot break them; but if I can get one stick out, I can put it across my knee, and if strong enough, succeed in smashing it; and in so doing, I really do injure the review, as any contributor fancies that he may be the stick selected. The only method, therefore, by which you can retaliate upon a review like the *Edinburgh* is to select one of its known contributors, and make the reply *personal* to him. For instance, I have advised the *Edinburgh* to put a better hand on next time. Suppose that it attacks me again, I shall assume that their best hand, Lord B—, is the writer of the article, and my reply will be most personal to him; and you must acknowledge that I shall be able to raise a laugh, which is all I care for. You may think that this is not fair; I reply that it is; I cannot put my strength against a host: all I can do is to select one of the opponents in opinion and politics, and try my strength with him. This I am gratified in doing, until the parties who write a review put their names to the article; as long as they preserve the anonymous, I select what I please, and if I happen to take the wrong one, the fault is theirs and not mine. So recollect, that if I am attacked in the *Edinburgh* (should I reply to the article when I publish my 'Diary of a Blasé' in June next), my reply will be to Lord B—, and will be as bitter as gall, although I have the highest respect for his Lordship's talents, and have a very good feeling towards him."

We could lengthen this notice to quadruple its present extent, by presenting more of the characteristic epistles and epistolary curiosities which Dr. Madden has heaped together in his third volume. But enough has been given to show the quality of its contents.

Whitelocke's Memorials. A New Edition. 4 vols. Oxford University Press.

Whitelocke's Swedish Embassy. A New Edition, revised by Henry Reeve. 2 vols. Longman & Co.

THE principle—if there be a principle—which regulates the activity of the Oxford University Press is not very intelligible. Do the directors of this Press desire to make money by their reprints?—or do they seek primarily to be

of service to historical literature? On either ground, we cannot comprehend their reason for reprinting Whitelocke's 'Memorials.' The book is not very important,—not at all interesting,—not very scarce. The first folio sells for a few shillings, and is met with on every London stall. The second and best edition—the folio of 1732, printed from the original manuscript, with the suppressed passages restored—is not so common; but it cannot be called scarce, and its price in the market is little more than twenty shillings. The reprint, in four volumes, sells for something more than the best folio. Clearly, then, no service is done to literature by this reproduction.

These reasons also render it all but impossible that the new edition can bring grist to the mill. Even if it were cheaper than the old, it is not a work to create new readers. Whitelocke never had, never can have, a public. No duller writer ever wrote the English language. He has no style, scarcely a method; his facts are tumbled into type, without order,—and his opinions on the great acts of the Revolution are contradictory. His use lies in his collection of facts: which he nevertheless contrives to rob even of the interest of a chronology by his alternate dryness and verbosity. The special collector must have him on his shelf; but even he will not dare to go beyond a reference. The man who preferred the galleys to Guicciardini would have hanged himself after three pages of Whitelocke.

Here, however, rises a suggestion. Whitelocke's 'Memorials' is notoriously a book for reference:—and the first requisite for a book of reference is a good index. The folio of 1732, as admirable as such a book could be in other respects, has a meagre index. Here, therefore, Oxford might have stepped in to some purpose. An index, equal in its minute accuracy to the Index of the 'Harleian Miscellany,' would have made this new edition valuable. But no; Oxford is not equal to an index. This reprint in four volumes positively appears with the old index of the folio,—not even distributed into volumes. After this announcement, the reader will not be surprised—however much he may be annoyed—to hear that in the whole four volumes there is not one word of note, elucidation or illustration.

Why should the University Press waste time, funds, and opportunity on the production of these worthless reprints? Are there no manuscript treasures at Oxford? Why not treat us to a decent edition of Aubrey's Letters and Lives? Every student knows how much unprinted matter is contained in those dirty papers at the Ashmolean Museum. Is not Hearne still waiting for printer's ink? Are there not, in fact, multitudinous historical treasures lying in manuscript at Oxford more worthy of attention than Whitelocke's 'Memorials'?

The 'Journal of the Swedish Embassy,' first printed by Dr. Morton in 1772, and now revised by Mr. Reeve, is a more creditable performance than the 'Memorials.' It is the best written of Whitelocke's works, and it has an enduring interest as the picture of a country and a court then at the zenith of its greatness. Mr. Reeve has done the little that he had to do in the way of notes and illustrations with zeal and care, though some few errors have escaped his eye. His estimate of Whitelocke as a statesman is kindly and lenient, and he does not exaggerate his parts as a lawyer or his abilities as a writer. In short, his task is undertaken with zeal and executed with moderation. This is no slight praise to accord an antiquary.

The Poetry of Christian Art. Translated from the French of A. F. Rio. Bosworth.

It is now nearly twenty years since we first drew the attention of the English public to the excellencies and defects of Rio's opinions on the mysticism of Art. Long before Mr. Ruskin had begun to carry out the opinions existing in their germ in Rio's book we had earnestly directed attention to the simple piety of these patriarchs of Art, to the beauty of Fra Angelico's colour, to the sublimity of Orcagna, and the devotion of every touch of Giotto:—at the same time we warned Rio's disciples against the narrow bigotry that in pardoning the child-like errors of Cimabue should turn with disgust from the aberrations of Michael Angelo. We regret to say we spoke in vain. In Mr. Ruskin's works we find all the stern fanaticism of Rio, heightened with greater eloquence and still more intolerance. We find a wilful blindness to the fact, that Greek mysticism in Art, if it did not originate the mysticism of early Italian Christian Art, at least carried it forward and gave it its stronger impulses.

We think it due to ourselves to remember that we were the first pioneers in this now triumphant cause. We were the first to point to the mysticism of early Art as a source of pure inspiration, superior to that of the Greek statue or the Grecian frieze,—to show that it was more adapted to our Gothic spirit, to our climate, our religion, and our manners. We regret that we were the first and last to warn the Art-student against too violent a reaction.

We now, after nearly twenty years, have to repeat that the mysticism or religious principle of Grecian as of all other Art is catholic, and never pagan or sectarian. If we had genius enough we might mould into the forehead of a Dead Christ the divine repose of the Colossi of Memphis,—and we repeat, that debased Christian Art is more essentially pagan in every essential than the Apollo of Calamis or the Venus of Milo.

According to Rio, that beautiful form of Christian poetry Christian Art originated in the rude sketches found on the walls of the Catacombs, on the roofs of the subterranean chapels, and on the tombs of the buried martyrs. From this dark grave it emerged in brightness to reign Christ's regent upon earth. A necessity for concealment, and a super-idealism naturally re-acting from a corrupt and depraved age, gave rise to the first pictorial allegories which concealed the mysteries of Redemption as in hieroglyphics, intelligible only to the faithful. In these zealous times of early faith Art scorned to record individual piety or transitory suffering. As soon as Christianity became triumphant, the boughs long beaten bare by the storm, frozen and scathed, began to bud and flower, and the voices of the choristers arose in hymns of gratitude, like those of the forest birds newly released from the ark. The walls became radiant with mosaics, now that the Church, long militant and suffering, had become the Church triumphant. The tradition of the Greek fathers, that Christ was the least comely of the children of men,—an opinion supported by Tertullian and St. Justin, who considered that the abject form which the Redeemer had assumed rendered the mystery of the Incarnation more sublime,—tended to hasten the decline of Art; and the iconoclastic persecution still further accelerated the event.

With Charlemagne's patronage Rio dates the rise of the Germano-Christian school, which, succeeding the Romano-Christian, flourished till the birth of the Renaissance. The Monastery of St. Gall became a school for missal miniature painting; and in France originated

the use of painted glass in cathedrals, and the employment of tapestry for the decoration of churches. Our author denies that Christian sprang from Byzantine Art. He shows that the Romano-Christian style had never become extinct; and that Cimabue was not the first painter to found a new school in opposition to that of the Greeks, but only the reformer who caused the final extinction of Byzantine conventions. Reforms appear sudden only to the superficial observer. Wickliffe, Huss, Savonarola, and the Waldenses all cleared the jungle for Luther's path; and many forgotten men toiled lifelong in order that Cimabue should become immortal. About the beginning of the thirteenth century, in the reign of our Edward the First, when English architecture had already reached its second stage of perfection, schools of painting arose in Italy, but not in Florence with Cimabue, says Rio, but among the marshes of Sienna, the City of the Virgin. The great subjects now were not the mere allegorical ciphers of the singers in the Catacombs, but the miracles of the saints in the deserts. We have at Pisa of this age the Lions digging the Grave of St. Paul, the Temptations of St. Anthony, whom Christ visits to console, St. Hilary chasing away the Dragon that infested Dalmatia, St. Mary the Egyptian receiving the Eucharist from the hands of the Blessed Zosima, and the two friends, Onofrio and Panuza, picking the Fruit from the miraculous Palm-Bough, or the heavenly Choir chanting the Service at the Burial of St. Dominic. The joyous Giotto, who completed the reformation that Cimabue had begun, delighted to portray the love and humility of St. Francis, and St. Jerome was the favourite saint of Taddeo Gaddi.

The poems of Dante opened a new world in Art; the mystic became the inspirer of all the great painters. Art grew to be essentially Christian. The subjects were universally taken from the Litanies. The painter was the auxiliary of the preacher. In the words of Buffalmacco, a pupil of Giotto, "we painters occupy ourselves entirely in tracing saints on the walls and on the altars, in order that by this means men, to the great despite of the demons, may be more drawn to virtue and piety." The confraternity of St. Luke met periodically, simply to offer up thanks and praises to God. The whole city, to the poorest peasant, came to see a new Madonna. There was such sympathy between the People and the Painter, that the tomb of Barna, who was killed by falling from a fresco scaffold, became a complete shrine for the daily visit of the *condottieri*. The *condottieri* spared a gate of Florence because of its painted Virgin. The early painters fasted and prayed before they painted,—and frequently received the sacrament during the progress of their work. Our modern artists frequently fast while they paint, but rather unwillingly than voluntarily; and their prayers, if said at all, are rather that their pictures may sell well and soon, than that they may convert a sinner or strengthen a waverer.

Rio traces the decline of Art from the naturalism of Paolo Ucelli, about 1430. He studied perspective, painted animals, and designed scenes from Ovid on the coffers of the Florentine nobles. Classical pedantry, luxury, and frivolity soon followed. Patrician vanity multiplied the number of portraits in religious pictures,—one of the great elements of decadence in modern Art. Ucelli represented his friend Dello as one of the sons of Noah. Andrea del Castagno, the murderer of his rival Veneziano, drew himself as Judas in a Last Supper. Masaccio painted Pope Martin the Fifth and the Emperor Sigismund as saint and patriarch. Art became degraded by this subtle means of flattery. That debauched adventurer, Lippi,

who had been a prisoner in Barbary, painted a nun whom he had seduced as a Madonna. Raphael and Andrea del Sarto, as Art grew more pagan, more beautiful, less saintly and more meretricious, repeatedly took their mistresses as their models for the Mother of God. Castagno introduced the Medici, the Pitti, the Strozzi, and the Guicciardini as apostles, angels, and beatified saints,—the faces, seamed with vice and convulsed by passion, were only known to be holy by the established conventions of the lily branch, the palmer's staff, or the gilded crozier.

As early as the commencement of the fifteenth century, the unity of Christian Art had perished. Portrait took the place of idealism. The exact and minute imitation of living or inanimate Nature became slowly the avowed aim of Art. Landscape assumed a more prominent place. Mystical subjects, which did not admit of the introduction of things daily seen and everywhere existing, grew into disfavour. The study of antiquity became an absorbing study. Some artists borrowed antique composition—others antique form. Some filled their pictures with classic ornaments—others with classic draperies. Art became not merely un-Christianized, but impure. Raphael's life is divided by Rio into its Christian and Pagan portions.

An interesting chapter of this valuable book is that devoted to Savonarola's efforts to purify Art from its pagan element. Drawing from the nude was to be abandoned, and all antique statues were to be treated as mere grave-stones and lumber. These were among the reforms that the "pastor of Florence" inculcated beneath the rose-tree of St. Marco and in the square of the Cathedral, among the fig-trees of Fiesole and the grassy slopes of the Lombard plains. From his religious Platonism sprang Fra Bartolommeo and his imitators, who battled in vain against advancing naturalism.

A perusal of this book will remove an impression of the originality of Mr. Ruskin's views of Art. His hatred to naturalism, his distrust of many of Raphael's works, his love of the Gothic spirit, his contempt of the antique, his apotheosis of Fra Angelico, are all foreshadowed here. Although Rio cares less for colour than Mr. Ruskin, he is equally glowing when he extols the religious spirit that led the Venetian Doge to be brought to die at the foot of the high altar of St. Mark, exclaiming "In manus tuas, Domine, commendo spiritum meum et rempublicam"; or the conquering general to write over his porch, "Not unto us, not unto us, O Lord! but to Thy name give the glory."

The ease and accuracy of the translation reflect great credit on the translator.

The Czarina: Drama, in Five Acts, in Prose—[La Czarine, &c.]. By Eugène Scribe, of the French Academy. Paris, Lévy.

ODIOUS as comparisons are (at least in the estimation of those who have reason to fear comparison), they are sometimes not to be neglected as a compendious mode of illustration. When we find M. Scribe running the same heroine, as maid and wife, through two dramas (a third being possibly to come), we cannot but think of the use which was thus made of *Rosina* and *Count Almaviva* and *Figaro*, by Beaumarchais, and be led to compare the value of the dead and the living dramatist. Nor is this done altogether in the unreasoning spirit of Sterne's simile-maker. No one will accuse M. Scribe of being a philosopher,—still less, a political agitator; yet he may have been attracted to his "*Czarine*" as a heroine by instincts or considerations akin to those which made the Author of '*Le Barbier*' select his democratic hero as a type belonging to his own time. In days like ours, when revolutions and sovereignties and alliances and wars appear entering into such new conditions, the

figure of the Empress from the ranks, breaking down the brutal will of her appointed sovereign, by her personal ascendancy,—in one lustre of her charms, saving his life,—in another, listening to conspiracies against it,—might naturally rise up in association with the phenomena of Royalties without ancestry—of arbitrary despotisms wrested (so to say) into the cause of justice and progress, which Europe is now beholding. But if such has been the train of thought by which M. Scribe has been led to adopt Catherine and “Master Peter” as hero and heroine, he has proved less equal to the working out and sustaining his conception than Beaumarchais was. He has tottered beneath the weight of his idea,—he has been bewildered by the complexity of his characters. Neither his “Bertrand et Raton,” nor his “Le Verre d'Eau” will stand as historical plays; but “La Czarine” is inferior to either.—Doubtless, the incidents are skilfully cemented,—the drama moves along smoothly and with that clearness in its progress which, in part, belongs to the author's habit of mind, in part to his vast experience of the stage;—but his characters have little more bone and muscle than are requisite for a serious *vaudeville*. His Catherine in “L'Étoile,” with her barrel of rum (introduced to authenticate her historically) and her trite saying, “*To will is to do*,” is as vivid a “being of the mind” as the Czarine, who has been just cut out, and set in motion, for Mdle. Rachel to personate.—The Empress has a wonderful “*I see him!*” to repeat, at a juncture of torment, when her conscience is placed on the rack by her lover led past the window to the scaffold. She has a moment for a striking attitude with the poignard, which she brings from its concealment to be used, in case the execution of Sapieha should be consummated; but there is nothing, in either word or gesture, that might not belong to melo-drama,—nothing in any of the speeches and scenes leading up to this strong situation which are not the oldest expressions of woman's passion,—not the most threadbare embroideries of the robes of stage-queens. The dialogue is lean, bald and mechanical; going direct to the purpose of the scene, it is true, but with little more of high drama in it than belongs to a street “Good-morrow.” Since the play may have a certain circulation, owing to the circumstances of its subject and its production, the reader will hardly be displeased to have an opportunity of testing for himself the justice of our opinions; and to afford this, we will paraphrase a few speeches from the scene closing its fourth act. The Czar, who, from being a semi-savage nobleman addicted to rum, in “L'Étoile,” has become a most “fantastical Duke of dark corners” in “La Czarine,” suspects that his liege Lady is engaged in an amour with a Prince Sapieha, and resolves to end the matter with a quiet little dose of poison. Accordingly, he intimates his intention to Prince Menzikoff; at the same time blandly hinting that, should it not be carried out, the Prince's daughter, who is in his hands, shall forthwith set out for Tobolsk.—The next scene explains itself.—

The Czarine, Menzikoff.

The Czarine (coming out of the room on the right). The Czar is not here now?

Menzi. He has just gone to the review.

The C. He has spoken to you of me?

Menzi. Yes.

The C. He was in a passion?

Menzi. No!—He smiled coldly—the smile of steel that he smiled on the morning of the death of Alexis, when, in order to prove his clemency and gentleness for his son, he himself selected the poison that was the daintiest.

The C. Heavens!

Menzi. That poison he intends for you, too!

The C. (with animation). A crime like that! It cannot be true!

Menzi. He has entrusted it to one of his faithful servants—

The C. (vehemently). It is not true!

Menzi. That servant is—myself!

The C. You!!

Menzi. At this price I am pardoned:—received into his favour—his confidence.

The C. (with grief). Peter!—he to ordain my death—he!

Menzi. Your death is not the only one which he has ordained!—I have here, thank Heaven! written by his hand, the names of all those whom he has destined for punishment!

The C. Thank Heaven!... what say you?

Menzi. The certainty of death gives courage. They will

show it! (*in a low voice*) The power is in your hands. I wait for only a breath from you!

The C. I refuse!—do you hear me?—I refuse! and I command you to renounce your project.—Let others count up his crimes:—I behold only his benefits. He has given me his hand and his crown!

We cannot imagine that any reader has the slightest curiosity to see by what subtleties of argument the vengeance of the Empress is induced to meet the villainy of the Favourite half way; or how, without her participating in the murder so neatly propounded, the tables are turned by her on this Muscovite *Peter the Cruel*, at the precise moment when, having surprised his wife's secret, he is about to sign, not the death-warrant of her lover, but of herself.—Enough, surely, has been given to show of what common stuff a five-act tragedy may be made, and still succeed. Nor does the absence of individuality and vigour just displayed arise, as some may fancy, from the fact of its being written in French prose. That, too, is the vehicle of tragic passion employed by M. Victor Hugo in his “*Lucrece Borgia*” and “*Angelo*”; but the language of those two tragedies is so pregnant with passion,—so florid in colour,—so burning with life (though it be the life of fever),—as to make us feel that the dramatist did wisely in discarding the rhyme and cadence which belong to the rhymed tragedy of the *Théâtre Français*. Such mastery is not here shown by M. Scribe. His contours are not distinguished, his lines are petty, and his execution is trivial. When Mrs. Siddons bought a summer gown, or asked for beer at dinner, the transaction became a weighty and solemn thing:—even so, we doubt not that Mdle. Rachel's presence and voice can give body and soul to the dialogue just rendered, meagre and unspiritual though it seems. But the glory of such triumph, be it less or more, must lie with the *Czarine* not of the author, but of the actress.

OUR LIBRARY TABLE.

The History of the Papacy to the Period of the Reformation. By the Rev. J. E. Riddle. 2 vols. (Bentley.)—By the word “Papacy,” as used by Mr. Riddle, is to be understood not the Church of Rome generally, nor the Popes as its governors, but the Church of Rome “as aspiring to, and obtaining pre-eminence and power.” In dealing with this important subject, Mr. Riddle does not profess to assign a specific date for the commencement of the Romish supremacy; he contents himself with proving that there was a time when no traces of that authority are to be found, and afterwards showing by what a gradual succession of events and circumstances Rome was ultimately placed in her lofty spiritual position. In executing this important task, Mr. Riddle has availed himself of the works of Schröck and Planck. He has, according to his own statement, “condensed and transused” the labours of those two great Church historians—removed by their size, and the language in which they are written, very far beyond the reach of ordinary English readers. We will add, that Mr. Riddle has executed this labour in no slavish spirit. Independent research has been brought to bear upon many of the leading events, and especially upon those in which England was particularly interested. Mr. Riddle writes in a candid and liberal spirit towards the Church of Rome, and, in many places, displays anxiety to give her the benefit of any historical doubt. For example, he concedes the probability of St. Peter having visited Rome;—regards the story of Pope Joan as altogether fabulous;—adopts the succession of the early Roman bishops given by Eusebius;—notices, without approval, Mr. Shepherd's disbelief of the genuineness of the writings of Cyprian; and so in other cases gives the Church of Rome all the advantage it can derive from the commonly received views of its early history. He traces the rise of her spiritual despotism to the notion infused into the laity, and adopted by them in the second century, that the clergy formed a separate class or caste divinely instituted and superior to the laity. Upon this foundation, “it was easy to establish the idea that they also possessed the right of dominion,” and circumstances operating upon the clerical body from without and occasionally assisting ambitious views entertained by lead-

ing men amongst the clergy themselves, ultimately shaped the government into that hierarchical form which we see predominant wherever the Church of Rome bears sway. Whoever desires to see this notion of the “history of the Papacy” worked out, in a calm spirit and with scholar-like knowledge of the subject, may turn with confidence to the work of Mr. Riddle.

Sketches and Anecdotes of Animal Life. By the Rev. J. Y. Wood, M.A. (Routledge & Co.)—We noticed some time since the author's “*Illustrated Natural History*,” of which this work appears to be a kind of sequel. He tells us in his Preface that the matter of the present work was prepared for the former one, but was kept out for want of space. We much prefer these overflows to the original specimens in the first measure. Mr. Wood is evidently not a zoologist, but a lover of animals. He has collected here a large store of interesting anecdotes, and tells us that he was again obliged to stop short for want of space. We think it probable that Mr. Wood will be induced to publish the remainder of his anecdotes, if we may judge of their quality by the present volume. The present work is not merely a collection of anecdotes, but a series of papers on the habits of animals, with illustrative anecdotes. It also contains a series of illustrations from the pencil of Harrison Weir. On the whole, we know of no book that contains so large an amount of matter on the habits of animals so agreeably told, as this volume of “*Sketches and Anecdotes of Animal Life*.”

The Entomologist's Companion. By T. H. Stainton. (Van Voorst.)—Let no one be deceived by the name of this book into the belief that it is a volume for entomologists generally. Every one is probably aware that the great family of insects is divided into a number of orders, such as Coleoptera, Diptera, and Hymenoptera. It would appear that each one of these orders is so large as to defy the ambition of an entomologist who wishes to enrol his name amongst the list of discoverers of species. Thus it is not an uncommon thing to find an entomologist hunting amongst a net full of insects he has caught for the peculiar genus to which he has deliberately devoted the energies of his life. Mr. Stainton does not devote himself to a genus, but to a section of one of the large orders of insects. The butterflies and moths are divided into two sections, Macro-Lepidoptera and Micro-Lepidoptera. It is to the latter group,—the smaller moths, as they would be popularly called,—that Mr. Stainton has devoted himself and this book. For those interested in this branch of insect study, Mr. Stainton's book will be found of great use. The ways of catching, keeping, rearing, killing, and setting these minute creatures are fully detailed. It also gives a list of the British species, and the localities in which they may be found. Nor let any one despise these collectors of insects; they are doing a great work for science,—they are collecting the materials where-with such men as Ray, Linnæus, Cuvier, and Edward Forbes have developed the grand laws which regulate the development and distribution of organic beings on the surface of the earth. Without an accurate record of the special forms of minerals, plants, and animals, the sciences of chemistry, botany, zoology, and physiology, would be impossible; and every one possesses observant powers, which, if duly cultivated, may be made to contribute materials to the great science of life, to which all branches of natural history are subservient.

Cornwall: its Mines, Miners, and Scenery. By the Author of “*Our Coal Fields and Our Coal Pits*.” (Longman & Co.)—We have not met with a more agreeable account of Cornwall than this. The writer is familiar with his subject, and treats it in a style full of variety and animation. He affords a just idea of the peculiar social economy developed among our mining population, describes the processes and incidents of their industrious life, exhibits the value of their labours, and does good service by warning such persons as propose to speculate, that they should consult a more reliable authority than a prospectus. On this point his advice is given. Three golden rules, he says, are to be observed by a family man, with visionary dividends in his purse,—“First,

consult your wife; second, count your children; third, calculate your household expenses." These are wise maxims; and the writer collects facts from the mines which justify his view; and his summary contains the following statement:—"The quantity of copper annually extracted from Cornwall is not worth the money annually spent in Cornwall in copper-mining." Of course, the result is divided between fortunes made by some, and losses suffered by others. However, the book is from the style in which it is written, likely to be popular; so that the public will have the full benefit of its practical illustrations and its useful counsels.

Summer Tours in Central Europe in 1853. By John Barrow. (Dalton.)—It is true that visitors to Cologne, Munich, the villages of the Tyrol, and Mont Cenis should cease to print the story of their rambles, unless they have at least some touches of novelty to justify the publication. One original writer, on the most worn of topics, could hold his own against a field of handbooks; but the notes of an itinerary on the churches, picture-galleries, hotels, and public walks of the Continent scarcely ever contain remarks or suggestions that have not been repeated year after year, since railways made a commonplace path of the Grand Tour. Mr. Barrow treads in the steps of the Ten Thousand; and is as lively as could be expected under the circumstances. Nothing fresh is to be looked for in the narrative of a diarist who compares Genoa to Wapping. Travelling, therefore, without much reverence for the time-honoured and story-haunted cities of Italy; he never meets an object in Art or Nature which warms his imagination. Nor is it his custom to criticize social aspects with any view to found an opinion on his observations. The reader, consequently, will be prepared to find in Mr. Barrow's volume nothing but desultory chat, written in an unpretending manner.

Architectural, Archæological, and Historic Society, for the County, City, and Neighbourhood of Chester. Journal. Part III. From January to December, 1852. (Chester, Courant Office.)—No one is likely to draw a favourable inference as to the management of the Chester Archæological Society from the present number of their Journal. At the commencement of 1855, we are presented with an account of the proceedings and expenditure of the Society up to the end of 1852. Nor has the volume been delayed by unusual care in the printing, for the book is full of mistakes of the press; nor by the finished character of the illustrations, for they are all paltry, and some of them discreditable. Three or four are like woodcuts borrowed from old chap-books. The Committee are aware of the character of their plates, and defend the use of them in several passages in their report,—passages remarkable for being expressed in bad English and written with an air of *sans-froid*, not to say impertinence. The plea is want of money to procure better illustrations: the subscribers must take these or none. We are at issue with the Committee upon this plea. Such plates as those we have alluded to are utterly useless; nay, they are worse than useless, they disseminate false notions and bad taste. We prefer "none" to such illustrations as these. Letter-press can do its work just as well without them. But the Committee have not stated the question rightly. It does not lie between "these" and "none"; but between a mass of trumpery and two or three respectable and useful plates. The truth is, and the Committee must be content to hear it from us, that the present number bears the stamp of obvious inattention, or incompetency, we might almost say upon every part of it. The editorship is altogether defective. The Committee do not understand their work, or else they leave it to be done by incompetent persons. A county and city which have such peculiar connexion with the past, and contain so many ancient monuments of the very highest interest, ought not to be in this predicament; nor would it be so, if the gentlemen whose names give honour to the list of officers of this Society would really take an interest in its management. The papers in the volume are good enough in intention, but they

require the editorial supervision of a better anti-quary and a more practised writer than there seems to be connected with the Society. Until the Committee can effect the alterations obviously necessary, neither the county nor archæological literature can hope to derive credit or advantage from this Society. The people at present in connexion with its management may be excellent archæological recruits; but, like all other recruits, they require to be drilled and taught their duties.

Among publications of a religious character we have—*The Disciple whom Jesus loved, being Chapters from the History of John the Evangelist*, by James Macfarlane. It is extended to a wearisome length.—The same remark applies to *The Foot-steps of St. Paul*, in which, indeed, the writer is still more voluble and diffuse. He "fills up from his own mind" whenever materials fail, and "imagines" details in scenes of which no record has been preserved. This is surely unwise.—Besides these Scriptural biographies, we have *A Beginning without an End: an Allegory*, by M. A. E. C. The author's good intention will not atone for the turgid monotony of her style; nor is the "militant" tone of the Preface in keeping with that charity which is afterwards so conspicuously extolled. M. A. E. C. imitates the masques of Spenser and the studies of Raffaele, but fails to vitalize her allegorical impersonations of virtues and vices in this earth.—More practical in their objects are Bishop Selwyn's Four Sermons on *The Work of Christ in the World*, liberally conceived, and eloquently written,—and the Rev. H. Goodwin's *Guide to the Parish Church*, in which we are benignly informed that the author intends to "speak nothing of a severe kind" concerning his fellow Christians.—The Rev. J. Tulloch has printed his Inaugural Lecture, delivered at the opening of St. Mary's College, Edinburgh, on *The Theological Tendencies of the Age*,—and the Church Protestant Defence Society have issued their *Ninth Paper*, on the subject of Convocation.—Mr. William Fraser, Curate of Alton, has been induced to publish a volume of *Parish Sermons* by observing the attention with which they were heard by his congregation.—As connected with religious topics, we may here notice the Rev. A. Arrowsmith's *Geographical Dictionary of the Holy Scriptures, including also Notes on the Chief Places and People mentioned in the Apocrypha*. A defect in the compiler's plan has spoilt what might otherwise have proved a useful book. He rarely refers to an authority. It is singular that, while engaged in verifying the geographical statements of the Bible, and in so many instances comparing the geography of the Jewish period with our own, Mr. Arrowsmith should consult writers whose names he finds it unnecessary to quote. Such a Dictionary could not well be composed without extensive research; but whatever be the range of Mr. Arrowsmith's learning, he has not appealed to it in confirmation of his views. To scholars, therefore, his elaborate work can be of little value.

LIST OF NEW BOOKS.

Atherton's (C.) *Capability of Steam-Ships*, 2nd edit. 10s. 6d. cl.
Bancroft's (G.) *History of United States*, Vols. 3, 4, and 5. 7s. 6d.
Bellenger's (W. A.) *French Conversations*, 22nd edit. 12mo. 2s. 6d.
Blackstone's *Commentaries*, abridged by Wilmot, 3rd edit. 6s. 6d.
Bouchut (M.) *On the Diseases of Children*, 8vo. 20s. cl.
Boulbee's *Sermons before Students of Cheltenham College*, 2s. 6d.
Brabazon's (E. J.) *Russia and her Czars*, 8vo. 6s. cl.
Bulwer's (Dr.) *Lectures on Eccles. Hist.* 1st 3 Centuries, 4th ed. 12s.
Buttercups and Daisies, sq. 1s. cl.
Clarke's (Dr.) *Dictionary of the English Language*, 3s. 6d. (Weale.)
Copley's (Miss) *Cottage Comforts*, 2nd edit. 12mo. 2s. 6d. cl.
Croly's (Dr.) *Modern Orlando*, 2nd edit. 8vo. 5s. cl.
Gorham's *Unfrequented Paths in Optics*, Part I. 8vo. 2s. 6d. cl.
Gross on Foreign Bodies in Air-Passages, royal 8vo. 16s. cl.
Historical Pocket Annual for 1855, by Dr. Bergel, 18mo. 1s. 6d. swd.
Holy Thoughts, new edit. 32mo. 1s. 6d. cl.
Homeri *Odysseæ* ex Recognitione Guilelmi Dindorffii, 8vo. 5s. 6d.
Hunt's (G.) *History of Political Systems of Europe*, 8vo. 2s. swd.
Humphrey's (Dr.) *Manual of Political Science*, 12mo. 3s. 6d. cl.

Stratford Shakspeare, edited by Knight, Vol. 12, 1c. 3s. 6d. bds.
Tobin's *Shadows of the East*, Maps and Illustrations, 25s. cl. gilt.
Wheeler's (H. M.) *Popular Harmony of the Bible*, 12mo. 5s. cl.

'MOREDUN' AND THE BRITISH PRESS.

On the 25th of November, 1854, I published an account of the extraordinary manner in which the manuscript of a tale or romance, in three volumes, entitled 'Moredun: a Tale of the 1210,' came into my hands, accompanied by a letter of most singular interest. That manuscript and that letter I placed in my bureau, and I invited all whom the discovery interested to come and inspect them, and to judge for themselves of the grounds on which I founded the opinion, which I still entertain more strongly than ever, that Sir Walter Scott alone could have been the author of that romance.

One of the most eminent critics in France, and a personal friend of Sir Walter Scott, M. Philartète Chasles, was the first distinguished writer of my own country who examined the evidence, and he concurred in my opinion, after having studied the original in English of the letter signed W. S.:—to the discussion and examination of which he devoted five columns of the *Journal des Débats* of the 27th of December last.

Other literary gentlemen, among whom were several English critics, examined the documents, and expressed themselves unanimously and decidedly of the same opinion with M. Philartète Chasles and myself,—some of them even pointing out minutely corroborative circumstances, which had escaped our observation;—although, now, frightened apparently by the storm of insults with which, I understand, I have been assailed in England, they advise me to go to London or Edinburgh, there to have the authenticity of the letter determined.

By whom? By those who have prejudged the question, and who, without examining the evidence, have treated with contempt the opinion of the first literary critic in France, and received with contumely the testimony of the Society of Archivists of that country? This is *trop fort*!

But more than this. What,—as M. Chasles and others have said,—what has the question of whether the letter be in Scott's own handwriting, or a copy by the other W. S. imitative of it, to give to the German whilst he kept the original,—what has this to do with the authorship of the work?—Nothing whatever. Those who have read the work, or portions of it (as a select party of distinguished English residents in the *Faubourg Saint-Honoré* did the other evening), and have been convinced by itself that it was written by Sir Walter Scott, would their conviction of this be swayed in the smallest degree by such a circumstance?—Not in the least. That letter is written on note paper, bearing the water-mark of the first Empire, having the bust of Napoleon the First surrounded by his titles. It is clear from that and other circumstances, which have been examined by the Society of Archivists, that it is either the original letter or a copy taken of it at the time. I think it the former,—so do the others who have examined it;—it may be asserted to be the latter, without the authenticity of the work being in the smallest degree affected by such a circumstance.

But even in this view of the case, as either is an object of considerable interest, I am now having three copies of the letter most carefully traced:—of these I shall send one to the British Museum, one to the Crystal Palace at Sydenham, and the third I shall lodge with my London publishers,—so soon as I find any bold enough to give to the world a work of fiction full of interest, rich in humour, rapid and brilliant in its descriptions of scenery and of character, but which the critical press of England is determined shall not have been written by Sir Walter Scott. I shall accompany the copy sent to such publishers with some papers of most singular interest in themselves, but which are doubly so from being found in the same box with the MS. of 'Moredun.'

They are *forty-three* in number, and relate entirely to the period of the Hundred Days and the Restoration (1814, 1815, and 1816). These papers would have been of such immense value to the Author of the 'Life of Napoleon,' that I think all who examinethem will go along me in considering them a collection, or the commencement of a collection, intended for presentation, as an expression of thanks to the Author of 'Moredun.' My attention was so entirely engrossed by that work, that I did not at first give them the examination they were entitled to.

In the course of that examination, too, some pages of MS. in English were found, which supply several *lacunes* in 'Moredun' which had greatly puzzled those who were translating it for me into French. Among them was the following, without heading or title, evidently intended as an introduction to the work.—'I have somewhere met with the remark, that 'Dante's only object is to interest.' Such has been my aim in that to which I have, on that account, given the name of a tale, rather than claim for it the title of a romance; and if, as has been said of his poetry, it can be said of this tale that the interest never flags, my main object, besides that of turning it to as a recreation, will have been gained. If any apology be necessary for the neglect of the unities of time and place in such a narrative, I can quote the authority of Dr. Johnson, who justifies the want of them in much higher productions. I may likewise quote the same illustrious writer for a justification of many departures from the rules of criticism, and say with him, "that there is always an appeal open from criticism to Nature." The paper seems to be of English manufacture; and bears in the watermark the name of "Horne," with the date "1817."

All the facts relative to the MS. of 'Moredun' known to myself are now before the world. I do not intend to take any special notice of the articles—I cannot call them criticisms—of the English press, having seen only a small portion of them, —few of their authors or publishers having had the fairness or politeness to send me a copy of the journals in which they appeared,—although the literary treaty lately signed between the two countries would have led one naturally to expect a little *courtesy*, if not justice, on the part of the English journalists towards the director of a literary society in France, who gave his name and address along with his statements. But whilst one doubter says that Scott wrote all his novels himself,—another, that he always employed an amanuensis,—a third, that that amanuensis had a name full of L's,—and a fourth, that they were not L's, but G's,—I may safely leave them to demolish each other. The latest *fiction*, however, I must not pass unnoticed. It is therein alleged, as a suspicious circumstance, that the discovery of 'Moredun' was not made known until after the death of Mr. Lockhart. I reply, my notice of the discovery was lodged with the Minister of the Interior, in Paris, on the 24th of November, and was published here and in London (in the *Sun* newspaper) on the 25th, *the day on which Mr. Lockhart died in Scotland*. The telegraph does wonders; but it could scarcely have told in Paris on the 24th of November what happened at Abbotsford on the 25th:—*ab uno disce omnes*. E. DE SAINT-MAURICE CABANY, Proprietor of 'Moredun.'

OUR WEEKLY GOSSIP.

A minor reform often urged in the *Athenæum* has been effected by the House of Lords:—the public papers of that body are in future to be sold to the general public without the formality of a peer's order. Of course the personal papers—those relating to peerages, private actions, and the like—are not affected by this new regulation. With these the public have no concern. The order, we are sorry to say, is not retro-active.

The piratical field is gradually failing the pirates. Last week the literary convention between England and Belgium was ratified. From the date of this new convention the authors of works of literature and art in each country, will be entitled to exercise the right of property in their works (where the laws now confer that right) in the territories of

the other, and the protection given to original works will be extended to translations with certain express stipulations. Dramatic works and the performance of musical compositions will be included in the provisions of the convention in so far as the laws of each of the two countries are applicable. Pirated works or articles will be seized and destroyed, and such penalties levied as the laws of each country may prescribe. Works, to be protected, must be registered,—if Belgian, at Stationers' Hall, London, and if English, at the office of the Belgian Minister of the Interior in Brussels. During the continuance of this convention the duties now payable on the importation into the United Kingdom of books and musical works published in Belgium will be reduced to 15s. per cwt., and the duty on prints or drawings to 1½d. per lb. The duties now payable on the importation of books, music, and prints into Belgium will be reduced to and fixed at the uniform rate of 10 francs per 100 kilogrammes. Books may still be prohibited by either Government.

Mr. Robertson writes again on the subject of Copyright in Australia.—

"35, Lower Sackville Street, Dublin,
"Feb. 5.

"The *Empire*, Sydney newspaper, must get the credit of having given the assurance that 'it will be seen that, in New South Wales, the Imperial Copyright Law will in future be strictly enforced,' inasmuch as these words are an extract from its pages, and not an assurance of mine, as Mr. Howitt represents, for I recorded the statement a second time as one 'that the newspaper mentions with satisfaction.' * * Although Mr. Howitt did not in his first letter draw attention to the facts, terminating in the re-shipment of the pirated editions to America, nor to 'the most able and pertinent letters' in reply to the *Argus*, yet these are important features of the case, showing the better side and the existence of correct opinions. In England, societies exist, whose object it is to see that certain laws are not transgressed, such as 'The Society for the Prevention of Cruelty to Animals':—such societies are not organized because the promoters have no faith in the law, but it is because of their faith in the authority of the law, that they associate in a combined capacity. In like manner, an organization may be formed, with the object of seeing that certain laws are not transgressed in Australia;—and the suggestion of such an organization does not imply a want of faith in the enforcement of the law. The strongest point in favour of such an organization is the existence of the law, for if actions are brought against booksellers for infringement of the Copyright Law, the penalty will follow,—when penalties are enforced, booksellers will not keep such stock,—and, as the sale will thus be checked, shipment must cease;—when, in addition, we have the shipment of any adventurous speculator re-shipped to him, as is done at Sydney, a heavy blow and great discouragement will be given to American piracy. Our Australian countrymen will not consider themselves flattered if we coincide in the idea that their allegiance to Britain is dependent on our encouragement of American literary piracy. I have letters from my Correspondent, Mr. George Robertson, bookseller, Melbourne,—and under date of November 11th, he writes:—'As to the American piracies, I have already checked them to a very great extent, by insisting on the interference of the Customs; but it would be as well that publishers should have a power of attorney here;—and again, under date of the 24th of November, he writes: 'In reference to the copyright question, I send for your perusal a copy of correspondence between self and Collector of Customs. The result has been to diminish American shipments almost to nothing; but we must try and stop the thing more effectually.' These remarks of my Correspondent may be considered as supplying a reply to some of Mr. Howitt's statements and ideas. Yours, &c., WILLIAM ROBERTSON."

The Pryne and other Commonwealth Pamphlets, sold the other day by Messrs. Sotheby & Wilkinson, brought good prices:—and the sale of 700 lots, in a not very choice selection of books, realized 200l. The 'Histrio-Mastix' brought 2l. 10s.,—the 'Vindication of Liberties,' 1l. 19s., and other lots in proportion. The dealers bought largely; but Mr. John Bruce secured a number of the Pryne lots for his collection; and Mr. Hepworth Dixon about sixty tracts by Lilburne, Pryne, Sir Thomas Fairfax and other writers, particularly a series on the celebrated case of the Eleven Members.

Mr. Bernal's library—a collection of choice works—is announced for sale next week. It comprises works on costume, illustrations of mediæval art, galleries, books of emblems, illuminated missals and printed horæ, illustrations of the different branches of natural history, Polar and other voyages and travels, poetry and the drama, bibliography, literary history, heraldry, books of fancy and imagination, county histories, and autograph letters of royal and literary personages, including holograph specimens by Charles the First, Alexander Pope, and Samuel Richardson.

The General Committee appointed by the Royal

Society to secure an adequate representation of philosophical instruments at the French International Exhibition held its last meeting, at Marlborough House, on Thursday. The attendance of the distinguished *savans* forming this Committee has been on all occasions large, and the zealous co-operation which they have given to the Board of Trade in promoting the objects for which they were appointed will, no doubt, be viewed by our French neighbours as an expression of the sympathy and admiration of our scientific bodies with the efforts now making in France to promote the peaceful Arts, notwithstanding the impediments which have arisen from the war.—It is understood that the Astronomer Royal will send to the Exhibition a full-sized Model of the Great Transit Circle of Greenwich, executed under his superintendence, at the expense of the Government. The telescopes of Lord Rosse, Lassell and Nasmyth will also be sent in model.—The Astronomer Royal of Edinburgh has various useful instruments in preparation;—and Mr. Cook, of York, will show that the professional astronomical makers of this country are reviving, if they have in any degree lost their former renown.—The Kew Observatory sends a complete collection of magnetical and meteorological instruments, which will be adjusted, in Paris, under the careful superintendence of Mr. Walsh.—The Ordnance Board propose to send the great Theodolite used in the Trigonometrical Survey, and specimens of the maps on the various scales. The Geological Survey is also engaged in preparing a complete representation of its labours. Among the men of science who are exhibitors, the names of Herschel, Brewster, Sabine, Smythe, Tyndall, James, De la Beche, Willis, Sheepshanks, Lord Wrottesley, Lord Rosse, Snow Harris, Wheatstone, Lassell, De la Rue, Grove, Arnott, Frankland, Gassiot, and Brodie have been mentioned to us. Although at first there was considerable hesitation among the instrument makers to exhibit, this reluctance has now in almost all cases been overcome, and out of the list of 98 exhibitors under this head, there are very few names the omission of which is to be regretted. It is pleasing in the list of exhibitors to observe that some of our public institutions, such as University College, and Guy's Hospital, and the London Institution, send collections.

A third dividend under the late Mr. W. Pickering's estate is now in course of payment, making 15s. in the pound on the debts proved; and when the remainder of the modern stock, copyrights, &c., is sold, it is supposed there will be sufficient to satisfy the claims of all the creditors. Messrs. Sotheby & Wilkinson concluded a three days' sale of the last portion of the old stock on the 13th ult.,—the whole having produced a sum exceeding 9,000l. A collection of letters by the celebrated Mrs. Elizabeth Montagu (doubtless bought with a view to publication), as well as others from persons of eminence, found amongst the papers of the late Mr. Pickering, will shortly be offered for sale.

The following is from a Correspondent.—

"When the *Times* the other day cast such solemn discredit on the possibility of any person, such as the M. Wikoff, of its "Nichoff" mystery, having figured as a contributor to any journal of repute, such protest can only have been registered on the writer's own short memory. In 1849-50 this person was an avowed and frequent contributor to *La Presse* in Paris; and in a number of the *Spectator* of January, 1850, will be found an elaborate English panegyric on the Wikoff letters there printed. Y. Y."

Mr. Lake writes on the subject of new acids:—"A new acid is obtained from the *Cimex lectularius* by digesting a quantity of these insects in distilled water for several days. On pouring a portion of sulphuric acid into this solution effervescence takes place, and, on the application of heat, an acid gas is copiously given off, which is soluble in water. This gas has a pungent, suffocating odour; it might not be inaptly named *cimic acid*. The scarlet-leaf species of geranium yields also a new acid. It has a sharp, pleasant odour, and is soluble in water. It may be obtained by macerating the leaves and green branches in distilled water and adding sulphuric acid to the solution. The gas is readily given off on the application of heat. This might be named *geranic acid*."

We hear that by order of the King of Prussia

all autographs of Frederic the Great are being bought up at Paris. The greatest collector of autographs in France, M. Feuille de Conches, is said to have procured already a great number of them for His Majesty.

Herr Gutzkow, the indefatigable German dramatist, has brought out a new comedy, 'Lenz und Söhne' ('Lenz and Sons'), which, on being performed for the first time at Dresden, was received with considerable applause,—a result towards which Herr Emil Devrient, by his masterly impersonation of one of the characters, is said to have largely contributed. After its first successful night, however, the play has been prohibited,—as it is whispered, by command of the King himself. It is not to be represented any more, either at Dresden or at any other place in Saxony. Has the success of 'The Gladiator of Ravenna' turned Court attention to the danger of allowing patriotic sentiments expression at the theatres?

A Milan paper gives a few particulars of the Piedmontese literary and political organs which have their head-quarters at Turin. From this account we learn that there are four regular reviews published in that capital:—*La Rivista Contemporanea*, a journal edited by Signor Chiala, and numbering among its contributors Signors Rosmini, Tommaseo, and Rovere,—*La Rivista Enciclopedica Italiana*, though founded by M. Predari and sustained by some of the best writers of Italy, Signors Amari, La Farina, Montanelli, and Mazzoni, has not, we are told, attained the success which its friends expected,—*Il Cemento*, a paper devoted to the cause of Italian nationality in the spheres of literature and philosophy, is the organ of the more ardent patriots, and numbers among its editors Signors Spaventa, a disciple of Hegel, Antonio Gallenga, a writer well known in England under his *nom de plume* "L. Marriotti," and Constantino Nigro, a young Italian poet,—and *La Ragione*, founded by Signor Antonio Franchi, an organ exclusively devoted to the discussion of high and abstract questions of philosophy. Of these, *La Rivista Contemporanea* alone reaches a sale of 2,000. The other journals amount to eleven. *Il Piemonte*, the ministerial organ, which has replaced *Il Parlamento*, sells 2,000. *La Gazzetta del Popolo*, the republican organ, sells 7,000, about double the circulation of all the other journals put together. *L'Opinione*, organ of the moderates, sells 800; the circulation of *L'Armonia*, a clerical paper, is not known; nor is that of *L'Unione*, the journal of Signor Giovini. In neither case is it large. *La Voce della Libertà* is edited by Signors Brofferio and La Cicilia, and has 500 subscribers. *L'Espresso* sells 500 copies,—*Goffredo Mameli*, 300. Turin has two satirical journals:—*Il Fischietto*, with a sale of 850, and *Il Campanone*, a sort of 'Punch,' supported by and supporting the *parti-prêtre*. *Il Diritto* is written by young men unconnected with the old parties, and has a sale of 500 copies.

A collection of autographs (brought together by Dr. Strahl, of Berlin) was sold the other day at Cologne. There were many valuable lots, the greatest part of which were sold at moderate prices. Gustavus Adolphus of Sweden, f. i., brought 11 thalers 10 silbergroschen,—Charles XII., 8 th.,—Frederic the Great, 8 th. 10 s.g.,—James I. of England, 4 th. 2 s.g.,—Francis I. of France, 3 th. 2 s.g.,—Catharina de Medici, 3 th. 2 s.g.,—Philippus Melancthon, 7 th. 5 s.g.,—Conrad Peutinger, 7 th.,—Hugo Grotius, 4 th.,—Simon Dach, 5 th. 21 s.g.,—Linnee, 8 th.,—Emanuel Kant, 7 th.,—Lessing, 10 th.,—Klopstock, 4 th. 15 s.g.,—Schiller, 10 th.,—Theodore Körner, 4 th. 5 s.g.,—Blücher, 3 th. 16 s.g.,—Beethoven, 6 th. 5 s.g. An autograph letter of Luther's (for which there were bidders up to 100 thalers) was withdrawn from the sale, on account of Herr Heberle not being quite certain of its authenticity.

An additional gleam of light has been cast over the probable fate of the Franklin Expedition by an Esquimaux, named Mastitukwin, who accompanied Dr. Rae's party, and who has been for many years a member of the Wesleyan congregation at Rossville, in Hudson's Bay. Dr. Rae has always considered this native highly efficient and trustworthy. On his return to Rossville, the Esquimaux stated, that "he wintered with his party in

a snow house, where they had six weeks' constant night. In March last (1854) they started, on the ice, to the north, and were thirty-seven days on their northern journey. They were 100 miles beyond the region inhabited by the Esquimaux, but they still found the tracks of the musk ox. Sir John Franklin and his party are dead; but, perhaps, one or two of the men may still be alive, and amongst the Esquimaux. Sir John's watch, all in pieces, with his silver spoons, knives and forks, were found. The ship was a great goodsend to these people; and they now all have good sledges, spears, canoes, &c., of oak wood. Dr. Rae and his party did not see any of the remains of Sir John and his party; but the Esquimaux informed him that Sir John was found dead, with his blanket over him and his gun by his side. The probability is, that it is not more than two or three years since the party perished by hunger." Such are the words of Mastitukwin's narrative, as detailed to the Rev. T. Hurlburt, of Rossville Mission, Hudson's Bay. They are entitled to credence because the narrator is a native of the country, acquainted with the language, and could have had no object in making a false statement. The various implements made of oak which were seen in the Esquimaux encampment, prove that they must have had access to at least one of the ships of the missing Expedition.

We are enabled to add to former notices of the progress already made in the collection of Napoleon's works some interesting details. The number of documents now subscribed exceeds five thousand; this number,—when contrasted with that set down in our last paragraph on the subject, will show how rapidly contributions are reaching the Ministry. The most interesting of these contributions—because the least known—are those written while the hero of Austerlitz held inferior rank in the army. Numbers of letters written during the early portion of his career have been sent to the Imperial Commission. They were addressed to people—often almost unknown—and were treasured by them after the writer had become celebrated. Of these contributions the most remarkable are about sixty letters of instructions and explanations written by Napoleon while commanding the artillery at Toulon. The Imperial Commissioners have also in their possession an autograph letter, addressed by Napoleon to Cardinal Fesch—in which he describes, minutely and clearly, the proper duties of an archbishop. Indeed, Napoleon's correspondence with the clergy promises to form a remarkable portion of his collected works. It appears that he wrote a series of letters to the *Ministre des Cultes*, in which he gave his notion of a good priest. The main point on which he forcibly dwells is, that the Church has no business with affairs of State. It is said that these lessons to the Minister of Religion are both severe and just. Napoleon favoured the priests while they remained within the walls of their church; but his correspondence clearly shows that he was little inclined to encourage their fondness for inserting a spiritual finger in the political pie. The active search which has been made in every ministry has, in short, already produced some very curious contributions to the history of the Empire. They will further prove the universality of Napoleon's genius; for he touches upon every detail of public business, and always in a vigorous, argumentative way. Great events never appear to have distracted his mind from the minor calls upon his time. The decree, establishing the *Comédie Française* was dated from Moscow.

BRITISH INSTITUTION, Pall Mall.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is open daily, from Ten till Five. Admission 1s.; Catalogue 6d.

GEORGE NICOL, Secretary.

THE WINTER EXHIBITION of CABINET PICTURES, SKETCHES, and WATER-COLOUR DRAWINGS, at the GALLERY, 121, Pall Mall, opposite the Opera Colonnade, WILL FINALLY CLOSE on SATURDAY, the 17th inst.—Open from Ten till Five o'clock daily.—Admission, One Shilling.

THE ARCHITECTURAL EXHIBITION and COLLECTION of MANUFACTURES connected with ARCHITECTURE is NOW OPEN, from 9 till 4, at the Galleries of the Society of British Artists, Suffolk-street, Pall Mall East.—Admission, One Shilling; Catalogues, Sixpence.—And in the EVENING (except on Saturdays) from 7 till 10. Admission, Sixpence.

WILL CLOSE February 24, and all objects exhibited must be removed on the 26th. JAS. FERGUSSON, F.R.A.S., Hon. Secs. JAS. EDMESTON, Jun.

PHOTOGRAPHIC SOCIETY.—The SECOND ANNUAL EXHIBITION of this SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5; in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogues, 6d.

Will shortly close.

COLOSSEUM, Regent's Park.—Admission, 1s.—The original PANORAMA of LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatories, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

CYCLOPAMA, Albany Street.—NOW OPEN, with a Colossal Moving Diorama of the City and Bay of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the great Eruption of 79, and present state of the Excavated City. Painted by Mr. J. M'NEVIN, from Sketches taken by himself in 1852. Daily at Three and Eight o'clock, with appropriate Music and Description.—Admission, 1s.; Children and Schools, half-price.

PATRIOTIC FUND.—ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—The Proceeds of the Afternoon Representation of the DIORAMA on MONDAY NEXT will be devoted to the BENEFIT of the PATRIOTIC FUND, on which occasion the Battle of Inkerman and the Great Storm in the Black Sea will be exhibited for the first time.—To commence at 3 o'clock, Evening at 8.—Admission, 1s., 2s., and 3s.

CROSBY HALL, BISHOPSGATE.—MONDAY EVENING NEXT, February 12, Mr. HERBERT'S New RANDOM ENTERTAINMENT, entitled "RAILWAY READING," with MUSICAL ILLUSTRATIONS.—Hall, 1s.; Balcony, 6d.; Stalls, 2s. Doors open at 8, commence at half-past.

SCIENTIFIC

SOCIETIES.

GEOLOGICAL.—Jan. 31.—W. J. Hamilton, Esq., President, in the chair.—The following communications were read:—'Observations on the Silurian and Devonian Rocks of Christiania, in Norway, on presenting M. Kjerulf's New Geological Map of that District,' by Sir R. I. Murchison.—'On the Foliated Rocks of Norway,' by D. Forbes, Esq.

HORTICULTURAL.—Feb. 6.—The Hon. Lawrence Sulivan, V.P., in the chair.—Three gentlemen were elected Fellows. The new regulations brought together an assemblage of flowers and fruits such as the Society never has had before at its meetings in Regent Street. Not only was the meeting-room filled, but even the passage leading to it and the Secretary's room next the library were full of gay-flowering plants, fruit, and examples of forced vegetables, certainly a promising beginning so early as the month of February. Those who are interested in the details of the competition had better refer to the Report in the *Gardeners' Chronicle*. Amongst the articles of peculiar interest shown, was the *Holcus saccharatus*, in a green state, and bearing seed, from Frogmore; also, dried stalks of it, and a sample of its fibre, from Mr. Henderson, of Kingskerswell. It was stated that its fibre, which is what is left after the sugar, for which it is grown in France, is pressed out of it, has been ascertained from paper-makers here to be worth at least 10l. a ton, a fact worth knowing during the present scarcity of textile material. A root and figure of the potato yam (*Dioscorea batatas*), from M. Decaisne was also exhibited. The root was about the size of a well-grown parsnip, the thick end being that which is furthest from the plant, and deepest in the ground. It can only, therefore, be grown with advantage on ridges, and in deep light land; when fresh, this root was said to weigh about 3 lb. Finally, on the walls of the room, were suspended some drawings of the *Wellingtoniana gigantea*, from Mr. Bateman. In one of these, the "great tree" is compared with the west fronts of the Cathedrals of Salisbury (406 feet), St. Paul's (365 feet), St. Peter's at Rome (457 feet), and the Great Pyramid of Egypt (476 feet); and it is shown that the Wellingtoniana, which is 450 feet in height, is nearly as high as the Great Pyramid itself. One immense diagram represented the natural size of the trunk of a young Wellingtoniana, cut off at 3 feet above the ground. Another showed a portion of the wood and bark, with the supposed age of tree, as ascertained by the annual rings in its semi-diameter. It is thus set down by the Americans at 3,000 years old; but it was stated that this was doubtless arrived at by erroneous computation, and that 1,120 years (as ascertained by Dr. Torrey, who visited the spot, and took much pains to ascertain the age of the tree) was much nearer the truth.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 6.—J. Simpson, Esq., President, in the chair.—'On the

Flow of Water, through Pipes and Orifices,' by Mr. J. Leslie.—Messrs. H. Banister, P. Hedger, and J. Henderson, were elected Associates.

ROYAL INSTITUTION.—Jan. 19.—W. R. Grove, Esq., V.P., in the chair.—'On some Points of Magnetic Philosophy,' by Prof. Faraday.

Feb. 5.—W. Pole, Esq., Treasurer, in the chair.—Messrs. E. Macrory, H. Maudslay, Major Gen. J. Stuart, C.B., H. Wedgwood, and J. W. Wrey, were duly elected,—and Messrs. H. Pemberton, and R. Hoper, were admitted Members. Thanks were voted to Profs. Faraday and Tyndall, and to the Astronomer Royal, for their discourses on the evenings of January 19 and 26, and February 2.

SOCIETY OF ARTS.—Feb. 2.—*Special Meeting.*—Viscount Ebrington, M.P., in the chair.—The paper read was 'Observations on the Proposed Congress, in Paris, as to the Improvement of International Commercial Law,' by Mr. Leone Levi. It was explained that when the assimilation of the law relating to commerce was spoken of, no distinction was made as to the sources—they might be statutes, ordinances, codes, usages of trades, or customs of places or markets, sanctioned by law. Again, as to the word "code," it was only the form in which the law was often embodied in a set of rules or definitions. So, when codification was spoken of, no reference was made by it to the value of the law itself, but simply to the mode of expressing, publishing, or applying it. The laws of two countries might be assimilated, yet the modes in which they were stated might continue different. The most important point, therefore, was the assimilation of the law—the codification of it was a secondary consideration. Mr. Levi then examined how a merchant was affected by the provisions of mercantile law. Whether, in fact, he formed a partnership, purchased or sold, shipped goods, effected an insurance, became a bankrupt or sued another for money—as partner, as debtor, and as creditor, as shipowner or insurer, as a shareholder in national enterprises, and even as an author or an artist—in all these relations he was touched by the mercantile law of the State wherein he resided or transacted business. But it had been said that commerce was essentially universal, and of an international character. A firm might have a house of business in many countries; goods were bought in one country and shipped to another, and, perhaps, on account of a merchant residing in a third, bills might be drawn in this country on another, and circulated through many more. In such cases the individuals, the articles, the instrument and the transaction were all affected by the law of the place wherein the business originated, by the law of the place through which it passed, and by that of the place wherein the affair was consummated. The idea of the proposed congress had originated with an Edinburgh Society for promoting an international code of commercial law, by whom it had been suggested to the French Government. They likewise recommended the issuing of an Imperial Commission, similar to that in this country. From such a congress much mutual advantage could not but accrue. Great Britain possessed a boundless store of legal learning—France excelled in the beauty and perspicuity of the exposition of the law—the Spanish and Portuguese codes were distinguished for their fullness and precision—Germany was rich in learned and philosophical juriconsults—Italy had in her legislation many institutions in advance of other countries—whilst the United States of America had the greatest experience in international law, owing to their peculiar federative constitution, and the complicated relations consequently arising between their several semi-independent Governments. An animated discussion followed the reading of the paper, in which Mr. Howel, Mr. Headlam, Mr. Collier, Mr. Hope, Mr. Chadwick, Mr. Hawes, Mr. Lyne, Dr. Waddilove, Col. Sykes, Mr. Elihu Burritt, Mr. Campin, and the noble Chairman took part—when the following resolution, proposed by Mr. Hope, and seconded by Mr. Hawes, was carried unanimously:—"That the Council of the Society of Arts be requested to appoint a committee to consider the best means to

be adopted to further the object of the proposed congress at Paris, for promotion of the assimilation of the commercial laws of the great nations of the world."

Feb. 7.—S. F. Gibson, Esq., in the chair.—The paper read was 'The Commercial Consideration of the Silk Worm and its Products,' by Mr. Thomas Dickens.

MEETINGS FOR THE ENSUING WEEK.

- MON. Royal Academy, 8.—'On Sculpture,' by Sir R. Westmacott.
— Geographical, 8.—'On the Sources of the Purus, a great Tributary of the Amazon,' by Mr. Markham.—'Report on the Arrival of the Chadda Expedition, under Dr. Baikie, at Fernando Po.'—'Accounts from the Central African Mission,' by Dr. Vogel.
- TUES. Institution of Civil Engineers, 8.—Renewed Discussion on Mr. Leslie's paper 'On the Flow of Water through Pipes and Orifices.'
— Syro-Egyptian, 7½.—'On the Yezidis, or Devil-Worshippers,' by Mr. Ainsworth.
— Zoological, 9.—Scientific.
- WED. Royal Institution, 3.—'On Electricity,' by Prof. Tyndall.
— Society of Arts, 8.—'On the Expediency of at once Decimizing English Monies and Weights,' by Mr. Franklin.—'On the Basis of a Decimal System of Money for the United Kingdom,' by Mr. Miuasi.—'On Decimal Coinage,' Mr. Reid.
— Ethnological, 8½.—'On the Ordeal, or Fetish-Tree of Western Africa,' by Dr. Daniell.—'Remarks on the Analysis and Comparison of the Personal Pronouns in the Schematic and old Egyptian Languages,' by Mr. Cull.
— Royal Society of Literature, 8½.
— Graphic, 8.
— British Archaeological, 8½.
- THURS. Royal Academy, 8.—'On Painting,' by Prof. Hart.
— Royal Institution, 3.—'On English Literature,' by Mr. Jones.
— Artists' and Amateurs' Conversation, 7½.
— Society of Antiquaries, 8.
— Royal, 8½.—'Account of Recent Researches near Cairo: "Geological History of the Alluvial Land of Egypt," by Mr. Horner.—"On the Computation of the Attraction of Mountain Masses," by Mr. Airy.
- FRI. Royal Institution, 8½.—'On Siege Operations,' by Mr. Jekyll.
— Geological, 1.—Anniversary.
- SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.
— Asiatic, 3.

FINE ARTS

BRITISH INSTITUTION.

IN spite of a display of five hundred and fifty-nine works of Art, we are sorry to say this much-abused Institution does not appear this year with flying colours. Not that we would imply that its colours—to use a commercial phrase—are flown. Quite the reverse,—they are gay as a flower-bed. Like Mortimer, in Gray's 'Elegy,' the Institution has only to—

Shake its quivering Lance

to refute any such charge.

Of views at Malta, Coblentz, Derwentwater, &c., on which small and cobalt are generally expended, we have more than enough. Of anything that shows thought—not merely originality, but even in plagiarism or repetition,—we see nothing. As far as creativeness, poetry, imagination, character, humour, or ideality go, the Exhibition really consists of two pictures—*Gil Blas* relating his Adventures to the Licentiate Sedillo (No. 155), by Mr. Selous, and *The Interview between Queen Elizabeth and the Countess of Nottingham* (138), by Mr. T. M. Joy. The first is a picture of the Leslie school of character; the second, an historical picture. In both we regret to see that exaggeration which is to real thought what padding is compared with the development of real strength. In both, also, we are sorry to see the author and the painter at variance;—a discord, we suppose, as inevitable as that of poet and musician,—a quarrel as irreconcilable as that of science with imagination. Neither Mr. Joy nor Mr. Selous seems to care the least for Hume or Le Sage. In the one picture Mr. Joy represents the Countess of Nottingham, an elderly woman, as a mere girl of perhaps eighteen; and Queen Elizabeth—who according to the old coin still preserved was at this time a perfect hag, a Sycorax, a paragon of ugliness—as forsooth a Semiramis dame of scarce fifty. Mr. Joy, on the other hand, depicts the Licentiate's housekeeper no selfish crone, anxious to prevent her master being smitten by apoplexy before he had made his will, but a blooming grisette (pure Saxon, not Spanish,) apparently shocked at *Gil Blas's* rashness in telling a story so dangerous to so good a master.

But to description: Mr. Joy represents the celebrated interview—one of the most romantic incidents in the life of Elizabeth—as full of a certain pathos, though, as history tells it, rather too repulsive for the conscientious painter. A

frightful, rouged old woman, all chin and nose, with sunk cheeks, with a yellow face choked up with false curls and jewels, freaked and flounced and furbelowed, all ruff, and frill and bows,—and another old woman, pale and dying, minus rouge, &c.—can never make a picture that tells a story without half a page of catalogue description. The picture has, however, power, and its tone is solemn and impressive. The gem of the Exhibition is, however, indubitably the head of Mr. Selous's Licentiate. Swollen purple with coughing, with small sodden grey eyes squeezed up and watering, and the tongue projecting from the mouth, it looks for all the world like an Orleans plum ready to burst with excess of ripeness. The dress is also good: the black velvet skull-cap, the stubby grey hair, the loose doublet over the Falstaff paunch, the bandaged gouty legs, the soft cushions, the small soft dimply white hands, Epicurean and voluptuous tell-tales of bygone *ollas* and *fricandeaus*, now to be atoned for by purgatorial twinges. The picture is all but spoiled by the barber's man-milliner of a *Gil Blas*, whose face is poor in colour and spottily painted. The tone of the whole composition is pale and rapid,—all washy buffs and feeble browns.

We do not wish to speak intemperately, but really Mr. Glass is a glass too much. We, indeed, see him through a glass darkly. His picture is an admirable picture, only we can see nothing but a figure as black as a sweep, sweeping along as if practising for a sweepstakes. To all painters who are uncertain what expression to throw into the faces of their figures, we recommend Mr. Glass's plan of hiding the face altogether, just as Vandyke, when he had not time to paint a portrait with two hands feminine and taper as his own, tucks one into the grandee's vest contemplatively. His *Border Spear* (228) borders on the ridiculous. What does the title mean?—must we go over the border to "spier"? How long are really clever artists to go on printing from the same indestructible stereotype;—throwing off the same impressions from the same worn-out mould, as like as one envelope to another, or one bullet to its fellow?

Mr. Naish's *Swoon of Endymion* (418) is in the Etty manner. The nude figures of the Nereids who carry off the hero of Keats are well drawn and carefully painted; and yet the flesh is flat and not round, and buffy and monotonous in colour. Such beings could not float in the air, but would pay homage to Newton, and yield to the laws of gravitation, if to no other. Spots of paint may be short-hand notes for flowers, but the fuzz and woolliness of Turkey carpet vegetables are not fit denizens of an artist's foreground.

The Portrait subjects (being less ambitious and more in the way of trade) are as good as usual. A *Sea Nymph* (25), by Mr. W. E. Frost, is, if not ethereal, at least a pretty study.—Mr. Inskipp is as clever and careless as usual; scornful anatomy, form, and finish, and yet pleasing, by a dash and firm self-confidence.—Mr. Desanges (a slave to moonlight) has *A Sibyl* (153), that is to say, a dark lady reading,—not an antique lady, but one, though somewhat supernatural, really "ripe and real."—Mr. Sant—*Hear thou in Heaven, thy dwelling place* (63)—gives us a pretty praying face—a sort of infant-Samuel-grown-up expression; finished to drawing-room requisitions, but with that cream colour and purple which have now become this pleasing artist's mannerism, whatever face he paint, old or young, English or foreign.—A *Study* (42), by Mr. Partridge, is a pleasing picture and well painted.—Mr. Collins's *Jacqueline* (184) is, of course, poetical, but has nothing to do with the name or with flight. This lady is not flighty.—Mr. W. Dyer's *Mariana* (68) has something of the poem about it. But Mariana need not be ugly and grim because she is melancholy.—In the Domestic school, appealing to the pocket and the affections, Mr. G. Smith, Mr. Goodall, and Mr. Cobbett stand prominent. Mr. Smith's Boys are smooth and clear as ever; Mr. Goodall is tender and finely finished; and Mr. Cobbett hearty and English.

Of Pre-Raphaelite pictures we find only one, although the whole gallery shows a quickening and increased care, for which we are indebted to

this new schism. This isolated heretic is *An Incursion of the Danes* (407), by Mr. W. Gale. A group of weeping, trembling, yellow-haired Saxon women are watching, from a plateau of cliffs, the Danes landing in the Isle of Wight. In some of the faces there are both beauty and sentiment; but the background, if true, is most Chinese and repulsively quaint. Why take disagreeable truths, when there is a choice?—Mr. Selous's second picture, *The Decision of the Caskets* (408), is gay in colour, but totally destitute of character. Portia is not queenly nor Italian, and her face implies neither suspense nor anxiety.—Of the High Church ascetic school, Mr. Burchett's *Death of St. Oswald* (992) is the only example. St. Oswald, having just recited fifteen Psalms, waited at twelve dinners, and washed twelve pairs of feet, is falling back senseless in the arms of his cross-bearer. St. Oswald is "rather yellow," as Canning said of the Nabob, and the whole forms an elaborate but rather lifeless picture. The poor men seem accustomed to the deaths of saints, and quite resigned to the melancholy event.

Mr. F. Underhill is as good, but no better than usual. His *Wheat-sheaf* (80) is a plagiarism from Mr. Uwins's picture of last year.—Mr. Wyburd is as delicate and enamelled as ever, with a little too much of the meretricious graces of snuff-box ornament about his style.

As usual, in an English Exhibition, the landscapes stand high as regards merit. Perhaps the most original is Mr. Anthony's *Wood-yard* (472). This artist is too deep an observer, and of too individual a mind ever to join a sect,—and he is as unlike the conventional hum-drum school as he is unlike the Pre-Raphaelites. He delights in the sombre effects of evening, and of impending rain and thunder, and seeks no beauty at the expense of truth.—Mr. Hering's *Convent on the Lago Maggiore* (69) is timid, compared with Mr. Stanfield's dash; vague, as contrasted with Mr. Roberts's accuracy and freedom; but yet pleasing of the strong, smooth, heavy, glazed, obscure, French-polish school,—showing poetry and long experience.—To paint the *Park* (243) Messrs. Creswick and Ansdell join forces; but the holy alliance has not done much.—Mr. Branwhite has a snow-piece—the subject good, but not bran new—*A Winter Afternoon* (178). The trees are knobbly, and want delicacy of spray and twig. The red, coppery light on the snow and on the trunks is very truthful; but the snow in the foreground does not lie loose and drifted as in Nature, but seems smeared on the ground with a spatula. There is no sparkle, no ripple, no footprints of birds, no grass growing through,—in fact, no minute or painstaking truth.—Mr. Linton's Welsh scene is, as usual, atmospheric and pleasing.

Mr. Dearle—*A Welsh River, Evening* (185)—who was last year eulogized by Mr. Ruskin, repeats this year the same trick of the flying duck; showing that no new thought has visited his studio since last May.

Mr. Danby is much the same as ever. He exhibits *Off Beachey Head, near Hastings* (235), and *Ventnor, Isle of Wight* (332),—and Mr. Copley Fielding's *View of the South Downs* (14) is a most foggy, vapoury, pallid scene,—perhaps very truthful,—certainly very unpleasing.—Mr. Cooper's *Cows and Sheep* (1) need no praise from us.—Of lesser men, we may mention favourably Mr. J. Percy's *Barmouth Water* (191).—Of miscellaneous pictures, Mr. T. Earle's *Dream of the Shepherd Dog* (464), with the sleeping child, has much poetry.—Of the young artists, we see much promise in Mr. Stark's *Views in Surrey* (41),—and Mr. J. Vernon's *Flowers and Fruit*.

Last, but not least, we must mention Mr. Lance's *Fruit* (163). His picture is all gold and gems and irises, and appeals, of course, to the eye rather than the head. A dead peacock in the foreground is a new effort of gorgeousness. The emerald eyes of the tail feathers are dull, and seem copied from a bad specimen. The artist has caught with great skill the effect of the golden spangle of the lower plumings; but in parts his touch seems to turn the filaments into a heavy fringe, not buoyant or downy.

FINE-ART GOSSIP.—One hundred and sixteen plans have been sent in for the new Sheffield School of Art. That of Messrs. Wightman, Hadfield & Goldie, of Sheffield, received the premium of 50*l*.

Mr. Mayall has sent for our inspection a number of daguerreotypes, with enlarged collodion copies of the same. The photographer appears to have invented a process by which he can reproduce, on a large scale, any likeness that may have been secured by the daguerreotype process,—thus doing away with the most disagreeable feature of the art:—the deathly hue and unpleasant reflexion of the original plate. This is an important improvement. The features present, in the copy, all the accuracy of detail belonging to the daguerreotype; but the metallic surface and the melancholy tint of the shifting shadow are no longer there. The plan of copying introduced by Mr. Mayall, we understand, is to place the daguerreotype before the camera and take an enlarged negative copy of it on glass. From this negative a positive impression is printed, and we have then a *fac-simile* of the daguerreotype so far as the likeness is concerned, but it comes out a totally different thing as regards the appearance of the picture. The copy has the agreeable effect of a very fine lithograph; and as the paper surface will admit of miniature work and colouring, any degree of artistic finish may be added. In the copies under our eye—portraits of men well known to us—the effect is admirable. This art is certainly approaching the domain of Fine Art.

A Correspondent writes on the subject of the Oxford designs:—

"The letter from your Correspondent of last week with reference to the competition for the Oxford University Museum requires some comment. It is possible that, as 'One of the Six,' he may have had information not vouchsafed to the other competitors, but certainly the account of the proceedings given in the public journals was to the effect that Mr. Hardwick examined the six designs after they had been chosen by the delegacy,—and not, as your Correspondent states, that they were selected by him. Had they been so chosen, it would, indeed, seem strange that he should have reported that not one of them complied with the requirements either as to cost or arrangement. And it is of the fact that the delegacy did not request him to examine the rest of the designs himself after he had as plainly as possible told them they were unable to select what they really did want, that I, in common, I am sure, with many other competitors, most justly complain,—the more so in my own case as personal inspection has convinced me of the justice of his report. These facts were very judiciously noticed by a Correspondent of yours some weeks previously, and I have felt compelled to call attention to them again, as it is bad enough to have endured the injustice of this competition at the hands of the delegacy, but it would be far worse to let the incorrect statement that part of their deeds were done under professional guidance pass uncorrected.

I am, &c., A COMPETITOR."

Messrs. Bradbury & Evans have effected considerable improvements lately in the line medalion-engraving machines. They can now copy medallions, or even historical subjects, in rilievo; reversing the position, and increasing or reducing the size of the original. Nothing can surpass the finish and relief of the specimens we have seen.

A Lover of Art expresses his dread of the intended restoration of the Chapter House of Salisbury Cathedral as a memorial to the late Bishop. He complains of the desecration of bad taste in that building. In one new window St. George is represented in armour of the sixteenth century, surrounded by borders of the thirteenth. The oak stalls of the choir are canopied with deal, and the Hungerford Chapel has iron work repaired with wood.

Mr. Birch's collection of pictures by living artists is announced for sale next week; a collection including several gems of the modern English school. Among others, we notice Wilkie's 'First Ear-ring,'—Etty's 'Fleur de Lis' and 'The Lattice,'—Turner's 'The Lock,'—Constable's picture, also called 'The Lock,'—'Waiting for the Deer to rise,' by Sir Edwin Landseer,—'Alfred in the Danish Camp,' by Mr. Maclise,—'A Pyrenean Pass, with Smugglers,' by Mr. C. Stanfield,—'Spezzia Bay,' by the late Sir Augustus Calcott,—'Beating for Recruits,' by Mr. Webster,—'The Mountain Pass,' by Mr. P. F. Poole,—'Dolly Varden,' by Mr. W. P. Frith,—'The Tambourine Player,' by Mr. J. Uwins,—'A Golden Landscape,' by Mr. Linnell,—'Diana Vernon,' by Mr. Leslie,—'Contemplation' and 'The Thistle,' by

Mr. F. Stone,—Sea Pieces, by Mr. Edward Cooke,—Landscapes, by Mr. Danby, Mr. S. Cooper, Mr. Harding, Mr. Creswick, Mr. F. R. Lee, and Mr. Payne,—'The Hall Fruit Table,' by Mr. Lance,—'Nimrod,' by Mr. Herbert,—and 'Dumblane Cathedral,' by Mr. D. Roberts.

An "Old Subscriber," in reference to the remarks of our Paris Correspondent of last week, observes:—"Art is a matter of prejudice for or against. Your Correspondent's prejudices seem in favour of Doo and Robinson. No one can doubt their talents, still it is a well-known fact, that the French can beat us in historical line engraving. No so in landscape. Here, no doubt, the Paris Exhibition will clearly prove that we are the only landscape-engravers in the world. That the art of line engraving will become extinct with the present men no one acquainted with the art can doubt for one moment; and it is in some measure owing to the enormous sums demanded by painters for copyright, forgetting how much their fame is spread by the art. The public also share the blame, as they are content with a wooden representation of pictures and passing events if they can get them for sixpence. The publishers, too, carry out the principle of Sir Robert Peel with a vengeance:—viz., 'the right to buy in the cheapest market and sell in the dearest,' which, when put into plain English, means starving the producer and cheating the purchaser. If it be worth while to attempt to save the art, a hint in your paper might have some good effect."

An old French *savant* has been taken in by a seller of curiosities who sold him a sham Assyrian obelisk for 5,000 francs. It appeared that the stone came from a quarry near Paris, and the *savant's* own work on Assyrian antiquities had been consulted for the requisite number of hieroglyphics. There is, however, something to be said for the *savant*, who, after all, discovered the imposture, and recognized on the stone the marks of modern tools. The marine-store-dealer was sentenced to pay 6,000*l*. damages, besides returning the purchase-money, and in default fifteen months imprisonment. There is need for such an exposure, if it be true that some credulous antiquary lately believed that he had discovered written on a Babylonian stone the whole Jewish Decalogue!

From the *Crayon*, a new Art-paper, published in New York, and conducted in a fine, if rather speculative, spirit, we extract a few lines of American Art-intelligence. Speaking of the studios of the New Country, our contemporary says:—"Kensett has just finished a picture, which he gives the name of 'An October Day in the White Mountains.' It is, to our mind, the most powerful in colour, and most satisfactory, as a whole, of his pictures, so far as we have seen. In the distance is Mount Chocorua; and the Saco, in the middle distance, winds through a valley dim with the purple autumn haze; and in the foreground, most judiciously used, are a few flashes of strongly-coloured autumnal foliage.—Church is at work on a large composition of South American Andean scenery. A picture, recently finished for Mr. Sturges, from the material gathered in his South American tour, is one of the most attractive and poetic compositions he has produced.—Stearns is painting Washington as the statesman, for his Washington series,—the incident being the adoption of the Constitution.—Greene, whose exquisite piece of colour in the last Academy Exhibition won him so much applause, is painting a portrait which promises still more.—Walcutt, who has recently returned from Paris, has brought with him several compositions painted there, which show a great improvement upon his European study. The overthrowing of the statue of George the Third, at Bowling Green, has some very brilliant colour,—and a passage of pioneer life, an American Mazeppa, is a wild episode of our history.—Thompson has a hunting scene on one of the lakes on his easel,—and a road-side scene just finished shows, as it ought, improvement. If the 'hard times' make the artists work the harder, we shall scarcely regret them—when they have passed."

MUSIC AND THE DRAMA

MUSICAL WINTER EVENING.—THURSDAY, February 15. Willis's Rooms, at half-past Eight o'clock.—Quartet, 3 B flat, Mozart; Quintet, Op. 44 (MS.), Piano, Oboe, Clarinet, Bassoon, and Horn, Pauer; Quartet, con Cauponetta, E flat, Mendelssohn; Morceau for Violin and Piano, Ernst and Heller. Executants: Ernst, Coffrie, Hill, Platt and Pauer, Barrett, Lazarus, Snelling, and Harper.—Single Tickets, Half-Guinea, to be had of Cramer & Co., Chappell & Co., and Oliviers', Bond Street. The remaining Sofas, with Reserved Places for Five Persons, may be secured for the Series of Four Concerts for Five Guineas.

J. ELLA, Director.

NEW PHILHARMONIC SOCIETY. Exeter Hall, WEDNESDAY, February 14, will be performed Cherubini's Grand Choral Work, in C; Beethoven's Symphony in A; Mendelssohn's Overture ('Ruy Blas'); Weber's Overture ('Euryanthe'); Beethoven's Overture ('Ermont'); Part Song (Mendelssohn), with chorus of nearly 300 voices. Vocalists engaged: Miss Birch, Miss Dyer, Miss Dianelli, Mr. Augustus Braham, Mr. Herbert, and Mr. Hamilton Braham. Violin, Herr Ernst; Conductor, Dr. Wylde. Performance will commence at 8 o'clock.—Stall Tickets, One Guinea; Reserve Seats, Area, 10s. 6d.; Portion of West Gallery, 5s.; Western Area, 3s. 6d., to be had at Messrs. Cramer, Beale & Co. and Messrs. Keith, Prowse & Co., where Subscriptions are also received.—Subscription, 2s. 2d.

EXETER HALL.—The Right Hon. the Lord Mayor and Sheriffs of the City of London have kindly signified their intention of being present at the Performance by the NEW PHILHARMONIC SOCIETY in aid of the FUNDS of the ASYLUM for IDIOTS on WEDNESDAY, February 14.—Stall Tickets, One Guinea; Reserve Seats, 10s. 6d., to be had at the Office of the Asylum, 29, Poultry. W. NICHOLAS, Sub-Secretary.

EXETER HALL.—Mrs. FANNY KEMBLE.—Mr. Mitchell respectfully announces a SECOND READING (and positively the Last) of Shakespeare's Play, A MIDSUMMER NIGHT'S DREAM, by Mrs. FANNY KEMBLE, with the incidental Music by Mendelssohn, on MONDAY EVENING, February 13, commencing at Eight o'clock. The Orchestra and Chorus under the Direction of Mr. Benedict. —Prices of Admission: Reserved and Numbered Seats (for which early application is requested), 7s. 6d.; Reserved Seats (not numbered), Centre Area, 5s.; West Gallery, 3s.; Area, 2s.—Tickets and Books of the Words may be obtained at Mr. Mitchell's Royal Library, 33, Old Bond Street, of Messrs. Keith, Prowse & Co., Cheapside; at the principal Libraries and Music-sellers; and at the Office, No. 6, in Exeter Hall.

AMATEUR SOCIETY.—Our musical season may be said to have begun with the first Concert of the *Amateur Society*, which was held on Monday last. This was more to our liking, from its being more amateur, than any previous meeting of the kind. The number of professional performers in the band has been reduced, and the executive machine now fairly represents the best and the worst qualities of those who execute musical works because such execution gives them pleasure,—but who cannot have the unfaltering precision or the steady nerve of persons trained up to particular services and accomplishments, as forming their occupation in life. The orchestra was efficiently conducted by Mr. H. Leslie. The overture to 'Der Freischütz,' and Mendelssohn's Symphony in A major, went fairly. The vocal music was contributed by the Society of German Part-singers, whose training—commenced by Mr. C. Horsley—has been well carried out by Herr Pauer.

MARYLEBONE.—Mr. Bayle Bernard's new drama of 'Leon; or, the Iron Mask' was produced on Monday. It is a romantic play, in five acts, much indebted to the tragedy of M. Casimir Delavigne, but elegantly interpreted by the adapter. The subject itself we do not consider well suited to dramatic purposes; and it has required much inventive skill to fit it for the stage. It is interesting as an historical mystery, but of too simple a texture for a long drama. The author has, however, evaded the great difficulty, by spreading the action over many years, and confining the topic of "the iron mask" itself to the fourth act, only a small portion of which it actually occupies. The scene in the Bastille, in which the poor sufferer laments his imprisonment and constant blindness, is intensely pathetic. His likeness to the King, of whom he was the twin-brother, is supposed by the dramatist to be the reason for this dreadful punishment. The previous hilarity and generosity of the hero, while ignorant of his claims, and rejoicing in the freedom of his boyhood, contrast strongly with his latter condition, and deepen the pathos of the situation. The fidelity of a Huguenot friend, who ultimately effects his deliverance by voluntarily dying for him, and by the aid of a monk causing his own dead body to be substituted for that of his beloved prince, is also a touching incident, alike beautifully conceived and executed. Mr. Wallack, as the hero, supported the character in the earlier portions of the play with dignity and spirit; and in the quiet demonstration of his sorrows in the later scenes was truthful and touching. Mrs.

Wallack performed the part of *Hortense*,—a lady of the Court attached to *Leon*, whose love is always on the alert to preserve him from danger or to mitigate his sufferings, and who, at last, plans and executes the means of his escape. The drama is principally composed of set scenes, which were picturesquely disposed,—the action being, in general, skillfully worked up to the necessary climax. There is also much beauty in the dialogue; and the performance proved very successful, and appeared to afford much delight to the audience.

ADELPHI.—The tendency of theatrical composition in our day is to the real, in distinction from the drama of an elder time which revelled in the ideal and poetic, and to which accordingly the form of verse was the proper adjunct. The present managerial demand for prose dialogue leads to a supply of familiar themes appropriate to the vehicle. These themes, from 'George Barnwell' to the latest French importation, have a certain monotony of interest. Mr. Dion Bourcicault in providing a new "drame" for this theatre, though aiming at the romantic in treatment, and extending his development to five acts, has not been able to escape this necessity. 'Janet Pride,' produced on Monday, is a kind of dramatic novel, dealing with old materials and incidents, but trusting for their effect to a new and startling combination. The heroine is a foundling of the *Enfants Trouvés* in Paris, but of English parents, and is brought to England, after her mother's death, by a friend, a French watchmaker, one *M. Bernard* (Mr. Selby), who resides in a garret in Greek Street, Soho,—whether she is followed by her scape-grace father, *Richard Pride* (Mr. Webster), under the name of *Sergeant Grey*, whose money, clothes, and pension he enjoys, the soldier himself having been murdered in the bush in Australia, whither *Pride* had been transported for forgery. *Pride*, in his assumed character, steals a diamond-set watch from *M. Bernard's* apartment, the guilt of which is fixed on *Janet*, who is brought to the Old Bailey, tried and convicted—but afterwards liberated, her father having committed suicide, and made confession of the truth. Poor *Janet* falls into this peril because of a trick of sleep-walking, during which she removes the watch for safe custody from the table-drawer to her own private cabinet. *Pride* is on the spot, and abstracts the watch from its case while in her hand,—so that the latter only is placed in safe custody, and becomes evidence, with a pawnbroker's ticket slyly introduced into the same depository, against his daughter. The action of the drama is made to occupy twenty years,—beginning in Paris with the scenes of the mother's distress, closely copied from the drama of 'Marie Jeannes,' thence proceeding to Australia, and ending in England; the last portion of the action occupying three acts out of the five. The first two are entitled "Prologues." Madame Celeste, accordingly, performs two characters, *Jane Pride*, the mother, in the initial section, and *Janet*, the daughter, in the concluding drama. The whole taken together is a dramatic oration on temperance,—not exactly in the style of Mr. Gough, but with the same design and purpose. *Richard Pride* is an habitual drunkard. This vice made him forge on his employer, caused his escape to Paris, led to his transportation to Australia, and involved him and his daughter in the above-stated perils on their return to England. Mr. Webster showed much skill in distinguishing the gradations of the inebriate habit, by which a good-humoured and not naturally bad-hearted man declined by little and little into the confirmed scoundrel. The plot extending over such a series of years enabled these steps of moral degradation to be shown in a great variety of phases; and the contrasts had been not only well studied by the actor, but were so pregnant illustrated, that the life-portrait of the man in his different stages was very artistically rendered. The whole drama was exceedingly elaborated, and certainly much too long; but it was decidedly successful. It should be added, that 'Janet Pride' has already been performed in the United States.

MUSICAL AND DRAMATIC GOSSIP.—Our theory, that in times of stress any artist who opens a door into the world of Fantasy is more welcome to the public than those who appeal to stern passions and grave interests, received corroboration from the success which attended Mrs. Kemble's reading of the 'Midsummer Night's Dream,' at Exeter Hall, on Monday last, with the accompaniment of Mendelssohn's music. On former occasions we have expressed a doubt whether Shakespeare's exquisite Vision could be more adequately presented than in this form. The fairies are better called up by the voice of the reader and the music of the German master, than they can be by the most skilled of stage-managers, since his best skill cannot secure us an *Oberon*, a *Titania*, and a *Puck*, in any way approaching those shadowed out by the Poet. Now, too, when that which is gross and material and cruel—in conception unreal, in execution coarse,—has such a disproportionate place on our stage, we are glad to record such a protest in favour of the poet as the popularity of Mrs. Kemble's admirable piece of reading affords. It is to be repeated, we observe, next week.

The Directors of the *New Philharmonic Society* seem determined to lavish attractions hitherto undreamed of on their first concert. We are promised in their bills Cherubini's *Mass* in c, and a Symphony by Mendelssohn: and not these only,—but among the engagements advertised are those of Herr Ernst and—of the Lord Mayor and Sheriffs! Whether the latter are to appear in costume of gown and chain, and with mace-bearers, toast-masters, &c. (not to speak of those armed men who glitter at the Show), it is, perhaps, reserved for "the small bills" of the performance to declare. Are the days of masque and ballet to be revived, when Rule crossed hands with Rank, and Royalty pointed its toe to Beauty his partner, for the entertainment of burgher folk? *Can* Dr. Wylde have prevailed upon the City dignitaries to sing? The engagement advertised as above is one of great "particularity."

'Gli Arabi nelle Gallie,' by Signor Pacini, has just been produced at the Italian Opera in Paris, under the direction of its composer, who has re-touched the opera and made additions to it. The music, which is slight and sparkling, seems to have found corresponding favour in the eyes of the public. Madame Borghi-Mamo is described as having sung a brilliant *cavatina*, introduced for her, with great effect. Madame Bosio, too, has been fitted advantageously with some new flourishes and *roulades* contrived expressly for her use.

Our contemporaries announce that Mr. C. Kean has renewed his lease of the *Princess's Theatre* for a term of some years;—and that Mr. Gye intends to decorate anew *Covent Garden Theatre* before the commencement of his Opera season.—From the play-bills of *Drury Lane* it appears that Mr. Reynolds's adaptation of 'L'Etoile du Nord' is to be given. How far the word italicized above agrees with the pledge contained in Mr. E. T. Smith's note to the *Athenæum*, dated the 30th of November last [*Athen.* No. 1414], stating "that in the version I am about to produce the original (musical) text is strictly adhered to," remains to be seen.

The *Cologne Gazette* contains a letter of Herr Richard Wagner to Herr Röder, manager of the *Cologne Stadttheater*, on the performance of Herr Wagner's opera, 'Lohengrin,' at Cologne. We think the epistle rather characteristic of the expected leader of the Philharmonic Concerts.—"If you really have succeeded," says Herr Wagner, "in making this most difficult work generally understood (which only a very happy execution could have accomplished), I must be very grateful indeed for the zeal and the labour which you bestowed upon such an execution. I must beg especially that you will give my thanks to your *Capellmeister* for the immense pains ('für die schreckliche Mühe') which he must have given to the work before it could have been crowned with a real success,—a success, after all, which could only be made possible by the assistance of able and devoted singers, to whom I, therefore, also should wish to be remembered most kindly. It is true, I

always expect more from theatres of the rank of yours, knowing that *there* are the rising talents and the young and aspiring conductors,—whereas at the larger theatres every one is finished, *blasé*, *célèbre*, and therefore not disposed to learn new things. Nevertheless, I am always surprised, again, when I hear of a success of that very difficult ‘Lohengrin’; and doubly, in such a case, I deem it my duty not coldly to withhold my most joyful acknowledgments.” — Meanwhile, private letters from Cologne speak of ‘Lohengrin’ as anything but new; and as an opera forced on the town by newspaper influence, which has not succeeded with the musical, as distinguished from the revolutionary, public.

We know of no modern journalist who “paints the lily” (to speak orientally, which is, with civility) so richly as England’s admirer, M. Jules Lecomte, and this not merely when he is describing the Titanic appetites of the ill-looking “British fair,” or the addresses paid to him by German damsels on the Rhine steamers,—but also when he reports the conditions and caprices of Parisian actresses, for the readers of *L’Indépendance Belge*. He can rarely have set his palette with more florid tints than he used the other day, when he stated the terms on which Mdlle. Rachel has undertaken to make two hundred appearances in America. Half of the sum—only 24,000*l.*—is to be paid down in Paris before she sets foot on shipboard,—and this is not to be reclaimed, let any calamity or casualty whatsoever cut short her engagement. But, adds our lover of the marvellous, supposing that Mdlle. Rachel should arrive in America, she is still to make her two hundred appearances there—living or dead! It seems like insulting common sense to include the last word; yet M. Lecomte goes on to declare that Mdlle. Rachel’s contract provides for her being embalmed and exhibited for the requisite number of times—in case of her death; and this repulsive piece of exaggeration is not offered to the good public of Brussels after the fashion of a joke. It is further repeated in the *Journal des Débats* by M. Janin, though he guards himself from being suspected of believing in it by due expressions of wonder and disgust. Yet, outrageous though it be, this tale came to us opportunely. We fear that artists, who are willing to go to America for fabulous gains, must, while playing and singing there, endure vexations calculated to annoy them as much as the thoughts of posthumous mummery in glass cases. On the same day on which we read this stupendous clause in Mdlle. Rachel’s contract as told by M. Lecomte, we fell in with some of the criticisms which the Transatlantic press is just now bestowing on Madame Grisi. Rarely have the inevitable doings of Time and Change been commented on in less measured phrases. Being far fetched and dearly bought, the *prima donna* is accused and abused, and her still high qualities are questioned, because she is not twenty-five and a sylph, and because her voice is no longer at its best. To bystanders, it is saddening to think that great artists, at the close of careers full of honour, when no need exists, should subject themselves to cold welcome, coarse comparisons, and grudging approval, from a public as willing to stare at as to care for them. Let it be once understood, that by gilding the bait sufficiently, any actor or singer can be prevailed upon to face any new ordeal,—whether fit or unfit, inclined or disinclined,—and it follows that such a want of self-respect shall be met by a contempt which perceives small difference betwixt a *Norma* found unworthy of her reputation, and a Joyce Heth proved to be only eighty in place of being double the age. These forced musical progresses in search of monstrous gains are good for neither America nor Europe; and though, after a time, they will destroy themselves, their consequences in the interim are bad.—To judge from the tone of the press, Mdlle. Wagner seems to be considered as “the coming Lady,” and, we suppose, is expected to pay a visit to the United States.—Meanwhile, our neighbours seem making haste to get together a nomenclature of their own, which will add a fifth jargon to the bad English, bad French, bad Italian, and bad German already figuring so strangely on the pages of our

published music. Plays are now acted in a “theater” by universal orthographical consent. A singer who has been accused of “*sad flattening*,” is defended in the *New York Gazette* as innocent of the imputed crime. Another is blamed for not possessing the “*tones that ring a house*.” It is a pity that, since Music is the one universal language, there should be so many different dictionaries of its terms, and in the columns of these so many misprints.

M. Ole Bull, apparently tired of playing at agricultural life, and playing on the violin to Norwegian colonists, whom he has induced to settle at Oleana, has, conjointly with M. Maretzek (once upon a time M. Jullien’s chorus-master), undertaken the management of yet another opera in New York. The Americans love grand names, especially when they have a Parisian sound, and M. Ole Bull himself does not hate the dictionary of Barnum,—so that the new opera is to be called “The Academy of Music.” M. Ole Bull, in his programme, further appeals to native sympathy by advertising that he offers “A Prize of One Thousand Dollars for the best Original Grand Opera by an American composer, and upon a strictly American subject. The National History of America is rich in themes both for the poet and the musician, and it is hoped that this offer will bring to light the musical talent now latent in our country, which only needs a favourable opportunity for its development.” All works intended for competition are to be handed in before the 1st of August next.

MISCELLANEA

Special Prizes of the Society of Arts.—The Council of the Society of Arts has issued an addition to the general premium list published during the recess, from which it appears that Mr. Oliveira, M.P., has placed at its disposal two gold medals of the value of 25*l.* each, or money to the same amount, for special premiums. These the Council has determined to award—1. For the best and finest Flax Thread spun by Machinery suitable for Lace Making. 2. For the best Essay on the means of preventing the Nuisance of Smoke. Mr. S. M. Hubert, through the Society, has offered 5*l.* for a composition for the feeding rollers used in printing paper hangings by cylinder machinery, to which the Council has added the Society’s medal. But equal in importance to either of these is the offer of the Society’s medal for a school microscope, to be sold to the public at a price not exceeding 10*s.* 6*d.*, and also for a teacher’s, or student’s microscope, at a price not exceeding 3*l.* 3*s.* At the Society’s Educational Exhibition, last summer, this step was strongly advocated, as it was felt that the cultivation of habits of observation was a matter of essential importance in education, and one which had hitherto received too little attention. Nothing, it was thought, would tend to produce this result in a more satisfactory and agreeable manner than a cheap but good microscope. By way of giving a stimulus to the sale, the Council undertakes to purchase one hundred of the smaller and fifty of the larger instruments,—a plan which was so successful in the Society’s shilling box of water-colours, and half-crown case of drawing instruments.

St. Mary Magdalen Chapel.—A Correspondent of the *Gentleman’s Magazine* (Jan. 1855, p. 48), T. E. T., in speaking of St. Mary Magdalen Chapel, Westminster, says, “Mr. Walcott, in his ‘Memorials of Westminster’ and the locality of Tothill, has not even alluded to this Free Chapel, although he has done much to illustrate this ancient locality.” I at once wrote to correct the misapprehension, referring T. E. T. for full information to p. 290 of that work. The letter was never inserted. May I, therefore, be permitted through your columns to vindicate my accuracy? May I add, that the name is St. Armill’s in the churchwarden’s accounts of St. Margaret’s in 1482? Yours, &c.

DR. DALTON’S NEW WORK.

THE HISTORY of BRITISH GUIANA. By HENRY G. DALTON, M.D. M.R.C.S.

With a Map and 8 Plates.

2 vols. 8vo. 3*s.*; or (large paper) royal 8vo. 2*l.* 12*s.* 6*d.* “Dr. Dalton’s work contains a full account of British Guiana, of its settlements, its plantations, its trade, climate, and natural history. To civil functionaries, merchants, and planters, a connected view of the Colony was necessary, and this has been supplied by Dr. Dalton. The book is deserving of praise. It is copious, methodical, and full of information. It lays open the stores of natural wealth which exist in that country, and offers inducements to agricultural and commercial enterprise. The book is one of original and various interest, and possesses a general as well as a special importance.”—*Athenæum*.

“The first complete and systematic work, in which a historical and descriptive account of British Guiana has been given.”—*Literary Gazette*.

“It deserves to be classed among the useful works of modern literature.”—*Leader*.

“An elaborate publication. That part which relates to medicine, or its cognate topics, climate, temperature, &c., is most satisfactory.”—*Spectator*.

“The most ample and complete account of the colony that has yet appeared.”—*Observer*.

“A work of enduring interest, and not likely to be superseded.”—*Weekly Chronicle*.

“A work of great value and importance, and will take high rank among our colonial literature.”—*Dispatch*.

“A work of great value to the historian, the ethnologist, the naturalist, and the statistician, combining an unusual excellence of style and a lucid arrangement of matter.”—*John Bull*.

“A text book and authority upon all questions relating to a colony.”—*Atlas*.

“The standard work on British Guiana.”—*Daily News*.

“The latest and most comprehensive work extant on its subject.”—*Sunday Times*.

DEDICATED BY SPECIAL PERMISSION TO THE QUEEN.

ANNE, OF BRITTANY,
TWICE QUEEN OF FRANCE.

By MISS LOUISA STUART COSTELLO.

OPINIONS OF THE PRESS.

Morning Post.

"Miss Costello's heroine will win general sympathy and admira-
tion. The dual crown of Brittany granted her youthful brows at a
very early age; and she was only fourteen when, at the head of her
troops, she fearlessly approached the walls of a rebellious town. . . .
Miss Costello has done justice to her character."

Morning Chronicle.

"Few stories possess more interest than does that of the last
Duchess of Brittany. . . . The circumstances attending the difficul-
ties which surrounded Anne in her early life, and those of her
subsequent prosperous and happy career, are related in a graphic
and pleasing manner."

Morning Herald.

"We know of no character during the chivalrous and eventful
times in which she lived so eminently entitled to our sympathy
and admiration as that of the youthful daughter of Francis, last
duke of Brittany. In Miss Costello's interesting narrative, the
fortunes of Anne will be followed with eagerness and sympathy by
the reader. Her character is described with consummate skill
and judgment."

Athenæum.

"Miss Costello has been lucky in her selection of a heroine, and
she has told her story briefly, rapidly and gracefully. . . . For the
record of the times and of their moving accidents, we refer our
readers to the most agreeable volume for which we are yet indebted
to the pen of Miss Costello."

London: W. & F. G. Cash, 5, Bishopsgate-street Without.

THE THISTLE and the CEDAR of LEBA-
NON. By HABEEB RISK ALLAH, EFFENDI, M.R.C.S.
"One of the most delightful books on the East that we have
read."—*Standard*.

London: James Madden, 8, Leadenhall-street.

THE EMPEROR NAPOLEON AT ELBA.
Now ready, and at all the Libraries, one Volume 8vo. cloth,
with Coloured Illustrations, 12s.

THE ISLAND EMPIRE; or, the Scenes of
the First Exile of Napoleon I. Together with a Narrative
of his Residence on the Island of Elba, taken from local in-
formation, the papers of the British Resident, and authentic sources.
By the Author of 'Blondie'.
"A monograph which we have read with deep interest. . . . Many
of his (Napoleon's) remarks read like prophecies, and have an
interest as pressing in our time as when they were uttered."

"A fresh subject, treated freshly, without being overdone. It
has interest in reference to present affairs."—*Spectator*.
"It has an historical value of real significance for political read-
ers, and a lively interest for all."—*Leader*.

"Throws considerable light upon a critical point in modern
history, furnishes fresh illustrations of the character of a great
man."—*Morning Post*, 2nd notice.

In 2 vols. 8vo. price 23s. bound in cloth, a New Edition, revised
and greatly enlarged.

THE LIFE and TIMES of OLIVER
GOLDSMITH. By JOHN FORSTER, of the Inner
Temple, Barrister-at-Law.

"When, in the year 1848, Mr. Forster published his *Life of Gold-*
smith, it was at once universally extolled as a happy result of labo-
rious research and as a finished work of literary art. . . . The
whole world of English literature just as it stood in the last cen-
tury, till every mind received an impulse from the beginnings and
outbreak of the French Revolution, is here delineated in the most
masterly manner, with all its sorrows and all its enjoyments. . . .
The second edition, which is in two stout octavo volumes, is nearly
double the size of the first. . . . In 1848 Mr. Forster's work was an
admirable biography of an admirable man. It is now much more
—being also a *thesaurus* of information, as valuable to the special
student as to the general reader."—*Times*, Jan. 21, 1855.

Bradbury & Evans, 11, Bouvierie-street.

ROSS'S PHOTOGRAPHIC PORTRAIT and
LANDSCAPE LENSES.—These Lenses give correct defini-
 tion at the centre and margin of the picture, and have their
 visual and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.
 "Mr. Ross prepares lenses for Portraiture having the greatest
 intensity yet produced, by procuring the coincidence of the chemi-
 cal, actinic and visual rays. The spherical aberration is also very
 carefully corrected, both in the central and oblique pencils."
 "Mr. Ross has exhibited the best Camera in the Exhibition. It
 is furnished with a double achromatic objective lens, about 3 inches
 in aperture. There is no stop, the field is flat, and the image very
 perfect up to the edge."

Catalogues sent upon application.
 A. Ross, 2, Featherstone-buildings, High Holborn.

WHOLESALE PHOTOGRAPHIC DEPOT.
 —DANIEL M'ILLIAN, 182, Fleet-street—where every
 article used in Photography may be had of the best quality, and
 at prices worthy the attention of the trade.—Price List sent free
 on application.

THE IODIZED COLLODION, manufactured
 by J. B. HOCKIN & CO. 289, STRAND, LONDON, still
 remains unrivalled for *sensitiveness and density of Negative*—it
 excels all others in its keeping qualities and uniformity of constitu-
 tion.—Albumenized Paper, 17½ by 11, 5s. per quire; Waxed ditto,
 78, of very superior quality.—Double Achromatic Lenses, equal in
 all points to those of any other manufacturer: Quarter Plate,

 quired in the Photographic Art, of the finest quality.
 Instruction in all the processes.

Catalogues sent upon application.
 Bland & Long, Opticians, Photographical Instrument Makers
 and Operative Chemists, 153, Fleet-street, London.

X YLO-IODIDE OF SILVER, exclusively used
 at all the Photographic Establishments.—The superiority
 of this preparation is now universally acknowledged. Testimo-
 nials from the best Photographers and principal scientific men of
 the day, warrant the assertion, that no other preparation has
 been discovered which produces uniformly such perfect pictures,
 combined with the greatest rapidity of action. In all cases where
 a quantity is required, the two solutions may be had at Wholesale
 prices in separate Bottles, in which state it may be kept for years,
 and exported to any climate. Full instructions for use.
 CAUTION.—Each bottle is sealed with a Red Label bearing my
 name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to
 counterfeits which is felony.

**CYANOGEN SOAP, for REMOVING all kinds
 of PHOTOGRAPHIC STAINS.** The genuine is made only by the

Charles Henry Latouche, Esq. Joshua Walker, Esq.
 An Annual Bonus is allowed to parties who have made Five
 Annual Payments on Policies taken out on the Profit Scale. That
 for the current year is 20 per cent. in reduction of the Premium.
 Endowments and Annuities granted as usual.

The extensive Assurance Business of the Agra and United Sec-
 urity Bank has been transferred to this Office, and the Society has
 Branch Establishments or Agencies at Calcutta, Madras, Bombay,
 Agra, and Hong Kong.
JOHN CAZENOVE, Secretary.

SPECIAL NOTICE.
 TO SECURE THE ADVANTAGE OF THIS YEAR'S
 ENTRY, PROPOSALS MUST BE LODGED AT THE
 HEAD-OFFICE, OR AT ANY OF THE SOCIETY'S
 AGENCIES, ON OR BEFORE 1ST MARCH.

**MUTUAL LIFE ASSURANCE.
 SCOTTISH EQUITABLE LIFE
 ASSURANCE SOCIETY.**

Head Office—26, ST. ANDREW-SQUARE, Edinburgh.
 London—126, BISHOPSGATE-STREET.
 Instituted 1831.

Incorporated by Special Act of Parliament.
 The Profits are divided every Three Years, and wholly belong
 to the Members of the Society. The next division takes place at
 1st March, 1856.

EXAMPLE OF ADDITIONS
 On a Policy for 1,000l., dated 1st March, 1832.

1,532l. 8s. will be payable if it become a claim during the current
 year, after payment of this year's Premium. This is an addition of
 more than Fifty per Cent. on the Sum Assured, and averages
 2l. 3s. 7d. per cent. per annum.

Supposing such a Policy to have been effected at the age of
 Thirty, the additions might now be surrendered for a present
 payment of 221l. 7s. 10d., or if applied in reduction of the future
 Premium, would reduce the Premium from 25l. 10s. 10d. to 6l. 3s.;
 and even this small payment must be reduced every Three Years
 during the subsistence of the Policy.

AMOUNT OF EXISTING ASSURANCES. £4,234,308
ANNUAL REVENUE. 152,615
AMOUNT OF ACCUMULATED FUND. 839,354

Copies of the Annual Report, Forms of Proposals, and all infor-
 mation may be had on application at any of the Society's
 Offices in Town or Country.
W. COOK, Agent.
 126, Bishopsgate-street, London.

BOOKBINDING.—W. HOLMES, Practical
 Bookbinder, 195, Oxford-street, London. Books bound in
 Morocco, Russia, or Calf, both plain and elegant, on the lowest
 terms. Gentlemen waited upon with patterns. Estimates given
 for large or small Libraries.—Address, 195, Oxford-street.

 Royal Exchange.** Chronometer, Watch, and Clock
 Maker, by appointment, to the Queen and Prince Albert, sole
 successor to the late E. J. Dent in all his patent rights and busi-
 ness at the above Shops, and at the Clock and Compass Factory,
 at Somerset Wharf, Maker of Chronometers, Watches, Astronomi-
 cal, Turret, and other Clocks, Diapasones, and Patent Ships'
 Compasses, used on board Her Majesty's Yacht, Ladies' Gold
 Watches, 8 guineas; Gentlemen's, 7 guineas. Strong Silver Lever
 Watches, 6l. 6s.

WATERSTON & BROGDEN caution the
 Public to have the carat gold stated on the invoice, and
 redress is obtainable in a County Court. Waterston & Brogden's
 Gold Chains are sold on this principle only at manufacturer's
 prices.—Crystal Palace, Central Transit Gallery, and Manufac-
 tory, 10, Henrietta-street, Covent-garden. Assays made of chains
 and jewellery for 1s. each.

E. L. KING TON and C. O.,
 PATENTERS OF THE ELECTRO PLATE.
 MANUFACTURING SILVERSMITHS, BRONZISTS, &c.
 Respectfully urge upon Purchasers to observe that their article
 bears their Patent Mark, "E. & C. O. under a crown," as no others
 are warranted by them.
 The fact frequently set forth of articles being plated by "Elking-
 ton's process," affords no guarantee of the quality. These pro-
 ductions were honoured at the late Great Exhibition by an award
 of the "Council Medal," and may be obtained at either Establishment.

22, REGENT-STREET,
 42, MOORGATE-STREET, LONDON;
 NEWHALL-STREET, BIRMINGHAM.
 Estimates, Drawings, and Prices sent free by post.

 nection with their Manufactory, Broad-street, Birmingham. Estab-
 lished 1807. Richly cut and engraved Decanters in great variety.
 Wine Glasses, Water Jugs, Goblets, and all kinds of Table Glass
 at exceedingly moderate prices. Crystal glass Chandeliers, of new
 and elegant designs, for Gas or Candles. A large stock of Foreign
 Ornamental Glass always on view. Furnishing orders executed
 with despatch.

FLOWER-POTS and GARDEN SEATS.
 JOHN MORLOCK, 250, Oxford-street, respectfully an-
 nounces that he has a very large assortment of the above articles
 in various colours, and solicits an early inspection. Every de-
 scription of useful CHINA, GLASS, and EARTHENWARE, at the
 lowest possible price, for Cash.—250, Oxford-street, near Hyde
 Park.

**CONSTANT EMPLOYMENT GUARAN-
 TEED.**—Ladies or Gentlemen are instructed in the New,
 Elegant, Ornamental Arts of WHITE, GOLD, or OAK DECORA-
 TION, for articles of general use. "THE ARTS TAUGHT" for
 One Guinea each, and constant employment "GUARANTEED,"
 by which from 2l. to 3l. may be realized weekly. Ladies wishing to
 increase their income, or to pursue a more elegant, artistic, or
 pleasurable occupation. Private Lessons given at Ladies' own re-
 sidences. Mr. LAWRENCE, who is an exhibitor at the Stationary
 Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites
 Ladies to see his unique specimens at the above public buildings,
 or at Mr. L's Show Rooms, from Ten till Five, 15, Percy-
 street, Bedford-square, near Rathbone-place. The Arts taught by
 correspondence.

PAINLESS TOOTH EXTRACTION, with-
 out Chloroform.—Mr. WALTER BLUNDELL is at home
 daily, from Ten till Four, for Dental Operations under his new
 patent process.—29, New Broad-street, City.

TEETH.—MR. T. LUKYN'S SOLID
 PATENT ENAMEL ARTIFICIAL TEETH will be found
 superior to all others. They will not wear out, become loose on
 their fastenings, or decay.—Author of the "Essay on Improved
 French and American Modes of fixing Teeth." 2s. 6d.; by post, 3s.
 4, Upper George-street, Bryanston-square.

MORGAN'S PURE LLANGOLLEN ALE.
 —This nutritious beverage, recommended for invalids by
 the highest medical authorities of England and Scotland, brewed
 from the choicest malt and hops and the mountain streams, in 18-
 gallon casks, quart and pint bottles.—Sole consignee, SAMUEL
 MORGAN, 16, Old Change, City, London.

 Glenny's Cashmere Wool Drawers.
 Glenny's Fur Coats, Rugs, Capes, and Gloves.
 Balbriggan Hosiery, 23, Lombard-street.

RUPTURES.—BY ROYAL LETTERS PATENT.

WHITE'S MOC-MAIN LEVER TRUSS is
 allowed by upwards of 200 Medical Gentlemen to be the most
 effective invention in the curative treatment of HERNIA. The use
 of a steel spring, so often hurtful in its effects, is here avoided; a soft
 baudrage being worn round the body, while the requisite resting
 power is supplied by the MOC-MAIN PAD and PATENT LEVER
 fitting with so much ease and closeness that it cannot be detected,
 and may be worn during sleep. A descriptive circular may be had,
 and the Truss (which cannot fail to fit) forwarded by post, on the
 circumference of the body, two inches below the hips, being sent to
 the Manufacturer, Mr. WHITE, 288, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c.
 For VARICOSE VEINS, and all cases of WEAKNESS
 and SWELLING of the LEGS, SPRAINS, &c. They are porous,
 light in texture, and inexpensive, and are drawn on like an
 ordinary stocking. Price, from 7s. 6d. to 10s. each; postage 6d.
 MANUFACTORY, 288, PICCADILLY, LONDON.

7, Baker-street, Portman-square.
PRIZE MEDAL TO CAISTOR'S SADDLES
 (MILITARY AND PARK) and HARNESSES.
 SADDLERY, Harness, Horse Clothing, Blankets, Brushes,
 Sponges, and every other Stable Requisite. Outfits for India.
 Prices, cash, from 2s. to 30s. per cent. below the ordinary charge
 for credit. Repairs, Workmanship, and Style not to be surpassed.
 A detailed List will be sent free by post, or may be had on applica-
 tion at CAISTOR'S, 7, Baker-street, Portman-square, where the
 Great Exhibition Saddles and Harness may be seen.

PURE FRENCH COLZA OIL, 4s. 9d.
 gallon.—Messrs. LEMAITRE & CO. Manufacturers, Paris.—
 Sole Depot in England, the London Soap and Candle Company,
 70, New Broad-street.

CAMP LANTERNS for the CRIMEA, com-
 bining every recent improvement, adapted for burning the
 Patent Fusee Candles, which can be instantly kindled or extin-
 guished. The Lenses are equally suitable for warehousemen and others.
 Prices, cash; Fusee Candle, 1s. 3d. per box. Sold by all
 Lamp-Dealers; by S. CLARKE, 55, Albany-street, Regent's Park;
 and wholesale by PALMER & CO. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES,
can be instantly ignited as a lucifer, are of different lengths, adapted for journeys of two, three, or four hours, and of two thicknesses to fit all lamps.—Sold in Boxes, at 1s. 3d. per box, by all Grocers, Candle-Dealers, and Chemists; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made so that they can be instantly affixed to the Dashboard of any Gig, Drag, or other description of Vehicle, and removed and used for a Hand-Lamp in the stable. They are adapted for burning the new Patent Fusee Carriage Candle. The appearance and effect are equal to that of a carriage lamp of superior finish, but the price being less than half, these lamps are placed within the reach of every person requiring a light while driving.—Price 12s. 6d. each, by the Lamp-Dealers; and wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by the Patentee, S. CLARKE, 55, Albany-street, Regent's Park, London.

TO THE CLERGY, ARCHITECTS, AND CHURCHWARDENS.
GILBERT J. FRENCH, of Leicestershire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., replies immediately to all inquiries addressed to him at Bolton, from which place only orders are executed. He respectfully invites direct communications, as by far the most economical and satisfactory arrangement. Parcels free at the principal Railway Stations.

CHUBB'S LOCKS, with all the RECENT IMPROVEMENTS; STRONG FIRE-PROOF SAFES, CASH AND DEED BOXES.—Complete Lists of Sizes and Prices may be had on application.
CHUBB & SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley Fields, Wolverhampton.

AT Mr. MECH'S ESTABLISHMENT, 4, LEADENHALL-STREET, London, are exhibited the finest specimens of British manufactures, in DRESSING CASES, Work Boxes, Writing Cases, Dressing Bags, and other articles of utility and luxury, suitable for presentation. A separate department for Papier Maché Manufactures and Bezartelle Tables. Table Cutlery, Razors, Scissors, Penknives, Strops, Paste, &c., as usual. Shipping Orders executed for Merchants and Captains. An extensive assortment of superior Hair and other Brushes for the Toilet.

LOOKING-GLASS, CARVING AND GILD-ING, AND INTERIOR DECORATING MANUFACTORY established 1821, 393, 395, Oxford-street. This Establishment contains the most extensive assortment of LOOKING-GLASSES and GILT DECORATIONS in every variety of style. The taste and superiority of workmanship, and the crystal-like colour of the glass, ensure the patronage of those who may honour the Show Rooms with a visit. A Book of Designs forwarded free on receipt of six stamps for postage. Estimates made free of charge. Second-hand Glasses always on hand.
393, 395, Oxford-street.

DURABILITY OF GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE OF WIGHT.
—Second Testimonial.—"March 10th, 1857.—My dear Sir, I received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be laid generally, on account of its being so good here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE OF WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF-Road, CITY-ROAD, LONDON.

HOT AIR, Gas, Vesta, Joyce's STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of Register and other Stoves, Fenders and Kitchen Ranges, is the largest in existence.

THE PERFECT SUBSTITUTE FOR SILVER.
—The REAL NICKEL SILVER, introduced 20 years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best imitation next to sterling silver that can be employed, such, either used for ornamentation, or as by no possible means it is distinguishable from real silver.

CUTLERY, WARRANTED.—The most varied Assortment of TABLE CUTLERY in the world, all warranted, is on SALE at WILLIAM S. BURTON'S, at prices that are remunerative only because of the largeness of the sales. 35-inch ivory-handled Table Knives, with high shoulders, 11s. per dozen; Desserts to match, 10s.; if to balance, 1s. per dozen extra; Carvers, 4s. per pair; larger sizes, from 14s. 6d. to 36s. per dozen; extra fine, 32s.; if ivory, 35s.; if silver, 37s. 6d.; white bone Table Knives, 7s. 6d. per dozen; Desserts, 6s. 6d.; Carvers, 2s. 3d. per pair; black horn Table Knives, 7s. 4d. per dozen; Desserts, 6s.; Carvers, 2s. 6d.; black wood-handled Table Knives and Forks, 6s. per dozen; Table Steels, from 1s. each. The largest stock in existence of Plated Dessert Knives and Forks, in cases and otherwise, and of the new Plated Fish Carvers, also, a large assortment of Razors, Penknives, Scissors, &c. of the best quality.
WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRON-MONGERY (including Cutlery, Nickel Silver, Plated and Japanned Wares, Iron and Brass Bedsteads, so arranged and described that purchasers may easily and at once make their selections.
Catalogues, with Engravings, sent (per post) free. The money returned for every article not approved of.
39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON & Co., 42, Poland-street, Oxford-street; where one may be seen in daily use. The advantages of this Grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with Testimonials, sent on application.

DRAFT round DOORS and WINDOWS PREVENTED by using GREENWOOD'S PATENT INDIA-RUBBER STOPS, the most effectual plan for the purpose. They are made in wood mouldings, to fix round the jamb linings. The door closes against the India-rubber, and makes perfectly air-tight. New glass cases made on this principle at a reduced cost.—JOHN GREENWOOD, Patentee, 10, Arthur-street West, London Bridge.

TRELOAR'S COCOA-NUT FIBRE MATTING, Mats, Rugs, Mattresses, Hassocks, Cushions, Brushes and Brooms, Sheep-netting, Cordage, Brush-fibre, &c. &c., of which priced Catalogues may be had free by post.
Warehouse, 42, LUDGATE-HILL, London.

FISHER'S DRESSING-CASES, FOR LADIES AND GENTLEMEN. FISHER'S STOCK IS ONE OF THE LARGEST IN LONDON, AT PRICES TO SUIT ALL PURCHASERS. Catalogues post-free.
188 and 189, STRAND, corner of Arundel-street.

USE BARKER'S RAZOR PAPER for Wiping the Lather from the Razor while Shaving; by which simple process alone—giving not the least trouble—Razors, once properly set, instead of getting dull by use, improve in keenness and evenness, and are constantly preserved in perfect shaving order.

It is an invention that should be patronized on every gentleman's dressing-table; and in saying thus much we speak from long and comfortable experience.—Morning Advertiser.
Sold (in Packets at 6d. and 1s.; and Boxes, at 3s. and 6s.) by all Perfumers, Stationers, Chemists, &c.; and by the Inventor and Sole Manufacturers, F. BARKER & SON, Stationers, Hammer-smith; who will, on receipt of sixteen postage stamps, return a Shilling Packet for trial, post-free.

BEAUTIFUL HAIR, WHISKERS, &c., are INVARIABLY PRODUCED IN TWO OR THREE WEEKS by COUPELLE'S CELEBRATED CRINUTRIAR, which is universally acknowledged as the only preparation to be really depended upon for the unfailing production of Hair, as also checking greyness, Baldness, &c., and rendering the Hair luxuriant, curly, and glossy.—Mr. Williams, 8, Louth-street, Liverpool. "I can now show as fine a head of hair as any person, solely from using your Crinutriar."—Sergeant Craven, Longford Barracks, Ireland. "Through using your Crinutriar, I have an excellent Moustache, which I had before despaired of."—Mrs. Carter, Pangbourne, Berks. "My head, which was quite bald, is now covered with new hair."—Price 2s. per packet, through all Chemists and Perfumers; or sent post-free for penny stamps, by ROSS & CO. COUPELLE, 69, Castle-street, Newman-street, Oxford-street, London. Beware of imitations under closely named names. Twenty pages of Testimonials, with list of Country Agents, post free for two stamps.

DO YOU WANT LUXURIANT HAIR, WHISKERS, &c.?—No other compound for the Hair has maintained such an enduring celebrity as EMILY DEAN'S CRINUTRIAR. It is a good hair to produce Whiskers, Moustaches, Eyebrows, &c. in a few weeks, and restore the Hair in baldness, from whatever cause, strengthen it when weak, prevent its falling off, and effectually check greyness in all its stages. For the nursery, Dr. Wilson says, it is unrivalled.—Price 2s. per Packet (regularly post-free), sent post free on receipt of 24 penny-postage stamps, by MISS DEAN, 374, Manchester-street, Gray's Inn-road, London. Sold by every Chemist in the Kingdom. "In one fortnight it produced a beautiful set of moustaches."—H. Adams.—"It has prevented my hair falling off." J. Hickson.—"It has quite checked the greyness that was coming on." Mrs. Elder.

KNOW THYSELF!—Professor BLENKINSOP continues to receive from individuals of every rank the most flattering testimonials of his success in describing the CHARACTERS of Persons from their HANDWRITING, pointing out their mental and moral qualities, whether good or bad.—Address by letter, stating age, sex, and profession; enclosing 13 uncut postage stamps, to Dr. Blenkinsop, 344, Strand, London.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession as an excellent remedy for Acidity, Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient it is admirably adapted for delicate Females, particularly during Pregnancy; and it prevents the Food of Infants from turning sour during digestion. Combined with the ACIDULATED LEMON JUICE, it forms an Effervescent Aperient Draught, which is highly and most effectually recommended by DR. COOPER & CO., Dispensing Chemists, (and General Agents for the improved Horse Hair Gloves and Belts, 172, New Bond-street, London, and sold by all respectable Chemists throughout the Empire.

DR. DE JONGH'S LIGHT BROWN COD LIVER OIL, Prepared for MEDICINAL USE in the LOFODEN ISLES, NORWAY, and put to the test of Chemical Analysis.

THIS pure and unadulterated, transparent, light-brown Cod Liver Oil, long known and justly appreciated on the Continent, has now acquired the general confidence of the Medical Profession in this country, by whom it has been extensively and successfully prescribed, and with almost immediate and remarkably beneficial results—in many instances where ordinary Cod Liver Oil had been copiously, though ineffectually, administered. It owes its superior efficacy not only to its method of preparation, but to the fact—recently established by chemical analysis and therapeutic experiments—that the liver of the species of cod-fish from which it is exclusively procured naturally contains a larger quantity of iodine, of the elements of the bile and other essential remedial properties, than is found in other kinds of the genus GADUS. It is of the finest quality, free from any admixture, or the usually repulsive, sickly, and nauseous flavour or after-taste of the Pale Oil, or of the coarse Brown Oil, commonly sold, though totally unfit for medicinal purposes.

Being sold by DR. DE JONGH'S MEASURE it is as low in price per ounce as any other genuine Cod Liver Oil, whilst its regular and speedy effects render it incalculably cheaper. Medical and Scientific Testimonials of the highest character delivered or forwarded, GRATIS, on application to Dr. de Jongh's Sole Agents and Consignees, ANSAR, HARTFORD & Co., 77, STRAND, LONDON, by whom the Oil is sold Wholesale and Retail, in bottles capsuled and labelled with Dr. de Jongh's stamp and signature; and in the country by respectable Chemists and Venders of Medicine. Where difficulty occurs in procuring the Oil, four half-pint bottles will be forwarded to any part of England, CARriage PAID, on receipt of a remittance of ten shillings.
Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s.

VIOLETS.
H. BREIDENBACH, Distiller of Flowers and Ess. de Cologne to the Queen, has now in great perfection several EXTRAITS of that favourite flower the WOOD VIOLET. It has a lasting odour, and will not stain the handkerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet Powder, and several toilet preparations of the same flower equally fragrant.
157 B, New Bond-street, facing Redmayne's.

METCALFE & CO.'S NEW PATTERN TOOTH BRUSH & PENETRATING HAIR BRUSHES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is famous for the hairs not coming loose, &c. An improved Clothes Brush, incapable of injuring the finest nap. Penetrating Hair Brushes, with the durable unbroken Russian bristles. Flesh Brushes of improved graduated and powerful friction. Velvet Brushes, which act in the most successful manner. Smyrna Sponges.—By means of direct importations, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at METCALFE, BINGLEY & CO.'S Sole Importation, 130 B, Oxford-street, one door from Holles-street.
Caution.—Beware of the words "From Metcalfe's," adopted by some houses.
METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

RUPTURES EFFECTUALLY CURED WITHOUT A TRUSS!—All sufferers from this alarming complaint are earnestly invited to consult or write to Dr. LESLIE, who has effected a cure in every case. His remedy has been successful in curing thousands of persons of all ages, and is applicable to every kind of single and double Rupture, however bad or long-standing, in male or female of any age, causing no confinement or inconvenience in its use whatever. Sent post free to any part of the world, with full instructions for use, on receipt of 7s. 6d. in postage stamps, cash, or post-office order, payable at the General Post-office, Dr. Herbert Leslie, 374, Manchester-street, Gray's Inn-road, London.—At home daily (except Sunday) from 11 till 3 o'clock. A Pamphlet of Testimonials sent post free on receipt of one postage stamp.

DEAFNESS and NOISES in the HEAD.—Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London. Instant and permanent restoration of hearing guaranteed, without the use of ear-trumpets, or surgical operations, causing no momentary inconvenience to the most aged or nervous sufferer. Dr. HOUGHTON'S new and extraordinary discovery, by one consultation enables deaf persons of either sex to hear immediately with perfect ease the lowest whisper, and magically removes all ringing in the ears. Hospital and private testimonials and certificates from the most eminent and approved Surgeons in England, in whose presence deaf persons have been cured, and many hundreds of private patients cured can be seen or referred to. Hours of consultation, 11 till 4 every day. Francis Robert Houghton, Member of the London Royal College of Surgeons, May 2, 1845; Licentiate of the Apothecaries Company, April 30, 1846.
Just published,

"SELF-CURE OF DEAFNESS," for country patients; a step to emipicism, quackery, and quackery, sent on receipt of seven stamps, free. Examination free. 8, Suffolk-place, Pall Mall.

DR. BARRY'S HEALTH RESTORING REVALENTIA ARABICA FOOD counteracts Dyspepsia (Indigestion), Constipation and their consequences.—Andrew Ure, M.D. F.R.S., London. These consequences are Nervous, Bilious and Liver Complaints, Acidity, Heartburn, Flatulency, Sick Headaches, and General Debility, Low Spirits, Cough, &c. Incipient Consumption, Nausea, &c. It is, moreover, the best food for infants and invalids generally, as it never purges or turns acid on the weakest stomach, nor interferes with a good liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the debilitated. Sold by all the Dispensing Chemists, Ure, Shorland, Harvey, Campbell, Gattickier, Wurzer, Lord Stuart de Decies, and 50,000 other respectable persons, whose health has been perfectly restored by it after all other means of cure had failed.
In containers, 1 lb. 2s. 9d.; 2 lb. 4s. 6d.; 5 lb. 11s.; 12 lb. 12s.; super-refined, 1 lb. 6s.; 2 lb. 11s.; 5 lb. 22s.; 10 lb. 33s. The 10 lb. and 12 lb. carriage free on receipt of Post-office order. Barry Du Barry & Co., 77, Regent-street, London; Fortnum, Mason & Co. Purveyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street; 330 and 451, Strand; 4, Chancery; 68, Cornhill; 49, Bishopsgate-street; 1, Charing-cross; 54, Upper Baker-street; 63 and 150, Oxford-street.

KAYE'S WORSDELL'S PILLS have obtained a world-wide celebrity. Hundreds of Testimonials are enclosed with each box, attesting their efficacy. No family studying the preservation of their health should be without them. Sold by all the Dispensing Chemists, Ure, Shorland, Harvey, Campbell, Gattickier, Wurzer, Lord Stuart de Decies, and 50,000 other respectable persons, whose health has been perfectly restored by it after all other means of cure had failed.
In containers, 1 lb. 2s. 9d.; 2 lb. 4s. 6d.; 5 lb. 11s.; 12 lb. 12s.; super-refined, 1 lb. 6s.; 2 lb. 11s.; 5 lb. 22s.; 10 lb. 33s. The 10 lb. and 12 lb. carriage free on receipt of Post-office order. Barry Du Barry & Co., 77, Regent-street, London; Fortnum, Mason & Co. Purveyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street; 330 and 451, Strand; 4, Chancery; 68, Cornhill; 49, Bishopsgate-street; 1, Charing-cross; 54, Upper Baker-street; 63 and 150, Oxford-street.

CURES OF COUGHS, COLDS, AND ASTHMA by DR. LOCOCK'S PULMONIC WAFERS.
From Mr. W. J. Dale, Chemist, 65, Queen-street, Portsea.
"From the immense sale I have had of Dr. Locock's Pulmonic Wafers throughout this populous locality, I must do you justice to say that I consider them invaluable for coughs, colds, asthma, &c."

TO SINGERS and PUBLIC SPEAKERS they are invaluable for clearing and strengthening the voice.
They have a pleasant taste. Price 1s. 14d., 2s. 9d., and 11s. per box. Sold by all Druggists.

KEATING'S COUGH LOZENGES.—Upwards of Forty Years' experience has fully confirmed the superior reputation of these Lozenges, in the cure of Asthma, Winter Cough, Hoarseness, Shortness of Breath, and other Pulmonary Maladies.
Prepared and sold in boxes, 1s. 14d., and tins, 2s. 9d., 4s. 6d., and 10s. 6d. each, by Thomas Keating, Chemist, &c., No. 79, St. Paul's-churchyard, London.
The Testimonials of their efficacy are too numerous for publication.

KEATING'S COD LIVER OIL, imported direct from Newfoundland, of the finest quality, pale, purified, and nearly tasteless. Imperial Measure, half-pints, 2s.; pints, 3s. 6d.; quarts, 6s. 6d.; five-pint bottle, 15s.
Orders from the country should expressly state "KEATING'S COD LIVER OIL."

HOLLOWAY'S OINTMENT and PILLS effectually cured a dreadfully sore hand.—Mrs. Lyon, of 35, Whitecross-place, Wilson-street, Finsbury-square, suffered fearfully from an abscess in the hand, which for some months was rendered perfectly useless. She had the benefit of the medical men in the neighbourhood, and underwent various operations of the lancet, without obtaining relief. After this she tried Holloway's Ointment and Pills, which in a brief space of time effected an excellent cure, and she has now the free use of her hand, showing in this case, as well as in many thousands of others, the value of the medicine. Testimonials of the cure are sold by all Venders of Medicine; and at Professor Holloway's Establishments, 244, Strand, London, and 80, Maiden-lane, New York.

THE MOST APPROVED METHOD OF LEARNING LANGUAGES AND WITH THE MOST POPULAR WORKS
OF THE PRESENT DAY.

Adopted these last Twenty-five Years by nearly 20,000 Schools in Europe, and not less than 100,000 Families in England.

Monsieur F. DE PORQUET'S PLAN is that which the celebrated **ROGER ASCHAM**, the Tutor to Queen Elizabeth, used in teaching his royal Pupil who, it is related, spoke several Languages with great fluency. This excellent plan has throughout been much improved by the indefatigable exertions of our modern Philologist, Monsieur F. de Porquet, formerly an eminent and most successful Professor of French and Italian in this country. New and Improved Editions, reduced in price, are ready for delivery.

PUBLISHED FOR THE AUTHOR BY SIMPKIN, MARSHALL & CO.

FRENCH IN 28 DAYS!

DE PORQUET'S LE TRÉSOR DE L'ÉCOLIER FRANÇAIS;

Or, THE ART OF TRANSLATING ENGLISH INTO FRENCH AT SIGHT.

The only mode now universally acknowledged of obtaining a conversational acquaintance with any language. The Three Hundred and Twentieth Thousand just ready, carefully revised and enlarged. 3s. 6d.

DE PORQUET'S LE COMPLÉMENT du TRÉSOR de l'ÉCOLIER FRANÇAIS. With the assistance of this work a most powerful means will be put into action, by furnishing subjects and objects with questions and answers for conversation, keeping up at the same time an intense interest among the pupils. 3s. 6d.

DE PORQUET'S FIRST FRENCH READING BOOK; being Biographical Notices of Celebrated Children. With Foot-Notes and Plates. 2s. 6d.

DE PORQUET'S MODERN FRENCH SPELLING-BOOK. Framed upon Monsieur Butet's System, and adapted to the English Student. With a small Grammar, and Easy Phrases. Sixteenth Edition. 2s. 6d.

DE PORQUET'S NOUVELLES CONVERSATIONS PARISIENNES. Being Specimens French-English of the CHAT-CHAT, or CAUSERIES des Salons de Paris. 300 pp. Twelfth Edition. 3s. 6d.

DE PORQUET'S LA FRANCE TELLE QUELLE EST, ET TELLE QU'ELLE A ÉTÉ; ou, Description Historique et Géographique de ce Pays. Avec Carte, Portrait, &c., à l'Usage de la Jeunesse. 3s. 6d.

DE PORQUET'S PREMIERS PAS in the French Language; being an Introduction to all Grammars, and particularly to De Porquet's Parisian Grammar; intended chiefly for the Use of Schools. 2s. 6d.

DE PORQUET'S VOYAGE de SIX SEMAINES en FRANCE; à l'Usage de la Jeunesse, avec Cartes. 3s. 6d.

DE PORQUET'S NEW FRENCH-ENGLISH DICTIONARY. Price 5s. elegantly bound in embossed roan; or either Part separately, at 3s. 6d. each. Compiled from the Dictionary of the Académie Française, and containing upwards of Five Thousand new words adopted by French Authors, to which has been added the pronunciation of certain words which may be considered yet unfixed; also a copious selection of the most familiar Idioms, Proverbs, and Adverbial Phrases, used in common conversation. Words used familiarly are distinctly marked out, as also those considered popular, vulgar, obsolete, or seldom used in the present century, although met with in the literary compositions of the last. All improper and indelicate expressions have been most carefully rejected.

DE PORQUET'S PARISIAN GRAMMAR. Containing numerous Colloquial Exercises, much improved and enlarged. The Fourteenth Thousand. Pronounced by the Savants as the most comprehensive and easy work on French Grammar; divested of its metaphysical controversies. Tables of Verbs conjugated at full, negatively, and interrogatively. With Plates. 3s. 6d.—KEY to ditto, 1s.

Just published, price 3s. 6d. handsomely bound, with Portraits, Map of France, Attributes of each Reign, and Questions on each Chapter.

DE PORQUET'S HISTOIRE de FRANCE, écrite pour la Jeunesse, avec les Mots ou Phrases les plus Difficiles Traduites en Anglais au bas de chaque page. "This is a clever and painstaking compilation, interesting by seizing upon the most striking circumstances, and narrating them well."—*Spectator*.

DE PORQUET'S HISTOIRE d'ANGLETERRE, à l'usage de la Jeunesse, avec la traduction en Anglais des Phrases les plus Difficiles. 300 pp. 3s. 6d.

Also a Key or Translation of the above Work, under the title of **HISTORY of ENGLAND,** written expressly for Youth, with Translations at the end of each page, in order to re-translate the whole into good and elegant French. 3s. 6d.

DE PORQUET'S QUESTIONS sur l'HISTOIRE d'ANGLETERRE, pour servir à l'ouvrage. A help to Conversation. 1s. 6d.

DE PORQUET'S TRADUCTEUR HISTORIQUE; being a Selection of Historical Facts, Anecdotes, Letters of Illustrious Characters, Extracts from Sacred Dramas, &c. &c. 3s. 6d. "La mère pourra en permettre la lecture à sa fille."—*BOULEY*.

DE PORQUET'S PARISIAN PHRASEOLOGY; being repeated Examples on all the Rules of Syntax. The Thirtieth Thousand, much enlarged. With Plates. 2s. 6d.

HISTOIRE de NAPOLEON. Edited by F. DE PORQUET. 1 vol. 3s. 6d. In this edition no expense has been spared to make this work still more acceptable and interesting to British youth, for whom it has been compiled. A Portrait of the hero, and a Map of Europe, the Route of the French Army, have been added.

LE MIE PRIGIONI di SILVIO PELLICO. With Foot-Notes in English, so that the work may be read without the assistance of a Dictionary. Price 3s. 6d. handsomely bound in crimson cloth, with gilt edges, with a Portrait of Silvio Pellico, and Views of the Exterior and the Interior of the Prison (Spielberg) in which he was confined.

DE PORQUET'S ITALIAN GRAMMAR; or, Grammatica Romana, for the use of English pupils. Second Edition. Price 3s. 6d. With copious Colloquial Exercises, each of which is headed with Examples on the preceding Rules.—KEY, 2s. 6d.

DE PORQUET'S TESORETTO dello SCOLARE ITALIANO; or, the Art of Turning English into Italian at Sight. With Foot-Notes, Lithographic Plates, and an English-Italian Lexicon. 3s. 6d.—KEY to ditto, 4s. 6d.

DE PORQUET'S FIRST ITALIAN READING BOOK; or, Raccolta di Novelle Veramente Morali. With Foot-Notes, by means of which Italian may be read without any assistance. 3s. 6d.

London: Published for Mons. Fenwick de Porquet by SIMPKIN, MARSHALL & CO., and may be had of all Booksellers.

DE PORQUET'S ITALIAN GRAMMATICAL ANNOTATIONS; being nearly 200 Remarks on Italian Composition. 2s.

DE PORQUET'S ITALIAN PHRASE and DIALOGUE BOOK; or, FRASEGGIATORE TOSCANO. With Twelve Easy Dialogues. 3s. 6d.

DE PORQUET'S MODERN KEY to the ITALIAN LANGUAGE, with Easy Compositions, intended as Conversational Exercises for acquiring a rapid and practical knowledge of the Italian Tongue. 3s. 6d.

DE PORQUET'S SECRÉTAIRE ITALIEN; or, a Selection of Familiar Letters in French, to be translated into Italian at Sight. With Foot-Notes. 3s. 6d.—KEY, 3s. 6d.

DE PORQUET'S ITALIAN-FRENCH CONVERSATIONS; being a literal and elegant Translation of the Parisian Conversations, by the same Author. 3s. 6d.

Ditto, ITALIAN-ENGLISH, by the same Author. 3s. 6d.

GEORGE LOVE, 51, Bunhill-row, London.
* * * Established above fifty years.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyll-place.

DAQUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

"Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life * * * without the slightest sacrifice of definition, or the smallest approach to distortion;—indeed, the errors and peculiarities of former impressions appear to be corrected."—*Athenæum*, July 22, 1854.

"Mr. Mayall's portraits represent the high art of the daguerreotype; they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut."—*Art-Journal*, Nov. 1853.

"More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

HEALTH.—GYMNASIUM.

THE LONDON GYMNASIUM.—Capt. CHIOSSO (and Son), Professor of Gymnastics at University College School, —123, Oxford-street, near Regent Circus. Single Subscription, One Guinea per annum; Country Subscriptions, Two Guineas and upwards. Subscribers to the amount of Four Guineas are presented at the end of the year with copies of surplus Works from the Library to the amount of one-fourth of their subscriptions.

Prospectuses sent post-free on application.

BULL, HUNTON & Co. 19, Holles-street, Cavendish-square, London.

MUDIE'S SELECT LIBRARY.—ALL THE BEST NEW WORKS may be had in succession from this extensive Library by every Subscriber of One Guinea per Annum, and by all First-Class Country Subscribers of Two Guineas and upwards. The preference is given to Works of History, Biography, Religion, Philosophy, Travel and Adventure. The best Works of Fiction are also freely added. The Surplus Copies are offered for Sale at greatly reduced prices as soon as the first demand has subsided. Lists of the principal New Works and New Editions at present in circulation, with the terms of subscription and other particulars, may be obtained on application.

CHARLES EDWARD MUDIE, 510, New Oxford-street.

Now ready, gratis and post-free free.
A LIST of SURPLUS COPIES of RECENT WORKS withdrawn from MUDIE'S SELECT LIBRARY, and offered at greatly reduced prices for cash.
CHARLES EDWARD MUDIE, 510, New Oxford-street, London; and 76, Cross-street, Manchester.

TRUBNER'S SERIES of AMERICAN CATALOGUES.—Now ready, No. 1. of the above Series, being a complete List of Books on Divinity, published in the United States of America, and which will be forwarded on application to
TRUBNER & CO., AMERICAN LITERARY AGENCY, 12, Paternoster-row, London.

Just published, in royal 8vo. price 10s. 6d. in cloth, or 21s. in morocco.

THE LIBRARY CATALOGUE: a Book Ruled and Printed for the reception of a MS. Catalogue, with details of Author, Title, Edition, Number of Vols., Size, Date, Place and Publisher, Cost, when and to whom Lent. An Index (costing 1s. 6d. extra) can be cut through the volume for the purpose of more convenient reference.

The Catalogue is also issued in post 8vo. size, with some trifling alterations in the arrangement, at 5s. and 8s. in cloth, and 12s. and 15s. in morocco.

Letts, Son & Steer, 8, Royal Exchange, London.

LETTS'S SCRIBBLING JOURNALS, or ROUGH DIARIES, at 1s. 6d. and 1s. 2d. foolscap size, and 1s. 4d. and 1s. 2d. 4to. (letter paper) size, are introduced this year for the first time. Their cost being little more than plain paper, they are intended to be used as such in preference to accumulating a heap of miscellaneous papers of too much value to be destroyed, though very troublesome to keep. They may be obtained of any Stationer or Bookseller, or from the Publishers, post-free, on receipt of an extra sixpence beyond their price in postage stamps.

Letts, Son & Steer, 8, Royal Exchange, London.

ANASTATIC PRINTING.—Art of Printing from Prints on Paper. A TREATISE on an Original Process. Procurable of J. J. Jordan, 18, Lansdowne-terrace, Calendonian-road. Sent for 18 stamps.

Just published, price 3s. 6d.

ESSAYS IN DIVINITY. By JOHN DONNE, D.D., sometime Dean of St. Paul's. Edited by AUGUSTUS JESSOP, M.A., of St. John's College, Cambridge.
London: John Tupling, 320, Strand.

SALE OF THE STOCK OF THE ILLUSTRATED

AND OTHER WORKS published by JOHN CASSELL. In consequence of the large building occupied by John Cassell having given way, the whole has been condemned, and will be taken down. Instead, however, of immediately removing the valuable stock, it has been determined to afford individuals and families the opportunity of purchasing any number of copies of his magnificent ILLUSTRATED WORKS, as well as his popular EDUCATIONAL WORKS, at considerably REDUCED PRICES. Many of the Works are nearly out of print, and will not be reproduced, in consequence of the great cost attendant on such reproduction.

A Catalogue of this Valuable Stock, with the Prices attached, will be sent to any address on a Penny Post-office Stamp accompanying the request. The offer will be available for the period of one month only.

La Belle Sauvage-yard, Ludgate-hill, Feb. 15, 1855.

TO STATIONERS, BOOKSELLERS, NEWS

AGENTS, and Others. An excellent Trade, within two miles of the City. Mr. PAGE is directed to sell an old-established Bookselling, Stationery, and News Agency Business, most eligibly situated on the high road. The House is modern, and fitted with Plate Glass. The returns are excellent and increasing. About £7,000 required. Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

TO FANCY STATIONERS AND Others.—

In a first-class healthy neighbourhood, in Surrey, about four miles from the Bank. Mr. PAGE is directed to dispose of an old-established Fancy Repository, eligibly situated as above. The returns are good. The Premises are on Lease at a low Rent, and may be entered upon for about £400.—Apply to Mr. PAGE, Valuer and Auctioneer, 8, Coleman-street.

Sales by Auction.

MR. L. A. LEWIS will SELL by AUCTION, on TUESDAY, the 20th, the Implements in Trade of a Bookbinder.

ON the ATMOSPHERIC CHANGES which produce RAIN and WIND and the FLUCTUATIONS of the BAROMETRE. By THOMAS HOPKINS, M.B. M.S. "The work is written in a scientific spirit, and indicates considerable care and labour in the collection of facts."—Philosophical Magazine.

Published in London by John Wente, No. 59, High Holborn.

Now completed,

FLORA of NEW ZEALAND. By JOSEPH DALTON HOOKER, M.D. F.R.S., &c. In 2 volumes, with 150 Plates. Royal 4to. price 12l. 12s. coloured; 8l. 15s. plain.

"The work is written in good plain English, with a view to the convenience of colonists, but without on that account being rendered in the smallest degree unscientific; quite the contrary. Let us add that the beautiful execution of the work renders it a library-book, even for those who are not interested about natural history."—Gardener's Chronicle.

Lovell Reeve, 5, Henrietta-street, Covent garden.

THE EMPEROR NAPOLEON AT ELBA. Now ready, and at all the Libraries, in One Volume 8vo. with Coloured Illustrations, 12s.

THE ISLAND EMPIRE; or, the Scenes of the First Exile of Napoleon I. Together with a Narrative of his Residence on the Island of Elba, taken from local information, the papers of the British Resident, and other authentic sources. By the Author of 'Blondelle.' A monograph which we have read with deep interest... Many of his (Napoleon's) remarks read like prophecies, and have an interest as pressing in our time as when they were uttered."—Athenæum.

"A fresh subject, treated freshly, without being overdone. It has interest in reference to present affairs."—Spectator.

"It has an historical value of real significance for political readers, and a lively interest for all."—Leader.

"Throws considerable light upon a critical point in modern history, furnishes fresh illustrations of the character of a great man."—Morning Post (2nd ed. and age).

WHITELOCKE'S EMBASSY TO SWEDEN.

Just published, in 2 vols. 8vo. price 24s.

A JOURNAL OF THE SWEDISH EMBASSY In the YEARS 1653 and 1654,

Impartially Written by the Ambassador, BULSTRODE WHITELOCKE; and first published from the Original MS. by Dr. C. MORTON, F.S.A. Librarian of the British Museum.

A New Edition, revised by HENRY REEVE, Esq. F.S.A.

From the TIMES, February 15, 1855.

"It is a faithful record of the first embassy sent forth by the Commonwealth of England just two hundred years ago, written by the Ambassador himself, who was both a man of learning and a man of the world, equally versed in the manners of foreign countries and in the policy of his own. It preserves, with great minuteness and considerable graphic power, the conversations and the humours of several of the most remarkable persons of the seventeenth century; for Whitelocke successively dines and chats with Oliver Cromwell, dances the brawls with Queen Christina, and debates the politics of Europe with Chancellor Oxenstiern. The style is quaint, but vigorous; the manners of the time are described with a punctilious accuracy which is extremely amusing; and Whitelocke himself, though he cannot claim a place among the great statesmen or great lawyers of his age, fairly deserves to rank with the best memoir writers of the time just preceding Mr. Evelyn and Mr. Pepys. . . . Perhaps it is to the inimitable table-talk of Mr. Macaulay that we owe the new edition of this book; for, with the accu-

rate knowledge he possesses, above all other men, of the records and annals of England in the seventeenth century, he is not unfrequently heard to refer to *Whitelocke's Journal* as one of the most graphic and curious productions of that age. The book has, therefore, all the merits of an old book, and it will have to most readers the attractions of a new one. . . . Although Queen Christina, the eccentric daughter of Gustavus Adolphus, is one of the best-known personages of modern history, and has been described in every form of narrative and of fiction, we know no portrait of her so animated and so minute as that which Whitelocke has left us. . . . We hope that this new edition of a book of so authentic and original a character will restore it to the place it deserves to occupy in our historical literature. Mr. Reeve has given a more modern form to Whitelocke's orthography, and has added an introductory notice of the author, with some illustrative notes, which serve to complete this picture of the Court of Queen Christina of Sweden and the diplomacy of the Commonwealth."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A New Edition, in 16mo. 5s. 6d. cloth; or in roan with tuck and gilt edges as a pocket-book, 6s. 6d.

THOMSON'S CONSPECTUS of the PHARMACOPEIAS. Sixteenth Edition, revised throughout and corrected; containing all the Alterations and Additions of the New London Pharmacopœia; and a copious Appendix. Edited by Dr. EDMUND LLOYD BIRKETT, F.R.C.P. Lond., Physician to the City of London Hospital for Diseases of the Chest, and Curator of the Museum of Guy's Hospital.

Also, in 8vo. with Woodcuts, price One Guinea,

THOMSON'S LONDON DISPENSATORY. 11th Edition, corrected by Dr. A. B. GARROD.

London: Longman, Brown, Green, and Longmans.

In 2 vols. 4to. with numerous Engravings on Steel, Maps and Plans, and Woodcuts, price 2l. 8s.

THE LIFE and EPISTLES of ST. PAUL.

By the Rev. W. J. CONYBEARE, M.A. late Fellow of Trinity College, Cambridge; and the Rev. J. S. HOWSON, M.A. Principal of the Collegiate Institution, Liverpool.

"We doubt if any modern literature possesses a treatise more complete or satisfactory in its design and execution. . . . It is no small merit of the work that, while it extracts information from every source, an admirable spirit of Christian faith, accompanied by a manly love of truth and soundness of judgement, characterise it throughout. While its hand is in every German treatise, its heart is thoroughly English; and its effect will everywhere be to confirm those great central truths round which it has grouped the accessory and subordinate matter. . . . The sacred chronicle has never before had such diligent and loving labour bestowed on it."

Edinburgh Review.

London: Longman, Brown, Green, and Longmans.

BALDER.

By the AUTHOR of 'THE ROMAN.'

Second Edition, with Preface.

"In this poem we read a magnificent protest against the tendency of our age to materialism and positive philosophy and the apotheosis of mechanism and intellect. An age which everywhere manifests a blind atheistical dedication of force and power. The age to which of all others that trumpet-tongued text, 'What shall it profit a man if he save the whole world and lose his own soul?' needs to be preached and sung. There are two hundred and eighty-three pages in this book, and not one but contains fine thoughts, magnificent imagery, striking similes, or searching reflections. Of the wealth of thought revealed we can scarcely trust ourselves to speak. We consider 'Balder' to be the first and worthy part of a great poem—one of such a degree of greatness, that it has scarce an equal in our century, and one that will take the public opinion some years to arrive at that greatness. To those who cannot see its purpose, we may say, as the old chroniclers wrote of Shakspeare,—"Read it again and again, and if so be you do not understand it then, there is manifest danger that you are not quick of comprehension."—*Eclectic Review*.

"Genius is so unmistakably present in every page of the strange book before us, that to give examples from one, without injustice to the others, we find to be beyond possibility in the limits of a magazine review. We cannot, however, resist a passing allusion to the absence of all melo-drama in those scenes which nevertheless reach the very bounds of the dramatic, and to the instinctive avoidance of the horrible and attainment of the terrible, under circumstances of the highest tragedy. These general facts infer a quality of intuition in the author, which only the true critic can properly estimate; and in such passages as the portrait of Amy in scene twenty-eight, and the *ψυχο* of scene thirty-seven, or scene twenty-four, he will recognize the same wonderful truth of instinct at work, in the calmest nooks and most pastoral quietudes of the many-coloured landscape of life."—*Fraser's Magazine*.

"The lesson to be taught would make a grand theme for poetry, but only a crowned singer could hope to teach it. Let some large and wealthy mind study the darker possibilities of his own being—then the question may be met by handled. Some such denizen of Parnassus—understanding by experience the peculiar temptations of high poetic temperament—knowing well all those airy illusive tongues that 'syllable men's names' in the haunted wilderness of aspiration—looking steadily down that wrong turning, the gloomy avenue of that *via mæta* he himself might have chosen—such an one could address his brethren, and all of us, with happiest effect. Qualifications adequate to an enterprise so worthy Mr. Yendys unquestionably possesses; to some such purpose he appears to have devoted himself in the present poem, and, in our judgment, with signal success."—*British Quarterly Review*.

Recently published, in post 8vo. price 3s. cloth,

THE ROMAN.

By the AUTHOR of 'BALDER.'

"Should any one after the preceding extracts doubt whether we have a new poet amongst us, we should almost despair of his conversion. But we should not abandon the attempt while we had such an argument in reserve as the ensuing description of the Coliseum."—*Athenæum*.

"How far the merit corresponds with the magnitude of the work there may be some difference of opinion, but none as to the genius and power of the author."—*Literary Gazette*.

"Any man might be proud to be the author of this poem, which, if the first production of an author hitherto unknown, is full of the richest promise; and at any rate shows that the true poets still amongst us, who, if they would but take equal pains with our older writers, are capable of achievements not any way inferior to theirs."—*Guardian*.

"The hand that has struck this lyre is the hand of a master."—*Sun*.

SMITH ELDER & CO. 65, Cornhill.

This day is published, price 3s. 6d. cloth.
A ROMANCE OF THE BUSH.
 By E. P. R.

Now ready, in 2 vols. 21s. bound,

MR. SHEIL'S LEGAL AND POLITICAL SKETCHES.

Edited, with Notes, by M. W. SAVAGE.

"The intrinsic merit of these volumes will delight the student and charm the general reader. A fair and legitimate comparison may now be drawn between the Essays of Macaulay and Stephen, Mackintosh and Sydney Smith, and other brilliant literary worthies, with those of Richard Lalor Sheil, and most assuredly the last will in no respect suffer by the contrast."—*Messenger*.

Published for HENRY COLBURN, by his Successors, HURST & BLACKETT, 13, Great Marlborough-street.

NOTICE.

SAM SLICK'S

NEW WORK,

NATURE and HUMAN NATURE,

Will be ready in a few days, in 2 vols. post 8vo.

Orders received by all Booksellers.

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

MRS. GORE'S NEW NOVEL.

Now ready at all the Libraries, in 3 vols.

MAMMON;

Or, THE HARDSHIPS OF AN HEIRESS.

By Mrs. GORE.

"The most lively and entertaining novel Mrs. Gore has yet written."—*Literary Gazette*.

"In the novel of 'Mammon' the style of Mrs. Gore is as buoyant, rapid, and pointed as usual."—*Spectator*.

"Mrs. Gore is certainly foremost among the female novelists of the day for wit, for acuteness of observation, for originality of remark, and generally for her graphic powers. These qualities ornament 'Mammon' in profusion."—*Observer*.

"'Mammon' is written with Mrs. Gore's usual vivacity. The novel is exhilarating in tone, and exhibits the follies and weaknesses of life in a spirit of playful sarcasm."—*The Press*.

"A really good novel, that will attract every educated and observant reader."—*Messenger*.

"Mrs. Gore's new romance exhibits English manners at the present day. It is thoroughly amusing, and is written with force and point."—*Sunday Times*.

Also, in 3 vols.

The SECRET HISTORY of a HOUSEHOLD.

By the Author of 'ALICE WENTWORTH.' "Alice Wentworth" reminds us of the tales by Lady Scott, which had power and pathos enough to get a hearing and keep a place—even though Lister, Ward, and Bulwer were all in the field with their manly experiences of modern life and society."—*Athenæum*.

OAKLEY MASCOTT.

By L. HOWE. Dedicated to Professor AYTON. 2 vols. "A very clever romance."—*Morning Post*.

"A deeply touching story, written with exquisite taste and feeling."—*John Bull*.

The ROMANCE of the FORUM;

or, Narratives, Scenes, and Anecdotes from Courts of Justice. By PETER BURKE, Esq., Barrister-at-Law. SECOND SERIES. 2 vols. 21s.

"This second series of the 'Romance of the Forum' equals the first in interest and variety."—*Literary Gazette*.

ANTIPODES; or, The New

EXISTENCE. A TALE of REAL LIFE. By A. CLERGYMAN. 3 vols.

"This work has certainly the advantage of being different from every-day novels. It is seldom that so practical and useful a narrative is met with. Its interest is considerable, from being true and natural."—*Sun*.

THE CURATE of OVERTON.

"The startling accession of such men as Newman, Manning and Wilberforce, render the revelations which the author has made in these interesting and instructive volumes extremely well timed."—*Britannia*.

HURST & BLACKETT, Publishers, Successors to HENRY COLBURN, 13, Great Marlborough-street.

JOHN MURRAY, Albemarle-street.

LONDON, SATURDAY, FEBRUARY 17, 1855.

REVIEWS

Sketches, Legal and Political. By the Late Right Hon. Richard Lalor Sheil. Edited, with Notes, by M. W. Savage. 2 vols. Hurst & Blackett.

THE 'Sketches of the Irish Bar,' which appeared in the *New Monthly Magazine* under the editorship of Campbell, made a talk in their day. They painted the characters of the leading persons in Irish politics with graphic felicity. Light, varied, and dramatic in their manner, the 'Sketches' were found readable by many who were tired with the violence of Irish politics.

The authorship of these 'Sketches' was attributed to the joint pens of the late Mr. Sheil and his surviving friend and literary associate, Mr. W. H. Curran, the son and biographer of the most eloquent of Irish forensic orators. The part which each had in the contributions was never accurately known; thus, the picture of O'Connell in "shouldering his umbrella like a pike, flinging out one factious foot before the other, as if he were kicking the Ascendancy before him," was often erroneously attributed to the brush of Sheil. An American publisher having issued a pirated edition of these brilliant 'Sketches,' Mr. Colburn has reclaimed his copyright. Accordingly, Mr. Savage has edited the papers by Mr. Sheil in the present work,—and another volume will follow, from the pen of Mr. W. H. Curran. We confess that we wish that the whole publication had appeared under the editorship of the latter gentleman, as it would have given more unity to the series. But, possibly, on the question of omitting or retaining certain passages from Mr. Sheil's vivid and often mordant pen, Mr. W. H. Curran desired to have the assistance of another judge.

Of the author of these brilliant papers we need say nothing here, as his life may shortly come before us for review. Many reflections pass through the mind on their critical re-perusal. Their vivacity of style was gained at the sacrifice of depth of thought; and in the comic force of the delineation fidelity to nature was often forgotten by the artist. The writer looked at Ireland only from one point of view, and "Emancipation" was invested in his mind with a talismanic power. We read the 'Sketches' with pleasure for their dramatic force of contrast, but we can by no means accept their verdicts as judicial. Sometimes reality is lost sight of altogether. The paper called 'Effects of Emancipation' proves that the writer was not a deep observer of the new springs of action which were then at work in Irish affairs. A reader will look in vain through these 'Sketches' for any distinct perception of the new power of the Roman Catholic priesthood, resulting from the "Clare Election," and other events so graphically described.

But the literary merit of these essays is very high. Sheil's early practice in writing for the stage assisted him in the difficult art of giving contrasted light and shade and dramatic interest to narrations of civil life. Irish society, in a variety of its phases, is amusingly described; and, though during the last twenty years that subject has been overworked, we can still laugh at the amusing pictures of its curiosities described in these pages. Nothing, for example, can be better than the picture of Lord Norbury presiding at Nisi Prius. There were two sides to his character—the fierce and the farcical. Sheil has given a striking view of him as a terrifying Crown prosecutor,

bullying witnesses and intimidating juries. Here is the comic side of the character.—

"Lord Norbury was at the head of an excellent company. The spirit of the judge extended itself naturally enough to the counsel; and men who were grave and considerate every where else, threw off all soberness and propriety, and became infected with the habits of the venerable manager of the court, the moment they entered the Common Pleas. His principal performers were Messrs. Grady, Wallace, O'Connell, and Gould, who instituted a sort of rivalry in uproar, and played against each other. With such a judge, and such auxiliaries to co-operate with him, some idea may be formed of the attractions which were held out to that numerous class who have no fixed occupation, and by whom, in the hope of laughing hunger away, the Four Courts are frequented in Dublin."

Then comes the Chief Justice in full force.—"Having despatched the junior, whom he was sure to make the luckless, but sometimes not inappropriate victim of his encomiums, he suffered the leading counsel to proceed. As he was considered to have a strong bias towards the plaintiff, experimental attorneys brought into the Common Pleas the very worst and most discreditable adventures in litigation. The statement of the case, therefore, generally disclosed some paltry ground of action, which, however, did not prevent his Lordship from exclaiming in the outset, 'A very important action indeed! If you make out your facts in evidence, Mr. Wallace, there will be serious matter for the jury.' The evidence was then produced; and the witnesses often consisted of wretches whose emaciated and discoloured countenances showed their want and their depravity, while their watchful and working eyes intimated that mixture of sagacity and humour by which the lower order of Irish attestators is distinguished. They generally appeared in coats and breeches, the external decency of which, as they were hired for the occasion, was ludicrously contrasted with the ragged and filthy shirt, which Mr. Henry Deane Grady, who was well acquainted with 'the inner man' of an Irish witness, though not without repeated injunctions to unbutton, at last compelled them to disclose. * * Lord Norbury, however, when he saw Mr. Grady pushing the plaintiff to extremities, used to come to his aid, and rally the broken recollections of the witness. This interposition called the defendant's counsel into stronger action, and they were as vigorously encountered by the counsel on the other side. Interruption created remonstrance; remonstrance called forth retort; retort generated sarcasm; and at length voices were raised so loud, and the blood of the forensic combatants was so warmed, that a general scene of confusion, to which Lord Norbury most amply contributed, took place. The uproar gradually increased till it became tremendous; and, to add to the tumult, a question of law, which threw Lord Norbury's faculties into complete chaos, was thrown into the conflict. Mr. Grady and Mr. O'Connell shouted upon one side, Mr. Wallace and Mr. Gould upon the other, and at last, Lord Norbury, the witnesses, the counsel, and parties, and the audience, were involved in one universal riot, in which it was difficult to determine whether the laughter of the audience, the exclamations of the parties, the protestations of the witnesses, the cries of the counsel, or the bellowing of Lord Norbury, predominated. At length, however, his Lordship's superiority of lungs prevailed; and, like Æolus in his cavern (of whom, with his puffed cheeks and inflamed visage, he would furnish a painter with a model), he shouted his stormy subjects into peace."

Mr. Savage records an appropriate jest on such a Court.—

"A witness, being asked one day what his occupation was, answered that he kept a racket-court. 'So do I,' said Lord Norbury, puffing, and glancing at his 'company.'"

And elsewhere Mr. Savage gives another specimen of the untiring punster.—

"Cobbett was called the 'bone-grubber,' in consequence of the respect which, with ostentatious bad taste, he paid to the memory of Thomas Paine, whose remains he brought to England from America.

Lord Norbury, on being asked what Cobbett meant by importing the bones, is said to have answered, that he supposed he 'wanted to make a broil.'"

A collection of *Norburiana* would amuse. Let us contribute one of the best. A gentleman, who practised wit and professed law, thought that he could overcome the punster on the Bench. So on one day, when Lord Norbury was charging a jury, the address was interrupted by the braying of a donkey. "What noise is that?" cried Lord Norbury.—"'Tis only the echo of the Court, my Lord," answered Counsellor Readytongue. Nothing disconcerted, the Judge resumed his address; but soon the barrister had to interpose with technical objections. While putting them, again the donkey brayed. "One at a time, if you please," said the retaliating joker.

The pictures of domestic life in Ireland in these papers are very graphic:—many passages being full of dramatic spirit. An old Catholic family is in pecuniary difficulties, and a rich wife is hunted for.—

"A priest, a friend of the family, who, as matrimony is one of the seven sacraments, thinks himself in duty bound to promote so salubrious a rite, is consulted. He gives a couple of taps to his gold snuff-box, tenders a pinch to the old gentleman, protests that there are risks in celibacy, that it is needful to husband the constitution and the estate, and observing that the young squire, though a little pale, is a pretty fellow, puts his finger to his nose, and hints at a young damsel in Newrow (a penitent of his reverence, and a mighty good kind of young woman, not long come from the Cork convent), with ruddy cheeks, and vigorous arms, a robust waist and anticallican toes. The parties are brought together. The effect of juxta-position is notorious: most of my readers know it by experience. The young gentleman stutters a compliment, the heart of the young lady and her wooden fan are in a flutter; the question is popped. The old people put their heads together. Consideration of the marriage, high blood, and equity of redemption upon one side; and rude health and twenty thousand pounds on the other. The bargain is struck; and to ensure the hymeneal negotiation, nothing remains but that Counsellor Bellew should look over the settlements."

The "wooden fan" suggests the artist too much in the exhibition; but let us proceed, first premising that "Mr. Bellew" was a real person.—

"Accordingly, a Galway attorney prepares the draft marriage settlement, with a skin for every thousand, and waits on Mr. Bellew. Laying thirty guineas on the table, and thinking that upon the credit of such a fee he may presume to offer his opinion, he commences with an ejaculation on the fall of the good old families, until Mr. Bellew, after counting the money, casts a Caius Marius look upon him, and awes him into respect. He unrolls the volume of parchment, and the eye of the illustrious conveyancer glistens at the sight of the ancient and venerable name that stands at the head of the indenture. But as he advances through the labyrinth of limitations, he grows alarmed and disturbed, and on arriving at the words 'on the body of the said Judy Mac Gilligan to be begotten,' he drops his pen, and puts the settlement away, with something of the look of a Frenchman, when he intimates his perception of an unusually bad smell. It is only after an interval of reflection, and when he has recalled the fiscal philosophy of Vespasian, that he is persuaded to resume his labours, but does not completely recover his tranquillity of mind, until turning the back of his brief, he marks that most harmonious of all monosyllables 'paid,' at the foot of the consolatory stipend."

Throughout the 'Sketches' there is a satirical exhibition of the contrasted points between "patricians" and "plebeians," which reminds us of society where "an Ascendancy" is installed in power. Occasionally broader social features are depicted. Ethnologists will be pleased with this bird's-eye view of "race" in Ireland.—

"In other countries, one national physiognomy

prevails through the mass of the people. In every district, and in every class, we meet with a single character of face. But in Ireland, the imperfect grafting of colonization is easily perceived, in the great variety of countenance which is everywhere to be found: the notches are easily discerned upon the original stock. The Dane of Kildare is known by his erect form, his sanded complexion, his blue and independent eye, and the fairness of his rich and flowing hair. The Spaniard, in the west, shows among the dominions of Mr. Martin his swarthy features and his black Andalusian eye. A Presbyterian church in the north exhibits a quadrangular breadth of jaw-bone, and a shrewd sagacity of look in its calculating and moral congregation, which the best Baillie in Glasgow would not disown. Upon the southern mountain and in the morass, the wild and haggard face of the aboriginal Irishman is thrust upon the traveller, through the aperture in his habitation of mud which pays the double debt of a chimney and a door. His red and strongly curled hair, his angry and courageous eye, his short and blunted features, thrown at hazard into his countenance, and that fantastic compound of intrepidity and cunning, of daring and of treachery, of generosity and of falsehood, of fierceness and of humour, of absurdity and genius, which is conveyed in his expression, is not inappropriately discovered in the midst of crags and bogs, and through the medium of smoke. When he descends into the city, this barbarian of Art (for he has been made so by the landlord and the law—Nature never intended him to be so) presents a singular contrast to the high forehead, the regular features, and the pure complexion of the English settler."

Even on a three days' railway tour in Ireland, the justice of the foregoing picture could be seen.—Comparing the English and Irish boys at one of the Jesuits' Colleges, where the writer was educated, Sheil says:—

"There were at Stonyhurst, as I have mentioned, a great number of English Catholics of the highest rank. The number of Irish boys was about half that of the English. They were generally greatly inferior in station, though many of them were the children of the best Catholic gentry in Ireland. There existed among the natives of the two countries a strong rivalry, which was occasionally wrought up to animosity. The favourite game at the school was a very violent one, called football. The Irish were marshalled on one side of a large field, and the English on the other. When they became heated, the boys showed a spirit of antipathy, which reminded one of the feuds of the two nations. In general, the English were successful, because they showed more prudence and self-control. The Irish were so precipitate and headlong as constantly to miss the victory when they were on the point of gaining it. The same emulation ran into their school exercises. Wherever attention and assiduity were required, the English were generally superior; but in matters of display the Irish went far beyond them. This was particularly observable in their declamation, in which the Irish were unquestionably far more accomplished."

The recollections of the Jesuits in these papers are very remarkable, because to some extent they are revelations as well as reminiscences. It is from the pen of a Roman Catholic witness that the following anecdote comes. Speaking of Stonyhurst, the writer says:—

"The Sodality itself was a curious instance of the mechanism by which the Jesuits contrived to keep perfect order in their schools. It consisted of the majority of the boys, who voluntarily enrolled themselves in a corporation, which was instituted in honour of the Blessed Virgin. The students who belonged to this society were compelled to select a certain number of individuals from among themselves, who were called admonitors, and who bound themselves to disclose to the heads of the school every malpractice which should fall under their cognizance. They were, in fact, a set of tell-tales, to whom no degradation attached, because they were elected to the office by the very persons whose conduct it was their duty to superintend. Thus their functions were not dishonourable, although the habit which they engendered was not, perhaps, very useful."

We totally dissent from the writer's approbation of such an institution. To raise the morals or refine the manners of boys by so odious an organization is a worse than dubious experiment. A spy-system is fundamentally vicious in design, and sure to destroy the nobler springs of action. It is worthy of the invention of a Fouché. The following anecdote of Molinari, a Jesuit of the school at Kensington, would not be believed if it came from a Protestant pen.—

"He had a whip made of several strong cords, with knots at regular intervals, with which he used to lash the hands of the scholars in such a way as to make the blood leap from them. It seemed to give great pain to inflict this chastisement, and I have seen him weep at what he called the necessity of being severe. He had a very extraordinary method of reconciling the devoted students to this torture. He sentenced you first to nine lashes, and then ordered you to hold out your hand; 'Offer it up to God and his saints,' he would say, 'as a sacrifice.' He would then select you nine saints. The first blow was to be suffered in honour of St. Ignatius, 'Allons, mon enfant, au nom du plus grand de tous les Saints—St. Ignace!' and down went the whip from a vigorous and muscular arm.—'Oh! mon Dieu!' cried the little martyr, withdrawing his hand after the first operation.—'Allons, mon enfant, au nom de St. François Xavier!' and he then inflicted a second laceration upon the culprit.—'Mais, mon Père, ayez pitié—jamais, jamais, je ne ferai des solécismes—oh, mon Père, jamais.' The Jesuit was inexorable.—'Allons, mon enfant, au nom de Saint Louis de Gonzague;' and thus he proceeded till he had gone through his calendar of infliction."

The Jesuit who chastized in this extraordinary fashion is described by Sheil as endowed with "heroical disinterestedness of character," and also as being "exceedingly mild in temper." We have not space for extracting the account of Stonyhurst, but as "a picture of an interior" it is highly interesting, for a variety of reasons.

Mr. Savage has had no easy task in editing these papers, as in the original series there were several passages of a highly invidious character, —and even as they stand there is too much of imputation on individuals, and a vein of detraction painful in the case of those who have passed from the scene. Lord John Russell, in his controversy with Mr. Croker, ought to have taught a lesson to all "editors" of posthumous papers of the danger of committing their defunct principals. Mr. Savage has not profited by that example. Thus, when Sheil has severely criticized the public character of a Whig Duke, Mr. Savage makes a low bow to his Grace, and records in a laudatory note how his Grace acted when "the country was disturbed by an unfortunate movement for the Repeal of the Union," forgetting that the eminent person whose papers he was editing had taken a vehement part as a Repealer. So, again, at p. 372 (Vol. II.), Mr. Savage assails a late administration, and talks of "Mr. Sheil's prediction being strikingly realized." We turn over the page, and we find that Sheil had anticipated that a glorious career was in store for the personage disparaged by his editor. There are also various errors of omission. Sheil in one passage records how O'Connell "caught a Tartar" when he vituperated Mr. Stanley, then (1830) comparatively unknown.—

"All this was borne by the object of so much vituperation not only with patience, but with some scorn. He knew that the hour of ample retribution was at hand, and was heard, I have been told, to intimate that the Honourable Member for Waterford would change his tone in the House of Commons. The prediction was verified. Mr. Stanley displayed, in his very first encounter with Mr. O'Connell, so much acuteness, dexterity, fearlessness, and so much of that subdued and polite virulence which constitutes the highest merit in the sarcastic oratory of the House of Commons, that his antagonist was taught

to beware of him, and since that time nothing more has been heard of 'shave-beggar,' and of the other somewhat contemptuous designations which were attached in the miscellany of tribunitian invective to the Secretary for Ireland."

—A note was here required, stating that O'Connell and Sheil were not on friendly terms when the passage was written,—and there are several similar omissions.

It is necessary to caution the reader that throughout these papers "the other side" is kept out of view, almost as much as if they had been written by Cobbett. On anything Irish we must recollect the Earl of Liverpool's sensible remark, that "there are two Irelands in one island." But we can cordially commend these 'Sketches' as interesting in matter and brilliant in composition. Some of the best gifts of a dramatist and novelist are seen in the series, and they deserve to find many readers.

Chronicles of Wolfert's Roost, and other Papers.
By Washington Irving. Edinburgh, Constable & Co.; London, Low & Co.

It would not be easy to overpraise this American miscellany. To be classic seems a lost ambition among our young writers,—who confound correctness with academical frigidity, and conceive that invention is substantiated by impudence. Nevertheless (as the wit said of church-going) quiet readers can "see no harm" in a pure style, especially from a new country like America, which has a literature yet to establish, and its models to range on their pedestals. It is better, we think, for a man to tell his story as Mr. Irving, Mr. Hawthorne, or Mr. Longfellow does, than to adopt the style Emersonian—in which thoughts may be buried so deep that common seekers shall be unable to find them. "Geoffrey Crayon's" elegance and polish do not imply want of life or the absence of humour. His fancies are ideal, not typographical. They do not consist of verbs for nouns,—of full stops barring the way when the reader desires to go on,—of tumid epithets, which arrest by their strangeness, not their appositeness,—of foreign idioms and forms, introduced (it may not be uncharitable to divine) by way of apprising the public that the writer is versed in French, Italian, or German. "Geoffrey" is less poetical than the Author of 'Hyperion,'—he does not possess the strange and weird vigour of Mr. Hawthorne;—but, as the eldest, he may possibly, in the Book of American Worthies, be ranked as the first, also, of those three writers,—whom we mention in company because of the affinities among them.

To begin at the beginning:—it is possible that 'Wolfert's Roost,'—the "little old-fashioned stone mansion, all made up of gable-ends, and as full of angles and corners as an old cocked hat,"—the *Chronicles* of which are so unctuously rehearsed by "Geoffrey Crayon,"—may have owned the same original as belonged to the "house of seven gables," peopled by Mr. Hawthorne with human beings so peculiar and pathetic. Other of Mr. Irving's gatherings, again, remind us of legends in 'Hyperion,' and of that fine ballad 'The Skeleton in Armour,' which has not yet taken the high place due to it among Prof. Longfellow's poems. Here, for instance, is a goblin tale belonging to the Convent of San Francisco at Seville, and introduced by proper awful talk concerning Don Juan de Tenorio, the well-known hero of Tyro de Molina, and Molière, and Mozart. Observe how admirably the scene is arranged for a ghost story.—

"While my companion was relating these anecdotes, we had traversed the exterior courtyard of the convent, and made our way into a great interior court;

partly surrounded by cloisters and dormitories, partly by chapels, and having a large fountain in the centre. The pile had evidently once been extensive and magnificent; but it was for the greater part in ruins. By the light of the stars, and of twinkling lamps placed here and there in the chapels and corridors, I could see that many of the columns and arches were broken; the walls were rent and riven; while burnt beams and rafters showed the destructive effects of fire. The whole place had a desolate air; the night-breeze rustled through grass and weeds flaunting out of the crevices of the walls, or from the shattered columns; the bat flitted about the vaulted passages, and the owl hooted from the ruined belfry. Never was any scene more completely fitted for a ghost story. While I was indulging in picturings of the fancy, proper to such a place, the deep chant of the monks from the convent church came swelling upon the ear.—‘It is the vesper service,’ said my companion; ‘follow me.’—Leading the way across the court of the cloisters, and through one or two ruined passages, he reached the portal of the church, and pushing open a wicket, cut in the folding doors, we found ourselves in the deep arched vestibule of the sacred edifice. To our left was the choir, forming one end of the church, and having a low vaulted ceiling, which gave it the look of a cavern. About this were ranged the monks, seated on stools, and chanting from immense books placed on music-stands, and having the notes scored in such gigantic characters as to be legible from every part of the choir. A few lights on these music-stands dimly illumined the choir, gleamed on the shaven heads of the monks, and threw their shadows on the walls. They were gross, blue-bearded, bullet-headed men, with bass voices, of deep metallic tone, that reverberated out of the cavernous choir. To our right extended the great body of the church. It was spacious and lofty; some of the side-chapels had gilded grates, and were decorated with images and paintings, representing the sufferings of our Saviour. Aloft was a great painting by Murillo, but too much in the dark to be distinguished. The gloom of the whole church was but faintly relieved by the reflected light from the choir, and the glimmering here and there of a votive lamp before the shrine of the saint. As my eye roamed about the shadowy pile, it was struck with the dimly-seen figure of a man on horseback, near a distant altar. I touched my companion, and pointed to it: ‘The spectre statue!’ said I.”

The excellent openings of Mrs. Radcliffe’s ‘Italian,’ and of Schiller’s ‘Ghost-seer,’ are recalled by the foregoing picture. The tale thus prepared for is ghastly enough; and since our readers have not for many a day been treated to a specimen of the supernatural, we will give it them entire.—

“There was once in Seville a young gay fellow, Don Manuel de Manara by name, who having come to a great estate by the death of his father, gave the reins to his passions, and plunged into all kinds of dissipation. Like Don Juan, whom he seemed to have taken for a model, he became famous for his enterprises among the fair sex, and was the cause of doors being barred and windows grated with more than usual strictness. All in vain. No balcony was too high for him to scale; no bolt nor bar was proof against his efforts: and his very name was a word of terror to all the jealous husbands and cautious fathers of Seville. His exploits extended to country as well as city; and in the village dependent on his castle, scarce a rural beauty was safe from his arts and enterprises. As he was one day ranging the streets of Seville, with several of his dissolute companions, he beheld a procession about to enter the gate of a convent. In the centre was a young female, arrayed in the dress of a bride; it was a novice, who, having accomplished her year of probation, was about to take the black veil, and consecrate herself to Heaven. The companions of Don Manuel drew back, out of respect to the sacred pageant; but he pressed forward, with his usual impetuosity, to gain a near view of the novice. He almost jostled her, in passing through the portal of the church, when, on her turning round, he beheld the countenance of a beautiful village girl, who had been the object of his ardent pursuit, but who had been spirited secretly out of his reach by her relatives. She recognised him at the

same moment, and fainted; but was borne within the grate of the chapel. It was supposed the agitation of the ceremony and the heat of the throng had overcome her. After some time, the curtain which hung within the grate was drawn up: there stood the novice, pale and trembling, surrounded by the abbess and the nuns. The ceremony proceeded; the crown of flowers was taken from her head; she was shorn of her silken tresses, received the black veil, and went passively through the remainder of the ceremony. Don Manuel de Manara, on the contrary, was roused to fury at the sight of this sacrifice. His passion, which had almost faded away in the absence of the object, now glowed with tenfold ardour, being inflamed by the difficulties placed in his way, and piqued by the measures which had been taken to defeat him. Never had the object of his pursuit appeared so lovely and desirable as when within the grate of the convent; and he swore to have her, in defiance of heaven and earth. By dint of bribing a female servant of the convent, he contrived to convey letters to her, pleading his passion in the most eloquent and seductive terms. How successful they were, is only matter of conjecture; certain it is, he undertook one night to scale the garden wall of the convent, either to carry off the nun, or gain admission to her cell. Just as he was mounting the wall, he was suddenly plucked back, and a stranger, muffled in a cloak, stood before him.—‘Rash man, forbear!’ cried he; ‘is it not enough to have violated all human ties? Wouldst thou steal a bride from heaven!’—The sword of Don Manuel had been drawn on the instant, and furious at this interruption, he passed it through the body of the stranger, who fell dead at his feet. Hearing approaching footsteps, he fled the fatal spot, and mounting his horse, which was at hand, retreated to his estate in the country, at no great distance from Seville. Here he remained throughout the next day, full of horror and remorse; dreading lest he should be known as the murderer of the deceased, and fearing each moment the arrival of the officers of justice. The day passed, however, without molestation; and, as the evening advanced, unable any longer to endure this state of uncertainty and apprehension, he ventured back to Seville. Irresistibly his footsteps took the direction of the convent; but he paused and hovered at a distance from the scene of blood. Several persons were gathered round the place, one of whom was busy nailing something against the convent wall. After a while they dispersed, and one passed near to Don Manuel. The latter addressed him, with hesitating voice—‘Señor,’ said he, ‘may I ask the reason of yonder throng?’—‘A cavalier,’ replied the other, ‘has been murdered.’—‘Murdered!’ echoed Don Manuel; ‘and can you tell me his name?’—‘Don Manuel de Manara,’ replied the stranger, and passed on.—Don Manuel was startled at this mention of his own name; especially when applied to the murdered man. He ventured, when it was entirely deserted, to approach the fatal spot. A small cross had been nailed against the wall, as is customary in Spain, to mark the place where a murder has been committed; and just below it he read, by the twinkling light of a lamp, ‘Here was murdered Don Manuel de Manara. Pray to God for his soul!’ Still more confounded and perplexed by this inscription, he wandered about the streets until the night was far advanced, and all was still and lonely. As he entered the principal square, the light of torches suddenly broke on him, and he beheld a grand funeral procession moving across it. There was a great train of priests, and many persons of dignified appearance, in ancient Spanish dresses, attending as mourners, none of whom he knew. Accosting a servant who followed in the train, he demanded the name of the defunct. ‘Don Manuel de Manara,’ was the reply; and it went cold to his heart. He looked, and indeed beheld the armorial bearings of his family emblazoned on the funeral escutcheons. Yet not one of his family was to be seen among the mourners. The mystery was more and more incomprehensible. He followed the procession as it moved on to the cathedral. The bier was deposited before the high altar; and funeral service was commenced, and the grand organ began to peal through the vaulted aisles. Again the youth ventured to question this awful pageant. ‘Father,’ said he, with trembling voice, to one of the priests, ‘who is this you are about to inter?’—‘Don Manuel

de Manara,’ replied the priest.—‘Father,’ cried Don Manuel impatiently, ‘you are deceived. This is some imposture. Know that Don Manuel de Manara is alive and well, and now stands before you. I am Don Manuel de Manara!’—‘Avaunt, rash youth!’ cried the priest; ‘know that Don Manuel de Manara is dead!—is dead!—is dead!’—and we are all souls from purgatory, his deceased relatives and ancestors, and others that have been aided by masses from his family, who are permitted to come here and pray for the repose of his soul!’ Don Manuel cast round a fearful glance upon the assemblage, in antiquated Spanish garbs, and recognized in their pale and ghastly countenances the portraits of many an ancestor that hung in the family picture-gallery. He now lost all self-command, rushed up to the bier, and beheld the counterpart of himself, but in the fixed and livid lineaments of death. Just at that moment the whole choir burst forth with a ‘*Requiescat in pace*,’ that shook the vaults of the cathedral. Don Manuel sank senseless on the pavement. He was found there early the next morning by the sacristan, and conveyed to his home. When sufficiently recovered, he sent for a friar, and made a full confession of all that had happened. ‘My son,’ said the friar, ‘all this is a miracle and a mystery, intended for thy conversion and salvation. The corpse thou hast seen was a token that thou hadst died to sin and the world; take warning by it, and henceforth live to righteousness and heaven!’ Don Manuel did take warning by it. Guided by the counsels of the worthy friar, he disposed of all his temporal affairs; dedicated the greater part of his wealth to pious uses, especially to the performance of masses for souls in purgatory; and finally, entering a convent, became one of the most zealous and exemplary monks in Seville.”

Capital, of the same quality, are the legends of ‘The Grand Prior of Minorca,’ and ‘The Engulfed Convent.’ Then, there are Indian and American sketches,—glimpses of Paris in 1825,—a picture of Broek, the toy-village, four miles from Amsterdam, as Broek was, and is, and bids fair to remain, like a whimsical bit from China glazed down in the midst of Holland,—two well-narrated historical reminiscences of the Mississippi Bubble and the tragical crimes and sufferings of the Count von Horn,—‘Mountjoy,’ a drawing-room tale of the best Annual quality,—and ‘The Birds of Spring,’ which would be welcome were it only for the sake of the natural verses on “the Blue Bird,” by Wilson the Ornithologist, which, long ago, made a place for themselves in our memory.—There are other papers of interest; but enough has been said to justify the praise of the ‘Chronicles of Wolfert’s Roost’ with which we commenced our comment on them.

Missions in South India Visited and Described.

By the Rev. Joseph Mullens. Dalton.

THE Author, a Missionary resident at Calcutta, visited, in the first three months of 1853, the principal stations of the Missions in the Madras Presidency. On his return to Calcutta he delivered six Lectures containing the fruit of his inquiries,—and these Lectures are given to the English public in the volume before us. Mr. Mullens travelled over a distance of 1,360 miles, passing through many places of great interest, some of which have been inadequately described. Yet he confines himself so much to bare statistics that the whole narrative fails to present a vivid picture to the mind,—almost conveys the idea of having been compiled, rather than of being the fruit of personal investigation. This is the more to be regretted, as his descriptions of places, when they do occur, though brief, are not uninteresting. Of Cape Comorin, he says, for example,—

“I visited the Cape, when travelling among the out-stations of the Nagercoil mission, and was much struck by its numerous peculiarities. Near the shore is a fine group of palm-trees; and close beside them stands a Hindú Temple. On the very shore itself, is

a well-cut choultry, consisting of a corniced roof resting on twelve carved pillars, all built of stone. Directly in front of this choultry is the low black rock, which constitutes the last point of solid land in Hindustán. On the east side of the temple, there lies on the shore, a large mass of *purple sand*, which on examination, proves to be a collection of minute garnets, broken out of the granite rock of south India, in which it abounds, and strangely washed together in one spot. Close to the black rock is another curiosity; a mass of sand, each grain of which is as large as the ordinary grains of raw rice, whence it is called *rice-sand*. There is a singular legend told about its origin that may be thought interesting. It is told in various ways; but the following account is most common. It is said that the youngest daughter of the king of Pandya, named Kaniá Kómori, was sought in marriage by a foreign giant, named Vánasaram. She accepted his suit, and agreed to marry him, on one condition which she hoped he could never fulfil; namely, that he should, on the wedding-day, give the guests to eat, *rice* which had been sown, grown, cut, winnowed, and cooked upon that very day. Much to her astonishment, the ugly monster performed the task. Greatly enraged, she cursed the rice, which became stones; she cursed the chaff, which became sand: she broke down a bridge which the giant had built there for his convenience, and finally slew the giant himself."

Mr. Mullens's facts are valuable, and are given with much candour. Those who wish to learn how far the Missionary movement has succeeded in Southern India will find much to interest them; they may learn, too, where and why it has failed. Among the causes of failure the author especially notices, in the Tamil Missions, the intolerance of caste. This was retained by converts with such obstinacy that they denied the very Missionaries that taught them access to their wells. Such converts, it must be allowed, were converts only in name. Nor, according to our author's account, was the conduct of some of the Missionaries themselves altogether irreproachable. Of one it is naively said, "He was a man of rather angry temper, and at times used to beat his servants and the converts in general, unmercifully." It is added, that having been exasperated by an old woman of Muthaloor, who rather too importunately claimed payment for some eggs, "he cursed the people, and especially their fowls,"—a curse which, in the opinion of the people of that village, whose faith seems greater than their discernment, caused a considerable decrease in the number of eggs for some years.

The Lectures conclude with a short summary of the results of Missionary labours in the south of India. Not to mention the 650,000 Catholics, and 120,000 Syrian Christians of the Madras Presidency, there are 76,000 Protestant converts, who are all receiving secular as well as religious instruction. These converts do themselves, too, largely subscribe to the support of the Missions. At eleven stations in Tinnevely alone, 17,000 rupees were collected in four years. Nor can it be denied that the Missionaries have introduced many useful arts among the natives. Thus, watch-making flourishes at Mangalore, and lace-making at Nagercoil. Neither should it be forgotten that we are indebted for the first Grammars and Dictionaries of the Canarese, Tulava, Tamil, and Maláyalin languages, and of many other dialects, to the Missionary Press.

MINOR MINSTRELS.

The Yogi's Daughter: a Tragedy in Five Acts. By John Baker Hopkins. (Hall, Virtue & Co.)—This tragedy is obviously no joke. Possibly we do not understand the language of the City and the Desert, where its scenes are laid—and probably the critic fittest to review it,

and also most pleasing to Mr. Hopkins, would be "the Yogi's Son," or some other Oriental used to singular figures of speech and curious stage effects. The following is the beginning of the tragedy: and we think it is a little like the beginning of one of Mr. Bunn's operabooks.—

Scene I. A Street in the City.

Enter Slaves.

1st Slave. Happy hour! let us sing and dance! Nyo has decreed that none shall labour on his marriage-day.

2nd Slave. Ah! we are happier than the birds.

1st Slave. Nay, they are always free.

2nd Slave. Therefore are we happier to-day. Give them but one day in many in which to chant their songs, and on those rare intervals, how rich and loud would be their blithe-some notes.

1st Slave. Well said.

3rd Slave. Let us away to the groves of Paphila.

1st Slave. The noble Leba passes to the temple to receive the holy Sona's blessing—let us wait till she be gone.

2nd Slave. We will sing the marriage-song.

All. Aye, the marriage-song.

Song.

Marriage is the tree of Love,

Life its glorious fruit;

It is the sole celestial plant

That blooms beneath the skies.

Join with the children of the air,

Angels of minstrelsy,

Who chant the songs they hear above

When noble weds the brave.

The gods grant them a pious race,

That night may brighter be;

For every child that's born on earth,

A new star shineth forth.

Enter Seer.

All. Hail, Seer.

Seer. Why this sound of rejoicing?

1st Slave. Know you not this day Nyo weds the Yogi's daughter? We sing the marriage-song.

These sociable and singing slaves have presently to sing another tune, and a terrible tune it is; but we will leave its turnings and windings to be explained by the "Yogi's Son," or Pundit, who may be called in for the purpose, satisfied that we shall have done our best if we treat the public to a few notes of the "grand crash" at the close.—

Scene V. Room in the Palace. Sona sleeping.

Enter Leba, who watches him for some time and then moves from his couch.

Leba. Sleep has divorced him from the sense of guilt.

Sona, I will soon awake, and wed thee

To everlasting woe! My heart will burst

Not from fear or pity, but with ardour.

Quick—he may wake, and this good chance be lost!

[She takes the packet from her hair, opens it, and rubs poison on her fingers.

White—purple—shalt be red soon, my fingers;

Either these stains are cleansed by heaven's dew,

Or fixed by the flames of hell. No matter;

If I may join the blest, the gods be praised;

If otherwise, I shall see Sona's tortures.

Father, Mother, Nyo, veil not your eyes;

Behold the purpose of your hapless child.

I offer this princely victim to your wrath.

[She draws near to Sona, pauses a moment, then tears out his eyes—she rushes to the other side, screaming and laughing, and throws herself on the ground.—Sona starts up.

Sona. Fiends, away! Soldiers! help me, I dream;

Wake me. Oh, exquisite torture! wake me.

Oppressive darkness—pain unbearable.

Guards, friends, touch me—speak to me, Oh speak!

Laughter!—her voice—Ah, it cannot be Leba!

It is part of this terrific vision—

I cannot speak,—I am not heard—my voice

Is drowned in slumber. Alas! none could laugh

At torments such as these. Oh, mercy, mercy!

My eyes are gone!—I feel vacuity,

Where they should be—blood seems trickling forth.

Patience—'tis a dream—'twill soon pass by.

Ah!—

[He pauses.

Shortly after this Leba, "the Yogi's Daughter," sucks her thumb and dies of the poison!—Comment would only mar the effect of the catastrophe.

Five Dramas. By an Englishman. (Saunders & Otley.)—Drama, says our Englishman (author, by the way, of 'Sketches of English and Scotch Scenery'), is at its lowest ebb in England; and this is owing to the disproportionate public favour bestowed on foreign theatrical wares. How could he, after this, put forth these five plays, announcing the nationality of their author by way of "head and front" to his complete justification of our popular bad taste?—It will be seen, from one solitary specimen, that,

in taste and in diction, our "Englishman" outdoes the burlesque caricaturists whom we have so often met in the 'Pocket-book' of *Punch*. The second act of the third drama, 'Retribution,' opens as follows:—

An Apartment in Millington Hall.

Servants ornamenting the apartment with flowers, &c.—RILEY and JANET attended by Tailor and Milliner, who determine the arrangement of their new apparel.

Janet (to Milliner). The arm is too confined, methinks. [She raises her arm.

Milliner. You mean too formal, madam?

Janet. Shape thou the dress—not my words.

I say the arm is too confined.

Milliner. But this is all the fashion now.

Janet. Fashion!—to bind a woman's arms?

That fashion shall be altered ere I wed.

And the skirt!—what think ye of the skirt?

[She walks to and fro.

Milliner. Perfection, madam.

Janet. Then, of course, it must become the wearer.

You may depart. [Milliner goes out.

—The above delicious passage is one among the thousand which this strange volume yields, and will therefore suffice.

The Englishman's 'Dramas,' however, contain what will seem the wisdom of Solon—the music of "Apollo's lute"—the character of Shakspeare,—if they be measured against a smaller book of rhyme which they have overlaid. This is entitled, *Aguemerrasque*; or, a *Cataplasms of Columbo-root, with Interludal Scraps: a Satire for the Times.* Extracted from Part V. of *Unpublished Miscellanies.* By Chas. Hancock, Esq. (Saunders & Otley.)—We remember Mr. Chadwick's Oratorio, also Mr. Warren's 'Lily and Bee,' but think that in its own style this 'Satire for the Times' by Charles Hancock, Esq. exceeds those dithyrambics, memorable as they were. It may be divined that our satirist's subject is the recent schism in the English Church; but of this we are not sure. Neither are we able to discover, when our author fancies himself to be indulging in "doggerel," when he intends to be seriously sharp. What will those who are better skilled in divination than ourselves make of the following? Is it tragedy or comedy?—

Lastly, while doggerel were excites or warms, One solemn word we wish to add about our singing psalms. In reason and in conscience, they are wrong, Who write or cite, irreverent rhymes, or chimes for holy song!

With jargon slang,
Or nasal twang,
Who cause our tongues to jingle:
And heark'ning ears,
When clerk appears,
With grating tunes to tingle!
It mads and sads
Our village lads,
And fills the heart with ills,
To whine in pain,
The metric strain
Which chokes our countless choirs.

Priests, for their pets, print hymn-books, now-a-days:
But, though devout attempts of some, excite our praise,
Poor, by compare with Asaph's lyre, all other would-be lays!

Say, what so rapturous as the Hebrew muse,
Which, winning, warms: or, softly warning, woos?
Oh precious anthems ye, from childhood, wont to use!

—Some five-and-twenty years ago, a Haymarket ditty, with its burden about "a sad *Heigh-ho!*" was popular among ballad-singers. Charles Hancock, Esq. has published a sacred '*Heigh-ho!*' among the scraps or miscellaneous rhymes which fill his wondrous pamphlet.—But enough has been said concerning him and them.

Rome's Red Foot-prints in the Alps; or, the Woes of the Waldenses in 1686 and 1689, by the Rev. David Drummond, &c. (Hall, Virtue & Co.), is the last piece of minor minstrelsy which we shall include in the present collection. Though it cannot be charged either with the Oriental sublimity of the Eastern Tragedy, with the wit of the 'Five Dramas,' or with the singular pungency of 'The Cataplasms,' we are sorry to say, that it is no more a poem than they are poems, but merely the old anti-Papistical tale, told in metres the most irregular conceivable, and in a style in which puerility and pathos are

so oddly intermixed that the innocent reader will assuredly laugh in places where no laughter was meant.

The Life of the Right Honourable Edmund Burke. By James Prior. Fifth Edition. Revised by the Author. Bohn.

Prior's 'Life of Burke' is the best we have,—though in itself, and in relation to its great subject, it is unsatisfactory. We do not understand the principle on which it has been written. It is manifest that Mr. Prior saw as clearly as other people what circumstances required elucidation, for he approached them with parade and professions which awakened interest. These, however, turned out to be mere flourishings—words and assertions—as if reference to a subject and Mr. Prior's opinion were all the reader could desire. Mr. Prior seems to regard the faithful portraiture of the man, less than the coherency of his own narrative and the self-consistency of his ideal hero. His fault is, that he thinks more of Mr. Prior than of Burke. To a certain extent this is a fault common to biographies; but we had few examples so startling as Mr. Prior's 'Life of Burke.' As a consequence, it is impossible to find therein satisfactory information on many of the vexed questions—incidents, circumstances, or relationship—in or in connexion with the life of Burke.

A dim light has broken upon us by the publication of this, the fifth, edition. Not that Mr. Prior has said anything to enlighten us—that is not his humour;—not that the reader of this fifth edition is forewarned that there are statements in it contrary to positive statements in preceding editions. Quite otherwise. Mr. Prior assures him, "in testimony of the care with which the work was originally written," that in the many volumes of contemporary men and history since published, "no incident that I have mentioned is contradicted and no new one added." Not one?

This may be true; "incident" is a vague word, and may be largely or narrowly interpreted. If it mean, as will be inferred, that Mr. Prior has seen no reason to alter any of his opinions or qualify any of his statements, then Puck must have taken the manuscript after it had been "revised" by the biographer, and, with especial reference to this self-congratulatory announcement, made changes, which, though innocent in themselves, must be annoying to Mr. Prior. Some of these humorous contradictions are inserted with delicacy and skill, others in wantonness of spirit. A word, a sentence, a mere parenthetical paragraph occasionally runs counter not merely to an "incident," but contradicts and confuses facts, opinions, and pages of argument.

One purpose, manifest enough in former biographies and in former editions of Mr. Prior's work, was to create an impression that Edmund Burke was not, as often asserted, a literary or political adventurer, but the descendant of a long line of estates gentlemen—possibly, as Mr. Peter Burke would have us believe, "a descendant of an off-shoot of Clanricarde," himself a descendant of one of the rough-shod, iron-clad companions of Strongbow. Dr. Bisset, indeed, told us, on the authority of that extraordinary gossip, or worse, Dr. Laurence (Burke's executor), that Burke's grandfather possessed a landed estate of 3,000*l.* a year, which was confiscated! The facts, indeed, when scrutinized, amounted only to a traditional Burke or Bourke, an assumed Mayor of Limerick, and some evidence, which seemed to us reasonable, tending to show that Edmund had a great-grandfather. Then there was a talk about contemporary slander and party misrepresentation, and the reader

was to infer from it that literature was not a necessity of Burke's early life, but its grace and ornament,—that "to accept the reward was not to be in want of it,"—that Burke's father "allowed him 200*l.* per annum, at that time a liberal sum," and dying left "a considerable provision" for all his children; in brief, and on "unquestionable authority," as Mr. Prior called it, with the superadded supererogatory authority of the eternal Dr. Laurence, "that Mr. Burke received from his family at various times a sum little short of 20,000*l.*—a larger patrimony than fell to Mr. Pitt," the son of Chatham,—and, as we will in candour acknowledge, greater than fell to Chatham, the father of Mr. Pitt.

We took leave, as our readers may remember [*Athen.* Nos. 1363, 4], to laugh at these pretensions—to question even the "unquestionable." Mr. Prior laughed in return; as we infer from the announcement to which we have alluded, that no one incident in the whole of his life of Burke has been contradicted. This assertion will, we fear, make the joke which has been played off on him all the more painful, for hereafter we shall have Prior quoted against Prior,—a painful position for a man who prides himself on the impeccability of his work. We, indeed, except for our sympathy with Mr. Prior, might rejoice, for Puck has not only followed our hints, but without scruple has made this fifth edition contradict all the preceding editions and confirm our speculations. Thus, in the new version of this patrimonial story, Mr. Pitt has fallen out of comparison altogether,—Dr. Laurence does not even appear on the scene,—and Burke himself is brought to prove that the allowance from his father "did not exceed one hundred,"—which allowance, we would remind Mr. Prior, the father soon discontinued. To contradict the "unquestionable," Burke certifies, under his own hand, that his father died worth "very near six thousand pounds,"—which, if it were divided equally, and of this we have doubts, and if there were no more than four children living, as Mr. Prior asserts, would give Edmund a trifle above or about 1,400*l.*! As to the estate of inheritance, the patrimonial estate—Clohir—which we were told was the estate of "the great-grandfather," and which, "*continuing in the Burke family,*" came into the possession of Edmund in 1765 on the death of his elder brother, we have a few parenthetical words of great significance, which hint at possibilities heretofore hinted at in the *Athenæum*, for the phrase now runs, "*continuing or being repurchased by the Burke family.*" This makes a vast difference. The fact is, that Garrett Burke, the brother of Edmund, obtained possession of this property under circumstances which gave rise to very angry feelings and litigation, and some time after Edmund had been in possession, he was appealed to by friends who assumed that he could not be aware of the "rights and sufferings" of the person—a relation—who had been deprived of it, or of his interest in it.

Another opinion which we heretofore hazarded was a possibility that the shadowy, indistinct, ever-present, unknown William Burke was the first of the kith or kin that floated to the surface. We showed that William was early and intimately connected with Lord Verney,—a borough proprietor, who had at that time great interest with the Minister; and we thought it probable, from many circumstances, that Edmund was indebted to William for the helping hand which first brought him forward—procured for him the appointment of private secretary to Rockingham and a seat in Parliament. Mr. Prior thought differently—thinks differently—for, after his formal disclaimer, we cannot hold

him responsible for the contradictions in this fifth edition. Mr. Prior told us that,—*"through the recommendation of several friends, particularly Mr. Fitzherbert, Mr. Burke received the appointment of private secretary to that nobleman [Lord Rockingham]; * * that by an arrangement with Lord Verney he came immediately into Parliament for Wendover."*

We now learn from this fifth edition that,—*"through the recommendation of friends, particularly Mr. William Burke [!], as Edmund more than once said, he received the appointment of private secretary to that nobleman [Lord Rockingham]; * * that by an arrangement with Lord Verney, for which he was, as he said himself, indebted to William Burke, he came immediately into Parliament as Member for Wendover."*

There are, as we showed long since, numberless other mysteries about Burke. After the admissions in this fifth edition—the vast reduction made in the amount of the personal and real property which Burke received from his family—there will be no offence, we hope, in assuming that in 1761 Burke was a struggling man of letters—willing to undertake any literary drudgery—to abridge a history of England, or write and compile a volume of the 'Annual Register'—for the "reward" of one hundred pounds. Yet in three or four years—in 1765—he, with the help of William Burke, became the generous patron of Barry, the painter, whom he sent to Italy, defraying all expenses; and in 1768 he purchased the estate of Gregories, and gave for it, as Mr. Prior says, "*above 20,000*l.**"; and he lived there ever after, keeping up the customary establishment of carriages, horses, and servants. Now, where did this money come from? Heretofore, Mr. Prior told us—

"a considerable part undoubtedly was his own, the bequest of his father and elder brother."

This fifth edition has reduced the father's noble to nineneppence; and now the unchanged and unchangeable text of Mr. Prior reads:—

"A part undoubtedly was his own, the bequest of his elder brother, and some portion [it] is believed came from William Burke."

It is curious, considering the changes that have come over this explanation, that the "undoubtedly" should maintain its place with the same modest assurance as before. We must further observe, that as Edmund Burke did not part with the little property at Clohir, bequeathed to him by his brother, for five-and-twenty years or more, we do not see how the bequest could have helped in this purchase of Gregories. As to the advance now assumed, or "believed" to have been derived from William Burke, it would not, if admitted, solve the difficulty; for the money must have been repaid in 1769—the next year—when William, as heretofore shown [No. 1364], was ruined, and eventually forced to fly the country.

There is, in fact, no end to the mysteries in the life of all the Burkes, which only become greater mysteries by the admissions and revelations of this fifth edition. We had read heretofore that Richard Burke possessed certain property, and of "magnitude," in the West Indies:—a circumstance almost as extraordinary as the purchase of Gregories by Edmund. We knew, indeed, that when Monckton took the command of the expedition against Martinique in 1761, Burke's friend, Maclean, embarked with him as a sort of secretary or contractor; and that it was reported, on seemingly good authority, that Maclean contrived in a short time, and by questionable means, to accumulate a large fortune; and that all he made, and all he could raise on credit, to the extent, it was said, of two hundred thousand pounds, he invested in the purchase of lands in Grenada from the French inhabitants, who

were allowed by treaty to sell and withdraw. We knew that in 1769 Maclean and Richard and William Burke were ruined by gambling in India stock, and Monckton and Lord Verney and other of their friends then or soon after:—we knew there was a report that the Burkes' friend, Garrick, lost about that time a large sum of money which he had been tempted to advance on mortgage of lands in some of the conquered colonies; and we had come to the conclusion that possibly Richard, by some sort of legal process, had been put into possession of some of these estates,—that by his personal presence he might save something for mortgagees or joint speculators. Such vague and inconclusive speculations were forced on us by the no-information of the preceding editions of Mr. Prior's work. Some light—there are lights that mislead—has now penetrated the obscurity. Heretofore, we were simply told that—"In this year [1770], Mr. Richard Burke revisited Grenada"; to which is now added, "and made a purchase of property in St. Vincents." It seems strange that a man ruined in 1769 should be the purchaser of property, and Burke said, of "magnitude," in 1770,—still more strange that he should revisit Grenada just when he had made his purchase in St. Vincents. So it was—at least, so we are told. Strange that a biographer should, after so many years, obtain this exact information—time and place—and no more. We wonder at the knowledge:—still more, at the want of knowledge.

The *Athenæum* also ventured to ask for information as to the relationship of the many Burkes found in immediate connexion with Edmund. Mr. Prior now, incidentally, touches on the subject. For the first time, he refers to the story told by the late President of the Academy, of his "meeting," as Mr. Prior reports it, "with a monk named Burke, bearing some resemblance to Edmund." This story, says Mr. Prior, if true,—this "some resemblance" "could be only accidental. None of the family or its earliest connexions knew any other than the three brothers." Here is an odd sort of *non sequitur* refutation. Mr. Prior must have been thinking of something else when he wrote it,—perhaps of what the President *did* say—which we take to be very different from what is above reported, although our authority is the same as that referred to by Mr. Prior. What Galt records is this:—that Mr. West, late in 1763, or early in 1764, within a few months of his leaving Italy, met Edmund Burke at dinner at Dr. Markham's.—

"On being introduced to Burke, he was so much surprised by the resemblance which that gentleman bore to the chief of the Benedictine monks at Parma, that when he spoke he could scarcely persuade himself he was not the same person. This resemblance was not accidental; the *Protestant orator* was, indeed, the *brother of the monk*. It always appeared to Mr. West that there was about Mr. Burke a degree of mystery, connected with his early life, which their long intercourse never tended to explain."

—Mr. Prior's "some resemblance" is, we submit, a very diluted version of this story.

The mystery about Burke's early life, be it remembered, continued through life, and was prepared for even after death; for Burke, the last survivor of the family, must have collected, as far as possible, and destroyed, every letter, paper and document that could help us to a conclusion. Of all the letters that passed between father, mother, brothers and sister at that period, only one fragment, we believe, remains, and that was rescued, we are told, from an unsuspected depository—the lining of an old arm-chair.

As, however, Mr. Prior has at last referred

to this story, we ask on what authority he states that "none of the family or its earliest connexions knew any other than the three brothers"? Were any of the family or its earliest connexions living when this fifth edition was revised? Were any of them living when Mr. Prior was born? Mr. Prior, indeed, speaks of information obtained from Shackleton, Burke's schoolfellow, with "whom frequent correspondence was maintained." But surely there must be some mistake here—at least no such correspondence could have been maintained by Mr. Prior, for Richard Shackleton died before Burke, in 1792. The best answer would have been the burial certificates of the children, fourteen or fifteen in all; and as we know the place of residence of the father, these might have been obtained without much difficulty. Mr. Prior knows the value of such evidence;—he travels all the way to Castletown, diocese of Cloyne, to procure a copy of the baptismal register of Mrs. French, Burke's sister: why not have stopped on his way at Dublin, and given us copies of the burial registers of the brothers? Such certificates might help to prove many things. Mr. Prior knows that the assertions about the Benedictine brother are quite consistent with contemporary assertions about the religion of the Burke family:—he knows that Burke's mother was a Catholic,—his sister "a rigid Roman Catholic,"—that Dr. Nugent, whose daughter Burke married, was a Catholic,—that it was formally reported, over and over again, that Burke himself had been a Roman Catholic, and on such authority that the Duke of Newcastle remonstrated against his appointment as secretary to Rockingham,—that Musgrave, who, so far from being an enemy, avowed a profound respect for the "exalted moral and intellectual" character of Burke, believed it, and gave a circumstantial account of his conversion.—

"Soon after he [Edmund Burke] went to the Temple to study the law, he married a daughter of Doctor Nugent, who had been bred at Douay in Flanders, and was a most bigoted Romanist. A year after he had gone to the Temple, Mr. Griffith, who was at that time serving his apprenticeship to Mr. Burke's father, informed me, that his master sent him to London, relative to some law business, and that Mr. Edmund Burke detained him many days longer than he had permission to remain there: that during his stay, he seemed much agitated in his mind, and that, when they were alone, he frequently introduced religion as a topic of conversation, and said, that he had strong reasons for thinking more favourably of the Romish persuasion than he formerly did. For these reasons, this gentleman assured me, he verily believed, that he was become a convert to popery. Soon after this gentleman's return, Mr. Burke, senior, having heard a report that his son had really changed his religion, was much concerned at it; because he had entertained the most sanguine hopes that he would acquire great wealth and fame at the Irish bar, from practising at which Romanists were excluded by law. He therefore employed Mr. Bowen, his brother-in-law, who, as a linen-merchant, had a very extensive correspondence in London, to make strict enquiry about the conversion of his son. Some days after, Mr. Bowen entered his office, and in the presence of the gentleman who gave me this information, threw him a letter, saying, 'There, your son is most certainly become a Roman catholic.' On reading the letter, Mr. Burke became furious, lamenting that the rising hope of his family was blasted, and that the expence he had been at in his son's education was now thrown away."

Musgrave attributes this change to love for Miss Nugent.

Now, no matter what the motive, such conversions and reconversions are not so exceptional as to excite especial wonder. Burke's assumed conduct agrees exactly with the conduct of Gibbon,—and all we desire is to know the truth. The anxious silence and suppressions

of Burke,—the studied silence of the biographers,—leave us at the mercy of the wildest speculator. There are some years of Burke's life, at the very period referred to, about which we hear nothing, see nothing, know nothing. The biographers are as silent as Burke himself. We glean for ourselves indeed, from scattered paragraphs, what seemingly agrees with Musgrave's story, that Burke, though always designed for the law, entered of the Temple, and, receiving an allowance from his father while a student there, was never called to the Bar;—that his father was incensed against him, and stopped his allowance;—that though Burke wrote a very dutiful letter of regret, and though the father sent him 100*l.* on the publication of the 'Essay on the Sublime,' the father was only reconciled by the intercession of Mr. Agmondisham Vesey, about a twelvemonth before he died;—and that some time or other in this unknown period Burke did marry the daughter of Dr. Nugent. We know that Richard Shackleton, when that kind-hearted man volunteered his public defence of the character of Burke in the London newspapers,—Shackleton who had visited at Burke's house and been visited in Ireland by Burke and his wife,—spoke of Mrs. Burke as "a genteel, well-bred woman of the Roman faith," who "has since conformed legally to the Church of England." Mr. Prior tells us that this was a mistake,—that the daughter of the bigoted Romanist was a Calvinist. Possible, of course: but Burke did not say so. Burke, he tells us, wrote an angry letter to Shackleton,—strange that the letter is not published either by Mr. Prior or in the 'Memoir of Shackleton,'—"stating that his table and bed, hitherto sacred, had been for the first time wantonly forced before the public; his life or conduct required no defence; he was accustomed to libels daily and twice a day; and it was great imprudence or worse in others to notice such things, as he never descended to do so himself." Hard and somewhat unfeeling this to his old schoolfellow and volunteer advocate; but here is no word about the mischievous mistake in calling Mrs. Burke a Roman Catholic. Surely Mr. Prior's assertion cannot determine this question. Whether Burke had for a moment gone over to the Catholic Church,—whether Miss Nugent was at the time of her marriage a Catholic or a Calvinist,—might, perhaps, be shown by the marriage certificate; but the biographer neither produces it himself nor helps others to find it. Of this influential incident in Burke's life Mr. Prior simply tells us that he was married at Bath, and leaves it to be inferred that it must have been in the year 1757 or 1758. Are we to understand that Mr. Prior does not know when they were married,—that he has not taken the trouble to search the registers,—or that he has searched and cannot find the record? If the latter, the fact would be significant, and ought to have been recorded.

Here, again, we are perplexed, as at starting, to know how to distinguish between jest and earnest in this new edition. Mr. Prior tells us, or leaves us to infer, that he has seen no reason to change any of his opinions: yet we find—in this fifth edition,—that the many pages in proof that Junius was an Irishman and Burke Junius—by far the best argued question throughout the work—are gone! It was all, we are now told, a mere speculative pleasantry, inserted to humour one of Mr. Burke's "relatives." Mr. Prior had no faith in his own argument! Is this fact or fiction? Is Mr. Prior in earnest now, or was he in earnest in the four preceding editions? Is it Mr. Prior that is speaking, or Mr. Puck? Fortunately, we are not called on to solve these riddles. Finding ourselves puz-

zled and perplexed, we shall end, as we began, with an acknowledgment that Prior's 'Life of Burke' is the best we have,—and a word of regret that it is not better. The original work was the worse for the influence of the "relative" referred to, and this fifth edition is all the worse for its pretension to sufficiency and consistency.

The United Provinces in 1672 and 1673—[*La République des Provinces Unies, &c.*]. By W. J. Knoop. Translated into French by P. G. Booms. Paris, Müller Frères.

THE gallant defence of a nation assailed by invaders, is one of those episodes in which history assumes the charm and brightness of romance. It touches the best sympathies—it awakens the loftiest recollections—it enjoys the most enduring and the purest glory. Great acts of conquest are not to be related without some prelude of apology, and the more widely they swept the world the more art is required to reconcile us to the devastations and the sorrows produced by them. In these enterprises of arms every triumph may have been a crime; but a people encircled by enemies, and resisting them on every side, infallibly wins victories over which all posterity exults, or suffers misfortunes which become the subjects of historical tragedy. Such have been the favourite passages in the records of states and empires since antiquity;—such have been the feelings with which the mind has thrilled and kindled as it reviewed the heroic succession of Marathon—Salamis—the assault of Rome—the siege of Constantinople—the sallies of the Florentines—the defeat of the Spanish Armada—the struggle of the First French Republic—the mortal fight of Kosciuszko—and the last defence of Rome and Venice; names and events, worn by repetition, yet always poetical, since they are associated with the efforts of courage against power.

The Dutch have, in their history, two of these epic pages,—the war of liberty against Spain, and the war of defence against France,—and they are proud of them. Nor is theirs a silent, imperturbable pride. We sometimes connect with Holland the idea of a phlegmatic population, immersed in pedantry at Leyden, or in trade at Amsterdam, or in dull industry about their swampy fields; but the Dutch are a people of some imagination, and almost excel the French in vanity. Their literature is characterized by exuberance of diction and freedom of ideas. They dwell on their national achievements with intense delight; they praise themselves with the zest of Delaware warriors; and, in their chronicles, heroes defile before us in extraordinary throngs. Long ago their world of letters was flattered by the thought that it contained a native Sappho, since they gave that appellation to their poetess Anna Vischer; and they recount, in the same airy and florid strain, whole catalogues of generals, admirals, and statesmen, each—as an Arabian novelist or an Irish historian would say—more illustrious than the other.

An historian relating to a people so familiar with the use of superlatives in self-laudation a narrative of real constancy and heroism could satisfy them with nothing less triumphal in its tone than one of the pæan songs of Pindar. The Dutch are accustomed to be told that they gain continually (*journellement*) over the brown and black savages of the Malay islands victories which stand in very close relation to the achievements of Cimon and Miltiades. What, then, had Major Knoop to do when he undertook to condense the story amplified by Sypestein and Debordes of the defence of Holland in 1672 and 1673, against Louis the Fourteenth and his league of allies? He had been

regarded by his countrymen as one of their historical champions ever since he acquired his first reputation by an angry and dashing attack on Capt. Siborne, who, in his opinion, depreciates the share which the army of the Netherlands took in the war of 1815. He was now, therefore, under a sort of compulsion to deal largely in panegyric, and he had a proper occasion for doing this; but he chose, we think, the wrong method when he disparaged the most distinguished prowess of the invader, and sought, by odious comparisons, to revive an obsolete bitterness between the British and Dutch nations.

In the story of those two memorable years, names glorious to Holland occur as frequently as on the flag of one of her oldest regiments. It was a short, but an exciting, period. There were the signal, the alarm—the consultation—the gathering—the arming—the error of the earlier movements—the resistance—the wavering conflict—the nation hard pressed and rising under every stroke—the eloquence of soldiers firing the troops and the people to action, and the last and desperate resolve to destroy their country rather than surrender it. One of the greatest kings of France, and one of the greatest kings of England, with Turenne, Condé, De Vauban, De Ruyter, De Witt and Luxembourg are associated with the struggle; and had Major Knoop depicted its incidents more as an artist and less as a critic, his talents would have enabled him to produce an effective and dramatic series of tableaux. It was unnecessary to heighten his eulogies of William the Third by trying to prove that his defence of Holland against Louis the Fourteenth infinitely surpassed the defence of Greece against Darius and Xerxes. The French monarch, it is true, has been egregiously flattered; his passage of the Rhine, which Napoleon, perhaps not quite impartially, described as a military operation of the fourth order, has been compared with the most splendid feats on record,—but it is no part of an historian's task to indulge in the repartee of extravagance. Our Dutch major of infantry laughs at the hyperbole of calling the Rhine the king of European rivers; but is it less or more absurd to degrade it into the "rivulet of an idyl"? Major Knoop's sarcasm cuts both ways. He is disparaging Louis and praising William; but, while the glory of the former dwindles when he is described fighting his way over a petty stream, is the science of the latter exalted by showing that he selected as his main line of defence a rill only fit to add its murmurs to the music of a pastoral poem?

The Major in his fragmentary but suggestive narrative eulogizes Vauban; but had he studied the great master of attack and defence, he would have been more cautious in "advancing by parallels." It may be permissible to misrepresent the size of a river; but it is fit that writers should be checked when, by ignorant comparisons, they imply charges of wholesale and indiscriminate murder. For example, the Duke of Alba left a reputation stained with the blood of that massacre by which he cut off the inhabitants of Haarlem; the ravages of the Palatinate are among the notorious atrocities of modern history; and the caves of Dara furnish a companion sketch to the horrors enacted at the siege of Brescia: but was not the list complete without including in it the British generals who cut down the mulberry-trees at Cabul? It is one thing to say that there were wanton ravages committed in Afghanistan, and another, and a totally different thing, to compare them with the bloodshed which glutted the sword of the ferocious Duke of Alba. If Major Knoop had only desired to multiply the associates in cruelty of Marshal Luxembourg, his historical studies

might surely have suggested the names of Vlamming and Valckenier. It was unfortunate that these topics were introduced into a book avowedly designed only to prove to the people of Holland that they have, within their own borders, resources of defence and securities for liberty which, if they are true to themselves, may always be assailed in vain. Major Knoop has arranged in contrast the forces opposed to each other in the celebrated war of 1672 and 1673. The French, besides their allies of Cologne and Munster, had, he says, 100,000 men under arms, already rich in trophies, with an ambitious and brilliant prince at their head, a chivalrous nobility in their ranks, and the great Condé and Turenne among their leaders. The Dutch at first had no allies, though afterwards joined by Spaniards and Germans; but they had a superior fleet at sea, which Tromp had armed with discipline, which Blake had piqued into emulation, and which Ruyter now commanded. Their land forces, however, composed of 60,000 troops, were ill organized and poor. No spirit remained in the government,—a statement which Major Knoop enforces by relating an anecdote. During the early part of the war, he says, the immediate reduction of Dutch strongholds by the enemy had become so common, that it was supposed a natural result for a fortress to surrender after a certain duration of siege. When, therefore, the governor of Cœverden sent to demand additional provisions, on account of his supplies being only sufficient for a few days, his government coolly replied, that it was quite unnecessary to send him any more, as the French sieges rarely lasted so long, and the place would probably be captured before all the beef was eaten!

In fact, during many weeks the invasion rolled steadily on, until Amsterdam itself was threatened. Then the Dutch rose. Winter, which as with ramparts of ice guards the Russian empire, endangered Holland, for it froze pathways over the floods with which the people had covered their gardens, their fields and their roads, to check the enemy's advance. All hearts swelled as the peril increased; and they resolved to open new sluices to bury their land under water, and fly to found a new state in Asia rather than sacrifice their independence.

This magnificent contest Major Knoop describes in vigorous language; though he fails to draw pictures. His translator has rendered the narrative in an animated style, so that the book, which is very small, has much intrinsic attraction in addition to its interest as a specimen of military studies on the Dutch model.

Heliondé; or, Adventures in the Sun. Chapman & Hall.

Scientific Certainties of Planetary Life; or, Neptune's Light as Great as Ours. By T. C. Simon. Bosworth.

Farquhar, in his dedication of 'The Recruiting Officer,' says, "My play came out on the third night of D'Urfe's, who brought down a huge flight of frightful birds upon me. . . With these three I engaged his whole empire, which I think was as great a wonder as any in the Sun." These words are unintelligible to most modern readers; but they refer to a celebrated, lumbering opera of D'Urfe's, which was played a few nights, some century and a half ago, and which did not realize half as much money as was thrown away on its "getting up." The title of this piece was, 'Wonders in the Sun; or, the Kingdom of the Birds.' In it the author affects to describe, as the author of 'Heliondé' does in his book, the manners of the solar inhabitants; and in doing so, D'Urfe has condescended to borrow from Brome's 'Antipodes' without ac-

knowledging his obligation. We notice these facts because of all the visionary voyagers who have preceded the author of 'Heliondé' to the bright residence of which he discourses so pleasantly, the names of D'Urfey and of Brome take foremost rank.

It is not true, although so great a man as Bessel has declared it to be so, that "those who imagine inhabitants in the moon and planets suppose them, in spite of all their pretensions, as like to men as one egg is to another." The author of this voyage to the Sun, who writes thus in his Preface, might have cited to the contrary the assertion of Neocles of Crotona. That sage maintained that the lady matrons in the moon were given to lay eggs, and that the male children hatched from them grew to fifteen times the stature and the strength of common humanity. But Neocles was wise only after the fashion noticed by Congreve, who remarks that "pure wisdom is nothing but pretending to know and believe more than we really do. You read of but one wise man, and all that he knew was, that he knew nothing."

Our author agreeably conveys to his readers a considerable amount of information touching traditional ideas connected with the "fountain of light." He has overlooked the Indian tradition mentioned by Purchas, that the existing luminary (of Purchas's time) is the fifth that has occupied the brilliant position in which it shines. The first sun perished by water, the second by a fall from the heavens, the third by fire,—and at each of these catastrophes the whole human race perished also. When the fourth was destroyed by a tempest of air and wind, mankind was metamorphosed into apes; but with the creation of the fifth there appeared upon earth a new human couple, whose office it was to teach to the generation rising about them the principles of the happy dwellers who so-journed in the Sun. If we are to judge of those principles by the conduct of the descendants of this fifth pair of progenitors, they must have been something like those which influenced Capt. Bluffe, who exclaims, in the old comedy, "D—n your morals! I must revenge the affront done to my honour."

In 'Heliondé' all, however, is *couleur de rose*. The people of the Sun are spotless, though the Sun itself is not so. The author takes us there picturesquely,—not so easy a matter to achieve after Mr. Landor's description of the famous journey to the "Fountain of Arethusa." Like the last-named book, 'Heliondé' has a moral in it, and a purpose. We will not say what the moral is, but if it do not prevent people from going to sleep on damp grass it has been enunciated to very little purpose. As to the object of the book, it consists chiefly in this, that while we are astounded with the wonders told us in the text, we are informed in foot-notes that these wonders are familiar to us here upon earth, and only unheeded because they are familiar. Nevertheless, there are some things in the Sun which we can never expect, however earnestly we may desire it, to see common with us here below. For instance:—

"The class of men answering to those we term 'cabmen, cads, conductors, and omnibus-drivers,' were highly educated and refined gentlemen, and they drove you wherever you desired for a polite speech or agreeable sentiment. The manner of hiring a public vehicle was in this wise. When you required a conveyance, you descended from the Broadway or terrace appropriated to the promenaders, down to the roadway, the exclusive domain of Jehu. When here, you walked a little way on, and up drives a cab, and the gentleman who propels it, reverentially bows, and expresses a hope that you are not fatigued. To this you reply you feel a little so, but you beg that he will not give himself any concern on your account. Upon which,

with alacrity he dismounts from his seat, opens the door of his vehicle, and earnestly presses you to honour his carriage with your presence. You here demur a little, but in the most courtier-like terms, till you observe that you are likely to give the gentleman cause for sorrow if his offer be longer refused, whereupon you yield gracefully to the reiterated courtesy, and enter the carriage, intimating that on no account will you permit him to drive you further than a portion of your journey. Benign smiles are his only response, and he sets you down at your journey's end, however great the distance. When you alight, you give utterance to some charming little aphorism, which is the only querdon our Chesterfield expects, and in return he utters some exquisite line of poetry, and with mutual good wishes and amicable gestures, you separate, satisfied and charmed with each other. Cabbie drives off delighted with the urbanity of his 'fare,' and 'fare' enters his domicile, only regretting his short acquaintance with 'cabbie.'"

Is not this a case wherein to say *O sic utinam*? We may observe here, that although the author has shown much originality and much fertility of imagination in his details, the idea of making a fair speech pass as current coin is not a new one. The tailor Vertigo, in 'The Maid in the Mill,' asks for no other payment than expressions of love in return for his handiwork: Good faith, the least thought in my heart; your love, gentlemen; Your love 's enough for me. Money! hang money. Let me preserve your love.

If in the Sun, as described in 'Heliondé,' there be many wonders common to Earth, the latter has one which the Sun cannot boast of.—

"We were now ascending a flight of stairs composed of sapphires exquisitely engraved, and my friend, taking me by the arm, led me into a chamber of vast extent, which proved to be neither more nor less than a library; but what struck me as most strange were a number of machines beneath different openings in the roof, apparently of a most complicated description. Before I inquired the meaning of this, I took down one of the volumes, and opening it, I was puzzled to make out the characters. Alútedon here informed me that authors had no occasion to employ manual labour in their publications, for they had only to repeat their ideas aloud, and the vibrations of the air, differing according to the words used, set in motion a very delicate machinery which stamped indelibly the language expressed. Copies could afterwards be taken in any number. These machines, however, refused to perform their office when the author's ideas were either obscure, illogical, old, or erroneous. This criticism by machinery served to keep down the weeds of literature; and when an author found a blank upon the tablet, he usually relinquished that particular train of thought, and either mended it or took to another. The critics were thus saved a vast amount of labour, and the literature of the Sun was necessarily exceedingly choice."

—But the literary public in the Sun must also necessarily possess but a spiritless weekly record of literary progress. Where all is perfect the critic loses his calling,—and the public has an enjoyment the less.

The author touches more upon solar literature than solar law. He does not appear to have met with many lawyers during his sojourn, and was only significantly smiled at when he inquired after those highly-principled beings. But there could be no vocation for them in such a state of society as is described in 'Heliondé'; neither do we meet with what ought not to be found in this less favoured planet, namely, an ultra-pious publisher who defrauds his authors, and laughs at them over his wine for allowing themselves to be defrauded. But we turn for another extract to a pleasanter subject than either law or literature, the subject of love —as it is in the Sun.—

"When one young couple mutually fall in love, truly and fondly, their personal beauty increases to a degree which is apparent to every one, and the more it is visible, the more certain is everybody that

their affection for one another is sincere."—"And then they marry?"—"Yes."—"How wonderful is this."—"What, that they should marry?"—"No, Alútedon; but that love should increase loveliness."—"Not at all. With us it is a sentiment that ennobles, refines, and elevates the character, and our inward faculties exhibit themselves in external forms of harmony."—"Does their beauty diminish after marriage?"—"Again I perceived a wicked twinkle in Alútedon's eyes, as he answered: 'No; except from the natural decay of age.'—"Then young married people are handsomer than single?"—"Certainly; why should they not be? From this, there is a prospective inducement to enter into wedlock; were the single people the most beautiful, present temptation might lead to ulterior unhappiness."—"When is the culminating point of their beauty?"—"At the culminating point of attachment."

But we must leave the traveller to the Sun without touching on the details of the story connected with his narrative, and with a word of commendation for the fancy displayed in his book. We turn, then, to a more serious subject.

The second volume noticed above is a calm, sensible, and able examination of that celebrated essay which, under the name of 'The Plurality of Worlds,' professed to establish, among other things, the alleged and unwelcome facts that the moral agent, Man, could not subsist upon any planet of any system, except on that which is the third in order outwards from the Sun of each system; and that the rest of the universe is a universe of brutes, and "such brutes!" The author examines upon what grounds—upon what merely astronomical grounds—the writer alluded to denies that the stellar planets are opaque bodies; and he in the same way examines various other assertions or suggestions laid down by the father of the brute hypothesis. Mr. Simon concludes, from analogy, that the eight known planets of our system are inhabited, and also that the stars have opaque planetary systems resembling our own. The line taken by Mr. Simon is the proper one, because the author of the 'Plurality' not only asserted that there was, most probably, no moral government in any other world of our system except this, but he maintained "that analogy, in this case, however strong, was to be considered of no weight at all, upon the plea that there was either too little or too much heat and light in the other planets for moral agents—that things are a great deal too heavy in one of them, and that some are composed wholly of water:—that he should have done this without that thorough investigation of the facts which we have here shown to have been omitted on his part, cannot fail to surprise even his greatest admirers, and must long remain a monument of the 'boldness,' the 'guessing' and the levity with which learning unhappily—it must be unconsciously—has too often arraigned the providence of our Great Architect." This will serve to indicate the purpose, method and conclusions of a work which is written in a spirit of calm but earnest philosophy, and a perusal of which will gratify all who are equally earnest in the cause of truth.

OUR LIBRARY TABLE.

A History of the Book of Common Prayer; with a Rationale of its Offices. By the Rev. Francis Procter, M.A. (Cambridge, Macmillan & Co.)—Mr. Hardwick's 'History of the Church during the Middle Ages,'—the first of a series of "Cambridge Theological Manuals," which we noticed in the *Athenæum*, No. 1378, p. 367,—is now appropriately followed by a history of the Prayer-Book. The theme is a good one; and it is treated by the author generally in a fair spirit. Passages occasionally occur which are over-laudatory, and others which are needlessly sharp and prejudiced in reference to the Puritans; but these are faults which it seems almost impossible for men of the author's profes-

sion to avoid. The spirit which has generally pervaded the clergy when dealing with the Prayer-Book is aptly illustrated by a circumstance in the history of the book itself. When the new Liturgy was in process of settlement, shortly after the accession of Elizabeth, the question arose—In what part of the church should the service be read? The second Prayer-Book of Edward the Sixth gave a distinct and reasonable answer—"In such place as the people may best hear,"—not necessarily where the mass had been accustomed to be said, in which the people were for the most part spectators, but where they might best hear that in which they were called upon to bear a part. But this did not suit what is called the "moderation" of the men who were in power at Elizabeth's accession. Their object was to frame a service, which although substantially different, should look as much like the old service as possible. The Edwardian direction was therefore laid aside, and that which now stands before the Prayer-Book put in its place:—"Hear, or not hear, the service was to be read "in the accustomed place." In many other matters relating to this subject, what has been "accustomed" is the rule. Considerations of what is reasonable are seldom thought of, and still more seldom encouraged. A spirit of undue deference to the "accustomed," however objectionable in many respects, is sure to produce curious and valuable books, because antiquity is ransacked to furnish authorities even for the merest trifle. The book before us is of that class. It is a *résumé* of all that has been done in the way of investigation in reference to the Prayer-Book. We admire the author's diligence, and bear willing testimony to the extent and accuracy of his reading. The works of Palmer, Cardwell, Clay, Maskell, and Lathbury, in our time,—and those of Comber, Sparrow, and Wheatly in the last century, with the older authorities upon which they were built,—have all been used most diligently; and the result is a well-considered compilation fully bearing out its title. The author writes clearly,—his authorities are carefully stated,—the origin of every part of the Prayer-Book has been diligently investigated,—and there are few questions or facts connected with it which are not either sufficiently explained, or so referred to that persons interested may work out the truth for themselves. We should have preferred throughout a tone of greater freedom in judgment; but, with that exception, the volume is most satisfactory.

The History of the Chartist Movement, from the Commencement to the Present Time. By R. S. Gammage. (Holyoake).—The climax of this history has now been reached. Mr. Gammage describes the "monster petition," the Welsh riots, and the Monmouthshire trials. It was at this part of the narrative that a display of temper was necessary, and we are not disappointed at the writer's manner of dealing with incidents which provoked so much passion and so much controversy. Mr. Gammage presents neither a violent nor a partial statement; and we notice that his political inquiries have forced him to reject and to reprove many of the plans and acts of the "Chartist" leaders in 1839.

Flax and Hemp; their Culture and Manipulation. By E. S. Delamer. (Routledge & Co.).—We have here another attempt to persuade our agriculturists to undertake the raising of flax and hemp in large quantities. At present, the writer complains, they are regarded—when grown at all—as curiosities rather than as legitimate crops. The climate and the soil of Great Britain and Ireland are, however, favourable to their culture;—the necessary processes may be easily learnt,—the required machinery is at hand,—and nothing but apathy or ignorance can retard the "restoration" of textile plants to an important place in the husbandry of the United Kingdom. Mr. Delamer's treatise, compiled from various sources, is the most complete that has been published in a cheap form. Its utility is enhanced by illustrations of the flax plant, at different stages of its growth, and of the implements best adapted to be of service in its cultivation. Mr. Delamer evidently writes with a full knowledge of the subject.

Charade Dramas for the Drawing-Room. By Anne Bowman. (Routledge & Co.).—We trust that Miss Bowman's "young friends," who may take parts in these dramas, will not learn to believe that ladies, baronets, and captains in general are wont to speak in the style here ascribed to them. Christmas mummers may play fantastic tricks, but the soliloquies and dialogues of Miss Bowman's heroes and heroines are too unnatural even for the little brief romance of a Christmas gathering.

The Task: a Poem. By William Cowper. Illustrated by Birket Foster. (Nisbet & Co.).—There was a time when Annuals and "Trash-Art" threatened to effect irreparable injury. We have survived the crisis, and the handsome volume before us might be cited as one of the proofs of the fact. Mr. Foster's illustrations are masterly translations of the poet, and the magic of the artist's hand is to the full as potent as that of the poet's pen. As the reader breathes the morning air, hears the whispers of the foliage, listens to the rippling brook, and enjoys half-a-hundred other delights, through Cowper's words—so, with a glance at Mr. Foster's illustrations, does he find himself deep embowered in leafy shades, loitering by the stile, walking in trim gardens, measuring the wide heath, or meeting the labouring wain in heavy road and narrow lane,—and with an air of exquisite reality about all. It was the maxim of De Boufflers, that he who would please everybody must possess an incalculable amount of art. In a better sense than was meant by De Boufflers has Mr. Foster this desirable possession, for we cannot conceive of any one looking on these illustrations of 'The Task' without delight.

The Sorrows of the Streets. By M. A. S. Barber. (Nisbet).—A little collection of stories and sketches, designed to stimulate charity. The writer seems to have a personal acquaintance with the characters as well as the scenes he describes, and his well-meant appeal will probably touch the sympathies of many who are indifferent to the sufferings of the poor, because they fail to realize a knowledge of their condition. It were well, however, if a plea for the houseless wanderers of London could be indited in a style more applicable to the social conditions under which we live. It would also be wise on the part of Mr. Barber to leave Vishnu and Siva out of the question. Is it not possible to reform the wicked, and to cherish the desolate in our own land, without malignant allusions to the certain doom of innumerable millions of the human race?

Early Christianity in Arabia: a Historical Essay. By T. Wright. (Quaritch).—In this historical essay we have the result of Mr. Wright's early studies in Oriental literature and in those obscure records which bear on the state of the East at a period anterior to Mohammed's conquest. Through the glimmerings of tradition we discern in that province of the Arabian peninsula called the Happy, an active people, who lived in luxury on their abounding plains. Pastures and plantations, naturally rich, afforded them subsistence; they laboured only for their own pleasure,—they amassed the stores of an imperial opulence,—they were sumptuous without effeminacy, and spoiled their splendours by no corruption. Scholars and poets were their favoured guests. Such was the picture of Yemen, with its Sabæan inhabitants, which the ancients possessed; but the country passed through many changes, and a far different scene was opened to the sight of conquering Islam when the last of the independent chiefs ruled and died. Mr. Wright has diligently collected materials for a view of the peninsula, under its early Christian aspects, and has, with some scholarship, compared the testimony of writers in Europe and Asia. His book is little more than a fragment and a study; but it is meritorious as an example of careful research and honest criticism. We have much respect for any earnest endeavours to throw light on the politics and on the social and intellectual history of such distant periods, and of races which, like the Arabian, have been wholly changed or totally destroyed.

Poland: its History, Constitution, Literature, Manners, Customs. By Count V. Krasinski. Part I.

(Chapman & Hall).—A work on Poland is well timed just now. Count Krasinski is right when he observes that, in England, the politicians of the spelling-book have a certain number of phrases in their mouths, which they suppose to present a summary of Polish history. A country vexed by anarchy, and wasted by misrule,—a nation which enjoyed, without deserving, high gifts of fortune, and lost them through its own perversity,—a state whose miseries could only be ended by the interposition of its neighbours,—such is the short record contained in vulgar tradition. The object of Count Krasinski's book is two-fold:—to show that the past of Poland was not shameful, and that her future is not destroyed. As far as he has yet written he displays the spirit of an historian, and brings his countrymen to judgment freely; but, with no disposition to convert history into advocacy, he lays open the annals of a brave, free and liberal people, exhibiting in their rasher prowess that indomitable courage which is the soul of patriotism, and which, in their prostration, forbids them, like the Roman and the Venetian, to despair of their commonwealth.

A Treatise on the Elements of Algebra, by G. Ainsworth, B.A., and J. Yeats, is derived in a great measure from Continental sources. It comprises all the subjects usually discussed in works on algebra, without exhibiting any marked improvement in the methods employed. On the contrary, those here given are sometimes inferior to what we have been accustomed to see in English works. This remark is especially applicable to the mode of demonstrating the Binomial theorem, which is sadly cumbrous.—*The Science of Arithmetic: a Systematic Course of Numerical Reasoning and Computation, with very Numerous Exercises*, by James Cornwell, Ph.D., and Joshua G. Fitch, M.A., is better in aim than in execution. We quite approve of the attempt to make arithmetic more of a science than is frequently the case in school books, but we wish the task had fallen into more competent hands. There is a want of precision and finish in the mathematical phraseology; but a much more lamentable display of ignorance in the classical derivations. Greek words are used which are not to be found in any Greek writer, lexicon, or grammar. We are surprised to find persons with such titles appended to their names capable of these blunders. It would have been far better to have made no reference to the Greek than to teach error.

We have to record the appearance of another little volume belonging to "Gleig's School Series." It is from the prolific pen of Mr. Tate, and treats of *Mechanics and the Steam Engine* in a popular but satisfactory manner. The matter contained in *Rules for the Gender of Latin Nouns, and the Perfects and Supines of Verbs*, by the Rev. H. Haines, M.A., may be found in any good Latin grammar, and was not worth publishing in a separate form. *The Treatise on Practical Mathematics* in Messrs. Chambers's "Educational Course," which has just reached another edition, is a most comprehensive and useful work, comprising logarithms, trigonometry, mensuration, gauging, levelling, land surveying, navigation, &c., all well explained.

The compiler of *Mistakes of Daily Occurrence in Speaking, Writing, and Pronunciation* goes, at least, to the point. We hope, however, that in a little volume particularly "intended for the use of those who have received what is generally considered a fair education," the warning not to employ such a phrase as "Whose are these here books?" is superfluous. "Court-of-arms" instead of "coat-of-arms" is not, we should think, a mistake of "daily occurrence."—*Conversation: a Lecture*, by F. Trench, is a pleasant and sensible discourse, not only didactic, but suggestive.—While dealing with formal recommendations for the benefit of persons willing to take counsel as to the conduct of life, we must give a word of peculiar praise to Mr. W. H. Grey's *Few Remarks on the Importance of Keeping Correct Accounts of Household Expenditure*. It is compact, pithy, and full of wholesome advice. Mr. Grey points out clearly the social evil of which he complains, and brings some good reasoning to bear on the ways and means of the wealthy "in

times like these."—Relating to topics of present interest we have the Earl of Mount-Edgcombe's Address to the House of Peers *On the Militia Bill, and on the Effects of Past Legislation on the Present War*. His view, as he quaintly sums it up, is, that England must "forbid the banns between great attempts and small preparations,"—in other words, that our military establishments ought to be made more powerful. For the sake of historical good faith, however, he would do well to revise his statement, that "the parsimony" of the "people" has caused the sufferings of our army in the Crimea.—The Society of Friends have met with a vigorous answer to their "Appeal" in *How the Society of Friends provokes War*. The writer is civil to his antagonists while he informs them, as a Turk would put it, that they are the fathers of ignorance, strife, and confusion.—Neck-and-neck with Mr. Morell, Count Krasinski carries on his warfare against Russia and Russian ideas, summing up his views in a *Coup d'Œil sur l'Etat Actuel de l'Europe*. He is neither so fearless nor so liberal as Mr. Morell; but his criticism of the Czar, as an arbiter in the affairs of Europe, is rapid, pointed, and convincing. He defends the Turkish empire, and advises that the Western Powers should excite fanaticism, revolution, and all other inflammatory elements, within the realms of the Emperor Nicholas.—We need only mention the titles of such publications as the following:—Mr. J. H. Ridley's *Losses at Sea: their Causes and Means of Prevention*,—O'Byrne's *Monthly Navy List*,—Mr. Tidd Pratt's *Suggestions for the Establishment of Friendly Societies*,—*Instructions in Book-keeping for Friendly Societies*, issued from the Official Registrar's department, and *The Poultry-keeper's Pocket Almanack*.—Mr. William Fothergill Cooke has produced a pamphlet entitled *The Electric Telegraph: Was it Invented by Professor Wheatstone?* We may spare ourselves the trouble of examining his statement, because in the last paragraph we find a question, with a reply: "Did he (Professor Wheatstone) invent the Electric Telegraph? The award answers, No! and my forthcoming volume will show that the answer is not given on insufficient grounds!" This pamphlet, then, is the preface to a volume. We are sorry that Mr. Cooke has thought proper to write in a tone so angry as to seem malevolent.

LIST OF NEW BOOKS.

Ahn's (Dr.) French Reader, English Notes, First Course, 2s. 6d. cl.
Alford's (Rev. H.) Greek Testament, Vol. 2, 2nd edit. 8vo. 2s. cl.
Barrow's Summer Tour in Central Europe, 1853-4, 12mo. 1s. 6d.
Bede's (Rev. C.) Photographic Pleasures, cr. 8vo. 7s. 6d. cl. gilt.
Bellenger's Modern French Conversations, 2nd edit. 12mo. 2s. 6d.
Bell's Philosophy of Joint-stock Banking, 2nd edit. 8vo. 6s. 6d. cl.
Black's New Map of Europe, 18s. cask.
Blue Beard, by Peter the Friar, square, 1s. 6d. swd.
Burghersh; or, Pleasures of a Country Life, illust. post 8vo. 2s. 6d.
Canton's (E.) Surgical and Pathological Observations, 8vo. 7s. cl.
Constable's For. Misc. Gregorovius's Wanderings in Corsica, 7s.
Cornelius Nepos with Notes, by H. Young, 12mo. 1s. bds. (Weale.)
De Porquet's French Spelling Book, 17th edit. 12mo. 2s. 6d. cl.
De Porquet's First French Reading-Book, 24th edit. 2s. 6d. cl.
Egan's (C.) Laws of Bills of Sale, 12mo. 3s. 1d.
Forbes's (Dr.) Tour of Mont Blanc and Monte Rosa, fo. 5vo. 5s. cl.
Forbes's (Bishop) Commentary on the Litany, 12mo. 4s. 6d. cl.
Gay's (J.) Memoir on Indolent Ulcers, post 8vo. 3s. 6d. cl.
Godfrey's (Rev. N. S.) Conflict and Triumph, cr. 8vo. 6s. cl.
Great Battles of the British Army, new edit. 12mo. 4s. 6d. cl.
Great and Good illustrated in Six Sketches, 12mo. 3s. 6d. cl.
Hall's Soldiers and Sailors in Peace as in War, 12mo. 3s. cl.
Handbook of French Literature, 12mo. 3s. 6d. cl.
Harvey's What shall I do with my Money? 6th edit. 2s. cl. swd.
La Bagatelle, new and revised edition, 18mo. 3s. bds.
Leechman's (J.) Choral Book, crown 8vo. 2s. 6d. cl. swd.
Morton's Handbook of Altruism, Peacage, &c., 5s. cl.
McIlvaine's (Dr.) Truth and Life, crown 8vo. 5s. cl.
Mayhew's Story of the Peasant-Boy Philosopher, 2nd edit. 6s. cl.
Mülling's Missions to Constantinople & Petersburg, 1829, 39, 45, 6d.
Massey's (G.) Ballad of Babe Christliffe, 5th edit. 12mo. 5s. cl.
Magnay's (Rev. C.) Sermons, 12mo. 5s. cl.
Nicholson & Rowbotham's Practical System of Algebra, 7th edit. 5s.
Orr's Circle of Sciences, "Organic Nature, Vol. 2," 4s. 6d. cl.
Paton's (A.) Bucarian, Turk, and German, 12mo. 5s. cl.
Pellew's (Dr.) Seven Ages of a Christian's Life, 12mo. 2s. cl.
Pirret's (D.) Ethics of the Sabbath, 12mo. 4s. cl.
Poole's (Rev. G. A.) History of England, 2nd edit. cr. 8vo. 7s. 6d. cl.

EXPEDITION TO CENTRAL AFRICA.

It affords no small gratification to announce that, after five years' unceasing and determined efforts, the grand attempt for discovering and laying open Inner Africa, known as the "Expedition to Central Africa," has been crowned with a fresh success—more important than all previous ones—by the return of the exploring steamer Pleiad, after a most successful voyage up the River Chadda.

It is not a slight tribute of justice to that noble-minded and distinguished traveller, Dr. Barth—who, we fear, is now no more—to premise that the Chadda Expedition has fully confirmed the importance of his discoveries in 1851, which led to the despatch of the Pleiad; and it is interesting at the present juncture to quote the identical words, in which he announced at the time his discovery in the official despatch addressed to the British Government:—"The most important day, however, in all my African journeys was the 18th of June [1851], when we reached the River Benueh, at a point called Taëpe, where it is joined by the River Faro. Since leaving Europe, I had not seen so large and imposing a river. The Benueh, or 'Mother of Waters,' which is by far the larger one of the two, is half a mile broad and 9½ feet deep in the channel where we crossed it," &c. &c.

This discovery was considered by all competent persons as one of great importance; and the Geographical Society of Paris gave Dr. Barth their large medal on account of that discovery. Being struck by the immense advantages that might accrue by following up this discovery, I first suggested the idea of the despatch of a steam-boat to ascend the Chadda-Benueh [see *Athen.* No. 1309], as it was my humble opinion that this river would "eventually form the natural and most important line from the west for spreading commerce and civilization into the very heart of Inner Africa, and extinguishing the slave trade by extending European influence to the sources of the slave supply." This suggestion was adopted; and the Chadda Expedition determined upon and sanctioned by Her Majesty's Government.

The Pleiad left England in the latter end of May last under the most favourable auspices [see *Athen.* Nos. 1387, 1388, and 1389], and reached Fernando Po on the 28th of June. Here she was to receive an augmentation to her force in the person of Mr. Consul Becroft as Commander; but owing to the lamented death of this experienced African traveller, Dr. W. B. Baikie, R.N., was appointed as the temporary leader of the Expedition,—and subsequently assumed the entire charge, when, in the beginning of the voyage, the sailing-master, in consequence of incapacity and apathy, was displaced.

The Pleiad steamed up the Niger Delta in the beginning of July,—ascended the Chadda 250 miles above Allen and Oldfield's furthest point,—and reached to within about 50 miles of the confluence of the Benueh and Faro, the furthest ever reached by a European vessel on an African river. Thus, it has been proved that the Chadda and Benueh are one and the same river, and that this river is navigable up to Yola, the capital of Adamaua, visited by Dr. Barth. The longitude of the positions assigned by the latter to that region is upwards of one degree too far to the east, which corresponds with the difference found by Dr. Vogel in the countries round Lake Tsad.

The river was in high flood and plenty of water, and the goodwill and friendship of the natives were universally secured. On the 7th of November last the Pleiad had returned to Fernando Po.

But the most important point, and which marks a new era in African geographical discoveries, is, that very little sickness was experienced and—what has never occurred before—that not a single life was lost, white or black,—thus proving the possibility of leading a party of Europeans into the interior by these rivers and bringing them back again in safety. The party was a mixed one, some of the whites had never been in a tropical climate, the majority had never been in Africa—Dr. Baikie himself included. Altogether the party numbered sixty-six, including Kroomen and native interpreters, and they were 118 days in the river,—twice as long as the great Expedition of 1842, which ended in so fearful a loss of life. It must be interesting to learn that the safety of the members of the Chadda Expedition is attributed—

First, To having entered the river at the proper season, viz., on the rising water.

Second, To having induced all the Europeans to take quinine daily.

Third, To carrying the green wood, used for

fuel, in the iron canoes, and not stowing it in the bunkers.

Fourth, To passing all the water used for cooking and drinking through the boiler of the Expedition,—scrapping decks instead of washing them,—using Sir Wm. Burnett's solution of zinc freely,—and pumping out the bilge-water daily.

And last,—though not least,—To keeping up the spirits of the men by music, &c. &c.

"Here then, at last, the problem is solved, and Central Africa can be explored in safety by Europeans, through her natural channels, at a cost of a few thousand pounds per annum." Thus writes Mr. Macgregor Laird,—a gentleman who has so large a share in the success of this Expedition and in all previous efforts to navigate those African rivers, for it will be remembered that he personally took part in the first Expedition that ascended the Kowara (in 1832), and has ever since continued earnestly to promote that object.

To Dr. William Balfour Baikie, R.N., too much credit cannot be given, as to his energy and talents—displayed under trying circumstances—the success of the Expedition is greatly to be attributed.

It is much to be regretted that the Expedition has not met with Dr. Barth or Dr. Vogel, nor brought any news of them beyond what is already known. Dr. Baikie heard of them, and showed the natives their likenesses, contained in the work published by me last year, when they recognized Dr. Vogel. Probably, by not taking the direct route to Yola, but a circuitous one, in order to traverse unexplored regions, and to add to the amount of his researches, the latter traveller was delayed, and thus prevented meeting the Chadda Expedition. May God grant his safe return!—for the great devotion and zeal in their mission, which caused them cheerfully to sacrifice everything, life itself, for the accomplishment of their objects, have been the sole cause of the death of his unfortunate predecessors. But, however deplorable a loss their untimely end has been to their own country and to England, it must be gratifying to both to reflect that the reputation and credit gained by Horne-mann, Burekhardt, Schomburgk, Leichhardt, and other German gentlemen who have had the honour of being employed in the English service, have been amply sustained by the three German travellers in Central Africa.

AUGUSTUS PETERMANN.

LADY BLESSINGTON.

I hear that Dr. Madden has published Lady Blessington's Correspondence. Severe illness has prevented my looking into it, so that I am ignorant what parts of my letters it may contain. Permission was asked of me by one of the family to make a selection of them, under a promise that it should be done sparingly and discreetly; and I entertain no doubt that such has been the case. My letters have always been of such a nature, and intentionally, that any publisher must be ruined who should undertake the printing. There may, however, be a few sentences, here and there, not uninteresting to my correspondent. The hope of rendering a trifling service to a member of Lady Blessington's family was my sole motive for compliance. I will now state my first acquaintance with her Ladyship. Residing in the Palazzo Medici at Florence, the quinsy, my annual visitant for fifty seasons, confined me to my room. At that time my old friend Francis Hare, who had been at Pisa on a visit to Lord and Lady Blessington, said at breakfast that he must return instantly to Florence. Lord and Lady B. joked with him on so sudden a move, and insisted on knowing the true reason for it. When he mentioned my name and my sickness, Lord Blessington said, "You don't mean Walter Landor!" "The very man," replied Hare. His Lordship rang the bell, and ordered horses to be put instantly to his carriage. He had gone to Pisa for his health, and had rented a house on a term of six months, of which only four had expired. The next morning my servant entered my inner drawing-room, where I was lying on a sofa, and announced Lord Blessington. I said I knew no such person. He immediately entered, and said, "Come, come,

Landor! I never thought you would refuse to see an old friend. If you don't know Blessington, you may remember Mountjoy." Twenty years before, when Lord Mountjoy was under the tuition of Dr. Randolph, he was always at the parties of Lady Belmore, at whose house I visited, more particularly when there were few besides her own family. I should not have remembered Lord Mountjoy. In those days he was somewhat fat for so young a man; he had now become emaciated. In a few days he brought his lady "to see me and make me well again." They remained at Florence all that year, and nearly all the next. In the spring, and until the end of autumn, I went every evening from my villa and spent it in their society. Among the celebrities I met there was Porcio, and, for several weeks, the Count di Camaldoli, who had been Prime Minister of Naples, the Duke de Richelieu too, and D'Orsay's sister, the Duchess de Guiche, beside a few of the distinguished Florentines. When I returned to England, soon after Lord Blessington's death, my first visit was to the Countess. Never was man treated with more cordiality. Her parties contained more of remarkable personages than ever were assembled in any other house, excepting perhaps Madame de Stäel's. In the month of the Coronation more men illustrious in rank, in genius, and in science, met at Gore House, either at dinner or after, than ever were assembled in any palace. Enough has been said vituperatory about the mistress of that mansion. I disbelieve in the tales of her last friendship: an earlier one affords more cause for admiration than for censure. She had been attached to a very handsome man, whose habit of gaming ended, as it often does end, and always should, in utter ruin and expatriation. She resolved to follow him. At that time she resided at Brighton. Lord Blessington was also there, and heard of her distress. He had seen enough of her to love her ardently: but instead of making any proposal to her, he wrote a request to know whether "a thousand pounds or two" could bring back her friend in safety. She answered as only a generous heart can answer one equally generous, and wrote immediately to the person concerned. He replied that he was ruined beyond redemption, and never could return to England, nor stand between her and fortune. Lord Blessington, on receiving this intelligence, called on her. The exile received from her one hundred pounds quarterly until his death. She made an ample allowance to her father and her brother, and brought his children to live with her. Lord Blessington told me that he offered her an addition of a thousand pounds to her jointure of three, and could not prevail on her to accept the addition. Virtuous ladies! instead of censuring her faults, attempt to imitate her virtues. Believe that, if any excess may be run into, the excess of tenderness is quite as pardonable as that of malignity and rancour. WALTER SAVAGE LANDOR.

OUR WEEKLY GOSSIP.

FROM a published note, addressed, by Mr. Thackeray, to the Associate Societies of the Edinburgh University, we learn that the Author of 'Vanity Fair' declines to be nominated as President to succeed Sir E. Bulwer Lytton.

A Liverpool Correspondent says:—"It would, so far as respects this community, so closely interested in the question, tend greatly to strengthen the effect of the arguments advanced in the letter of the Astronomer Royal, published in your impression of the 3rd instant, if that gentleman could be induced so far to depart from the anonymous form in which the evidence of his correspondents is there given, as to negative the prevalent impression, that the communications given under the letter B. are from the adjuster of the compasses of the unfortunate Tayleur, the introduction of whose testimony might, without imputing his 'skill and intelligence,' be considered under the circumstances of the controversy as open to some objection."

A Correspondent says:—

"I can testify to the fact, that the 'pair of stanzas' quoted in the *Athenæum* from Dr. Madden's 'Life of the Countess of Blessington' were sent by Lord Byron

to Mr. Davenport; and admit that they are not to be found 'in Byron's collected published works'; but in case it should be assumed that they now appear for the first time, I beg to apprise you that a fac-simile of the original poem was given in *Artiss's Pocket Magazine* (which Mr. Davenport edited) in 1824. Mr. Davenport was a scholar, a writer of elegant verse, and remarkable alike for his literary ability and his peculiar habits. His death, which happened in January, 1852, at the age of 75, from an overdose of opium, which it was his custom to use when writing, and the state of his house, are evidences of his eccentricity. About 4 o'clock on a Sunday morning, low groans were heard from Brunswick Cottage, Park-street, Camberwell; and the front parlour being broken into, he was found lying in the passage nearly dead, with a bottle which had contained laudanum in his hand. A surgeon was sent for; a few minutes after whose arrival he expired. His rooms were found to be literally framed with books, manuscripts, pictures, ancient coins, and antiques of various kinds. He had lived in Brunswick Cottage more than eleven years, during which time he had steadily declined the profane interference of broom or flannel. Books, beds, and furniture were rapidly decaying, and dust was undisputed monarch of all. The windows of the house (of which Mr. D. was the freeholder) were all broken, and the whole place was a most dilapidated appearance. I believe that the list of Mr. Davenport's works (compilations and other) would be startling. He was editor of 'Lives of the Poets,' in 1 fear to say how many volumes, and dare not guess whether they have gone. He wrote Histories of America and India; contributed, in 1825, to the *Edinburgh Pocket Library*, 'The Common-place Book of Epigrams,' an admirable collection, including many spirited essays of his own; and was busy for the booksellers to the day of his death. More than one popular living author first fluttered his maiden pen in the pages of *Artiss*, under the editorship of Mr. Davenport. — I am, &c. "J. W. DALBY."

Next week will be sold Mr. Bernal's choice collection of prints, comprising English and Foreign portraits, from the time of Queen Mary to James the Second; a curious series of portraits relating to Henry the Fourth; historical and topographical prints, in a fine state, many of them proofs; specimens of the works of F. Hogenberg, Drevet, De Leu, Hollar, Gaultier, Faithorne, Nanteuil, Loggan, Edelinck, Smith; a few old German masters; a selection of the works of Hogarth; fine proofs to Cook's Voyages; a few choice views in Switzerland, and some modern portraits.

"In your last number of the *Athenæum*," says a Correspondent, writing on the subject of 'More-dun,' "you insert a letter from E. de Saint-Maurice Cabany, regarding a romance called 'More-dun,' supposed of Sir Walter Scott's composition, along with other papers and letters. Now, as to the authenticity of these manuscripts, I feel myself in a position to judge, with some degree of confidence, from having been so intimate a friend and contemporary of Sir Walter Scott during the whole period of his literary life, in habits of constant intercourse with him, personal, or by correspondence when absent,—a correspondence which only closed with his inability to write, from the attack of the malady which speedily terminated his life. The last letter of that series in my possession being, I have reason to believe, the last he was ever able to write. To me, of course, the handwriting, habits of study, and literary labours of Sir Walter are quite familiar, as he rarely withheld from my knowledge the subjects on which he was from time to time engaged. It was not his habit to resort to dictation in preparing his works; but of those of which the authorship was for a time withheld from the public, he had his manuscript copied for the press by a young man, Mr. Huntley Gordon (whether yet in life I cannot say), or by Mr. Laidlaw (some time since dead). He was not in the habit of using the signature of "W. S.," but generally either W. Scott, or Walter Scott.

"I am, &c., JAMES SKENE."

"28, Beaumont-street, Oxford, Feb. 13."

A Correspondent writes in explanation of the authorship of the book called 'Tit for Tat,' and which claims to be "By a Lady from New Orleans." The work, it would seem, is not American; and, in justice to America, we gladly give a place to the explanation.—"I send you," says our Correspondent, "the book 'Tit for Tat,' which was noticed in the *Athenæum* under the idea that it was in reality written by an American Lady. As I doubted the truth of this I made inquiries, and I send herewith a letter from Mr. Moran, chief clerk of the U.S. Legation, to Mr. —, one of the *attachés*. This establishes the fact that the work is English. I believe that there is no doubt as to the true author; that it is written by one —, formerly confined in Charleston gaol, and

who on his release wrote several abolition works here. He was the individual alluded to in the 'Peabody Correspondence,' as having published the false report of the proceedings:—

"Dear —, I will send everything that may come to-day for you. There is nothing here now. I told Mr. Buchanan of your illness, and he will not expect you to-day. I never was connected with 'Tit for Tat.' Beeton asked me to write so much of it as would secure an American copyright, which I declined to do, and there ended the matter. He told me the work was English; and the very fact of his speaking to me about writing a chapter or two so as to secure the exclusive right to publish it in the United States, is a proof that it is not American. I have no objection whatever to my name being used for this statement. I told Mr. Beeton, at the time, I would not have anything to do with a work designed to be abusive of England.—I am, &c. "B. MORAN."

—The names omitted in the above are known to ourselves; and we frankly confess that in our own minds there remains no doubt that this disreputable book is of English origin.

A discovery, which, perhaps, will prove an important one to the German literature of the sixteenth century, has recently been made in the "*Raths-archiv*" (Record Office of the Senate), at Zwickau, in Saxony, where Dr. Herzog, quite unexpectedly, found thirteen manuscript folios, all of them containing poems of old Hans Sachs, the cobbler poet of Nuremberg. A close investigation has led to the knowledge, that these thirteen folios are the remainder of a series of thirty-four volumes, forming a complete collection of all the works of Hans Sachs (the unprinted ones included), and compiled by order, and for the private use, of the celebrated "Meistersänger" himself. The MS., though not an autograph of Hans Sachs, is yet full of corrections by his own hand.

By paragraphs translated from the German into the French papers, we learn that the Rhine Land has got a new ruin—the stately Abbey of Laach (we are glad to add *not* the Church) having been the other day destroyed by fire. For many years past, the monastic fabric, though in perfect repair, has been uninhabited; and thus it may be that the destruction wrought may give that strange secluded pile, hard by the volcanic lake, and solitary in the midst of its rich orchards, a picturesque beauty greater than that which it possessed in its completeness. But there were already strange and striking ruins enough in the Lower Eifel—Schloss Ollbrück, on its commanding knoll, for instance; and not far from the river, such romantic specimens as exist at Heisterbach and the Werner's *Kapelle* at Bacharach; and the most moon-struck or moody of tourists could hardly desire another added to his list,—above all, by so rude and mean a process as the doings of some private incendiary, to whom the destruction of the pile in question is ascribed.

"In the Museo Borbonico of Naples," writes a Correspondent, who has just returned from Italy, "and in the celebrated chamber which contains the engraved gems—gold and jewelry—found at Pompeii, I observed a *lens* of greenish glass, double convex, and of about 3 in. diameter. This, the custode informed me, upon inquiry, had been discovered within the last week or two in the new excavations at Pompeii (the street in which stands the house of the musicians). A slight flakiness of surface—the general manifestation of decay in glass—is remarkable on this, I believe, unique relic of antiquity. One would be, perhaps, inclined to suppose its use that of a burning glass rather than of an optical instrument. It is very lenticular in section; and I am not aware that any notices of optic glasses have come down to us in classic literature.—Some most interesting antiquarian discoveries were made during my stay in Sicily, under the direction of Signor Cavalari, then of Palermo, and now of Milan (a member of our Royal Institute of Architects).—At Syracuse, an ancient *submarine* aqueduct, dating from the Greek period, has been explored and cleared. It connects, by means of a channel under the bed of the Porto Grande, the fountain of Arethusa, in Ortigia, with the long water-course on the heights of Epipoli, which runs from the back of the theatre on those superb hills. The submarine gallery is tunnelled out at a depth of 25 feet below the sea level, and runs for the distance of about a mile in

this position, with dimensions some 6 ft. wide by 12 ft. high.—Thames tunnels, we shall begin to confess, are not an original inspiration of the nineteenth century;—a somewhat similar discovery has taken place at Gigenti.—At Taormina, a perfect terra-cotta antique repetition of the Laocoon, rather less than life size, has been disinterred from the ruins of the Theatre; where, also, an arrangement of passages and saloons beneath the scene, for the use of the chorus, has been cleared, which will probably throw some light upon the different mode of Thespianizing among the Greeks and Romans."

Dr. Rae writes:—

"13, Salisbury Street, Strand, Feb. 12.
"Observing in your journal of the 10th inst. some statements entitled 'An additional gleam of light on the probable fate of the Franklin Expedition,' would you have the kindness to give insertion to the following remarks on the subject. The person from whom this 'additional gleam' is said to have been obtained was certainly one of my best men on the recent Arctic Expedition. He is, however, not an Esquimaux, but a Cree Indian, named Thomas Mistegan (erroneously called Mastitukwin), who had never lived among the Esquimaux until he accompanied me to the Arctic Sea, nor could he speak or understand a syllable of the Esquimaux language until he, as well as my other men, picked up a few words during the month or two we were with the natives of Repulse Bay. Our winter station at Repulse Bay was exactly on the Arctic Circle, and consequently we had not, as represented, 'six weeks' constant night,' for refraction raised the sun at noon quite above the horizon, even on the 22nd of December, and on this—the shortest day—there were three hours' good daylight. My northern journey commenced on the last day of March, 1854, and occupied us fifty-six days, and not thirty-seven days, as stated. We were never 'one hundred miles' nor even one mile 'beyond the region inhabited by the Esquimaux,' although, for a very good reason (the scarcity of deer, &c.), none of these people were seen at or near our extreme point at the season of the year we were there. That one or two of Sir John Franklin's men may still be alive, is probably a theory of the reverend gentleman who communicates the information. That 'Sir John Franklin's watch, all in pieces,' was found is more than I yet know. How the Esquimaux, or Thomas Mistegan, the Cree could distinguish it, without any particular marks, from the fragments of six or eight other watches, all obtained at the same time, is a question which I shall leave the Rev. T. Hurlbert and his informant to decide. The statement that 'there was plenty of wood among the natives,' and that 'the ship was a god-send' to them, is equally incorrect with the previous portion of this report. Among some dozen or so of sledges, I saw three or at most four, of wood. The wood in these was old and worn; and the Esquimaux distinctly told me that it had been obtained from a vessel many years ago, and pointed out the place on the chart in Prince-Regent's Inlet, agreeing very closely with the position of Sir John Ross's vessel, abandoned, I think, in 1832 or 1833. Two of the sledges were made of the jawbones of whales, and all the others were formed of musk-ox skins, folded up in the form of sledge runners, and frozen together by an application of mud and water. To this last mode of forming sledges the natives never resort, unless driven thereto by a very great scarcity of wood, because as soon as the sun acquires power in the spring, the skins thaw and become so soft and pliable as to be unfit for use. The Esquimaux were from the same cause—scarcity of wood—equally ill provided with canoes, not having above half as many in proportion to the number of the party as they had when I wintered at Repulse Bay in 1846-7. One or two of their spear-handles and bows were made of oak and ash, which appeared fresh and new; probably portions of the oars and gun-wales of the boat found where the dead men were seen. Indeed, wood was so highly prized by the natives, that a piece of stick about 5 feet long and 1½ inch diameter was as highly valued by them as a dagger or large knife, which most certainly would not have been the case had the Esquimaux obtained possession of one or even a portion of one of Franklin's ships. It is said that, 'Sir John Franklin was found dead with his blanket over him and his gun by his side.' This is as difficult a question to decide as that of the identity of the fragments of Sir John's watch. The Esquimaux accounts, to me, were plain and simple. They said, 'that there was no old man with the party of "whites" when seen alive,—that the leader, or apparent leader (for the natives could only judge by seeing one person walking unnumbered, whilst the others were dragging the sledges and boat), was a tall, stout man, taller than myself, and, consequently, about six feet high.' They also remarked, that they thought one of the dead bodies found was that of an officer (chief), as he had a telescope strapped over his shoulder, and had his double-barrelled gun lying under him. I shall leave your readers to judge how much reliance can be placed on the report of Mistegan, whom I, at the same time, exonerate from the imputation of having wilfully misstated facts. The Rev. Mr. Hurlbert has evidently 'jumped' at conclusions, when any statement that could have been made by Mistegan would scarcely warrant his arriving at—I am, &c., JOHN RAE."

There is terrible work going on in New York between Mrs. A. S. Stephens and Mrs. H. M. Stephens. Both have written stories: the first, 'Fashion and Famine' (with which this journal has dealt); the second, 'Hagar the Martyr'; and Mrs. A. is accused of wishing, besides wearing her own aureole as authoress of that precious tale, to

wear the wreath of bays which belongs to Mrs. H., the parent of 'Hagar.' The battle is fought out very comically in *Norton's Literary Gazette*, where Messrs. Fetridge & Co. inform the public that—

"Messrs. Bunce & Brothers, of New York, have recently, and for manifestly selfish and mercenary ends, set up a very stupid assumption, and are now, in a seeming spirit of most virtuous indignation, doing all in their power to knock it down. The assumption is, that the authoress of 'Fashion and Famine'—Mrs. Ann S. Stephens—has been reputed to be the authoress of 'Hagar the Martyr.' Now, we have given Bunce & Brothers no reason whatever for assuming any conclusion of the sort; and in looking over the numerous favourable notices of 'Hagar the Martyr,' which have appeared in the public prints, we can find no authority on which to base such an apprehension. * * But, supposing the public should confound the names of the two ladies, it is not therefore at all uncertain that Mrs. Ann S. Stephens would be highly complimented by the mistake. Nay, it is absolutely reasonable that she will, or ought to be; for, if we mistake not, the book published by Bunce & Brothers, under the title of 'Fashion and Famine,' has a singular affinity, in all respects, to one previously and fugitively known as 'Prisons and Palaces; or, Sequel to the Strawberry Girl.' Mrs. Stephens—that is, Mrs. H. Marion Stephens—is no collaborator, but the authoress of an entirely original work, and in this respect would not likely, by parties interested, be wilfully placed on the level of a mere compiler and patcher-up of old and exploded materials. It is, therefore, under these circumstances, entirely unnecessary and uncalled for on the part of Messrs. Bunce & Brothers to notify the public that Mrs. H. Marion Stephens is not the authoress of 'Fashion and Famine.'"

—This spirited defence of Mrs. H.—this murderous attack of Mrs. A.—remind us so strongly of similar extravagances in Mr. Poole's 'Little Pedlington,' as to make us ask whether they are original inspirations, or adaptations from that farcical novel, employed to serve the purposes of advertisement?

BRITISH INSTITUTION, Pall Mall.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is open daily, from Ten till Five. Admission 1s.; Catalogue 6d.
GEORGE NICOL, Secretary.

The ARCHITECTURAL EXHIBITION and COLLECTION of MANUFACTURES connected with ARCHITECTURE is NOW OPEN, from 9 till 4, at the Galleries of the Society of British Artists, Suffolk Street, Pall Mall East.—Admission, One Shilling; Catalogues, Sixpence.—And in the EVENING (except on Saturday) from 7 till 10. Admission, Sixpence.

WILL CLOSE February 24, and all objects exhibited must be removed on the 26th. JAS. FERGUSSON, F.R.A.S. } Hon.
JAS. EDMESTON, Jun. } Secs.

PHOTOGRAPHIC SOCIETY.—The SECOND ANNUAL EXHIBITION of this SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5; in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogues, 6d.

Will shortly close.

COLOSSEUM, Regent's Park.—Admission, 1s.—The original PANORAMA, by L. J. M. Leitch, exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatories, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—Additional Pictures. The Battle of Inkermann, and Great Storm in the Black Sea.—The Cavalry Charge at Balaklava, Battle of the Alma, Pictorial Map of Sebastopol, &c. are also exhibited in the Diorama, illustrating events of the war.—The lecture by Mr. Stoeckeler. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

ASH WEDNESDAY—LOVE'S LENTEN ENTERTAINMENTS.—Upper Hall, Regent Gallery, 69, Quadrant, Regent Street, completely refitted for the occasion, with New Entrance, New Stage, New Cloak-rooms, &c. Every Evening at 7, except Saturday; Saturday, at 8.—Monday, Tuesday, and Thursday, Mr. LOVE will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called 'THE LONDON SEASON,' and other entertainments. On Wednesday and following Friday, a LECTURE on the OCCULT POWERS of the VOICE; followed by the entertainment called LOVE IN ALL SHAPES; with LOVE'S LABOUR LOST.—On Saturday at 3, Love in all Shapes, with other entertainments.—Pianoforte, Miss Julia Warman.—Stalls, 3s.; Area, 2s.; Gallery, 1s.—Tickets at Mitchell's Royal Library, 33, Old Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, between 12 and 3.

SCIENTIFIC

SOCIETIES.

GEOGRAPHICAL.—Feb. 12.—Rear-Admiral Beechey in the chair.—Mr. F. S. Day and Dr. R. B. Griird were elected Fellows.—Admiral Smyth, Mr. Osborne Smith, and Mr. T. H. Brooking were appointed Auditors for the year.—The Chairman directed the attention of the meeting to the illustrations by Dr. Baikie and Dr. May of the Chadda and country adjoining; to the drawings of Mr. M'Gregor Laird's screw-steamer, the Pleiad, which had so successfully ascended that river; to the map by Mr. Anderson, showing his route in South Africa; to some specimens of the gold manufacture of Timbuctoo, exhibited by Mr. Renshaw; and to several maps by Mr. Arrowsmith, to accompany the forthcoming volume of the Society's Journal.—The papers read were:—On the Sources of the

Purus, a great Tributary on the Amazon,' by Mr. Clement R. Markham.—'Report on the Arrival of the Chadda Expedition under Dr. Baikie, R.N.,' communicated by the Earl of Clarendon. The general results of the Expedition are:—1. 250 miles of new river examined, and the identity of the Chadda and Binue established. 2. The navigability of the river during the rainy season ascertained. 3. Several new tribes discovered, the friendly disposition of the natives proved, and the resources of the countries inquired into. 4. Positions of former charts corrected, and new places laid down from numerous astronomical observations. 5. Materials for a complete chart of the rivers have been collected, and also for a map of the surrounding regions. 6. Much information has been gathered concerning the various countries visited, and the periods of rise and fall of the rivers accurately noted. 7. The general desire of the natives to open trade and to receive instruction has been ascertained. 8. The existence and extent of slavery have been examined. 9. A favourable report can be made of the climate, as little sickness showed itself, and not a single life was lost. The Pleiad entered from the sea on the 12th of July, and, visiting, among other places, Abó and Iddá, reached the confluence on the 4th of August, and on the 18th, the town of Dágo the furthest point of Allen and Oldfield in 1833. After this the principal countries reached were Mitshi, Kororofa, and some Filátá provinces, and also a very barbarous race, named Bábai. The expedition commenced the descent on the 30th of September, with a falling river, and arrived again at Fernando Po, on the 7th of November, after an absence of four months, of which 118 days were spent in the Kwóra and Chadda.—'Accounts from the Central African Mission,' by Dr. Vogel; communicated by the Earl of Clarendon. From Dr. Vogel's paper it was understood that while Dr. Barth was to have started from Timbuctoo to proceed *via* Sokatu, to meet Dr. Baikie and the Chadda Expedition, Dr. Vogel, with the Sappers and Miners, was to have proceeded from Kuka in the month of June for the same purpose.

SOCIETY OF ANTIQUARIES.—Feb. 8.—Viscount Mahon, President, in the chair.—Mr. J. Leighton was elected a Fellow, and the Marquis Campana and the Cavaliere Canina were elected Foreign Members.—Mr. G. Scharf, junior, read a paper 'On some of the Sculptured Ornaments of a Temple or Group of Buildings at Bath, discovered on the site of the present Pump-room in the year 1790.' He bestowed particular attention upon the celebrated head considered by many to represent Medusa, which formed the centre of one of the pediments of the building. The head is placed in the middle of a large shield, supported by two flying figures of Victory; whose feet rested on a globe, as shown by a fragment still preserved of the right-hand figure; enough also remains of the left-hand figure to show that they were provided with large spreading wings, and that the folds of drapery were very much better arranged and executed than the published representations of these fragments would seem to indicate. He laid some stress upon the importance of not making the faults of the decadence period appear worse when copied for publication: it misleads almost as seriously as when a tolerable specimen of Art is flattered into perfection by the engraver. Mr. Scharf described the so-called Medusa head as a fleshy round male face, with long curling hair, full beard, and moustaches arranged in a generally radiating fashion to accord with the circular space round it, and of which the face was the exact centre; among the hair snakes appeared protruding, and two large bird's-wings sprang—not from the temples or forehead, as in other known instances—but from directly behind the ears which partially appeared among the full flowing locks of hair. All previous illustrators, both those who believed it to represent Medusa, and those who declared it to symbolize the sun, recognized the existence of the moustache which they generally designated by the term *whiskers*: those of the former opinion expressed a belief that the sculptor had, in order to make the Gorgon's head more terrible, added whiskers to the

countenance; others sought by reference to an engraving in Montfaucon, where Medusa was represented with moustaches and four wings, two from her temples, and two, reversed, issuing from her jaw-bones, to establish their position. On referring to the plate quoted from Montfaucon, Mr. Scharf recognized the representation of a bronze acerra or incense-box, that has since become one of the ornaments of the Museum Disney-anum. At one end of the box is a head of Medusa; but in the original no trace of wings or moustaches are to be found; they were purely the invention of the old French engraver.

ENTOMOLOGICAL.—Feb. 5.—J. Curtis, Esq., President, in the chair.—Among the donations was one by Herr Pretsch, of Vienna, of a specimen of the silken fabric made by the caterpillars of *Saturnia spini*, accompanied by figures of the insect in its different stages of growth, and a statement of the means used to procure the fabric.—The President appointed as his Vice-Presidents, J. O. Westwood, Esq., E. Newman, Esq., and H. T. Stainton, Esq., and delivered an inaugural address, which was ordered to be printed in the *Proceedings*.—Brigadier Hearsey exhibited a large number of insects just received from Sylhet; including many Lepidoptera and Coleoptera of rarity and some novelties.—Mr. Stevens exhibited three perfect specimens of the rare beetle *Cheirtonotus Macleayi*, from India.—Mr. Stainton exhibited a bunch of the galls formed by *Cynips quercus-petiole*, gathered from an oak near Exeter, and read an extract from a letter of the correspondent who sent them, confirming Mr. Stainton's former statement respecting the abundance of this kind of gall in Devonshire last year, and giving some interesting particulars of their mode of growth.—Mr. Westwood read, from the *Journal of the Asiatic Society of Bengal*, an account of the Indian method of preparing the threads of silk from the cocoons of *Bombyx Cynthia*, the insect recently introduced with such good prospects of success into Malta and Italy.—Mr. Newman read a note, founded on a communication of an eye-witness, stating that the cockroach fed voraciously upon the common house-bug:—a fact which he found had been previously recorded in the 'Narrative of Foster's Voyage.'—The President read a communication from Dr. Asa Fitch, stating that *Coccus arborum-linearis* was committing awful havoc in the fruit orchards of Illinois and Wisconsin, and that the history of this insect would be included in the Report on the Insects injurious to Fruit-trees, which he was now preparing for the Agricultural Society of New York State, pursuant to an order of the legislature.—The President read an extract from a letter addressed to him by M. Candèze, of Liège, requesting the assistance of English entomologists in the Monograph of Elateridæ, on which he was engaged.—Mr. Douglas read a note on *Psyche helicinelletæ*, the larvæ of which form curious helical cases, from which, until recently that M. Nylander raised a winged male, nothing but apterous females have been produced.—Mr. Westwood read a memoir 'On Lucanidæ,' with figures and descriptions of many new species.—A new Part of the *Transactions* was on the table.

INSTITUTION OF CIVIL ENGINEERS.—Feb. 13.—J. Simpson, Esq., President, in the chair.—The evening was entirely devoted to the consideration of Mr. Leslie's paper, 'On the Flow of Water through Pipes and Orifices.'

SOCIETY OF ARTS.—Feb. 14.—The Astronomer Royal in the chair.—The following papers were read:—'On the Expediency of at once Decimalizing English Moneys and Weights,' by Mr. J. A. Franklin.—'On the Basis of a Decimal System of Money for the United Kingdom,' by Mr. F. J. Minasi.—'On Decimal Coinage,' by Mr. Hugo Reid.

MEETINGS FOR THE ENSUING WEEK.

MON. Royal Academy, 8.—'On Sculpture,' by Sir R. Westmacott. Statistical, 8.—'On the Loans raised by Mr. Pitt during the First French War, 1793–1801; with some Statements in defence of the Methods of Funding employed,' by Mr. Newman.

TUES. Institution of Civil Engineers, 8.—'On Steam and Sailing Colliders, and the Mode of Collasting,' by Mr. Allen.

ROYAL INSTITUTION, 8.—'On Electricity,' by Prof. Tyndall.

WED. Geological, 8.—'Evidences of the Occurrence of Glacial Action in the Permian Period,' by Prof. Ramsay.

THURS. Royal Academy, 8.—'On Painting,' by Prof. Hart.

NUMISMATIC, 7.

SOCIETY OF ANTIQUARIES, 8.

ROYAL, 8.

ROYAL INSTITUTION, 3.—'On English Literature,' by Mr. Donne.

FRI. Royal Institution, 8.—'On providing an Additional Supply of Pure Water for London,' by Mr. Dickinson.

PHILOLOGICAL, 8.

SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

FINE ARTS

ROYAL ACADEMY.

Lectures on Painting, by Prof. Hart, R.A.

LECTURE I.

To expatiate on the subject of those Arts in which most of us who are here assembled this evening have the happiness to be engaged, after the repeated treatment which they have previously received within the walls of the Royal Academy from so many eminent Professors' hands, will readily be acknowledged to be a task of no mean difficulty. It is owing to this consideration in all probability that some individual more highly qualified than myself does not now stand before you as the expositor of the principles and practice of an Art which it is one of the functions of this establishment to teach. By the same consideration of how often and how ably the ground which I have to tread has been already occupied, I might myself well be dismayed did I not bear in mind that these Lectures are intended chiefly for the students of the Academy; and as their classes are perpetually changing, such information as I have to offer will be addressed, as may be presumed, to unprepared minds, and have at least the quality of novelty for them. Of the distinguished artists who are members of this institution, I can only solicit the forbearance while I follow on a course of analysis and instruction which to them is so familiar as a theory, and by them so successfully illustrated in practice. What Quintilian says, when speaking of new definitions, I will add here for myself. "It would," he observes, "be both impertinent and impossible for me to mark out every definition, since a practice which is a bad one has prevailed amongst writers on Arts of never defining a thing in the same terms that others have made use of before. This is a practice I am in no ways ambitious to follow," he adds, "for I shall ever be proud to say whatever is right, although it may not be of my own invention."

I am aware that an opinion is maintained by some, that through the medium of Lectures the student is not practically instructed. If such objection means merely that the palette is not placed in the student's hand,—that he is not thus instructed in the more mechanical parts of his pursuit, I answer that the same Royal Academy which places me as a lecturer here, has also provided schools in which that other and more practical object is to be attained. It is by means of such Lectures as it is my office to deliver that he can better be directed to an acquaintance with the theory of his art, its history, its great moral purpose, and its principles. Without such direction he may labour, perplexed by the varieties of excellence which he beholds. A collection of pictures by the old masters presents to his mind merely a chaos of merit. Each picture bears a name which he regards as an authority, and to his enthusiastic and impressible nature presents a model for his imitation. Emulating thus indiscriminately, he may in turn imitate varieties and contrarieties of excellence and styles, which he cannot hope either to reconcile or to combine, and discover when too late how much time he has erroneously devoted, through misapprehension, to ill-judged and irreconcilable expectations.

To divest this seeming confusion of its perplexity, to make the road clear for his better comprehension, will be my first object in this present course. To do this with any degree of efficiency, I must call on the student to consider the Fine Arts in a general sense, and as elements in the social condition of man. The history of those Arts will engage our early attention, in so far as that history more particularly regards Painting, and in so far as the limits of a lecture will permit. But before I approach this branch of the subject, it will be convenient that we should enter on a short inquiry

into the principles of Imitation,—the language in which our art more especially expresses itself. Our course will, therefore, be this, as the imitation of Nature is the origin and basis of Art, I will, as I have said, this evening confine my attention to considering the true meaning of Imitation as applied to Painting. In my Second Lecture I will consider the principles laid down in their application to Ancient Art, from the earliest times to the establishment of the Christian Church. My Third Lecture will continue the subject through that period which has been justly classified as that of Christian Art. The consideration of the various sections of Art-practice, with observations on schools and styles, I leave for a future season.

Because an essential element in the practice of painting is Imitation, the painter's art has been by many misapprehended and narrowed down into one, in which Imitation is at once the means and the end. In fact, to the undue acceptance of this term, Imitation, are owing mistakes so often made between that which is the true end proposed, and those which are the means by which that true end is to be attained. In the lowest and most elementary view of the subject, Art is supposed to have attained its end when a fac-simile representation of any object is achieved, whatever may be the relative interest or importance of that object,—and the artist is in that view considered most successful who most successfully represents objects by their mere outward and accidental properties. These views, like all other false views in Art, have this evil, besides their own inherent wrong, that the error acts and re-acts from the public on the artist, and from the artist on the public. The ill-formed demand creates the ignorant supply, and a low scale of taste is the necessary consequence of both.

If Imitation consisted in a mere fac-simile representation of circumstance, that could surely not deserve the name of a Fine Art, by which it was produced. We live in an age which has seen almost the perfection of mere surface rendering, procured by agencies merely mechanical or scientific;—a perfection such as the unaided eye or hand of the painter can never hope indeed to attain. Yet, just because those agencies, marvellous as they are, can do no more than render the material truths which they find, their utmost perfection must yet fail to procure their admission into the category proper of the Fine Arts.

Let us then inquire more particularly what is the part which Imitation does play in Art:—a point on which it is necessary that we should arrive at a clear definition, before we can enter successfully on the consideration of which are the best and noblest themes on which the painter's art can be employed. For, after all, we shall have to admit that in its most transcendental exercises, Art is necessarily limited by the range of the language through which it speaks.

The eye, being the organ through which picture addresses itself to the mind, and the representation of visible objects being the language, or medium, by which the subject is conveyed, the painter has, of course, to take care that nothing finds actual admission into his work but such matters as the eye is conversant with; since, even in the most imaginative flights of the poet, the circumstances of his imagery have their rise in Nature. His most fanciful conceptions owe their origin to existing elements in creation. The art of painting, even when most spiritually employed, consists technically in a resemblance to visible things. What are invisible, therefore, come not within even its highest scope,—and the attempt to strain its powers to utterances beyond the capacities of its language is a mistake as great (if less ignoble) as that which would keep down Art-expression (as the Imitative school would) to its merest syntax. The poet, with his almost boundless language, can lead the imagination at his will, and to heights which the painter cannot climb, and through mazes which the artist cannot thread;—yet, even to the poets' non-natural personifications, natural elements have contributed the facts, as in the case of angels, demons, centaurs, satyrs, and the like. Ancient artists held that no degree of truth could be assigned to representations which varied from their true standard of Nature. They were accus-

tomed to refer always back to Nature, with a view of ascertaining and deducing from her some undeniable property, admitting only, after deliberation, such ideas or images as were found, on close examination, to have a common consent with Nature. Such things only as are, or can be, were by them considered to be worthy of representation; and they condemned such works as failed to record actual truth, however excellent might be the art with which they were presented. That performance was considered unworthy of esteem which was not distinguished by some attribute of sound argument or of common sense.

The experience of every artist has suggested to him the difficulty of defining for himself the true standard or quantity of imitation which should, in any given case, be employed for the fitting representation of the object or objects which he has in view. At the commencement of his career, the student is apt to be influenced by the desire to mark down all particulars which, to his eye, make up the sum of the thing before him; and as at that age the artist is an almost microscopic observer, a study which might well befit the naturalist becomes, in its rendering of specific fact, a fatigue to the sense to which it appeals as a work of Art. The end is in fact missed, through the very over-elaboration of the means. It is this habit of seeing too much, through want of taste or of judgment, that makes a portrait painted by a beginner so little satisfactory. Not contented with so much of imitation as shall secure identity with the type, he has insisted on details as punctiliously as a surveyor might, whose task it was to make a chart of the face. He has mistaken a picture for a map. Such an example of imitative Art, I myself, in early life, submitted to a deceased member of this Academy, Mr. Northcote; and was by him warned that, by insisting on telling every fact which I saw, and, of course, at that commencing period of my career in an exaggerated manner, I missed the way at once to the hearts of my sitters, and to the secrets of my art.

That simplicity, not complication, of means serves the purpose of identification in form, is illustrated by a fact in every man's daily experience: the facility with which, at a distance or amid a crowd, we distinguish a well-known figure or face. In the first of these cases, the facts are resolved by the distance; in the second, they are generalized by the numbers, in which the mere technical particulars are, to some extent, the same or similar. In both, it is shown that the individuality is something outside of, or added to, the facts; and this it is which the painter has to seize, as by a few expressive lines he often may. To borrow an illustration from the arithmetician, the likeness is the resulting whole which expresses, as it were, in a single line, the sum of all the several figures which are its factors,—not a precise repetition of all the figures which make up that whole. The process of Art-imitation is synthetic, not analytic.

The amount of character which a few forms are capable of expressing, is well illustrated also in the breadth of treatment and simplicity of means employed for portraiture by the Egyptian sculptor 3,400 years before the Christian era, as well as in some of the historic themes of the same people. The like principle of simple means was eloquently applied to the decoration of the Etruscan Vase,—a few lines, by means of which a variety of condition, age, sex, &c. are expressed and recognized in forms of beauty, of grace, or of motion. In the flattest or lowest relief of Greek sculpture, everything is almost reduced to outline.

Patient investigation, and that experience which implies the combination of judgment with taste, must be employed to determine in each case, by comparisons with a number of objects in the same class, what are the essential peculiarities that constitute its character, standard, or true type. There are certain specific attributes peculiar to each object, either in form, in character, or in colour, and the central or focal point of these is its essence. Divergence from this constitutes variety,—exaggeration of it, caricature. This essential form it is which the artist must seize. When this is expressed in his work, the idea of that work is complete.

Additions to this are incumbrances on the idea—shortcomings of it render the representation vague and incomplete. Such disciplined observation it was that led the Greek sculptor in his search after the representation of beauty, strength, grace and other attributes, to seize on the characteristic details as he found them in a number of human objects, and these combined into one whole gave the ideal of the type. These cultured figures—now known under the denomination of the Antique,—while they form the studies for his imitation as examples, at the same time invest the student's mind with ideals of certain attributes, and teach him, when in turn he looks to Nature for his models, to detect and estimate the accidents or departure from the beauty of proportion, of form, or of character, with which he must constantly meet in the living example through which he may seek to embody his own conceptions. In the whole range of antique sculpture, with the single exception of what is named the Torso, there are no examples so worthy of your consideration as the fragments of Art known as the Elgin Marbles, and happily among the national possessions in the British Museum. Before their discovery, we were obliged to content ourselves either with such treatments of the human figure as are supplied in the eminently conventional forms of the Apollo Belvedere, and other embodiments of superhuman character, wherein the departure from fact was intentional and in accordance with the mythologic theme to be realized, or with such examples as were presented by the athletic figures of the Fighting and the Dying Gladiators—fine specimens of ordinary nature, and adequate exponents of the ideal of their class.

In the mean betwixt these two orders of description—the Ideal and the Actual—the highly Conventional and the Literal, we have now in the bodies of the Theseus and the Ilyssus the exact treatment that defines the limits of the Essential and Accidental,—clothing the essential meaning in forms sufficient and best fitted for its expression, controlling detail by knowledge and judgment of the abstract. No particulars are wanting that help the sentiment of action in the one, or that of repose in the other of these fragments; while facts so minute as the foldings of the skin are rendered with a truth which, having the moral co-efficients so largely expressed, but add their mite to the sum of the imitation.

By close study of such examples, as well as of the human and animal forms in the frieze of the Parthenon, you will train your eyes and understandings for the due estimation of similar objects in Nature. No unessential or redundant particulars were permitted, you will observe, to enter into their representation. Wherever in the works of these old Greek masters, exaggeration of natural circumstance occurs, it must be accepted as an intentional deviation, for a purpose foreign to the theme itself,—as a calculation for the efficient expression of the parts, when removed, for instance, to such a distance from the eye as was implied in the place of their original destination.

All the written critical opinion of the ancients enforces the same view of the purposes and limits of imitation as was inculcated by their master-works. Thus, Quintilian, for example, lays it down that in overloading the matters in hand with particulars, we incur the penalty of a double inconvenience,—that of saying always too much, and yet never saying all.

To resume, then. The true sense of Imitation consists in seizing on the leading characteristics; those parts which constitute the specific difference between one object and another. Minor details follow, and are subordinated to the great and leading idea. When the cognate expression is once obtained, the imitation is complete.

In these observations, I have presupposed that the student has acquired the power of transferring literally to his canvas the copy of a particular human form,—that he is thereby qualified to render any number of forms as representative of varieties of Nature; for the things which are to enter into his service during his career are innumerable.

We will proceed, then, to consider Imitation when applied to imaginative conditions; bearing in

mind one of the observations of Sir Joshua Reynolds, that it is by the power of drawing correctly what we see, that we are enabled to draw correctly what we imagine. The principles of Art are simple and fixed; and they are compendiously enunciated for the student's use in the great examples which the sculptors and painters have left. These results have a classification determined to a great extent by the nature of the materials with which they work. Principles of proportion and form have been deduced from Sculpture:—those of colour, of light and shade, and of composition have been established on the labours of the various schools of Painting.

In the works of three of the greatest masters of the painter's art whom the world has produced, severally conspicuous each for a quality of his own,—Raffaello, Titian, and Rembrandt,—we may illustrate alike this principle of comprehensiveness in seizing what are the main or predominant characteristics.

To begin with Raffaello. If we take for our purpose his most accomplished works, the Cartoons, we find on examination that so many details only are given of the human form or draperies as are absolutely essential to the just description of the parts, or are indispensable to their action. If we proceed to test this principle of comprehensiveness by arranging our own lay figures, we shall find how many forms in the draperies that were extraneous and unessential to the expression of the human form beneath have been omitted by the great artist. So, Titian omits all trivial particulars in representing a mass of flesh-tint. The eye at once recognizes the general truth of the part, and is unfatigued by a sense of the elaboration that suggests exertion or great pains-taking. In fact, the eye is impressed in exactly the same way as on beholding Nature herself. If we inspect the picture more minutely, we behold a fusion of the tints, corresponding to that which we see in the real flesh and those local peculiarities of colour in particular parts of the limbs, which do not interfere with the general sense of truth or the prevailing air of simplicity of means.

Rembrandt, with his light and shade, arrives by different means at imitative results similar to those of Titian. With a power of calculation that controlled every seemingly rude touch to a definite end, distance from the picture is all that is needed to make these singular means combine in the revelation of character, of expression, or of gradation in light and shade. Rembrandt's production of these results is as much under the control of abstract principle as ever were the linear treatments of a Greek sculptor. Our own Reynolds, in his 'Ugolino,' and in other historical presentments, combining often the characteristics of Titian with those of Rembrandt, indulged in that degree of imitation which never distracts or divides the attention between the picture in its subjective and objective truth, and any personal display of his own powers.

This principle of the limitation, and consequent elevation, of the original principle of Imitation, which I have been contending for in Sculpture and in Painting, runs equally through all the Arts. It is not, for instance, by the direct and literal imitation of natural sounds, but by the force of expression and the power of association, that Music makes its appeals. In fact, this illustration of a principle controlling a principle derived from music is very striking:—as with the more technical imitation of the voices by which Nature speaks nearly the whole body of music as an art disappears. To use the language of a competent authority, "Music can imitate in a direct manner only by its actual resemblance to the sound of the thing imitated; and of all the powers, that of raising ideas by direct resemblance is the weakest and least important." It is, indeed, so far from being essential to the pleasures of the art, that, unless used with great caution, judgment, and delicacy, it will destroy the pleasure, or become even offensive or ridiculous. It is in the power which Music possesses of raising emotions and exciting our sympathies by means of association, that we are led to the recognition of the effects intended by Beethoven in his Symphonie

Pastorale. The imitations are offered by way of suggestion, not by attempts at direct imitation. Of technical imitation, as subordinate and auxiliary to general expression, we have many happy musical examples; where the imitations even in the moment of their success, define their own limits, and like the technical treatments of Sculpture, mark their dependence for any value which they have on the larger and more spiritual expositions of the theme. Take as an instance: Handel's musical embodiment of the lines in Milton's 'Penseroso,' beginning,—

Oft on a plat of rising ground
I hear the far-off curlew sound.

—Here he suggests, and in a sense imitates, the bell, by the deep-toned strings of the basses,—confining the voice to notes expressive of that pleasing and contemplative melancholy, whose idea the words are so powerful to excite. Under the same subordination it is that in the song of Galatea, "Hush! ye pretty warbling quire," the flute imitates the natural music of the birds. The ideas of light in the chorus of 'Samson,' "Oh! first created beam!" and of darkness in the chorus of 'Israel in Egypt,' "He sent a thick darkness," can have no aid whatever from technical imitation, any more than the words "And there was light," in Haydn's 'Creation,' but depend wholly on suggestion, and the poetry of association musically attired. In fact, I may just state here—though it would lead me too far out of my direct road on the present occasion, and too much on metaphysical ground, to do more than state—that indefiniteness of detail, such as we find in the vague forms comprehended within the contour of an Egyptian Colossus, may, in its appeals to the imagination, be itself a source of pleasure;—contrasted exactly with the too great definiteness which depresses the mental faculties into inaction, and kindles no high or noble sentiment, in the elaborated minutiae of a Gerard Douw.

All the objects of fact or of imagination which the painter can be called on to represent must come under a classification which has three heads, and by their place in which, the amount of imitation and the degree of particular must be determined. They must be generic, specific, or exceptional. The specific, while it will always have much that is common to its genus, will have something that is especially its own, and differing from other examples of its kind. The exceptional implies some departure from the rule that generally pervades even specific difference.

If the student at the commencement of a work would ask himself, What constitutes the predominant characteristics of the object which I am about to represent? and how are these to be rendered?—and at the conclusion of his labour would inquire, Have I complied with these conditions? he would arrive with more certainty at the true Art-rendering of the essential and specific properties of his objects, as contradistinguished from their accidents, or deviations from natural law. The difficulty is in determining precisely that which is necessary, and that which only is necessary. In the anxiety not to render too much, there is, of course, the danger that the exposition may be inefficient. A fitting copiousness of diction and fluency of style are no more to be rejected by the painter than dispensed with by those who most ably wield the pen.

Thus observes Aristotle in his 'Poetics,' "Sophocles said that he described men such as they ought to be, but Euripides such as they were." "If, however," he continues, "it should be objected that the poet neither represents such things as they are, nor such as they ought to be, he may say, that he represents them conformably to the general opinion, as, for instance, in things pertaining to the Gods."

The student, then, who has arrived at the power of representing visible things with taste and judgment is in possession of the principles which apply to the rendering of those more poetical creations which borrow their exceptional attributes from the imagination, for the imagination can invest visibly its creations only with the intelligible forms which the world of visible objects supplies. And this brings us at once to that limit of Art-expression in

its highest exercise, to which we have already alluded, and which if the artist endeavours to pass, under the belief that he has a language transcendently co-extensive with that of the poet, he will fall baffled, not by the greatness of his theme or the incapacity of his own mind to grapple with it, but by the inadequacy of the means at his disposal for the rendering of his thought. The student will do wisely to remember this:—that whatever Art can do, it can do not only well but perfectly, and that which it can do best it can do better than the same thing can be done by any other expressive power. But while the poet, with all his range, can never bring the Madonna before the sense, as Raffaele has, the painter cannot make the language of visible objects embody the ideas of spiritual or mysterious agency. How shall the painter, for instance, with any resources at his command, give shape to that Image, before whose awful presence, as conjured up by the sublime poetry of Scripture language, the heart stands still: "Then a spirit passed before my face; the hair of my flesh stood up: It stood still, but I could not discern the form thereof: an image was before mine eyes, there was silence"? What bold brush could undertake to make intelligible to the sense,—what language yet bring vividly before the mind—the burning bush as it appeared to Moses on the Mount? as what mortal music dare seek to utter the "still small voice" that followed it? In fact, this very power of language to do much that the Arts generally cannot express, furnishes at once an excellent measure of the controlling power of the imitative principle in the Arts, and an indication of the uses to which imitation for the high purposes of Art should be devoted. Just because language is the least imitative of all the arts, it is by far the most suggestive. Language can suggest everything that the mind is capable of receiving, from the very fact of its being in no way limited to the actual sensible resemblance of things, while all the suggestions of Art must arise out of the sensible objects which it presents. That Art, then, is the highest, which, true to the principles of Imitation, rightly understood, that lies at its base, enlarges and spiritualizes such imitation by the greatest amount of suggestive thought, but bears in mind, at the same time, that the range of thought must be controlled by the capacity for its suggestion, residing in the imitative language which it is compelled to employ.

For this reason it is that all of the numerous Art-attempts at the personification of the Almighty, under the form of an aged man, are, and must be, by the very conditions of the case, lamentable failures. The supreme and concentrated image of Power and Eternity is here sought to be rendered in forms that suggest the ideas of imbecility, decay and death. Raffaele, himself, in his treatment of the Creation, has represented only a venerable old man, toiling and struggling with exaggerated action among rolling clouds. The comparatively unspiritual Deities of classic lore were, for the same reasons, fit enough themes for the handling of classic Art. The Greek Mythology, which invested the Gods with human passions, consistently adopted human forms for their expression, and had thus possible types which these artists might exalt by treatment, instead of the spiritual God whom the noblest treatment must yet lower to the human type. And thus it is that the Greek sculptor could assist the Greek poet in the establishment of certain personifications, composed of distinct and varying attributes, which had all a human reference, but, in their concentration and emphasis, were in each case sublimed by Art and Poetry into a classic God.

And this leads me to touch for a moment, parenthetically, on what seems to me a heresy in Art-criticism, which may have had its root in this co-operation of the Greek poet and the Greek artist, and in an undue application (by its extension into a principle) of the practice of some of the illustrious masters of Christian Art, working to specific ends. Among the Greeks, a belief grew up that the painter and the sculptor must follow the descriptions of the poets, as these were held to have anticipated the artist's conceptions, and established a previous settlement

on his ground. A recollection of some of the themes which the Greek artists treated, satisfies us that Apelles or Zeuxis, and most of the renowned painters of antiquity, derived their subjects from the mythological or other fables of their time. For his 'Jupiter' and 'Minerva,' Phidias drew on the bards who had excited his imagination with such themes. Homer supplied the moral proportions and relations, and for the physical elements, out of which he combined and constructed these ideal personifications of omnipotence and wisdom, he went himself to Nature. The 'Venus' of Apelles, the 'Helen' of Zeuxis, and the 'Galatea' of Raffaele drew their inspirations from the prevailing traditions and ideas caught from the poets. That these controlled the respective artists, we learn from the difficulties which each encountered in finding in ordinary nature the forms that would suffice to render satisfactorily the accepted notions with which the public mind was familiar. Michael Angelo, in the Sistine, in his Prophets, and his Sibyls, drew for his grand creations on the inspired portions of the Scriptures, or on the fables of Pagan mythology. To what extent in the Middle Ages the imagery of Dante controlled or directed the imitative capacities of the painter, it were superfluous to mention, except for the purpose of observing that religious principle was as much the motive in that time to both painter and poet, and therefore as necessarily suggested a conformity of action, as it was in the old Pagan period.

There have not, however, been wanting opinions which such cases do nothing to justify, that Art is elevated by seeing Nature generally, and, as a rule, through the poet's spectacles.

"In some instances," observes Lessing, "it is a greater merit in the artist to have imitated Nature through the medium of the poet's imagination than without it. The painter who has delineated a beautiful landscape, after a Thomson, has performed a higher task than he who has copied it directly from Nature. The latter has the original immediately before his eyes; the former must exert the powers of his imagination until he fancies he sees it before him. The one produces a beautiful imitation of distinct and palpable lineaments; the other has to arrange a discretionary effect from faint and fleeting images." This is dangerous doctrine, as I have hinted. Art so derived, can at best give but a second-hand impression of Nature. The painter has thus delegated his own power of seeing Nature to another, in entire neglect of the peculiar requirements and technical capabilities of his own art. But I have introduced this opinion of Lessing's in passing, merely for the purpose of showing you how capricious and unpractical are some of the dogmas which the unprofessional critic does not hesitate to promulgate, and which the artist is too often weak or unthinking enough to accept.

If, then, I have had any success in defining what is the true place of Imitation in the Arts—if we have arrived at a clear perception, as well of its large and noble faculties of suggestion on the one hand, as of its restraining canons on the other, you will have learnt as rules of your future practice, while you avoid all those extravagant utterances for which the vocabulary of your art is insufficient, to shun all those meaner heresies by which Art is degraded into any of the forms of mere representation. In Art, as in morals, doubtless our first search is after truth; but in Art, as in morals, we have to inquire what truth is, and nowhere will it be found in the character of servility. Reduce Art, for instance, to mere simple and elementary imitation, and you rob it of every pretence to notice, because the imitation will in every case be inferior to the thing imitated. Let the object so copied have no natural beauty in itself, then we have merely a lower visible presentment of that which had originally no interest save such as cannot be transferred—that of its Use. At the best, the copy will want the force and freshness of the original. The most perfect representation of a piece of ornamental furniture will be beaten at the upholsterer's, and the mercer will show against the best artist in the article of brocade or of Brussels lace. Let us apply this to such transcripts of Nature represented by her

meaner incidents as have been favourites with the Dutch school of painters. The manner in which the copy or resemblance is performed will certainly have in some degree, greater or lesser, impressed on it the character of the author's mind, and this makes it not even an exact resemblance. It bears the stamp of an individual observer in its mode of treatment, or in the mechanism of its execution. Thus, an object represented by Teniers, Ostade, or Gerard Douw, truthfully rendered by each, after his own distinct mode of perception and execution, will, when placed side by side, present three distinct versions of the same object. They cannot, therefore, be technically true, and they do not aim at being anything higher, though there are conspicuous merits of technicality in each. I do not, of course, lose sight of the fact, that the advocates of this school find a charm in the single fact of the successful imitation itself; but, as I have said, that is limiting the large intellectual enjoyments which the Arts can yield to the pleasure derivable from an appreciation of the lowest and most elementary of their powers. All considerations of Beauty, or of the proprieties and amenities of Fine Art are abandoned. The theme is subordinated to the instrument of its rendering, and a merely skilful is preferred to a noble use of the language of Art. The stories which we read of the imitations of the Greek painters must be accepted with distrust. The generally limited acquaintance of the literary critic with the real requirements of our art may have caused him greatly to exaggerate the merits of Imitation in the cases supposed, and to have missed their relation to merits of another kind. When we read of imitations by Zeuxis and Apelles, so marvellous that not merely the judgments of men, but the instincts of the lower animals were imposed on by their representations, we set against these statements our knowledge, that the artists in question were duly sensible of the value of subjective truth. A story goes that Zeuxis, having painted a boy carrying grapes, was irritated when he saw the birds peck at the fruit. Unconsciously these winged creatures were reviewers, to his great discomfiture; and their peck at the fruit was a biting criticism on his drawing of the human form. Had the boy been rendered as successfully, the birds would have gone without their grapes, and so Zeuxis is said to have painted out the fruit, and repainted it with less obtrusive truth. This criticism might have been usefully taken to heart by such masters of the Dutch school as Mieris and Gerard Douw:—in whose works the human form is usually the part the least completely or perfectly imitated.

When Wilkie was painting the whole-length portrait of Daniel O'Connell, some visitors to his studio were so loud in their admiration of some still-life introduced in the picture, that the artist in their presence obliterated the much-belauded details, considering that this direction of their applause was a severe criticism on the mode in which he had treated the character or expression of the head. I had this anecdote from the late Mr. Cholmondeley, for whom the picture was painted.

So much for the mere imitation of Nature in her lower forms and less intelligent meaning. But there is yet another species of Imitation against which I must warn you, and which has for its object the simulation of Art. This is a species of imitation which founds itself on a special style, or on a particular picture (generally the former), and some have even recommended it as one of the paths to excellence. For the truth and vitality which are derived immediately from the observation of Nature, the objective means in which these are developed giving a stamp of veracity to what is within its reach, the imitator in question substitutes the bias of another mind than the artist's own, and so gives to his works a certain unreal or fictitious air. His form of servility is, to wear the mental livery of some one whom he recognizes as a Prince in Art. The tones and textures familiar to our eye, in the pictures of old masters, become snares to dependent minds; and this form of imitation meets with a large amount of encouragement from amateur and dilettanti consent. To this kind of whim, sense and judgment are often subordinated or sacrificed. The applause bestowed, is bestowed

on want of originality. The false metal gets a dangerous currency from the stamp of connoisseurship. The fact is, the more original the old artist who is proposed as a model for imitation, the more strongly marked his peculiarities of thought or of rendering, the less does he present a possible or desirable model for direct imitation. The painter of power applies himself to the record of truth with a vigour that communicates a character of its own to all with which he deals. His own impressions shape and determine his own modes of enunciation. His dealings with the objects before him have a direct relation to the tendencies of his own mind,—and the emphasis of his pronunciation constitutes his own particular style. The modern artist who imitates these things does so by the precise abdication of the means that led his model to excellence. He works in that unphilosophic mood which, dwelling on the letter, misses the spirit. For those suggestions which Nature would have made to himself, he substitutes the structural peculiarities of another mind, which, not being his own, have a foreign air. Instead of seeming an expression, they show like an artifice. Modes of arrangement or dexterities of manipulation, which were the spontaneous language of another mind, become his studied substitutes for thought. He looks at Nature through spectacles at best,—and probably spectacles unsuited to his own focus. Let me warn you, then, that while next to the reading of Nature for yourselves, the best thing you can do is to read the accepted masters,—it is mainly with the view of learning by a careful study of their works, how they read Nature for themselves, and how their several idiosyncrasies coloured the results of that reading. The mere study of their modes of expression has immense value of its own, as I shall endeavour to show you in future Lectures; but if the study land you in the adoption of mere modes, instead of enlarging your knowledge of the principles of which those modes were several forms of expression, you turn the great library of picture to a wrong use, and become mannerists at second hand, by seizing on the manner, which was a vital form of the genius of your great originals.

This subject brings us naturally to another, which has a relation to it, and with a few remarks on which I shall conclude. It refers to an eccentric Art-course, which has been the subject of some conflicting opinions of late.

There have been periods in the history of Art, as in that of Letters, when certain minds, as if wearied, under some morbid influence, with the contemplation of high models, have chosen to fall back on some earlier condition of progress, and perversely taken up a backward starting-point, from whence a portion of the road to excellence has needlessly to be travelled over again. Of all the forms of eccentricity into which the love of paradox and the passion for novelty are apt to seduce mankind, this is surely one of the most illogical and uneconomical. If the servile imitation of even perfect models be, as I have said, a thing to be shunned, what shall we say to an imitation which deliberately selects for its models comparative imperfection? The disciples of this school of artists flourish on contradictions. They seek to become conspicuous by a dip among the shadows of the earlier centuries:—their attempt at novelty is made by a return to what is ancient. The bad thus made new they exalt above the beauty that has grown old; and they challenge the logic of the schools in the name of an anachronism.

If there be any truth in the principles which have now been laid down, the followers of this schism stand doubly condemned, as being imitators of what was bad in itself, as an imitative school. What would be said of the author who should prefer now some crude or early form of the language in which he writes, to express his thoughts, rather than avail himself of the wealth of illustration, which the ages and the knowledge born in them have brought to enlarge, enrich, and dignify the utterances at his command? Could the full thought and scientific accomplishment of the present time find fitting interpretation in the vocabulary of Lydgate or of Chaucer? As reasonably might we, in an age of steam-ships and steam-guns, traverse

the Euxine in the tireme and assail Sebastopol with the catapult.

Is it more rational that, rejecting all improved ideas and forms of Beauty due to the march of time and the fullness of thought, all enlarged scientific knowledge and mechanical means, we should go formally back to a more uninformed and rudimentary time for our examples, and copy the comparative ignorance of the Past, as a positive title to the admiration of the Present?

But these artists of the modern heresy who copy imperfect modes, miss, in doing so, all that gives a dignity and a beauty even to their imperfections. I deny that there is in their works any sympathy or intrinsic correspondence with any one of the earnest masters of the fourteenth and fifteenth centuries. The hardness, formality, conventionalism, structural errors, deficiencies of scientific or manipulative appliance, where these occur in the works of that time, were the accidents of the day—accidents out of which it took but a comparatively short time for the Arts to emerge. It is not, as Dr. Waagen has justly observed, on account of their defects, that these early masters attract us; but in spite of these and their peculiarities, I say that Giotto, Fra Angelico, Ghirlandajo, Francia, or Perugino, never present us, as do their pseudo-imitators of our day, with intentional types of deformity. In what they wrought, they aimed at excellence, and sought for beauty to the extent of their capabilities. None of them sought to return to the Byzantine forms of ugliness; but all endeavoured anxiously to advance themselves by improving their Art. Earnestness and honesty are perceptible in every line and touch that they have left us.

The backward tendency, visible in the practice of sections of the modern German and French schools, is at least intelligible, and may have a species of defence. For the most part, it occurs in works executed for the decoration of the same Romish Church,—deals therefore with the same conventional forms, and adopts the same conventional methods. The legends of the Romish Church to-day are the same legends with which the fourteenth-century artists dealt; and the modes of the old masters are themselves a sort of Roman Catholic dogma. Truthfulness of character and religious sentiment pervade these French and German works. They have the plea of their faith, and are engaged in the service of their Church.

Their imitators of our school transcend the limits of the dogma of ugliness propounded by old St. Basil himself, or by his followers. As if to make as conspicuous as possible the absolute no-meaning and deformity of their practice, they do not even conform to the abstract and spiritual renderings of the age which it is their pretence to adopt. In their devotion to what the French style the *système rétrospectif*, they exhibit the grossest inconsistency, by mixing up the primitive modes of that system with tastes, habits, and methods of later periods and of schools of the lowest and most material agencies. Who could dream of a successful engrafting of the Dutch school on the Italian art of the fifteenth century? Let me entreat the gentlemen of this modern-antique school, as, five years since, I said elsewhere, "to believe that Raffaele may be received as no mean authority for soundness of view and excellence in practice." They stand convicted of insincerity by the very cleverness of some of their pictures. What a wilful misapplication of powers is that which affects to treat the human form in the primitive and artless manner of the Middle Ages, while minor accessories are elaborated to a refinement of imitation which belongs to the latest days of executive art. By the side of their affected simplicity and rudeness, they write the condemnation of the same, saying "You see by the skill with which we can produce a detail, that we could joint and round these limbs if we would. We show you that while some of us could, if we chose, do as well as they who use the enlarged means and appliances of Art, we can also do, and choose to do, as ill as they who wanted our knowledge. We desire you to understand that it is not for want of knowledge of what nature is, that we fly to affectation."

As a last suggestion, let me warn you, gentlemen students of the Academy, to bear in mind that no technical or manipulative excellence will recommend a vulgar or an immoral subject to rational or thinking minds. Talent bestowed on a low subject is, at best, a misapplication of it and of time;—devoted to an immoral one, it is, besides, a dishonour—an abuse of the great gifts which are implied in the name, rightly understood, of an artist.

FINE-ART GOSSIP.—Mr. Cousins, the engraver, was elected a member of the Royal Academy on Monday night,—being the first engraver who has attained the full honours of that institution.

At last Wednesday's meeting of the *Graphic Society*, a very varied collection of paintings and drawings was exhibited; including a portrait of Gainsborough's daughter, by Gainsborough, and a Study by Sir Joshua Reynolds; a sketch of 'Eddystone Lighthouse in a Storm' by Turner, and an interesting series of drawings from the Crimea by Mr. Simpson. The artist—who, we believe, arrived at the Seat of War the day after the wreck of the Prince—has, by a few touches, conveyed a perfect impression of the desolation and dreariness of the storm-swept, snow-imbued camp. The most admirable of this series are, 'The Burial-place of the Second Division,' the 'Scene in the Diamond Battery,' and the 'March from Balaklava.' All looked with painful interest at views of the spots, not merely where Iphigenia may have bled, or Greeks have shouted "Thalatta!"; but where the flower of England, unscathed by fire, unsmitten and unhurt, rotted away, with their faces turned towards England. For them, there will be no victory, no rejoicing,—for them, no open arms and happy faces, no flags waving or jubilee of bells,—but in their stead, cold, narrow graves, in an enemy's country, on a spot perhaps to be blasted by a great nation's greatest and most terrible disgrace. In all of these, we observe, as a marked characteristic, the heavy, congealed, sluggish yellow clouds struggling through a deep blue sky. In 'The Burial-place of the Second Division,' some soldiers, muffled up like Esquimaux, are hewing out trenches in the frozen snow for the dead comrades that a fatigue party (red against the dismal white and grey horizon) are toiling along with in the distance,—their weather-beaten, stern faces bent down deprecatingly before the icy wind. There the long white-heaving waves of shapeless graves, swollen with snow, stretch away like the burial-place rather of the dead of some tremendous battle than the dead of an army, we trust, still to be victorious. In the 'March from Balaklava,' the same muffled men, bandaged and ragged, more doleful for the shred of scarlet and strip of dingy lace, toil with heavy step towards the doomed city, rather like criminals going to execution than men confident of victory. On a carrion steed, the most prominent of all, is an hussar, who once rejoiced in the much-ridiculed "cherry-coloured pantaloons," now wonderfully faded, and more fit for Houndsditch than the glitter of Rotten Row. Perhaps the most spirited sketch is the 'Scene in the Diamond Battery,' with the huge sixty-eight pounder Lancaster gun, and the group of foreign-looking sailors who lie stretched round it, more like pirates in ambush than the smart jack tars of Nelson's age. Capt. Peel, grim and expectant, is watching from the rampart; and his brother officer, a little lower, is equally on the alert. One sailor has thrown himself down by the linstock, and another slim, long-legged reefer stands ready at the cannon's breach. In this sketch, we realize at once the enormous size of the gun, and the excitement and ardour of the defenders. We can easily imagine the knowledge soon obtained of the gun's habits, the indignation at its shortcomings, and the uproarious delight at its happier hits, when pulks of Cossacks are sent to the four winds, or a rival band of gunners disappears in a gush of fire. How sweet the great voice of such a potent friend must sound,—and how awful its roar that is at once a war-cry and a knell. Turner's sketch of the Lighthouse divided interest with these clever drawings,—with some landscapes of extraordinary finish and truth by

Mr. Inchbold and Mr. Carrick, young and rising artists,—with a rather ill-drawn life Study by Mr. Sant, and a vigorous sketch of the Boulogne review by Mr. G. Thomas. The sketch of Turner is a perfect piece of sea poetry. Sea and air seem to have banded together to quench the undimmed light. Drifts of foam leap up at the tower and spring above it,—and waves blot out the stars, and sky and sea have become one,—but still the flame burns on, persistent and steadfast. We never saw such a welter of froth and wave,—such a hell-pool of storm and water,—such a seething, boiling rage of maddened breakers, roaring for food and praying for wreck, or any human work on which they may wreak a hatred that eternity cannot satisfy. Still shines the flame, quenchless as hope—unshaken, undisturbed;—even as through the storms of life and the buffeting of daily cares burns the thought of a directing and merciful Providence.

Some curious frescoes of the second century have been discovered at Rome in the Catacombs of Calixtus, near the Appian Way.

Edward Kretschmar, the wood-cutter of Leipsic, has just received a gold medal from the King of Prussia, as a reward for his large woodcut of 'The Death of Gustavus Adolphus.' Art and royalty seem to move in closer orbits even in German courts than in our own.

The sale of Mr. C. Birch's pictures, which took place on Thursday, is calculated to re-assure those who may fancy that the Painter's value has as yet suffered by the return of the Soldier into prominence. The collection, it is true, had been choicely made, but the prices secured were, nevertheless, remarkable as illustrating the rise in estimation of the artist to the opulence of the buyer. As instances,—Müller's 'Slave Market,' sold for 15*l.* in 1841, fetched 195 guineas—Wilkie's 'First Ear-ring,' disposed of by its painter for 50*l.*, was handed over to a new possessor for 295 *gs.* The 'Fleur de Lys' of Etty,—concerning which and its fantastic frame, which cost 50*l.*, we were the other day reading in the painter's biography,—was "knocked down" for 700 *gs.*; picture and frame having originally cost 150*l.* Mr. Birch had only paid 147*l.* for Constable's 'Lock' in 1838. The landscape sold for 360 *gs.* The other prices were not less encouraging. Mr. Pyne's 'Rydal Water' went for 92 *gs.*—Mr. Danby's 'Pelens' for 115 *gs.*—Mr. Lance's 'The Hall Table Fruit' for 76 *gs.*—Mr. Uwins's 'The Tambourine Player' for 120 *gs.*—Mr. Linnell's 'The Road through the Wood,' for 415 *gs.*—Mr. Poole's 'Mountain Peasants,' 240 *gs.*—Mr. Frith's 'Dolly Varden' (not, we believe, Mr. Frith's engraved *Dolly*), for 200 *gs.*—Mr. Webster's 'Beating for Recruits,' for 355 *gs.*—Mr. Herbert's 'Nimrod,' for 190 *gs.*—M. Delaroche's 'The Saviour of the World,' for 265 *gs.*—Mr. C. Stanfield's 'Affray in the Pyrenees,' for 435 *gs.*—Collins's 'Haunt of the Sea-Fowl,' for 185 *gs.*—Calcott's 'Spezzia Bay,' for 500 *gs.*—Turner's 'The Lock' (painted by way of companion or challenge to Rembrandt's 'Mill,' for 600 *gs.*—Sir E. Landseer's 'Waiting for the Deer,' for 780 *gs.*—and Mr. Maclise's 'Alfred,' for 690 *gs.*—A small miscellaneous collection of the works of modern artists, was also disposed of by Mr. Foster, after the Birch sale—at which the lots, generally, fetched good prices.

The old Cathedral of St. Germans, in the Isle of Man, is past repair; and the diocesan talks of building a new one, as a sort of memorial to Bishop Wilson, who died in 1755.

At the *Réunion des Arts*, on Wednesday night, the chief objects of interest were a series of frescoes by Herr Goetzenberg. These bold crayon drawings were hung round the walls like tapestry, and beside them were ranged reduced copies painted in oil. The best of them seemed the Allegories of Religion and Philosophy, which, we believe, adorn the walls of the University at Bonn. In that of Religion, which is the chief, the various phases of religious progress are represented by figures that surround the "great white throne on which true Religion is seated,—these various forms being, in fact, so many false and distorted shadows of one and the same being. The Pontiffs are admirably given, with the thin

lips, malignant sneer of hard, cruel, scholastic intellectuality. About all of these cartoons there is a pervading atmosphere of German thought, purely abstract, and peopled by those heavy-limbed, unethereal, Albert-Dürer women, with furled robes, brooches, and pouches, who tenant the German Art-world. None of them are remarkable for severe, much less graceful, drawing; and the flow of line, though grand, bold, and firm, is never masterly and generally is heavy. The composition is good and always earnest and sincere,—but the subjects, incidents in the lives of Margraves, and miracles wrought by unknown saints or unknown nobles, are wanting in European interest. To judge from the sketches, the colour must be lurid and false. Of all the artist's creations we prefer the scenes in which the Nixe, or wood spirit, a semi-nude nymph who leads a fawn, decoys the shepherds, who are unable to resist the allurements of her voice, and follow her to death in the interior of the forests. Undine and the Heldenbuch, the Nibelungen-Lied and Uhland, rise before our eyes, and imagination completes what the painter has but hinted. There is no doubt that in the pure abstractions of fancy the German artists surpass our own, who are always trammelled either by a desire to show knowledge or display their power of imitation.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—FRIDAY NEXT, February 23, Mendelssohn's 'ST. PAUL.' Vocalists: Madame Clara Novello, Mrs. Locke, Mr. Sims Reeves, and Mr. Weiss.—Tickets, 3*s.*, 5*s.*, and 10*s.* 6*d.*, at the Society's Office, No. 6, in Exeter Hall.

NEW PUBLICATIONS.

L'Etoile du Nord. Comic Opera in Three Acts. The Words by M. Scribe. The Music by G. Meyerbeer. Arranged for Piano and Voices by A. de Garaude. (Paris, Brandus & Co.)—A few years ago [*vide Nos.* 1199 and 1201] an attempt was made in the *Athenæum* to define some characteristics of M. Meyerbeer as a musical composer,—the publication of his 'Forty Melodies' affording the occasion. Of the general remarks which were then offered, we have not a word to alter when we deal with the published music of 'L'Etoile du Nord.' Neither have we much to add,—since, though this new opera is a complete specimen of its master's peculiarities, we should be at a loss to mention one, whether of form, modulation, or treatment, of which examples do not exist in 'Robert,' 'Les Huguenots,' or 'Le Prophète.' M. Meyerbeer proves himself, in 'L'Etoile,' careful and constant, rather than rich and various;—he becomes, work by work, more ingenious, more elaborate,—but not more original or masterly. On the other hand, a growth in mannerism is evinced:—and on this, as it involves the development or decay of Truth in Art, a word or two may be said at the present period.

How far such truth can be insured by direct reality is the question, and one which is fermenting among musicians of the most opposite schools just now. On one side, Herr Wagner, fierce in his denunciation of all forms hitherto accepted, maintains that every emotion of tragic passion can be rendered in sounds almost as closely as the colours of flowers can be imitated on canvas by a Van Huysum or a Van Os; and in his operas cares for little except outcry for the voice,—giving to his orchestra such small beauty as he vowsafes to his work out of condescension to the frivolity of a generation that will not utterly dispense with beauty. On the other hand, M. Meyerbeer commits the literal interpretation of his stage-business to music with as close a persistence as if that were Music's sole function. He sets "*glou, glou,*" to accompany the action of drinkers,—"*tr.r.r.um*" and "*plan, plan,*" to represent what drummers do,—"*tic-tac*" to show how hearts beat,—a quantity of "*Oh's*" and "*Ah's*" and "*Fal-lal-lal's*,"—the like of which we do not recollect in any former work. Nay, in the first *finale*, the tuning-up of village scrapers, at a dance, is represented and methodized with Chinese exactness. All this desperately literal work seems to us a mistake,—a mistake as indicative of poverty and prosaic fancy as the formless

ravings of the young Germans. But in Art, we suspect, as in Philosophy, Materialism and Transcendentalism have some points of agreement which are strangely coincident in spirit, be the jargon in which they are expressed what it may.

Having indicated the peculiar form which the modern tendencies have taken in M. Meyerbeer's music,—having pointed out how, under the mistaken view of forcing his art into a precision of utterance totally alien to its real nature, he has indulged in conceits and puerilities beneath the adoption of one so highly gifted—we must leave the question to be argued out and illustrated in detail,—since, for the moment, it is more important to amateurs and opera-goers to be informed what they ought to hear on the occasion of the performance of the work in its English dress.

The Introduction, divided into five portions,—with the frivolous yet needlessly difficult air for *Danilowitz*—the angry and harsh phrase marking the character of *Peter*—and the vigorous little chorus of quarrel, 'Vengeance,' in which one of its composer's peculiarities of rhythm is employed with happy effect—is spirited, though fragmentary. There is no need to dwell on *Catherine's* first song, as an ingenious specimen of talking melody—on *Prascovia's* hasty entry, where fright is cleverly put into the music, by the breaking up of the phrases and the use of uncouth intervals—on *Gritzenko's* rude Cossack air with chorus—on *Catherine's* tambourine song, with dance and chorus,—since they are among the simpler and easier portions of the work.—No. 7, 'De quelle ville,' the duett betwixt *Catherine* and *Peter*, is one of M. Meyerbeer's happiest duetts of *mezzo-carattere*. The opening dialogue is bound together with a flow and consistency not common to the composer, by the elegant phrases given to the orchestra. In the movement *a due*, 'Sa voix noble,' the contrast of the characters is capably kept up by the different rhythms with their different accents given to the *soprano* and bass voice. The difficulty of this duett is great, owing to the mixture of expression and brilliancy demanded from both singers, and the trials to which they are exposed by the incessant and excessive modulation which M. Meyerbeer has here repeated, after having employed the same form in earlier works. We pass the *notturno* for *Catherine* and *Prascovia*, which also demands exquisite vocalization, to come to the first *finale*. The odd opening of this has been spoken of, and also the introduction of the four choruses of drinkers, musicians, bridal guests, and soldiers, at first separate, afterwards used simultaneously. In this *finale*, however curious be such admixture as an example of complication, the portion most really original is the song of *Prascovia*, with its chiming and responsive chorus of female voices, heightened to piquancy by the introduction of the bass (*Master Reinhold*) in the second verse. In the air, with chorus, for *Catherine*, which closes the act, the opening *cantabile*, as a fine broad melody, is welcome to the ear, after the large amount of florid and *staccato* passages which has preceded it. The effect of the following *barcarolle* does not depend so much on the music itself as on the delicate execution of the principal singer, and the gradual *diminuendo* of the semi-chorus by which she is accompanied. Till we come to the *coda*, with its caprices of interval and its mystifications of *tempo*, demanding the nicest management, we have phrases and passages daintily set and coquettishly garnished, of trite and familiar quality.

In the foregoing it might be thought that there is enough of contrivance and resource employed to weave together passages not very precious, and to disguise meagre first ideas; but, in the second act, commencing from the tent scene, intricacy and complication are carried further, step by step, to a point of climax, which it would be hard for M. Meyerbeer's self to overpass. The four soldiers' tunes (including the *ballet*) which open this act are in their composer's most natural vein of frank melody,—and this implies, also, that spice of common-place, not to say vulgarity, from which M. Meyerbeer's thoughts are rarely exempt when he wishes to be tuneable. But in the tent scene he makes himself full amends, if too familiar he has been. The *trio* No. 12,—as a

piece of music to be sung and acted, where neither liberty of *tempo*, change of passage, nor suppression of ornament is permissible, nor evasion of crudity is possible,—is perhaps the most difficult stage *terzetto* in existence. But how charming is the *andantino grazioso*, 'Que se passe-t-il,' given to *Catherine*, in which M. Meyerbeer throws away one of his best inspirations for the sake merely of a few bars of dramatic life!—and how jovial is *Peter's* toast, 'Vois en flots de rubis,' with its tipsy trills and its hiccupping final cadence, which are yet, it must be remembered, only at the opening of a long Bacchanalian scene,—for next come the *Vivandières* and their duett, which is as impudent as it is clever, and as musical as it is clever and impudent [vide *Athen.* No. 1397]. Following still the Paris score, the *couplets* marked B,—with the *coda* in quatuor, the quintett 'Cessez ce badinage' (which demands the neatest possible handling from all concerned in it), and the following sestet and the melo-dramatic music, during which *Peter* sobers himself,—may be pointed to as unquestionably the strongest and most individual portions of the opera. There is not a bar of this intricate scene in which M. Meyerbeer does not exhibit force, quickness of intelligence and knowledge of effect. His ideas have been exceeded in freshness,—some of his devices have been indicated by Signor Rossini,—he has already used the progressions which he once again employs here. It is further true, that the difficulty of the music keeps pace with the hazard of the situation, and that deficiency in vocal skill, or exuberance in action, would make of the whole an unmeaning and repulsive piece of confusion. Still, considering this scene, in its right point of view, as a piece of stage-effect broad in outline, yet as minute in its details as if Netscher or Van Aalst had touched the canvas, it may be referred to as a wonderful piece of art employed in the combination of fragments, more perfect than the most highly-finished examples of Meyerbeerism in 'Les Huguenots' or 'Le Prophète.'

We have dwelt on this scene because it contains, to our thinking, the real vitality and strength of 'L'Étoile.' Viewed in musical comparison with it, the much-talked-of military *finale* which closes Act the Second, is a clumsy and mean piece of head-work, in which the composer has resolved to drag himself through the self-propounded difficulty of dressing up the *Dessauer* March in as many uniforms at once as was possible. The leading phrase of the 'Serment,' 'Dieu, protecteur,' is clearly an after-contrivance,—an example of rhythm contrived to be fitted as accompaniment to a tune already made. The 'Pas Redoublé' in D minor,—the 'Fanfare' of the Tartar regiment in E flat,—are no less evidently so many bars of a given length, in which, by the omission of certain given notes, discrepancies of key could be got over,—so that when they are combined, whereas a most difficult feat appears to be achieved, it is only evaded. Neither 'quick step' nor 'flourish,' any more than *Peter's* prayer, has strength or feature which would enable it to go alone. The 'grand crash' is always in prospect; and, when this arrives, it proves less grand than it would have been, supposing the master had combined in it four real themes, and not three lengths of exercise-work, with one rather trite tune. The effect is not worth the enormous difficulties which must be mastered in the execution.

The same remark applies to *Catherine's scena*, with its long *agitato*, its snatches of chorus, and its final *bravura*, with double echo of flutes, which makes the great effect of the third act, and closes the opera. This third act, however, also includes a delicious instrumental *entr'acte*—the *Romance* of *Peter*, 'O jours heureux'—exhibiting some attractive niceties of instrumentation;—and *Prascovia's* dainty little song, 'Sur son bras,' to which the Russian colour (always successfully used by M. Meyerbeer when he has bethought himself of it) imparts a certain wild freshness.—The duett betwixt *George* and *Prascovia*, 'Fusille,' is poorer:—a slight repetition of better examples to be found in operas by M. Adam and by Hérold.

Such are some of the important points and characteristic features of M. Meyerbeer's latest musi-

cal drama; the mention of which, in conjunction with former notices, may possibly render some slight service to those attending on its first performance in England.

NEW PHILHARMONIC SOCIETY.—We have so frequently pointed out Cherubini's Service-Music as one of the last mines of classical treasure yet unworked in England, that we had, proportionately, great pleasure in making acquaintance with his Fourth Mass in C major, on Wednesday evening. The performance was only moderately good, for the voice of one of the principal *solis* was so sadly out of tune as to cast doubt on the composer's intentions in some of the delicate passages. Then, though the orchestra was numerous and produced a fine body of sound, Dr. Wyld's chorus was generally timid in attack and dull in the quality of its tone; while he himself was so anxiously occupied in dragging the work through (after the *Old Philharmonic* fashion of other days), as to have no coolness nor experience to spare for expression, or even for a correct rendering of *pianos* and *fortes*. Still, it is a boon of high value to hear any rendering of such a glorious work as this Mass. In style and scale, it would befit the most gorgeous of those Italian churches where stateliness, rather than severity, is the characteristic of the architecture. There is not a grim, harsh, or Gothic bar from first to last. It is a Mass for Feast, not for Fast days,—music to accompany some mighty and noble pageant:—brilliant, though sacred; grave, yet never gloomy; beautiful, without mundane allurements; grand, with its grandeur not awful. But, was this Mass one inspiration?—or may it have been commenced in one mood and concluded in another? Superb as the first three movements are, there are peculiarities in the entire work which suggest our question. The distribution of power seems arbitrary, if we are to suppose the entire Service the result of one plan. It is a Mass for five-part chorus, with *solis*. Two of the latter voices are used in the 'Kyrie,'—eight in the 'Gloria,'—five in the 'Credo,'—one in the first offertory (the jubilant 'Laudate'),—two in the second offertory,—but none in 'Sanctus,' 'Benedictus,' 'Agnus,' or 'Dona.' One would gladly know some reason for an apportionment so fanciful,—and this, possibly, may be found in the circumstances for which this Mass was produced.

There can have been no wavering, however, in Cherubini's idea of what his orchestra was to be. His mellowness of colour, habitually insured by consummate management of the stringed quartet, is here heightened, by extra parts for violoncellos;—as though the master, desirous of giving this work all possible grandeur of stature, had resolved not to leave it, like *Nebuchadnezzar's* image, with a head of brass and feet of clay,—still less, a creature having head and feet only, without a Herculean allowance of rib and spine—of thews and sinews. Such is the admirable fullness and just proportion, that we feel its span not to be preternaturally colossal. It is neither weak in frame, as giants are sometimes; nor small in seeming, as vast constructions may be made to look by a bad adjustment of details. A like effect, as we have noticed, was accomplished by Beethoven in the 'Missa Solennis,' where also, the composer's desire may have been to seem majestic by towering. Like Beethoven, moreover, Cherubini, let his orchestra be ever so full, never (like Dr. Spohr) cloy by its fullness. He gathered up power and poured forth riches, but he never produced satiety.

We have dwelt on this harmonious magnificence not merely because its secret is disregarded by many accumulators of our day, but because to us it was the arresting quality of this Mass. There are details in abundance to be noticed:—the picturesqueness with which the composition is opened by a single voice, almost as freely used as if the phrase were recitative or *cadenza*,—the entrancing combinations commencing the 'Gloria,'—the curiously bold 'Qui tollis,' rising to a passion which is hardly supplicatory in the 'Fugate,'—the short subject chosen for the 'Amen' fugue in the 'Gloria' (a phrase hardly worth fugal elaboration when Cherubini was to be artificer),—the noble melody for the *solis* voices at the close of the 'Credo,'

sweet as a strain of Mozart's, though in form less precisely squared;—but these points can be only indicated. The 'Laudate,' or first offertory, is not to be overlooked, as a specimen of pompous brilliancy, in which Cherubini's treatment of the stringed instruments is especially to be studied; nor the close of the 'Dona,' which recalls to us the close of Beethoven's Mass in C by the reiteration of the peaceful idea. Other notes and comments must be reserved for such occasions as other performances offer.

Beyond recording that Herr Ernst appeared as solo player, we need say nothing more concerning the music at this first Concert. The jumble of other matters mixed up with the music could only be done justice to by an enthusiast as miscellaneous as *Win Jenkins*, when she wrote how she had seen "the Queen, the piebald ass, the hillyphants, and the rest of the royal family." We are grateful—in spite of its mistaken and misleading course of proceeding—to the Society which has allowed us to hear such an unfamiliar work as Cherubini's Fourth Mass.

CHAMBER MUSIC.—Mr. Ella's first *Winter Evening* on Wednesday last, introduced a stringed quartet by Mozart, led by Herr Ernst, which was new to most hearers, ourselves among the number, with a slow movement in Mozart's lusciously melodious style, and a well composed and effective MS. Quintet for pianoforte with wind instruments by Herr Pauer. Since the Quintets by Beethoven and Dr. Spohr, we do not recollect so meritorious a modern composition in this form. The character and contrast of the instruments have been well studied: and the ideas are good, particularly those of the slow movement, which are skilfully treated. But the first part of the *Menuetto* should be rewritten, as it is unconsciously a parody in a minor key of the *Menuetto* in Mozart's E flat Symphony. Herr Pauer was playing beautifully; with something of new refinement added to his unhesitating brilliancy of finger.

DRURY LANE.—On Monday Mr. Douglas Jerrold's excellent drama of 'The Bride of Ludgate' was successfully reproduced. A new farce succeeded; a piece full of bustle, but not choice in its subject or nice in its treatment. 'The Writing on the Shutters' is its title; and the ominous words announce the closing of a fraudulent betting-office, in a village into which a betting-gang, headed by an effeminate captain, one *Loviduck*, have intruded themselves, and who seek to find or make victims by dropping letters and other similar expedients—vernacularly, "dodges." But proceedings are interrupted by accidents. One *Jack Cocker* (Mr. Wild), in pursuit of a fugitive couple, suspects *Loviduck* of being the bride, and has him placed *hors de combat*. Meanwhile, as

the pleasure is as great,
In being cheated as to cheat,

all the parties in the run-away wedding have been pleased, for they have all been cheated,—and, under the influence of inevitable feelings, they become accordingly reconciled. The farce has the ordinary merit of such pieces; and the temporary success it has achieved is fairly due to some vivacity in the action and some adroitness in the actors.

ADELPHI.—The title of the new English version of Auber's ballet-opera—produced a score of years since in London as 'The Maid of Cashmere'—is 'The Unknown and the Bayadère.' To Miss Woolgar is confided the impersonation of the pilgrim-deity, who, by his patriotism, incurs the resentment of "the powers that be," and secures the love of the innocent Bayadère. Mdlle. Maraquita was on Monday the *Zoloe*, whose devotion was so severely tried by the wandering *Shiva*, and whose pantomimic gestures were some of the most perfect within our remembrance. This charming and elegant dancer, we perceive by the bills, alternates the part with Mdlle. Benoni; who, on that evening, displayed her rival poetry of motion, as *Fatma*, the companion of the maid of Cashmere. Each of them, to win the regards of *Shiva*, competed in her especial *pas seul* with spirit and grace;—poor *Zoloe* still excelling, but winning no apparent

attention from the divine stranger, who bestows his admiration and the crown of merit on her delighted attendant. Mdlle. Maraquita's jealousy was prettily expressed; but the triumph of love, stronger than the death to which she is doomed by her fidelity, was still more admirably suggested. Not having witnessed the performance a second time, we cannot say how Mdlle. Benoni succeeded in the same situations, but apprehend that her form is not so well suited to give the same piquant expression to them, though always acquitting herself well. The eccentric *Vizier* was effectively acted and sung by Mr. Paul Bedford, but his exaggerations are too monstrous to command unqualified praise. Hope of reform, however, is now out of the question; his immense absurdities, though outrageous to taste, have become familiar to the public,—who, having "endured" and "pitied," have at length "embraced" the vices of his style, as characteristics of the man. The scenic decorations of the piece are, with the costumes, new, beautiful, and even grand;—at least the concluding scene of the apotheosis is so. In its form as a ballet, we welcome this piece to the Adelphi boards; the ideality of its subject, and the artistic grace of its musical and picturesque accessories, have a tendency to refine the perceptions of an audience only too prone to admire the grotesque or vulgar.

OLYMPIC.—The little drama of 'The Lucky Friday' has been revived at this theatre. The French man of business and confidential clerk, suddenly thrown into a condition of moral anguish, and delivered from it by force of the new impetus which it supplies to intellectual exertion, so that he fairly outwits fortune and saves his character, is represented as finely and truly as ever by Mr. Wigan.

MUSICAL AND DRAMATIC GOSSIP.—Miss Katharine Hayes appears to carry her own California round the world with her; since the Australian papers inform us that she has reaped a harvest of many thousand pounds from less than half-a-score of concerts given at Sydney,—and, in addition, costly presents also of "plate and jewels."—According to "last advices," she has arrived at Calcutta, where few singers of any repute have been heard since the days of Mr. and Mrs. Lacy.

Among operatic novelties—and old works found as good as new—just produced in Paris, must be mentioned the revival, at the *Théâtre Lyrique*, of 'Robin de Bois,'—M. Castil-Blaze's adaptation of 'Der Freischütz,'—A one-act opera by M. Grisar, 'Le Chien du Jardinier,' just given at the *Opéra Comique*, is a more legitimate novelty. —A new three-act opera, by M. A. Thomas, is in rehearsal at the same theatre, in which the principal singers are to be Madame Miolan-Carvalho and M. Battaille. —At the *Grand Opéra*, a Mdlle. Ribault, pupil of the *Conservatoire*, and credited as possessor of a fine voice, is engaged for four years. —Mdlle. Cruvelli is shortly to sing the heroine's part in 'La Juive,' having, till now, made little real effect there, even in 'Les Huguenots.' A thoroughly bad time seems to have set in for this theatre, though perhaps not worse than the period in which false execution was transformed and stagnation vivified by the unexpected apparition and influence of Signor Rossini.

It should have been observed by us last week, that though Signor Pacini's 'Gli Arabi' be new to Paris, the opera was tried in London in 1831 or 2, with Mdlle. Giuditta Grisi (elder sister to Madame Grisi) and Madame Rosa Mariani as principal singers. Here the opera failed to please. It is almost as long since Auber's 'Le Dieu et la Bayadère'—which was produced anew at the Adelphi Theatre the other evening—figured on the English stage as 'The Maid of Cashmere.' Surely the revival of two such works, neither of which won any extraordinary success when it was originally produced, tells a tale little creditable to modern opera composers.

Foreign journals mention a new pianist, Herr Egghard, who makes his effect and assumes his speciality, not by playing the compositions

of Bach, Mozart, Beethoven, or even the music of Dr. Schumann, but, by interpreting M. Alexandre Dumas, Madame Dudevant, Herr Heine, and others,—or who, to describe his performance more exactly, converts his pianoforte (credulity willing) into accompaniment of the contents of a circulating library. Shall we next have a series of pictures painted from Beethoven's Symphonies?—shall we have a new 'Whole Duty of Man,' written as laid down in Bach's "well-tempered *Clavier*"? Such foolish confusions among the arts find their defenders with those who fancy that they would spiritualize connoisseurship, forgetting that every revelation has its own language.—But there are odder musicians than Herr Egghard about the world, if we are to judge from advertisements,—among others, for instance, that of M. Gustave Pellereau, who calls himself a pianist-violinist, and who, of his single self—if we are to believe the *Gazette Musicale* of Paris—executes grand duets for the piano and violin, of his own composition. It might have been hoped that this duality had found its last expression in the French Lady, who a year or two since, by playing on the piano and seraphine at once, made herself so oppressive in London; but it seems as if we were at the beginning, not at the end, of quackery in music.—Let us turn to more encouraging concert-news; and announce, on the authority of the *Gazette Musicale*, the warm welcome given at a concert of the "*Société des Jeunes Artistes*" to some extracts from an unfinished Symphony by M. Gounod. Why "extracts" from an unfinished work should be given, it is not easy to conceive; but valuing their composer as we do, we are glad to observe any sign of his breaking ground in more fields of musical invention than one. While on the subject of Parisian concert-music, let us once again say, that we should be glad to hear some of the orchestral music by M. Gouvy, which has been described to us, on competent testimony, as well made, agreeable, and not mystical.

The German dramatists, to judge from the reports in the papers, are busy at work at present. Herr Alfred Meissner has written a tragedy, 'Der Prätendent von York,' ('The Pretender of York,') which was recently performed at Weimar, and is highly spoken of in the *Augsburger Allgemeine Zeitung*. Herr Berthold Auerbach, also, has finished a drama, 'Der Wahlbruder,' ('The Brother by Choice,') and Herr Joseph Rank (the author of some volumes of 'Böhmische Dorfschichten') is coming forth with a new piece, 'Der Herzog von Athen,' ('The Duke of Athens,') the subject of which is taken from the history of Florence.—It is a curious fact, that ever since the accession of the present King of Prussia in 1840, almost all the younger German poets (we name only, for example's sake, Herren Gutzkow, Hebbel, Prutz, Dingelstedt, Mosen, Friedrich Halm, Bauernfeld, Geibel, Paul Heyse, Otto Müller) have tried their strength on the drama,—in the noble and praiseworthy intention, it must be understood, to regenerate this long-neglected branch of literature, and to create in their country a truly national stage. However, in proportion to the time and talent wasted, how little has been attained by all these well-meant exertions! These tragedies and comedies come and vanish like so many shooting stars; proclaimed with great pomp, they are no sooner seen than forgotten; none of them, we believe, has ever become a permanent favourite with the public, and "Der Stube, den Schiller leer gelassen," ("The Chair which Schiller left vacant,") is still waiting for its successful new occupant. And half a century has elapsed since Schiller died! What is the reason of so strange a phenomenon? Is it the fault of the poets, of the actors, or of the public? This is a question difficult to answer. At all events, it will be a fruitless attempt to produce a great national drama in Germany, as long as the Germans are no great nation. A country where the stage lies under so many restrictions can hardly be expected to possess a stage at all. The years of 1848 and 1849, though they would have given a larger scope to free expression, were, on the other hand, too tumultuous for the quiet labours of the poet. So

they, too, passed away without any happy result to the German drama.

M. Lecomte's "Arabian Night" concerning Mdlle. Rachel's American engagement has been denounced as a fabrication by M. Raphael Félix, brother to the Lady, and manager of her tours. M. Raphael Félix has addressed to the journals a letter declaring that the contract, the embalment, and all the other incidents of "the wondrous tale," are only so many falsehoods.—A new comedy by M. Augier, entitled 'Ceinture Dorée,' has been produced at the *Gymnase*.

MISCELLANEA

Recovery of Waste Places.—A Committee of gentlemen connected with Bloomsbury Chapel has, for several years, been at work in St. Giles's, with a view to remedy some of the evils existing in certain of its districts. A system of house-to-house visitation has been prosecuted with energy and perseverance; habits of personal cleanliness have been recommended; and urgent destitution has been relieved. Parents have been directed to the schools most suitable for their children; and many, both children and adults, have been aided in their desire to abandon vicious habits. Measures have also been adopted to substitute wholesome for immoral reading; and with a view still further to awaken the people of this district to a sense of their position, an unsectarian religious instructor has been provided. The Temperance Hall, King Street, Seven Dials, has been partly rented for meeting purposes,—and these efforts have been so far appreciated that the Committee have long desired to extend their operations. Their great want has been a suitable building in which, and from which, plans of usefulness might be carried out. This difficulty, however, is now overcome. The Swiss Protestant Church, situated in the Five Dials, having been vacated, has been taken, and adapted, at a cost of 160*l.*, as the Bloomsbury Mission Hall. On Tuesday evening last it was opened to the people,—the lowest class being specially invited. The meeting was convened for eight o'clock, and the Hall was crowded in every part. Mr. S. M. Peto presided, and, together with the Rev. W. Brock, of Bloomsbury Chapel, explained the origin and progress of the work in which the Committee are engaged, and cordially invited the people to make free use of the building in which they were assembled, assuring them that at all suitable times it would be open to them free of cost. Addresses were delivered by other members of the Committee, and it was announced that adult writing classes would be immediately commenced, and the free library extended. Arrangements have also been made for the delivery of interesting lectures, some with dissolving views. It was further stated, that as circumstances suggested, other measures of usefulness would be adopted. A resolution expressive of the feeling of the Meeting was submitted by Dr. Smith. Mr. Peto, in acknowledging a vote of thanks, said, that he had never yet delivered a lecture, but being at present released from parliamentary duties, he was tempted to do so, and his first should be given in that Hall, to the people of St. Giles's.

Antiquities of London.—The *Builder* of last week gives an interesting account of a visit to the old Norman crypt below the Chapter House of Westminster Abbey. The crypt is octagonal, throwing groins of great strength to each compartment, and supporting the floor above. There are also in the wall an altar, a piscina and an aumbry; but there are none of the usual iron rings for the suspension of lamps. This curious vault should be thrown open to the public.—Another fragment of old London promises soon to furnish subjects for antiquarians: we allude to a part of old London wall laid open by the alterations for the Milton Club in the City.

TO CORRESPONDENTS.—S. D.—B. T.—received.

J. G.—The passage in the *Athenæum* [No. 1424, p. 168, col. 2], which this Correspondent complains of as obscure should have been printed thus:—Mr. Disraeli, the eldest son of that "distinguished *literati* who complimented," &c.

MR. CHURCHILL'S PUBLICATIONS.

Euthrapeia; or, an Examination

of the PRINCIPLES of MEDICAL SCIENCE, including Research on the Nervous System. By ROBERT GARNER, Surgeon to the North Staffordshire Infirmary, &c. Illustrated with Engravings on Copper and Wood. 8vo. cloth, 8s.

On the Diseases of Children and

INFANTS at the BREAST, including the Hygiene and Physical Education of Young Children. Translated from the French of M. BOUCHUT, with Notes and Additions by PETER HINCKES BIRD, F.R.C.S. 8vo. cloth, 20s.

On some of the Developmental and

FUNCTIONAL RELATIONS of CERTAIN PORTIONS of the CRANIUM; selected by Dr. PAVY, from the Lectures on Anatomy delivered at Guy's Hospital. By JOHN HILTON, F.R.S. With Nine Plates. 8vo. cloth, 6s.

On Lateral Curvature of the Spine;

its Pathology and Treatment. By BERNARD E. BRODIE, M.D., Assistant-Surgeon to the Royal Orthopaedic Hospital. Post 8vo. cloth, with Plates, 3s.

A Disquisition on Certain Parts

and PROPERTIES of the BLOOD. By DAVID TOD, M.R.C.S. With Illustrative Woodcuts. 8vo. 10s. 6d.

On the Nature and Proximate Cause

of INSANITY. By JAMES GEORGE DAVEY, M.D., formerly of the County of Middlesex Lunatic Asylums at Hanwell and Colney Hatch. Post 8vo. cloth, 3s.

Epilepsy, and other Affections of

the NERVOUS SYSTEM which are marked by Tremor, Convulsions, or Spasm: their Pathology and Treatment. By CHAS. BLAND RADCLIFFE, M.D., Assistant-Physician to the Westminster Hospital. 8vo. cloth, 5s.

On Some Diseases of Women

ADMITTING of SURGICAL TREATMENT. By I. BAKER BROWN, F.R.C.S., Surgeon-Accoucheur to St. Mary's Hospital. 8vo. cloth, 10s. 6d.

Obstinate Ulcers and Cutaneous

ERUPTIONS on the LEG. By HENRY T. CHAPMAN, F.R.C.S. Second Edition, post 8vo. cloth, 3s. 6d.

On Rheumatism, Rheumatic Gout,

and SCIATICA: their Pathology, Symptoms, and Treatment. By H. W. FULLER, M.D. Cantab., Assistant-Physician to St. George's Hospital. 8vo. cloth, 12s. 6d.

On Paralysis, Disease of the Brain,

and other AFFECTIONS of the NERVOUS SYSTEM. By ROBERT B. TODD, M.D. F.R.S., Physician to King's College Hospital. Fcap. 8vo. cloth, 6s.

5. Russians at Home.
6. Railway Literature.
7. Our Foreign Policy.—Who is to Blame?
8. Our Epilogue on Affairs and Books.

London: Jackson & Walford, 18, St. Paul's Churchyard; and Simpkin, Marshall & Co. Stationers' Hall-court.

Fourth Edition, price 1s. cloth, (1s. 4d. by post).

A WORD to the WISE; or, Hints on the Current Improprieties of Expression in Writing and Speaking.
By PARRY GWYNNE.
"All who wish to mind their P's and Q's should consult this little volume."—*Gentleman's Magazine*.
"May be advantageously consulted by even the well-educated."—*Athenæum*.
Grant & Griffith, corner of St. Paul's Churchyard.

INTERESTING FIRST FRENCH BOOK FOR YOUNG CHILDREN.
Now ready, a New Edition of
LA BAGATELLE: Intended to introduce Children of Four or Five Years old to some Knowledge of the French Language. Entirely revised by MADAME N. L.; and embellished with Cuts. 18mo. 3s. bound.
London: Simpkin, Marshall & Co.

MR. MARRYAT'S NEW WORK ON CALIFORNIA.
With numerous Illustrations, on Wood and in Colours, from Drawings by the Author, in 8vo. price 21s.

**MOUNTAINS AND MOLEHILLS;
OR, RECOLLECTIONS OF A BURNT JOURNAL.**
By FRANK MARRYAT,
Author of *Borneo and the Eastern Archipelago*.

"Mr. Marryat possesses a rare love of adventure, and an admirable capacity for observation; and the multitudinous haps and mishaps of his travels are related with frank simplicity and zest."
Literary Gazette.

"The spirit and graphic descriptions of these pages might have disappeared in a diary.... We heartily commend Mr. Marryat's *Recollections*; and we should add, that their interest is very much enhanced by the introduction of no less than eight coloured drawings by the author."
The Field.

"Taken as a whole, the book is as good a sketch of Californian life, and gives us as fair an idea of the country and the people, as we remember to have met with. Moreover, there is such an air of truthfulness over everything he relates that the reader enters into all Mr. Marryat's adventures, and enjoys them with a gusto which a conviction of their reality could alone convey."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Complete in 1 vol. square crown 8vo. with Portrait and Vignette, 21s.; or bound in calf by Hayday, 30s.

**MR. NEWBY'S
NEW PUBLICATIONS.**
Now ready, in 3 vols. 42a.

**THE LITERARY LIFE AND CORRESPONDENCE
OF THE
COUNTESS OF BLESSINGTON.**
By R. MADDEN, Esq.
Author of 'Travels in the East,' 'Life of Savonarola,' &c.

"We may, with perfect truth, affirm, that during the last fifty years there has been no book of such peculiar interest to the literary and political world. It has contributions from every person of literary reputation—Byron, Sir E. Bulwer (who contributes an Original Poem), James, D'Israeli, Marryat, Savage Lander, Campbell, L.E.L., the Smiths, Shelley, Jekyll, Sir W. Gell, Jekyll, &c. &c.; as well as Letters from the most eminent Statesmen and Foreigners of distinction, the Duke of Wellington, Marquis Wellesley, Marquis Douro, Lords Lyndhurst, Brougham, Durham, Abinger, &c."—*Morning Post*.
"The book is rich in matter which must interest, and will furnish its quota of anecdote to the literary records of the first half of the century."—*Athenæum*.
"Since the Life of Haydon this is the most interesting biography which has been published. Dr. Madden knows how to make a book readable."—*Duncan's Advertiser*.
"This book will be found to answer expectation. It contains something about every one who has been anybody for the last quarter of a century, of either sex and all countries, from the Duke of Wellington to Lola Montes—from Brougham to Bonaparte—from 'Boz' to Rachel—from Charles Mathews to the Queen of England."—*Liverpool Albion*.
"A most interesting work."—*Birmingham Journal*.
"It is without exception the most valuable book of the last half-century."—*Tribune*.

In 3 vols. 31s. 6d.

MARRIED WOMEN.
By the AUTHOR of 'BROOMHILL.'

"Mr. Newby is indefatigable in his endeavours to produce novels of real worth; and those endeavours have been crowned with complete success. This book should be read by every married woman and every spinster—it will instruct by its moral, and deeply interest by its story."—*Herald*.

THE WARHAWK.
By the AUTHOR of 'THE TWO MIDSHIPMEN.'

"Mr. Newby commences the year with an admirable novel, 'The Warhawk'—a novel that will please all readers; and the author more firmly establishes his position as the successor of the late Capt. Marryat."—*Guardian*.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical focusing focal coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross presents lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 5 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.
A. Ross, 2, Featherstone-buildings, High Holborn.

THE IODIZED COLLODION, manufactured by J. B. HOCKIN & CO. 289, STRAND, LONDON, still remains unrivalled for *sensitiveness and density of Negative—it excels all others* in its keeping qualities and uniformity of construction. SPECIAL NOTICE.

TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD-OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1ST MARCH.

INSTITUTED 1831.

SCOTTISH EQUITABLE MUTUAL LIFE ASSURANCE SOCIETY.

Incorporated by Royal Charters and Special Act of Parliament.
Head Office—EDINBURGH, 26, St. Andrew-square.
LONDON—126, Bishopsgate-street, Cornhill.

THE SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY is an Institution regularly adapted to afford provision for Families. It was established in the year 1831, upon the principle of MUTUAL CONTRIBUTION, the Surplus or Profit being wholly divisible among the Members; and the Additions which have been made to Policies at the Periodical Investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its Members. The following Examples exhibit the Additions already made:—

A Policy for 1,000*l.*, opened in 1839, is now increased to 1,523*l.* 8*s.*

A Policy for 1,000*l.*, opened in 1836, is now increased to 1,421*l.* 10*s.*

A Policy for 1,000*l.*, opened in 1840, is now increased to 1,310*l.* 12*s.* 7*d.*

The Profits are ascertained and divided triennially among Policies of more than five years' duration.

The Annual Revenue is upwards of 150,000*l.*

The Amount of Assurances in force is upwards of Four Millions and a Quarter sterling.

The Amount paid to the Representatives of Deceased Members exceeds 600,000*l.* sterling.

The Total Amount of Vested Additions allocated to Policies exceeds 600,000*l.*

The Accumulated Fund is upwards of 830,000*l.*

Loans granted to Members to the extent of the office value of their Policies.

Copies of the Annual Report, Forms of Proposal and all information, may be had on application at any of the Society's Offices in Town or Country.

ROBERT CHRISTIE, Manager.

WILLIAM FINLAY, Secretary.

W. COOK, Agent, 126, Bishopsgate-street, London.

January, 1855.

A SUPPLEMENT

TO THE

IMPERIAL DICTIONARY:

ENGLISH, TECHNOLOGICAL, and SCIENTIFIC.

By JOHN OGILVIE, LL.D.

This work contains nearly TWENTY THOUSAND Words, Terms, and Significations in addition to those given in the Imperial Dictionary itself. It will form a valuable and useful addition to all other English Dictionaries, since few, if any, of the Words in this Supplement are to be found in them. A Vocabulary of Greek, Latin, and Scripture Proper Names, and a copious List of GEOGRAPHICAL NAMES, with the Pronunciation, will be appended. The whole, illustrated by three Hundred and Fifty Engravings on Wood, will be completed in Seven Parts, 2s. 6d. each.

THE IMPERIAL DICTIONARY:

ENGLISH, TECHNOLOGICAL, and SCIENTIFIC.

comprising all Words purely English, and the principal and most generally used Technical and Scientific Terms, together with their Etymologies and their Pronunciation, according to the best Authorities.

By JOHN OGILVIE, LL.D.

Illustrated by upwards of Two Thousand Engravings on Wood. 2 vols. imperial 8vo. 4l. 10s.

"We must honestly say that Dr. Ogilvie has not only produced the best English Dictionary that exists, but, so far as the actual state of knowledge permitted, has made some approach towards perfection."—*British Quarterly Review*.

BLACKIE & SON, Warwick-square, London; Glasgow and Edinburgh.

ESTABLISHED 1838.

VICTORIA LIFE ASSURANCE COMPANY, No. 18, KING WILLIAM-STREET, CITY.

At the recent Division of Profits the Assets were valued at £176,861

The Liabilities at £144,376

Leaving a Surplus for division of £32,485

The Reversionary Bonuses to the Assured averaged 53 per cent. on the amount of premiums paid by them.

The business of the Company embraces every description of risk connected with Life Assurance.

Loans continue to be made to Assurers on undoubted Personal or other Security.

WILLIAM RATRAY, Actuary.

SUN LIFE ASSURANCE SOCIETY, LONDON.

SHARE OF PROFIT INCREASED FROM ONE-HALF TO FOUR-FIFTHS.

Policies effected with this Society now will participate in FOUR-FIFTHS of the Net Profits of the Society, according to the conditions contained in the Society's Prospectus.

The Premiums required by this Society for insuring young lives are lower than in many other old-established offices, and Insurers are fully protected from all risk by an ample guarantee fund in addition to the accumulated funds derived from the investments of Premiums.

Policy Stamps paid by the Office.

Prospectuses may be obtained at the Office in Threadneedle-street, London, or of any of the Agents of the Society.

CHARLES HENRY LIDDERDALE, Actuary.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY.

The attention of the Public is particularly called to the terms of this Company for

LIFE INSURANCES,

And to the distinction which is made between Male and Female Lives.

No Charge for Stamps on Life Policies.

FIRE INSURANCES

Are also effected by this Company on the most moderate terms.

LONDON AGENTS:

Mr. William Pitman, Solicitor, 34, Great James-street, Bedford-row.

William R. Turner, Solicitor, 1, Field-court, Gray's Inn.

Agencies are also established at the various Towns in th Country.

W. L. NEWMAN, Actuary and Secretary, York.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the Westminster Fire Office,

27, King-street, Covent-garden, London.

Established 1836.

Trustees.

George Dodd, Esq.

Colonel W. H. Meyrick.

Joseph William Thrupp, Esq.

This Association offers to Assurers the security of an ample Guaranteed Capital, besides a large Fund invested in the Public Stocks and on Mortgages, being the accumulation of premiums already received on Assurances.

The rates of premium hereunder stated have been re-calculated, and are precisely adjusted to the risk of the Assurance undertaken by the Office, and are as low as is consistent with security.

Five-tenths of the profits of the Association are divided every Five Years among the holders of Policies in the participating class of Assurances.

The additions made to the sums assured by Policies which have participated in the three divisions of profit declared 1842, 1847, and 1852, have averaged one-half of the premiums paid on them.

The assured may proceed to and reside in any part of Europe, without giving notice to the Association, or paying any extra premium.

Every restrictive condition of assurance not absolutely necessary for the security of the Association has been withdrawn from the policies.

Loans advanced on the security of policies after two premiums have been paid on them.

Premiums may be paid Yearly, Half-yearly, or Quarterly.

Every information on the subject of Life Assurance can be obtained on application at the Office.

Annual Premiums for the Assurance of 100l. for the whole term of Life:—

Age.	With Profits.	Age.	Without Profits.
20	£1 17 4	30	£1 14 7
30	2 8 10	40	2 5 4
40	3 5 0	50	3 0 4
50	4 10 6	60	4 4 0
60	7 4 8		6 14 2

W. M. BROWN, Actuary.

Agents required in the principal Country Towns.

[ESTABLISHED 1841.]

MEDICAL, INVALID, and GENERAL LIFE OFFICE, 25, Pall Mall.

At the Thirtieth Annual Meeting, held on the 30th November, 1854, it was shown that there had been issued no less than 2,130 Policies, covering Assurances to the amount of 1,937,500l., and yielding Annual Premiums amounting to 50,110l.

By the Annual Report for 1853, it appeared that the number of Policies then in force was 3,434, insuring 1,337,500l., and yielding an Income of 53,207l.

The Number of Policies now in force is.....5,248

The Amount Insured is.....£2,298,027 8s. 2d.

The Income from Premiums is.. £100,510 9s. 1d.

Two Bonuses have been declared (in 1848 and 1853), adding nearly 2 per cent. per annum on the average to sums assured, and by which a Policy of 1,000l. issued in 1842 on a healthy life is now increased to 1,260l.

Profits divided every five years.

Assurances are effected at home or abroad on either healthy or diseased lives, at as moderate rates as the most recent data will allow.

Policies issued free of Stamp Duty, and every charge but the Premiums.

Agents wanted for vacant places.

Prospectuses, Forms of Proposal, and every other information, may be obtained of the Secretary at the Chief Office, or on application to any of the Society's Agents in the country.

F. G. P. NEISON, Actuary.

C. DOUGLAS SINGER, Secretary.

NOTICE.

SECURITY MUTUAL LIFE ASSURANCE SOCIETY, 3, Charles-street, St. James's-square, London:

An Advertisement, containing a full statement of the Society's original and most comprehensive plan, will appear in *THE TIMES* OF MONDAY NEXT, THE 13th INSTANT, comprising Assurance of Healthy Lives, Disposed Lives, Annuities on Healthy and Disposed Lives, Endowments, Accidental Death Assurance, Railway Passengers' Assurance, Marine Passengers' Assurance.

AGENCIES.—The Directors will be glad to communicate with gentlemen who wish to be connected with an Office that they can thoroughly recommend to their connections, and, feeling that, will act with energy. The Society pays no pains to assist its Agencies, and requires corresponding vigour. Good commercial references are required.

ESTABLISHED 1837.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

Empowered by Special Act of Parliament, 4 Vict. cap. 9. Major-General ALEXANDER, Blackheath Park, Chairman. Increasing Rates of Premium, for securing Loans or Debts. Half Premiums, only, required during the first seven years. Sum assured payable at sixty, or at death, if occurring previously.

BRITANNIA MUTUAL LIFE ASSOCIATION. Empowered by Her Majesty's Royal Letters Patent. Profits divided annually. Premiums computed for every three months' difference of age. Half Credit Policies—the unpaid half premiums liquidated out of the profits.

in connexion with Life Assurance on approved security.

ANNUAL PREMIUM

required for the Assurance of 1000, for the whole term of life:

Age.	Without Profits.	With Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 6 5
20	1 13 10	1 19 3	50	4 0 9	4 10 7
30	2 4 0	2 10 4	60	6 1 0	6 7 4

For Prospectuses and Forms of Proposal apply at Offices as above, or to any of the Company's Agents.

ARGUS LIFE ASSURANCE COMPANY,

39, THROGMORTON-STREET, BANK.
THOMAS FARNCOMB, Esq. Alderman, Chairman.
WILLIAM LEAF, Esq. Deputy-Chairman.

Richard E. Arden, Esq.
Edward Bates, Esq.
Thomas Camplin, Esq.
James Clift, Esq.

Physician—Dr. Jeffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, M.A. of King's College.

ADVANTAGES OF ASSURING WITH THIS COMPANY.
The premiums are on the lowest scale consistent with security.
The Assured are protected by an ample subscribed capital—an assurance fund of nearly 400,000, invested on mortgage and in the Government stocks—and an income of 80,000 a year.

Premiums to Assure £100.			Whole Term.	
Age.	One Year.	Seven Years.	With Profits.	Without Profits.
20	£0 17 8	£0 19 9	£1 15 10	£1 11 10

60	3 2 4	3 17 0	6 12 9	6 0 10

Mutual Branch.

Assurers on the Bonus system are entitled, at the end of five years, and afterwards annually, to participate in four-fifths, or 80 per cent. of the profits.

The profit assigned to each Policy can be added to the sum assured, applied in reduction of the annual premium, or be received in cash.

At the first division a return of 20 per cent. in cash on the premiums paid was declared; this will allow a reversionary increase, varying, according to age, from 66 to 28 per cent. on the premiums, or from 5 to 15 per cent. on the sum assured.

One-half of the "Whole Term" Premium may remain on credit as a debt upon the Policy at 5 per cent., or may be paid off at any time without notice.

Claims paid in one month after proofs have been approved.

No charge for Policy Stamps.

Medical Attendants paid for their reports.

Persons may proceed to or reside in any part of Europe or British North America without extra charge.

The Medical Officers attend every day at Throgmorton-street, at a quarter before 2 o'clock.

E. BATES, Resident Director.

LIFE DEPARTMENT.—Under the provisions of an Act of Parliament, this Company now offers to future Insurers Four-fifths of the Profits, with Quinquennial Division, or a Low Rate of Premium, without participation of Profits.

The next division of Profits will be declared in June, 1855, when all Participating Policies which shall have subsisted at least one year at Christmas, 1854, will be allowed to share in the Profits.

At the several past Divisions of Profits made by this Company, the Reversionary Bonuses added to the Policies from One-Half the Profits amounted, on an average of the different ages, to about One per Cent. per Annum on the sums insured, and the total Bonuses added at the four Septennial Divisions exceeded 700,000.

FOREIGN RISKS.—The Extra Premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their Lives at the Tabular Premiums may have their Lives insured at Extra Premiums.

LOANS granted on life policies to the extent of their values, provided such policies shall have been effected a sufficient time to have attained in each case a value not under 500.

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

Medical Fees paid by the Company, and no charge will be made for Policy Stamps.

FIRE DEPARTMENT.—Insurances effected upon every description of Property at the usual rates.

BOOKBINDING.—W. HOLMES, Practical

Bookbinder, 195, Oxford-street, London. Books bound in Morocco, Russia, or Calf, both plain and elegant, on the lowest terms. Gentlemen waited upon with pattern. Estimates given for large or small Libraries.—Address, 195, Oxford-street.

MORGAN'S PATENT PAPER AND MILL-

BOARD CUTTING-MACHINES.—SHARP, STEWART & CO. (sole Manufacturers) are now prepared to execute orders for the above Machines, in all sizes.—ATLAS WORKS, MANCHESTER.

GLASS SHADES, for the Preservation of all

Articles injured by Exposure.—At H. HETLEY'S Wholesale and Retail Warehouse, 13, Wigmore-street, Cavendish-square.—Estimates and Prices of all descriptions of Glass for glazing forwarded free.

No. 23, GALLERY OF PRECIOUS METALS.

MANUFACTORY,

16, Henrietta-street, Covent-garden, London.

FINE-ART MANUFACTURE.—ELKINGTON

& Co. respectfully solicit the attention of the Nobility, Gentry, Amateurs, Artists, and others interested in the advancement of British Art-Manufacture, to their increasing Collections of Statuettes, Vases, &c. published exclusively by them in Bronze, Silver, and Gold, from the Antique and select Works of Modern Artists.

Also to their Artistic and Decorative Plate, calculated for the Table, Sideboard, Library, Boudoir, &c.

These productions were honoured at the late Great Exhibition by an award of the 'Council Medal,' and may be obtained at either of the Establishments—

22, REGENT-STREET, } LONDON.
15, MORGATE-STREET, }
NEW-HALL-STREET, BIRMINGHAM.

PAINLESS TOOTH EXTRACTION, with-

out Chloroform.—Mr. WALTER BLUNDELL is at home daily, from Ten till Four, for Dental Operations under his new patent process.—23, New Broad-street, City.

TEETH.—MR. T. LUKYN'S SOLID

PATENT ENAMEL ARTIFICIAL TEETH will be found superior to all others. They will not wear out, become loose on their fastenings, or decay.—Author of the 'Essay on Improved French and American Modes of Fixing Teeth.' 2s. 6d.; by post, 3s. 4d. Upper George-street, Bryanston-square.

A NEW DISCOVERY IN TEETH.

MR. HOWARD, SURGEON-DENTIST, 52, FLEET-STREET, has introduced an ENTIRELY NEW DESCRIPTION of ARTIFICIAL TEETH, fixed without springs, wires, or ligatures. They so perfectly resemble the natural teeth as not to be distinguished from the originals by the closest observer; they will never change colour or decay, and will be found superior to any teeth ever before used. This method does not require the extraction of roots, or any painful operation, and will support and preserve teeth that are loose, and is guaranteed to restore articulation and mastication. Decayed teeth rendered sound and useful in mastication.

52, FLEET-STREET.—At home from Ten till Five.

HAIR WORK.—NOVELTY TO LADIES.

Hair Bracelets made without gold in a most artistic manner: prices from 3s. to 12s.—Hair Rings made and mounted in gold, from 3s.; Brooches ditto, 2s.—Guard Chains, from 4s. 6d. Made only by MILLNE & CO. 47, Cumberland-street, Edinburgh.—A List of Prices free on application.

CONSTANT EMPLOYMENT GUARAN-

TEED.—Ladies or Gentlemen are instructed in the New, Elegant, Ornamental Arts of WHITE, GOLD, or OAK DECORATION, for articles of general use. "THE ARTS TAUGHT" for One Guinea each, and constant employment "GUARANTEED," by which from 2l. to 3l. may be realized weekly. Ladies wishing to increase their incomes cannot pursue a more elegant, artistic, or pleasurable occupation. Private Lessons given at Ladies' own residences. Mr. LAWRENCE, who is an exhibitor at the Stationary Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites Ladies to see his unique specimens at the above public buildings, or at Mr. L.'s Show Rooms, from Ten till Five, 15, Percy-street, Bedford-square, near Rathbone-place. The Arts taught by correspondence.

CONTINUOUS EMPLOYMENT GUARAN-

TEED.—A limited number of LADIES WANTED IMMEDIATELY, to pursue the Fashionable and Lucrative Arts of "ILLUMINATING ON VELLUM" and "LITHOGRAPHY," for objects at the Crystal Palace, intended for publication. Art is taught for One Guinea, either personally or by correspondence, and by which a handsome income can be realized weekly.—Continuous employment guaranteed at the pupil's residence and private instruction.—The elegant specimens are on view daily, at Mons. LAURENCE'S residence, 14, Torrington-square, near Russell-square; Royal Polytechnic, &c. References to families of distinction. No knowledge of drawing necessary.

TO THE CLERGY, ARCHITECTS, AND

CHURCHWARDENS.
GILBERT J. FRENCH, BOLTON, Lancashire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., replies immediately to all inquiries addressed to him at Bolton, from which place only orders are executed. Private respectfully invites direct communications, as by far the most economical and satisfactory arrangement. Parcels free at the principal Railway Stations.

BERMUDA ARROWROOT, unremoved from

the tin cases in which it is shipped, weight, case exclusive, 2s. 10d., price 20s. Small quantities can be had at 2s. 6d. per lb. JAMES ELLIS, Homoeopathic Chemist, 112, Great Russell-street, Bloomsbury; and 82, Old Broad-street, City.

ROYAL BANK BUILDINGS,

LIVERPOOL, FEBRUARY 14, 1855.

(CIRCULAR.)

The great fluctuations in the price of Tea during the last two years have caused much confusion among Retail Dealers,—whilst there have been loud complaints by Families of the inferiority of the quality. These complaints too frequently have their origin in the indifference displayed in the Selection.—A STRIKING TESTIMONY to the contrary may be witnessed in our business,—which exhibits a large increase in the number of Families supplied—as well as in the quantity disposed of—being greatly in excess of any similar period during the last fifteen years.

The support which has been so liberally accorded to us affords the most conclusive proof of the importance and value of constancy—in the selection of suitable qualities—with an especial view to the satisfaction of Consumers.

Our inflexible regard to QUALITY has been the gradual means of opening to us a new feature of Trade—Foreign orders—from English Families residing abroad. Shippers of fine Teas will find our Stock to consist of suitable Packages (in bond) for Export—and the PRICES fixed upon a principle calculated to give continued satisfaction, and with every possible security—as to the QUALITY.

Notwithstanding the continuance of the Rebellion in some districts of the Chinese Empire, there is no sound apprehension of a short supply of Tea. The Imports this year will prove at least equal to those of the last year—the present estimate being upwards of 80,000,000 lb.—a tolerable scope will therefore be afforded for a constant and personal attention in the selection of proper qualities.

Having already obtained—by many years' experience—a large amount of distinguished patronage—Families may rest assured—of our continued candour in recommending only such descriptions as will please.

Your obliged and faithful Servants,

ROBT. ROBERTS & CO^{YS}

Tea and Coffee Salesmen,

LIVERPOOL.

N.B.—Other remarks and the present

List of Prices may be had on application.

CARRIAGES of the lightest Construction, best build and finish, at reduced prices.—For SALE, or to be let on Job, a large assortment of New and Second-hand CARRIAGES, comprising single and double seated Broughams, Clareses, Steppe Barouches, Pilemtans, Phaetons, &c.—PEAKE'S old-established Carriage Factory, 5, Lisle, or 11, Princes-street, Leicester-square.

CAMP LANTERNS for the CRIMEA, combining every recent improvement, adapted for burning the Patent Fuse Candles, which can be instantly ignited as a lucifer. These Lanterns are equally suitable for warehouses and others. Price 9s. each; Fusee Camp Candles, 1s. 3d. per box. Sold by all Lamp-Dealers; by S. CLARKE, 55, Albany-street, Regent's Park; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

PATENT FUSEE CARRIAGE CANDLES, can be instantly ignited as a lucifer, are of different lengths, adapted for journeys of two, three, or four hours, and of two thicknesses to fit all lamps.—Sold in Boxes, at 1s. 3d. per box, by all Grocers, Candle-Dealers, and Chemists; and wholesale by PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made so that they can be instantly affixed to the Dashboard of any Gig, Drag, or other description of Vehicle, and can be as quickly removed and used for a Hand-Lantern in the stable. They are adapted for burning the new Patent Fusee Carriage Candle. The appearance and effect are equal to that of a carriage lamp of superior finish, but the price being less than half, these lamps are placed within the reach of every person requiring a light when driving.—Price 12s. 6d. each, at any of the Lamp-Dealers; and wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by the Patentee, S. CLARKE, 55, Albany-street, Regent's Park, London.

PURE FRENCH COLZA OIL, 4s. 9d. per gallon.—Messrs. LEMAIRE & Co. Manufacturers, Paris.—Sole Depot in England, the London Soap and Candle Company, 76, New Bond-street.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON & Co., 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this Grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel. Prospectuses, with Testimonials, sent on application.

LOOKING-GLASS, CARVING and GILDING, and INTERIOR DECORATING MANUFACTORY (established 1822)—CHARLES NOSOTTI, 398 and 399, Oxford-street. This Establishment contains the most extensive assortment of LOOKING-GLASSES and GILT DECORATIONS in every variety of style. The taste and superiority of workmanship, and the crystal-like colour of the glass, insure the patronage of those who may honour the Show Rooms with a visit. A Book of Designs forwarded free on receipt of six stamps for postage. Estimates free of charge. Second-hand Glasses always on hand. 398, 399, Oxford-street.

EASY CHAIRS, CHAISES LONGUES, SETTEES, COUCHES, CONVERSATION SOFAS, &c. &c., of the most elegant and luxurious forms, stuffed by French, German, and English Workmen. Persons Furnishing before deciding elsewhere should visit these Extensive NEW GALLERIES and SHOW ROOMS to inspect the immense stock, comprising all the requisites to completely furnish every class of House in the most fashionable style, on the most reasonable terms,—the whole being manufactured by first-rate workmen of the best seasoned materials. A written warranty for twelve months is given; and as the prices are attached in plain figures, parties can make their own calculations, and at once perceive the great advantages offered at this Establishment.—DRUCE & CO., Upholsters, Cabinet, Furniture, and Bedding Manufacturers, House and Estate Agents, 68, 69, and 70, BAKER-STREET, PORTMAN-SQUARE.—N.B. Patentees of the Royal Magnetic Paper Turner. See Court Circular, July 17.—Elder Down Quilts in great variety.

HOT AIR, Gas, Vesta, Joyce's STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, &c., the like, being at the season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of Register and other Stoves, Fenders and Kitchen Ranges, is the largest in existence.

THE PERFECT SUBSTITUTE FOR SILVER.—The REAL NICKEL SILVER, introduced 20 years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs. Elkington & Co., is better than any comparison; the best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

INFANTS' NEW FEEDING BOTTLES.—From the *Lancet*:—"We have seldom seen anything so beautiful as the nursing bottles introduced by Mr. Elm, of Oxford-street. They are adapted to milk, biscuits, and all kinds of food; and, whether for weaning, rearing by hand, or occasional feeding, are quite unrivalled."—BENJAMIN ELAM, 196, Oxford-street. The bottle and mouthpiece are stamped with my name and address.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession as an excellent remedy for Acidities, Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient it is admirably adapted for delicate Females, particularly during pregnancy; and it promotes the Food of Infants from functional derangement. Combined with the AGICULATED LEMON SYRUP, it forms an Effervescent Aperient Draught, which is highly agreeable and efficacious.—Prepared by DINNEFORD & CO., Dispensing Chemists, (and General Agents for the improved Horse Hair Gloves and Belts), 172, New Bond-street, London, and sold by all respectable Chemists throughout the Empire.

METCALFE & CO.'S NEW PATTERN TOOTH BRUSH & PENETRATING HAIR BRUSHES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is famous for the hairs not coming loose, &c. An improved Clothes Brush, incapable of injuring the finest nap. Penetrating Hair Brushes, with the durable unbroken Russian bristles. Flesh Brushes of improved graduated and powerful friction. Velvet Brushes, which act in the most successful manner. Smyrna Sponges.—By means of direct importations, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at METCALFE, BINGLEY, & Co. Establishment, 130 B, Oxford-street, one door from Holles-street. Caution.—Beware of the words "From Metcalfe's," adopted by some houses. METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

VIOLETS. H. BREIDENBACH, Distiller of Flowers and Eau de Cologne to the Queen, has now in great perfection several EXTRACTS of that favourite flower the WOOD VIOLET. It has a lasting odour, and will not stain the handkerchiefs and delicate tendresses evermore. Violet Sachet Powder, and several toilet preparations of the same flower equally fragrant. 157 B, New Bond-street, facing Redmayne's.

DECORATION OF THE HEAD.—The admirable taste displayed in the *Head Dresses* of some of our leading belles, who are no less indebted to art than to nature for their superiority, may be imitated, but never equalled, without the *modest* to work upon. The indispensable requisite is a GOOD HEAD OF HAIR. This, the skilful artist may embellish; but the lank, weak, and thinly-scattered locks he laboriously and vainly attempts to arrange in a manner befitting the requirements of the fashionable circles. For this, the Hair must be nourished and invigorated, and the receding tendencies overcome. *Dr. Bridg's Balm of Columbia* is the only preparation, truly efficacious, without being in the slightest degree injurious. By its frequent use the Hair is prevented from turning grey, is improved in appearance, strengthened, and receives, by frequent application, that beautiful gloss and luxuriance which so greatly adds to the grace and dignity of the human form. Price 3s. 6d., 6s., and 11s. per Bottle; no other prices are genuine. Ask for DR. BRIDG'S BALM, 13, Wellington-street North, Strand, London. Sold by all respectable Chemists, Perfumers and Stationers.

DO YOU WANT LUXURIANT HAIR, WHISKERS, &c.?—No other compound for the Hair has maintained such an enduring celebrity as EMIL DEAN'S CRINÉLINE. It is guaranteed to produce Whiskers, Moustachios, Eyebrows, &c. in a few weeks, and restore the Hair in baldness, from whatever cause, strengthen it when weak, prevent its falling off, and effectually check greyness in all its stages. For the nursery, Dr. Wilson says, it is unrivalled.—Price 2s. per Bottle (elegantly perfumed), sent post free on receipt of 2d. penny-postage stamps, by MISS DEAN, 37A, Manchester-street, Gray's Inn-road, London. Sold by every Chemist in the Kingdom. "In one fortnight it produced a beautiful set of moustachios."—H. Adams.—"It has prevented my hair falling off."—J. Hickson.—"It has quite checked the greyness that was coming on."—Mrs. Elder.

BEAUTIFUL HAIR, WHISKERS, &c., are INVARIABLY PRODUCED IN TWO OR THREE WEEKS by COUPELLE'S CELEBRATED CRINUTRIAR, which is universally acknowledged as the only preparation to be really depended upon for the unfailling production of Hair, as also checking Greyness, Baldness, &c., and rendering the Hair luxuriant, curly, and glossy.—Mr. Williams, 8, Louth-street, Liverpool. "I can now show as fine a head of hair as any person, solely from using your Crinutriar."—Nathan Craven, Liverpool Barracks, Ireland. "Through using your Crinutriar, I have an excellent Moustache, which I had before despaired of."—Mrs. Carter, Panbourn, Berks. "My head, which was quite bald, is now covered with new hair."—Price 2s. per packet, through all Chemists and Perfumers; or sent post free for 2d. penny stamps, by ROSALIE COUPELLE, 69, Castle-street, Newman-street, Oxford-street, London.—Guard against imitations under closely similar names. Twenty pages of Testimonials, with list of Country Agents, post free for two stamps.

DR. DE JONGH'S LIGHT BROWN COD LIVER OIL. Prepared for MEDICINAL USE in the LOFFODEN ISLES, NORWAY, and put to the test of Chemical Analysis.

THIS pure and unadulterated, transparent, light-brown Cod Liver Oil, long known and justly appreciated on the Continent, has now acquired the general confidence of the Medical Profession in this country, by whom it has been extensively and successfully prescribed, and with almost immediate and remarkably beneficial results. In many instances where ordinary Cod Liver Oil had been copiously, though ineffectually, administered.

It owes its superior efficacy not only to its method of preparation, but to the fact—clearly established by chemical analysis and therapeutic experiments—that the liver of the species of cod-fish from which it is exclusively procured naturally contains a larger quantity of iodine, of the elements of the bile and other essential remedial properties, than is found in other kinds of the GENUS *Gadus*. It is of the finest quality, free from any admixture, or violently repulsive, sickly, and nauseous flavour or after-taste of the Pale Oil, or of the coarse Brown Oil, commonly sold, though totally unfit for medicinal purposes.

Being sold by IMPERIAL MEASURE it is as low in price per ounce as any other genuine Cod Liver Oil, whilst its regular and speedy use renders it incalculably cheaper. Medical and Scientific Testimonials of the highest character, delivered on 10th May 1856, on application to Dr. de Jongh's Sole Agents and Consignees, ANSAR, HARPOD & CO., 77, STRAND, LONDON, by whom the Oil is sold Wholesale and Retail, in bottles capsuled and labelled with Dr. de Jongh's stamp and signature, and in the country by respectable Chemists and Vendors of Medicine. Where difficulty occurs in procuring the Oil, four half-pint bottles will be forwarded to any part of England, CARRIAGE PAID, on receipt of a remittance of ten shillings. Half-pints (16 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s.

RUPTURES EFFECTUALLY CURED WITHOUT A TRUSS!—All sufferers from this alarming complaint are earnestly invited to consult or write to LESLIE, as he guarantees them relief in every case. His remedy has been successful in curing thousands of persons during the last twelve years, and is applicable to every kind of single and double Rupture, however bad or long-standing, in male or female of any age, and by respectability or inconsequence in its use wholly exempted from any part of the world, with full instructions for use, on receipt of 7s. 6d. in postage stamps, cash, or post-office order, payable at the General Post-office, to Dr. Herbert Leslie, 37A, Manchester-street, Gray's Inn-road, London.—At home daily (except on Sundays and Holidays) from 11 till 5 o'clock. A complete of Testimonials sent post free on receipt of one postage stamp.

DEAFNESS AND NOISES IN THE HEAD.—Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London. Instant and permanent restoration of hearing guaranteed, without the use of ear-trumpets, instruments, or causing one moment's inconvenience to the most aged or nervous sufferer. Dr. HOGHTON'S new and extraordinary discovery, by one consultation enables deaf persons of either sex to hear immediately with perfect ease the lowest whisper, and magically removes all ringing in the ears. Hospital and private testimonials and certificates from the most eminent Physicians and Surgeons in England, in whose presence deaf persons have been cured, and three hundred and 500 other respectable persons, have been or referred to. Hours of consultation, 11 till 4 every day. Francis Robert Houghton, Member of the London Royal College of Surgeons, May 2, 1845; Licentiate of the Apothecaries Company, April 30, 1846.

Just published, 'SELF-CURE OF DEAFNESS,' for country patients; a step to empiricism, quackery, and exorbitant fees, sent on receipt of seven stamps, free. Examination free. 9, Suffolk-place, Pall Mall.

DR. BARRY'S HEALTH RESTORING REVALENTA ARABICA. FOOD counteracts Dyspepsia (Indigestion), Constipation and other disorders of the Stomach and M.D. P.R.S. London. These consequences are Nervous, Bilious, and Liver Complaints, Acidity, Heartburn, Flatulency, Sick Headaches and General Debility, Low Spirits, Cough, Asthma, Incipient Consumption, Nausea, &c. It is, moreover, the best food for infants and invalids generally, as it never purges or turns acid on the weakest stomach, nor interferes with a good liberal diet, but imparts a healthy relish for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. Highly approved of by Drs. Ure, Shorland, Harvey, Campbell, Gottlicher, Wurzer, Lord Stuart by Leeds, and 500 other respectable persons, whose health has been perfectly restored by it after all other means of cure had failed.

In cisterns, 11b. 2s. 9d.; 21b. 4s. 6d.; 51b. 11s.; 121b. 22s.; super-refined, 11b. 6s.; 21b. 11s.; 51b. 22s.; 101b. 22s. The 101b. and 21b. cisterns, on receipt of Post-office order, Barry Dr. Barry, P.O. 77, Strand-street, London. Fortnum, Mason & Co. Purveyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street; 330 and 451, Strand; 4, Cheapside; 68, Cornhill; 49, Bishopsgate-street; 55, Charing-cross; 54, Upper Bank-street; 63 and 150, Oxford-street.

ABERNETHY remarks that "disorders of the digestive organs cause a great number of other diseases;" KAYE'S WORMS' PILLS are a speedy, mild, and efficient cure for Dyspepsia, Headache, Bilious Affections, &c.—Sold everywhere at 1s. 12d., 2s. 9d., and 4s. 6d. Wholesale Depot, 22, BREAD-STREET, London.

HOLLOWAY'S PILLS infallible for the Cure OF FEMALE COMPLAINTS.—Mr. G. E. Taylor, of South Cove, informs Professor Holloway, in a letter dated Sept. 26, 1854, that Mrs. Sarah Carr, of Ellkess, was afflicted for a long time with swellings in the stomach (which occurred at the turn of the month), and frequent attacks of dyspepsia, in fact, she had been fre- quently thrown on a bed of sickness, when she commenced using Holloway's Pills. After taking a few doses she was completely cured, and now enjoys excellent health, better than ever she felt before. Sold by all Vendors of Medicine; and at Professor Holloway's Establishment, 244, Strand, London; and 80, Maiden-lane, New York.

THE WESTMINSTER REVIEW.

NEW SERIES.

PRICE SIX SHILLINGS PER NUMBER.

PUBLISHED BY

JOHN CHAPMAN, 8, KING WILLIAM-STREET, STRAND;

And may be had of all Booksellers.

N.B.—When payment is made directly to the Publisher a year in advance, four Numbers of the Review will be delivered for 11.; or will be forwarded by post, postage free, for 11. 4s.

Contents of No. XIII.

JANUARY, 1855.

1. THE ANGLO-FRENCH ALLIANCE.

"Written in a light, vivid style, but with much strength and sense."—*Leader*.

2. BALLADS OF THE PEOPLE.

"A gay and agreeable review of popular ballad literature in England."—*Daily News*.

"A pleasant article on a capital subject, with numerous specimens interspersed."—*Leader*.

3. PRUSSIA AND PRUSSIAN POLICY.

"Contains too much truth to make the article or the Review welcome at Berlin. . . . We recommend the spirited article to all politicians."—*Economist*.

"The amount and kind of knowledge of Prussian politics, both at court and among the people, is striking. . . . So much matter that is just what we want."—*Daily News*.

"An extremely valuable paper, the information in which is of a kind not to be procured in ordinary compilations, and worthy of being well weighed."—*Leader*.

4. THE PRINZENRAUB: a Glimpse of Saxon History.

"The hand of the master is shown in the power of leading the reader on through an effusion which it appears at first a sheer piece of audacity to offer to the public. . . . Every line will be read by him who reads any."—*Daily News*.

"The whole article will of course be eagerly read."—*Leader*.

5. POLAND: its History and Prospects.

"Sound, calm, and thorough."—*Daily News*.

6. CAMBRIDGE UNIVERSITY REFORM.

"A full consideration of the case—obviously by a Cambridge man, and of course of the reforming party."—*Daily News*.

7. AUSTRIA IN THE PRINCIPALITIES.

"It seems to us that we have not for very long read a political essay of such value as this. Its depth of knowledge of the case, clearness of view and style, and comprehensiveness of counsel, are such as to throw the reader into a sort of despair at the tacit exhibition it affords of the folly and ignorance of the foreign policy which our rulers conduct in secrecy, and quite apart from the national consultation and control."—*Daily News*.

CONTEMPORARY LITERATURE.

§ 1. THEOLOGY AND PHILOSOPHY—§ 2. POLITICS AND EDUCATION—§ 3. SCIENCE—§ 4. CLASSICS AND PHILOLOGY—§ 5. HISTORY AND TRAVELS, BIOGRAPHY—§ 6. BELLES LETTRES—§ 7. ART.

"It will be seen that this is a very superior number of a Quarterly which has been steadily rising for several quarters now. . . . It has not descended from its high ground of philosophical, literary, and artistic criticism, as its departments on Contemporary Literature show; but it now supplies more and more effectually the need of a vigorous, clear, well-informed, and honest liberalism in the treatment of political and social subjects."—*Daily News*, Jan. 3.

"The January number of *The Westminster Review* ought to make the Parliamentary recess less tedious to all who, being interested in the 'great question of the day,' miss the excitement of the debates. . . . Here is ample matter for those whom the lighter and less profound discussions in the newspapers do not satisfy—ample matter, too, to be worked up into newspaper articles for some time to come. The information supplied by the Review will bear this, for it is fresh, substantial, and closely packed; while the views put forward by the writers, along with the information, are put forward decisively, and in a manner to command attention even where they provoke controversy."—*Leader*.

WORKS

PUBLISHED

By JOHN CHAPMAN,

8, King William-street, Strand.

THE POSITIVE PHILOSOPHY of AUGUSTE COMTE. Freely translated and condensed by HARRIET MARTINEAU. Large post 8vo. 16s.

A MISCELLANY of INSTRUCTIVE AND AMUSING TRACTS ON THE PHYSICAL SCIENCES, AND ON THEIR APPLICATION TO THE USES OF LIFE.

Illustrated by Engravings on Wood.

Already Published,

VOLS. I. to IV. each 1s. 6d. (or in Double Vols. each 3s. 6d.); also PARTS I. to XIV., and NUMBERS 1 to 60.

"Dr. Lardner's Museum," one of the few works of the kind which can be recommended as at once popular and accurate."—*Sir David Brewster*.

"This series, besides affording popular but sound instruction on scientific subjects, with which the humblest mind in the country ought to be acquainted, also undertakes that teaching of 'Common Things' which Lord Ashburton and every well-wisher of his kind are anxious to promote. Many thousand copies of this serviceable publication have been printed in the belief and hope that the desire for instruction and improvement widely prevails; and we have no fear that such enlightened faith will meet with disappointment."—*The Times*, Feb. 9, 1854.

..* This work is continued in Weekly Numbers at 1d.; Monthly Parts at 5d.; Quarterly Volumes at 1s. 6d.; and Half-Yearly Volumes at 3s. 6d.

London: WALTON & MABERLY, Upper Gower-street, and Ivy-lane, Paternoster-row.

Printed by JAMES HOLMES, of No. 4, New Ormond-street, in the County of Middlesex, at his printing-office No. 4, Cook's-court, Chancery-lane, in the parish of St. Andrew, in the said County; and published by JOHN FRANCIS, of No. 14, Wellington-street North, in the said County; Publisher, at No. 14, in Wellington-street aforesaid; and sold by all Booksellers and News-vendors—Agents for Scotland, Messrs. Bank Annuities, invested by the late Sir John Soane, among distressed Architects, and the Widows and Children of deceased Architects left in destitute or distressed circumstances.
Forms of Application may be had at the Museum, and must be filled up and delivered there on or before **FRIDAY**, the 16th of March, after which day no application can be received.

ART-UNION OF LONDON.—By **ROYAL CHARTER**.—Prizeholders select for themselves from the Public Exhibitions. Every Subscriber of One Guinea will have, besides the chance of a Prize, an Impression of a Plate of 'A WATER PARTY,' by J. T. Wilson, R.A., after J. J. Chalon, R.A., together with a Quarto Volume of Thirty Illustrations of Byron's 'Childe Harold.' The Prints are now ready for delivery, and the Volume may be seen at the Office.
15th February, 1855. GEORGE GODWIN, Honorary Secretary.
LEWIS COCK, Secretaries.

THE GILBERT MONUMENT.—DESIGNS and ESTIMATES for the Erection of the proposed Monument to the memory of the late Lieut.-General Sir WALTER RALPH GILBERT, Bart. G.C.B. WILL BE RECEIVED on or before **MONDAY**, the 20th of March next, accompanied by sealed Letters addressed to the Secretary to the Gilbert Monument, at 78, New Bond-street, London, and endorsed 'Design for the Gilbert Monument.'
Full particulars may be had by written application to the Secretary at the above address, where Plans, and a description of the Site of the Monument, may be seen on and after Tuesday, the 27th instant.
London, 78, New Bond-street, Feb. 22, 1855.

CRYSTAL PALACE.—**INDIAN COURT.**—The Directors intend to have an **EXHIBITION OF INDIAN WARES**, illustrative of the Arts and Manufactures, and of the Manners and Customs of India, in a Court to be set apart for that purpose; and, with this view, they hope to be favoured with the loan of articles of the kind for exhibition during such period as the possessors may be willing to lend them. Further particulars may be obtained from the Secretary, to whom communications are to be addressed.
By order, G. GROVE, Secretary.
Crystal Palace, Feb. 17, 1855.

THE GOVERNMENTS' INSTITUTION, 34, Soho-square.—Mrs. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools to her Register of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

DEAF AND DUMB PRIVATE EDUCATION.—LONDON.—Mr. JAMES RHIND, fifteen years late Principal of the Liverpool Institution, RECEIVES PUPILS from the Higher Ranks, at 4, Avenue-road, Regent's Park. The highest references given.

GERMAN, ITALIAN, AND FRENCH.—DR. ALTSCHUL, M. Philolog. Soc. London, Examiner Royal College of Preceptors, gives LESSONS in the above-mentioned LANGUAGES and LITERATURE. Pupils may study TWO Languages in the same Lesson, or alternately, without any addition to their terms.—CHANDOS-STREET, CAVENDISH-SQUARE.

FRENCH CLASSES.—Mr. AUGUSTE MANDROU, M.A. of the Paris Academy, Teacher of French, German, and Mathematics, will open in the first week of March, 1855, at his Residence, 26, Coleridge-street, Euston-sq., **EVENING CLASSES** for the Practice of the FRENCH LANGUAGE. Each Class will be formed of Eight Gentlemen only, and will meet for two hours twice a week. Terms per Quarter, 1l. 10s. for each Pupil. Private Lessons on moderate terms.

HOME EDUCATION FOR BOYS.—The Wife of a Gentleman holding an important scientific appointment at a College, London, wishes to RECEIVE into her family ONE LITTLE BOY, under the age of six years, to be brought up under her immediate care, with every comfort and affection, with her own child.—Apply to F. R. S., care of Messrs. Taylor & Francis, Red Lion-court, Fleet-street.

ST. JOHN'S WOOD PROPRIETARY COLLEGIATE SCHOOL, 25, St. John's Wood Park.
Head-Master.—The Rev. THOMAS MARKBY, M.A., late Scholar of Trinity College, Cambridge, and Classical Master in King's College School.
Second Master.—H. DEIGHTON, Esq., M.A., Scholar of Queen's College, Cambridge.
The school is supported by the proprietors subscribing 21l. each, and by the pupils.
Each proprietor has the right of nominating one pupil at a time to the school.
Half-term commences Monday, March the 5th.
R. HODSON, Hon. Sec.

ST. JOHN'S WOOD COLLEGE FOR LADIES, 21, Clifton-road, Carlton-hill.—The Half-Term for the Senior Classes will COMMENCE on the 24th.
English Literature, &c.—L. Smart, Esq.
German.—Dr. Hausmann.
Pianoforte.—Ignace Gibson, Esq.

MISS H. S. PICKERSGILL, Professor of SINGING and the PIANOFORTE, has REMOVED TO 8, BAKER-STREET, PORTMAN-SQUARE, where she requests her Pupils will address all communications.

MILITARY EXERCISES for the SONS of CIVILIANS.—UNDER the PATRONAGE of His Grace the DUKE of RICHMOND, K.G. &c. Colonel of the Royal Sussex Militia.—At a respectable School, near London, Young Gentlemen are received as Boarders, and, in addition to the usual studies of youth, are regularly instructed in Military Exercises, and the use of Sword, Rifle, and Cannon, by a well-qualified officer. Such exercises acquire an erect and gentlemanly carriage, expand the chest, and fully develop the physical powers. Terms moderate. A drawing of the uniform will be sent on application to Mr. E. G. LIVESAY, Salvador House, Tooting-Graveney, Surrey.

A HIGH WRANGLER, experienced in tuition, being only partially occupied, wishes to meet with TWO or THREE PUPILS, to read Mathematics.—Address to M. A., care of Messrs. Smith & Son, 136, Strand.

A GRADUATE of the University of London offers to ASSIST GENTLEMEN who are preparing for Matriculation, or for the Examinations required previous to entering the Military or Civil Service.—Address R. CLARK, B.A., 25, New Ormond-street, Queen-square.

SUB-EDITOR WANTED on a Weekly Newspaper. Must be well up to the duty of Collating and Condensing.—Apply, by letter, stating Salary, &c. to F. W., care of Maxwell & Co. Contractors for Advertisements, 31, Nicholas-lane, Lombard-street.

TUTOR.—Required, a TUTOR, to carry on the EDUCATION of a YOUTH of 15. A thorough acquaintance with the Classics and Mathematics, German or French, will be deemed indispensable; also, some insight into the Physical Sciences. It is requested that none will apply but gentlemen who can produce first-rate testimonials as to ability and experience, and none but those who have been engaged in private tuition will be treated with. A liberal salary will be given.—Application, by letter only, to A. B., 4, Sebbon-street, Cross-street, Islington, London.

THE PRESS.—The Conductor of a Provincial Newspaper, who has had much experience as a public writer, will, in a few weeks, be OPEN to AN ENGAGEMENT as EDITOR of a Journal of Liberal or moderate political opinions. The Advertiser has the advantage of being a skilful and expert Short-hand Writer, and is perfectly familiar with all the duties and requirements of a Newspaper Office.—For further information letters may be addressed to DELTA, care of Mr. Davis, Railway Record Office, 35A, New Bridge-street, Blackfriars.

TO BOOKSELLERS AND STATIONERS.—A Young Man, for several years engaged in the largest wholesale and retail houses in town and country, IS NOW OPEN for AN ENGAGEMENT to undertake the management of a business, or has no objection to travel.—Address E. J., 34, Hunter-street, Brunswick-square.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyll-place.
DAGUERRETYPE and STEREOGRAPHIC MINIATURES in the highest style of Art taken daily.
Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life * * * without the slightest sacrifice of definition, or the smallest approach to distortion;—indeed, the errors and peculiarities of former impressions appear to be corrected.—'Athenæum,' July 22, 1854.
Mr. Mayall's portraits represent the high art of the daguerreotype: they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut.—'Art-Journal,' Nov. 1853.
'More pleasing, and far more accurate than the generality of such pictures.'—'Times,' July 17, 1854.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Messrs. COOKE & CO. respectfully solicit the attention of amateurs to the **COLLODION**, manufactured only by them from the formula of Mr. W. A. Delferier. This Collo-dion is superior to any other, and will not injure by keeping. Waxed, Iodized and Albumenized Papers of the first quality; also Photographic Chemicals of every kind from their own Laboratory.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Portraits, Copies of Pictures, Sculpture, &c. taken, and INSTRUCTION in the Art given daily, by Mr. ARCHIBALD LEWIS COOKE. Photographic Apparatus of all kinds constantly on Sale.

TO AUTHORS.
ROBERT HARDWICKE, Printer and Publisher, 24, Duke-street, Piccadilly, begs to inform Authors and Possessors of MSS. desirous of publishing Works on any topic requiring extensive and immediate publication, that he has at his command ample founts of Type and Machinery expressly adapted for printing Books, Pamphlets, Essays, Poems, &c., with the utmost Despatch and Economy.
Instructions to Authors with Specimens of Type and Sizes of Pages post-free on receipt of six stamps.

THE UNIVERSAL CIRCULATING MUSICAL LIBRARY.—Subscription Two Guineas per Annum, which entitles Subscribers to select One Guinea's worth of Music. Scientifically arranged Catalogues of 42,000 Works. Foreign and English Work is added immediately.—G. SCHIRMANN & Co. 85, Newgate-street.

THE GRESHAM LIBRARY supplies FAMILIES, in Town or Country, with every NEW BOOK of interest, in addition to the Standard Collection of 60,000 Volumes. Single Subscription, One Guinea per annum; Family ditto, Two Guineas and upwards.—A Prospectus, free by post, on application to ALFRED SMITH, 102, Cheapside.

BULL & CO.'S SUBSCRIPTION and PRESENTATION LIBRARY.—Subscribers to this Extensive and Valuable Library have the choice of the Entire Collection of Standard Works which it contains, in History, Biography, Divinity, Voyages and Travels, Philosophy, the Arts and Sciences, Poetry, and Miscellaneous Literature, to which is continually added an immediate and ample supply of all the best New Works as they appear.
Single Subscription, One Guinea per annum; Country Subscriptions, Two Guineas and upwards. Subscribers to the amount of Four Guineas are presented at the end of the year with copies of the best Works from the Library to the amount of one-fourth of their subscriptions.
Prospectuses sent post-free on application.

BULL, HUNTON & Co. 19, Holles-street, Cavendish-square, London.

MUDIE'S SELECT LIBRARY.—ALL THE BEST NEW WORKS may be had in succession from this extensive Library by every Subscriber of One Guinea per Annum, and by all First-class Country Subscribers of Two Guineas and upwards. The preference is given to Works of History, Biography, Religion, Philosophy, Travel and Adventure. The best Works of Fiction are also freely added. The Surplus Copies are offered for Sale at greatly reduced prices as soon as the first demand has subsided. Lists of the principal New Works and New Editions at present in circulation, with the terms of subscription and other particulars, may be obtained on application.
CHARLES EDWARD MUDIE, 510, New Oxford-street.

TRÜBNER & CO.'S SERIES of AMERICAN CATALOGUES.
Now ready, No. II. of the above Series, being a complete List of Books on Medicine, Surgery, Dentistry, and Homoeopathy, published in the United States of America, and which will be forwarded on application to
TRÜBNER & CO. AMERICAN LITERARY AGENCY, 12, Paternoster-row, London.

AUTHORS DESIROUS of BECOMING THEIR OWN PUBLISHERS may have their Works brought out, and no commission charged on copies sold until the cost and outlay shall have been defrayed.—ADVICE TO AUTHORS; or, HOW TO PRINT AND WHEN TO PUBLISH, sent post-free to orders, inclosing 12 stamps, addressed to Messrs. SAUNDERS & OLEY, Publishers, Conduit-street;

Of whom may be had,
The **YOUNG POET'S ASSISTANT.** Price 2s. post free.

TO BOOK COLLECTORS.—Just published for January, 1855, T. MILLARD'S CATALOGUE of SECOND-HAND BOOKS, being a portion of 20,000 Volumes (gratis and post free).—N.B. Libraries Purchased or Exchanged.—On Sale: Nash's Mansions, 82, 83.—Magistrates' Statutes, 1835 to 1852, 54, 55.—Doyle and Mant's Bible, 3l.—Waverley Novels, 48 vols. half-calf, gilt, 7 guineas.—Abbotsford Edition, 12 vols. calf extra, 10 guineas, &c. &c.—70, Newgate-street, London.

Just published, in royal 8vo. price 10s. 6d. in cloth, and 15s. in morocco.
THE LIBRARY CATALOGUE: a Book ruled and Printed for the reception of a MS. Catalogue, with details of Author, Title, Edition, Number of Vols., Size, Date, Place and Publisher, Cost, when and to whom Lent. An Index (costing 1s. 6d. extra) can be cut through the volume for the purpose of more convenient reference.
The Catalogue is also issued in post 8vo. size, with some trifling alterations in the arrangement, at 6s. and 8s. in cloth, and 12s. and 15s. in morocco.
Letts, Son & Steer, 8, Royal Exchange, London.

LETTS'S SCRIBBLING JOURNALS, or ROUGH DIARIES, at 1s. 6d. and 1s. 2d. foolscap size, and 1s. 4d. and 1s. 2d. (letter paper size), are introduced this year for the first time. Their cost being little more than plain paper, they are intended to be used as such in preference to accumulating a heap of miscellaneous papers of too much value to be destroyed, though very troublesome to keep. They may be obtained of any Stationer or Bookseller, or from the Publishers, post-free, on receipt of an extra sixpence beyond their price in postage stamps.
Letts, Son & Steer, 8, Royal Exchange, London.

Committee.

Lieut.-Col. Inard.
Major A. A. Maudslayi.
Lieut.-Col. Northey.
Sir John Dean Paul.
Hon. W. P. Russell.
H. Hooley White, Esq.

Treasurer—Aubrey Paul, Esq., 217, Strand.

Hon. Secs.—Mrs. Felix Vaughan Smith,
8, Portico-street, Grosvenor-square.

It is proposed to form a Collection of Works of Art, by Artists and Amateurs, for exhibition and sale; the amount so raised to be applied to the relief of the Widows and Orphans of British Officers, who may fall in the War with Russia.

The Collection will comprise any Works of Art, such as Pictures, Drawings, Sketches, Bronzes, Statuettes, Lithographs, Daguerotypes, &c. &c.

Persons willing to support this benevolent project, by contributing any of the objects above specified, are requested to forward their Names and Addresses, with particulars of the gift they propose making, to any of the following places:

ACKERMANN & Co. 96, Strand.
COLNAGHI & Co. 2 and 11, Pall Mall East.
DICKINSON Bros. 111, New Bond-street.
S. & J. FULLER 34 and 35, Rathbone-place.
GRAVES & Co. 6, Pall Mall.
HERING & REMINGTON, 107, Regent-street.
HOGARTH 1, Haymarket.
J. & R. JENNINGS 62, Cheapside.
Messrs. YOKINS 5, John-st., Oxford-st.

Notice to Contributors.

The Exhibition will be open in the last week of March, at the Gallery, 321, Pall Mall, which has been kindly placed at the disposal of the Committee by Mr. Gambey, Esq.

All Contributions should be sent in, free of expense, to one or other of the above-named places, on or before the 14th of February.

Pictures, Drawings, or Sketches, should, if possible, be framed, but not signed, but all articles should be marked with the name of the Exhibitor.

Exhibitors are requested, for the guidance of the Committee, to attach their Names, legibly written, to each Article, together with the Price and description thereof.

Pictures, Drawings, &c., may be priced, with or without Frame, at the option of the Donor.

Competent persons will be appointed to arrange the hanging of the Pictures, Drawings, &c., by whom the Price may be affixed, if preferred.

Price of Admission, 1s. each Person. Season Tickets, 5s. Exhibitors do, 2s. 6d.

TO BOOK-BUYERS.—A NEW CATALOGUE is now ready of very CHOICE BOOKS. Amongst the Collection will be found a beautiful copy of Voltaire and Rousseau on large paper, with proof plates by Moreau—Somers's Tracts—Howell's State Trials—Fontaine's Fables, printed on vellum, &c. &c. Sent free by post.—UPHAM & BEZ, (late Rodwell), 46, New Bond-street (corner of Maddox-street).

FREE TRADE IN BOOKS.—Burke's Peerage and Baronetage, 3s. 6d., published at 3s.—Strickland's Queens of England, 5s., published at 5s.—A New Edition of each just out. All New Books on the same terms.—S. & T. Glaser, 4, Copthall-buildings, Moorgate-street. Please note the address.

DE FIVAS' FRENCH GRAMMAR. MESSRS. SIMPKIN, MARSHALL & CO. have now received a large supply of this popular French Grammar, Last Edition, price 3s. 6d. strongly and elegantly bound.

ENGRAVINGS BROUGHT WITHIN THE REACH OF ALL.—Immense quantities of first-class Subjects (chiefly from Sales) at unheard of prices. One instance:—Morning and Evening (pub. at 21s.), 3s. 6d. per pair. Such an instance has never before occurred to adorn the Wall and enrich the Folio.—J. MABLEY, 2, Wellington-street North, Strand.

Next week will be published, No. XIII, price 2s. 6d., completing the First Series of

THE AUTOGRAPH MISCELLANY. A Collection of interesting Letters of eminent and distinguished Characters; with curious Public and Historical Documents, English and Foreign, executed in Lithograph Fac-simile, with descriptive Letter-press. Season commences 1st October; ends 31st May.

Sales by Auction.

Sale of the Extensive and Valuable Library of the late
Right Honourable LORD RUTHERFORD.

MR. T. NISBET begs to intimate that he will SELL by AUCTION, at his Great Room, No. 11, Hanover-street, Edinburgh, on THURSDAY, March 23, and the following lawful days, the EXTENSIVE LIBRARY of the late Right Honourable LORD RUTHERFORD, consisting of a Very Valuable Collection of Books, in Literary History, the Greek and Latin Classics, Antiquities, Philology, English and Scottish History, French and Italian History and Belles Lettres, Mathematics, the Fine Arts, Privately Printed Books, Law and General Literature.

Among many others of great value, this Library contains the following important Works:—Beautiful Historical Scriptures, Vetus, 30 vols. folio, 1. r.—Canonus, 48. Louvain, folio, the splendid edition privately printed at the expense of M. de Souza—Purchas's Pilgrimes, 5 vols. folio, old russa—Histoire de l'Académie des Inscriptions, 68 vols. folio, 4to, and 8vo. folio, 4to, and 8vo. morocco—Description de l'Égypte, 20 vols. folio, the magnificent work printed at the expense of the French Government, morocco—Bibliothèque Universelle, 3 vols. folio, morocco—Cham-pollion, Monumens de l'Égypte, 4 vols. atlas folio, morocco—Agassiz, Poissons Fossiles, 10 vols. morocco—Picart, Cérémonies Religieuses, avec Supplément, 11 vols. old morocco—Montfaucon, l'Antiquité Expliquée, avec Supplément, et les Monumens de la Monarchie Française, 3 vols. folio, 4to, and 8vo. folio, 4to, and 8vo. morocco—Atlas folio of which only 170 copies were printed, Bodoni's Magnificent Edition in morocco—Delpech, Iconographie Française, et Iconographie des Contemporains, 7 vols. folio, morocco—Biblia Sacra Polyglotta, Waltoni, 6 vols. old morocco—Biographie Universelle, avec Supplément, 32 vols. 1. r.—The Dictionnaires de M. de Trévoux, 4 vols. folio, and 4to, all in old morocco—Histoire Littéraire de France, par des Religieux Benedictins, 22 vols.—Cook's Voyages, 8 vols., the Original Editions, with Proof Impressions of the large Atlases, and Specimens of South Sea Cloth, old russa—Daguerrot, Histoire de l'Art par les Monumens, 6 vols. folio—Lodge's Fortifications, the original edition, 4 vols. 1. r., proofs—Rousseau, Œuvres de, 22 vols. 1. r., with repetitions of the plates in different states—Voltaire, Œuvres de, 66 vols. mor. with proofs before letters of the Plumes—Boccaccio, li Decamerone di, the Genuine Edition of 1527—Du Sennedard, Les Arts du Moyen Age, 10 vols. folio, morocco—Cesaris Commentarii, a Clarke, 2 vols. old morocco—Bartoli, Recueil de Peintures Antiques trouvées à Rome, 3 vols., of which only 100 copies were printed—Huart and Kevett's Antiquities of Athens, with Supplements, 5 vols. folio, morocco—Houbraken and Vaucel's Heads of Illustrious Persons, 2 vols. 1. r. old russa—Opere di Lorenzo de Medici, 4 vols., the splendid edition privately printed at the expense of Leopold II., Grand Duke of Tuscany, morocco—Britton's Works, 17 vols. 1. r. morocco—Biblia Graeca Sacra Scriptura, folio, first edition printed in Greek, Venetis, Aldus, 1518, morocco—The Marborough Gems, 2 vols. privately printed, morocco—An Extraordinary Collection of the Original Editions of Defoe's Works in 37 vols.—the Editio Princeps of Aristotle, Herodotus, Politian, and other Classics—Coxe's Works, 16 vols. 1. r. morocco—Lambecii Comment de Bibl. Vindobonensi, 8 vols. folio, old morocco—Gruner's Specimens of Ornamental Art, 4 vols.—Wilkins's Conella, 4 vols. morocco—Collection des Mémoires relatifs à l'Histoire de France, par Petitot, Buchen, Guizot, &c., 177 vols.

The Library also includes sets of the Books Privately Printed for the Bannatyne and other Clubs. It is also peculiarly rich in Works on English Jurisprudence.

Mr. NISBET begs particularly to call the attention of Collectors and the Public to this Sale, which, as regards literary property, will be the most valuable and important that has ever taken place in Scotland.

The whole of the Books are the best editions, having been collected with great taste and judgment. They are in the finest possible condition, and afford choice specimens of the best binders of the day—both of this and the last century.

Catalogues, price 2s., are now ready, and may be had in London, of Messrs. Evans & Son, 493, Strand; in Paris, of M. Rapilly, Bookseller, Quai Malaquais; and at the place of Sale, of Mr. Nisbet, who will forward them to any part of the Country on receipt of thirty postage stamps.

11, Hanover-street, Edinburgh.

DR. DALTON'S HISTORY OF BRITISH GUIANA.

With a Map and Six Plates.

2 vols. 8vo. 36s.; or (large paper) royal 8vo. 2l. 12s. 6d.

"Dr. Dalton's work contains a full account of British Guiana, of its settlements, plantations, trade, climate, and natural history. It is copious, methodical, and full of information. It lays open the stores of natural wealth which exist in that country, and offers inducements to agricultural and commercial enterprise."—*Athenæum*.

"The first complete and systematic work, in which a historical and descriptive account of British Guiana has been given."—*Literary Gazette*.

"It deserves to be classed among the useful works of modern literature."—*Leader*.

"An elaborate publication. That part which relates to medicine, or its cognate topics, climate, temperature, &c., is most satisfactory."—*Spectator*.

"The most ample and complete account of the colony that has yet appeared."—*Observer*.

"A work of enduring interest, and not likely to be superseded."—*Weekly Chronicle*.

"Of great value and importance, and one which will take high rank among our colonial literature."—*Dispatch*.

"Of great value to the historian, the ethnologist, the naturalist, and the statician, combining an unusual excellence of style and a lucid arrangement of matter."—*John Bull*.

"A text-book and authority upon all questions relating to the colony."—*Atlas*.

"The standard work on British Guiana."—*Daily News*.

"The latest and most comprehensive work extant on its subject."—*Press*.

"Dr. Dalton has brought a large share of ability as well as industry to his task. His work comprises a vast amount of valuable information."—*Sunday Times*.

Just published, in post 8vo. price 10s. 6d.

T H E W A R D E N.

By ANTHONY TROLLOPE.

"The *Warden* is a clever, spirited, sketchy story, upon the difficulties which surround that vexed question—the administration of the charitable trusts in England. . . . The book is, as we have said, an extremely clever and amusing one: all the characters are well and vigorously sketched. The twelve old men in the almshouses,—the mild, simple-minded, conscientious Warden, who has received his income without doubt or misgiving till the day his conscience is rudely awakened by the voice of the *Jupiter*, and his child-like anxiety to do right at whatever cost to himself,—the pompous, worldly, high churchmen,—the archdeacon, who bullies his father the bishop, and tyrannizes over his father-in-law the warden,—Tom Towers, the oracle of the *Jupiter*,—the sketch of the *Jupiter* itself,—are one and all excellent."—*Athenæum*.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Now ready, 8vo. cloth, bevelled boards, price 10s. 6d.

Just published, in crown 8vo. price 7s. 6d. cloth,

BALDER.

By the AUTHOR of 'THE ROMAN.'

Second Edition, with Preface.

"In this poem we read a magnificent protest against the tendency of our age to materialism and positive philosophy and the apotheosis of mechanism and intellect. An age which everywhere manifests a blind atheistical dedication of force and power. The age to which of all others that trumpet-text, 'What shall it profit a man if he save the whole world and lose his own soul?' needs to be preached and sung. There are two hundred and eighty-three pages in this book, and not one but contains fine thoughts, magnificent imagery, striking similes, or searching reflections. Of the wealth of thought revealed we can scarcely trust ourselves to speak, it is so great. We consider 'Balder' to be the first and worthy part of a great poem—one of such a degree of greatness, that it has scarce an equal in our century, and one that will take the public opinion some years to arrive at that greatness. To those who cannot see its purpose, we may say, as the old chroniclers wrote of Shakespeare, 'Read it again and again, and if so be you do not understand it then, there is manifest danger that you are not quick of comprehension.'—*Eclectic Review*.

"Genius is so unmistakably present in every page of the strange book before us, that to give examples from one, without injustice to the others, we find to be beyond possibility in the limits of a magazine review. We cannot, however, resist a passing allusion to the absence of all melo-drama in those scenes which nevertheless reach the very bounds of the dramatic, and to the instinctive avoidance of the horrible and attainment of the terrible, under circumstances of the highest tragedy. These general facts infer a quality of intuition in the author, which only the true critic can properly estimate; and in such passages as the portrait of Amy in scene twenty-eight, and the *chœur* of scene thirty-seven, or scene twenty-four, he will recognize the same wonderful truth of instinct at work, in the calmest nooks and most pastoral quietudes of the many-coloured landscape of life."—*Fraser's Magazine*.

"The lesson to be taught would make a grand theme for poetry, but only a crowned singer could hope to teach it. Let some large and wealthy mind study the darker possibilities of his own being—then the question may be meetly handled. Some such denizen of Parnassus—understanding by experience the peculiar temptations of high poetic temperament—knowing well all those airy illusive tongues that 'syllable men's names' in the haunted wilderness of aspiration—looking steadily down that wrong turning, the gloomy avenue of that *via mala* he himself might have chosen—such an one could address his brethren, and all of us, with happiest effect. Qualifications adequate to an enterprise so worthy, Mr. Tennyson unquestionably possesses; to some such purpose he appears to have devoted himself in the present poem, and, in our judgment, with signal success."—*British Quarterly Review*.

Recently published, in post 8vo. price 5s. cloth,

THE ROMAN.

By the AUTHOR of 'BALDER.'

"Should any one after the preceding extracts doubt whether we have a new poet amongst us, we should almost despair of his conversion. But we should not abandon the attempt while we had such an argument in reserve as the ensuing description of the Coliseum."—*Athenæum*.

"How far the poet corresponds with the magnitude of the work there may be some difference of opinion, but none as to the genius and power of the author."—*Literary Gazette*.

"Any man might be proud to be the author of this poem, which, if the first production of an author hitherto unknown, is full of the richest promise; and at any rate shows that we have poets still among us, who, if they would but take equal pains with our older writers, are capable of achievements not any way inferior to theirs."—*Guardian*.

"The hand that has struck this lyre is the hand of a master."—*Sun*.

SMITH, ELDER & CO. 65, Cornhill.

"Reminds us of the novels of Scott."—*Morning Post*.
"An exquisite love story."—*John Bull*.

London: RICHARD BENTLEY, New Burlington-street.

13, GREAT MARLBOROUGH-STREET.

HURST & BLACKETT,

Successors to Mr. Colburn,

HAVE JUST PUBLISHED

THE FOLLOWING NEW WORKS.

The MOSLEM and the CHRISTIAN; or, ADVENTURES in the EAST. By SADYK PASHA. Revised, with Original Notes, by COLONEL SZYRMA, Editor of 'Revelations of Siberia.' 3 vols. post 8vo.

From the Examiner.

"Sadyk Pasha, the author of this work, is a Pole of noble birth. He is now commander of the Turkish Cossacks—a corps organized by himself. The volumes on the 'Moslem and the Christian,' partly fact and partly fiction, written by him, and translated by Colonel Szyrma, display very well the literary taste of the soldier. They are full of the adventures and emotions that belong to love and war; they treat of the present time; they introduce many existing people, and have the Danubian Principalities for scene of action. Here are sources of popularity which the book fairly claims. As a translation it is excellent."

From The Messenger.

"In every respect a remarkable book, containing a history of the exploits of one of the leading characters in the present important Eastern campaign."

SAM SLICK'S NEW WORK,

'NATURE and HUMAN NATURE.' 2 vols.

[On Wednesday, Feb. 28.]

TURKEY; its HISTORY and PROGRESS: from the JOURNALS of SIR JAMES PORTER, Fifteen Years Ambassador at Constantinople; continued to the Present Time, by his Grandson, SIR GEORGE LARPERT, Bart., &c. 2 vols. 8vo. with Illustrations, 30s.

"These volumes are of an authentic character and enduring interest."—*Athenæum*.

TROPICAL SKETCHES; or, REMINISCENCES of an INDIAN JOURNALIST. By W. KNIGHTON, Author of 'Forest Life in Ceylon.' 2 vols. 21s.

"This work presents a graphic view of Indian life, and more particularly of European society in India. It is no less to be commended for the varied instruction than for the rich entertainment it affords."—*John Bull*.

The ROMANCE of the FORUM;

or, Narratives, Scenes, and Anecdotes from Courts of Justice. SECOND SERIES. By PETER BURKE, Esq. 2 vols. 21s.

"One of the most interesting works that have lately been given to the public."—*Chronicle*.

The Baroness D'OVERKIRCH'S

MEMOIRS, illustrative of the SECRET HISTORY of the COURTS of RUSSIA, FRANCE, and GERMANY. 3 vols.

"This book possesses a value as a work of information, which, in the interest of historical truth is, without exaggeration, almost incalculable."—*Observer*.

THE NEW NOVELS.

MAMMON; or, the Hardships of

an HEIRESS. By Mrs. GORE. 3 vols.

"The most lively and entertaining novel Mrs. Gore has yet written."—*Literary Gazette*.

"In the novel of 'Mammon' the style of Mrs. Gore is as buoyant, rapid, and pointed as usual."—*Spectator*.

"Mrs. Gore rarely fails to make her novels pleasant reading, and she has not failed in 'Mammon.'"—*Examiner*.

The SECRET HISTORY of a

HOUSEHOLD. By the Author of 'ALICE WENTWORTH.' 3 vols.

"This tale abounds with passion and power. The author has wrought out a natural subject with feminine tact and graceful eloquence."—*Messenger*.

OAKLEY MASCOTT. By

L. HOWE. Dedicated to Professor AYTOUN. 2 vols.

"A deeply touching story, written with exquisite taste and feeling."—*John Bull*.

ANTIPODES; or, The New

EXISTENCE. A TALE of REAL LIFE. By A CLERGYMAN. 3 vols.

"Antipodes" is a story of our own time. It is very eloquent and deeply interesting."—*The Critic*.

THE YOUNG HUSBAND. By

Mrs. GREY, Author of 'The Gambler's Wife,' &c.

ALBEMARLE-STREET,
February 1855.

LETTERS on TURKEY and its INHABITANTS. By M. A. UBICINI. 2 vols. post 8vo.

21.
A MANUAL of ELEMENTARY GEOLOGY; or, the ANCIENT CHANGES of the EARTH and its INHABITANTS, as illustrated by its Geological Monuments, by SIR CHARLES LYELL, F.R.S. 5th Edition, thoroughly revised, with 750 Woodcuts. 8vo.

"It is now more than three years since the appearance of the last Edition. In that interval the science of Geology has been advancing as usual at a rapid pace, making it desirable to notice many new facts and opinions, and to consider their bearing on the previously acquired stock of knowledge. In my attempt to bring up the information contained in this Treatise to the present state of the science, I have added no less than 200 new illustrations and 140 new pages of text, which, if printed separately, and in a less condensed form, might have constituted alone a volume of respectable size."—*Author's Preface*.

REVIEWS

The History and Poetry of Finger-Rings. By Charles Edwards, Counsellor-at-Law. New York, Redfield; London, Trübner & Co.

AUGUST is the theme of rings: for these have an Olympian origin. They began with Prometheus, who wore one at the suggestion of Jupiter. The Father of the Gods had sworn that he would keep his cousin fast bound to the frosty Caucasus, for ever: he changed his mind, yet kept his word. Zeus had the same gentlemanlike regard for truth which distinguishes the Czar:—he gave Prometheus an iron ring, inserted therein a minute fragment of Caucasus, by way of stone, and sent him into the world to set a fashion.

Is it from this legendary fact that rings were given to slaves when the latter were emancipated? Mr. Edwards does not enlighten us on this matter. Conclusions have been resolutely drawn on more slender premises. In later days, when slaves were converted into freedmen, they were not only presented with a ring, but a pair of shoes,—a present which the Olympian might have fittingly made to the kinsman whom he sent upon his travels. If this fact be remembered, much significance is given to a simple passage in Plautus, where Stalino says to Pardalisca, in the *Casina*—

Si efficiis hoc, soleas tibi dabo et annulum in digito Aureum.

—“If you manage this matter, I will give you a pair of shoes and a gold ring for your finger.” —When the old Athenian says this to his *ancilla*, he is not promising her a mean bribe, but her freedom. A slave could not wear shoes, —“sabots” belonged to his condition; changed for slippers when at home. This circumstance we recommend to the memory of the stage manager of the Westminster Plays, when next the nastiness of Terence is put into action by ingenuous youth. A slave with a ring on his finger would, of course, have been an unheard-of anomaly; but when liberty came, then came his delight to show himself in his gaudy ring and his pair of “Alcibiades,”—the *Wellingtons* of that classic day. In the States, a free Negro delights in French polished boots and gaudy rings: and thus the fashion set by the Father of the Gods and enlarged by his worshippers, yet has its influences in these degenerate days on the banks of the Mississippi, the Ohio, and the Delaware.

Want of a circulating medium probably first gave metallic currency to rings. Money rings were common even in Ireland; and they were never buried with the dead, like those rings which the piety of the Romans secretly slipped into the urns of their dear departed. It is well known that the Roman law forbade the burying of gold with the dead. There was, however, one curious exception to this rule. The law “permitted the burial of such gold as fastened false teeth in the mouth of the deceased, thus sparing the children and friends of the dead the painful task of pulling from their heads the artificial teeth which they had been accustomed to wear.”

The ancients do not seem to have been the more pious for wearing rings with the figures of the Gods engraved on them. Indeed, Pythagoras, who was a sort of John Wesley in the ancient society, whom he astonished with his Hindoo austerities, forbade his followers the use of such rings, as liable to constitute that sort of familiarity which breeds contempt. Some such species of contempt for the reality symbolized on the ring was perhaps felt by those light ladies of England some three cen-

turies since, whose vocation was known by the death's head which they wore on a ring. Mr. Edwards suggests that the emblem was perhaps chosen in order to induce people to take the wearer for a widow, ready to be wooed in any fashion. And *this* custom, too, may be traced to a remote period, perhaps to that time when the lady placing the hoop of her ring between her lips was supposed to invite all bold and handsome spectators to kiss the object engraved on the seal portion. And Moore may have had this in his thoughts when he wrote his erotic bit of prettiness touching ‘Rings and Seals.’

If there were rings for fashion, so also have there been rings for use. Roman mistresses wore thick gold circlets, with whistles contrived in them, wherewith to summon their slaves. These ladies must have worn their useful pieces of adornment much oftener than Heliogabalus condescended to wear *his* digital ornaments. That extravagant fellow never put on the most costly of his rings a second time, nor indeed did he don any garment twice. His valet must have retired from his service a *millionnaire*. Here is a conceit of another kind.—

“The idea of wearing rings on the fourth finger of the left hand, because of a supposed artery there which went to the heart, was carried so far that, according to Levinus Lemnius, this finger was called *Medicus*; and the old physicians would stir up their medicaments and potions with it, because no venom could stick upon the very outmost part of it but it will offend a man and communicate itself to the heart.”

With reference to the above, it may be stated that, among the Romans, rings were worn only on the left hand, except by very magnificent fops indeed. We may add a fact, of which Mr. Edwards does not seem to have been aware, namely, that not only has the fourth finger a special dedicatory name, but that every finger was dedicated to a deity. The thumb was consecrated to Venus, and courtizans wore thereon their rings. The forefinger, denoting power, was sacred to Mars, and thereon your gallant soldier carried the pretty circlet bestowed on him by some Thelestis or Melænis. The longest finger was the especial care of Saturn, and grave people wore their whistle and their mourning-rings upon it. The Sun especially cherished that next finger, on which is now worn the wedding-ring, and which is supposed to have an artery immediately leading from it to the heart. The little finger was Mercury's own. The fact of the thumb having been consecrated to Venus was remembered to a much later period here in England than is commonly known. Our great-grandmothers sometimes wore their wedding-rings, not where they are now worn, but on the thumb. The supposed heathen origin of the wedding-ring led many of the Puritans to advocate its being abolished:—

Others were for abolishing
That tool of matrimony, a ring;
With which th' unsanctify'd bridegroom
Is married only to a thumb.

As late as the time of George the First the ring, though placed in the ceremony of the marriage upon the fourth finger, was worn upon the thumb. It would appear as if the wife, by this fashion, had more regard to the husband than the priest.—

“We have remarked on the vulgar error of a vein going from the fourth finger of the left hand to the heart. It is said by Swinburn and others that therefore it became the wedding finger. The priesthood kept up this idea by still keeping it as the wedding finger; but it was got at through the use of the Trinity: for, in the ancient ritual of English marriages, the ring was placed by the husband on the top of the thumb of the left hand, with the words, ‘In the name of the Father,’ he then removed it to the forefinger, saying: ‘In the name

of the Son;’ then to the middle finger, adding: ‘And of the Holy Ghost;’ finally, he left it, as now, on the fourth finger, with the closing word ‘Amen.’”

So much for the finger or thumb of Venus. That which regarded Dan Mercury has not yet lost all reverence for its god, at least beyond the Atlantic. Mercury was the fond and lenient deity of thieves. In the States he is still honoured through this very finger. Touching these followers of the light-feathered divinity, Mr. Edwards tells us, that—

“Thieves in America will often wear a ring with the head of a dog projecting and its ear sharpened and still further extended, so that a blow with it would cut like any sharply pointed instrument. The present Chief of Police in New York is in the habit of clipping off these sharp ears whenever he has a rogue in custody who possesses such a ring. And characters of the like class wear one bearing a triangular pyramid of metal, with which they can give a terrible blow.”

The wicked have been ingenious with respect to their rings. Thus, Cæsar Borgia is said to have worn a ring composed of two lions' heads. When he pressed the hand of a man he wished to destroy, he pressed upon the stone, and then a poison exuded from the leonine mouth into the blood of the victim. After all, this was not worse than the Czar Nicholas kissing the brow of the young poet whom he knew he was devoting to death.

It used to be said that the physician was nothing without his wig. It was necessary that he should at least look old enough to be wise. So Hippocrates said of old, that a doctor without a ring was a medical man who did not know the decency required by his profession. These ancient slayers of men used to smell at their rings, as their successors in deadly exploits were wont, in consultation, to put the heads of their clouded canes to their noses. It is fancied that rings and heads of canes may have contained some aromatic water or preservative essence,—but this is very doubtful.

It is certain that the medical men of old had more conceits touching the stones worn in their rings than any other class of men,—sages or sciolists. Thus, Cardan wore the jacinth or hyacinth to procure sleep. Aristotle accounted the amethyst as good against vapours. The emerald lost its beauty on an unclean person. The topaz was accounted calming,—and, in proof of it, reference was made to its power of “astonishing boiling water into coldness,” which must have been highly satisfactory. But, silly as are these conceits of very wise men, they are as nothing compared with the rather blasphemous assertion of St. Jerome, that the sapphire “assuageth the wrath of God,”—which is about as true as the declaration of Albertus Magnus, that the opal will help a man to make himself invisible. If this were so, what an invaluable stone would the opal be in a society where bills oftener become due than the silly acceptors of them find convenient! We have far more faith in the alleged virtue of the turquoise, which can appease discord between man and wife:—if, as the condition is, both parties were anxious *not* to have the last word. The latter has, at all events, a more agreeable virtue than that ascribed by old *medici* to the diamond, which, in ancient wicked times, was only of use in detecting infidelities. Placed upon the head of slumbering wife or husband, it would compel the sleeper to betray the secrets of the bosom. There was, accordingly, a very natural distrust of the diamond in ancient days. Its vocation is gone in these better organized times. At least, if it were not so, we do not suppose that diamonds would so often pass as presents between lovers, married or unmarried.

Marcellus, who was the “Dr. Mead” of

Marcus Aurelius, says that a plain gold ring is a good specific for a pain in the side. With us it often cures a pain in the heart. Our old kings blessed cramp rings, and physicians made profit by the sale of them. Till the era of the Stuarts the regal influence was not ambitious enough to aim at curing aught but a mere spasm. It was left for the Stuarts, at least so Counsellor Edwards assures us, to pretend to cure the Evil. But if kings cured subjects, subjects have professed to cure queens. Thus, Lord Chancellor Hatton sent a ring to Elizabeth that could guard her from infectious air. He recommended her to place it—but Lord Chancellors were not then so nice as common men are in these days, and we leave Sir Christopher's recommendation to be sought after by those who are curious in research.

At Rome, where great men were not more honest than Hatton was nice, rich senators have been banished by unprincipled potentates for the sake of some ring which the alleged offender wore, and which was confiscated to the ruler. The latter was sometimes more justly severe towards the jeweller. Here is an instance.—

“Modern jewellers are known to palm off imitations of gems; and so did sellers of trinkets in ancient times. The moderns only run the chance of a loss of custom; but the latter were well off if they got no greater fright than the jeweller who sold to the wife of Gallienus a ring with a piece of glass in it. Gallienus ordered the cheat to be placed in the circus, as though he were to be exposed to the ferocity of a lion. While the miserable jeweller trembled at the expectation of instant death, the executioner, by order of the emperor, let loose a capon upon him. An uncommon laugh was raised at this; and the emperor observed that he who had deceived others should expect to be deceived himself.”

The following has reference to a recent fashion among us, whereby it was hoped that relief would come to the afflicted.—

“Quite recently, a new means has been contrived for deluding the public in the form of rings, which are to be worn upon the fingers and are said to prevent the occurrence of and cure various diseases. They are called galvanic rings. Although by the contact of the two metals of which they are composed an infinitesimally minute current of electricity (hence, also, of magnetism) is generated, still, from the absurd manner in which the pieces of metal composing the ring are arranged, and which displays the most profound ignorance of the laws of electricity and magnetism, no trace of the minute current traverses the finger upon which the ring is worn; so that a wooden ring or none at all would have exactly the same effect as regards the magnetism or galvanism.”

A curious circumstance is related in connexion with medical rings, as we may call them. In the last war between the United States and Mexico, rings were found upon dead officers belonging to the latter country, which contained small receptacles holding a poisonous fluid. It was said that the wearers intended to take poison rather than be taken prisoners!

The subject of Mr. Edwards's book will recommend the volume to a wide class of readers. It is fully rather than well treated, for the author has almost forgotten that “order is Heaven's first law,” and his numerous facts, stories, anecdotes, and tales, are flung together in rather unpicturesque confusion. He begins with Shakspeare and ends with the judgment of Solomon; Alexander and Aldermen jostle one another in the same paragraph. Prometheus, Popes, Pharaohs, antediluvian and contemporaneous anecdotes and references are so indifferently used that the author would seem to have made his book by simply copying his notes. However, he has given us a volume that contains a multitude of pleasant things upon a pleasant subject. He has omitted little that could give his subject illustration. When he has got

over something of his first confusion, as if he were uncertain of himself at starting, he discourses in something like order, but still without respect for chronology, of rings connected with power, of rings used as charms, connected with degradation or slavery, or employed for wicked purposes; he then passes in review those which have been coupled with remarkable persons and circumstances, and brings his argument and history to a climax, by writing upon rings of love, affection and friendship. Many of his illustrative stories are rather incidental and parenthetical than closely connected with his subject. A chapter on the pugilistic ring, fairy rings, and ring fences, would have been more in connexion with his theme than much which he has introduced as belonging to it. Nevertheless, his book is a readable book, and therein he shows how largely rings have influenced the fortunes of individuals and the destinies of men. Powerful, indeed, is the little circle for good or for ill; fit emblem of eternity; Cæsar, with his “armed Venus” in his thumb, crossed the Rubicon; and finally, to use a popular phrase, the ring is like the letter D—“We” cannot be “Wed” without it!

A Narrative of the Circumstances and Causes which led to the Failure of the Searching Expeditions sent by Government and others for the Rescue of Sir John Franklin. By Rear-Admiral Sir John Ross. Longman & Co.

THIS publication will not add to Sir John Ross's reputation. Independently of the numerous misstatements which it contains, it is written in so disjointed and incoherent a manner as to leave the reader in a state of great uncertainty respecting the part taken by Sir John Ross in the search for Franklin, and his views on the subject generally. The Admiral observes:—

“The period having now arrived when the public must expect from me an exposition of every circumstance relative to the rescue of Sir John Franklin and his companions, as far as I have been concerned in such unfortunate and unsuccessful operations, the more especially as it is known that I pledged myself, by a sacred promise to Sir John Franklin, that I would do all in my power for their rescue, it is not without reluctance, as well as concern, that I find myself in a position where my opinions may be found so widely at variance with those of several of my brother officers as to be anything but complimentary to their decisions, while they must also appear no less uncongenial to those feelings of others on whom the responsibility of the vital proceedings rests. But this is an occasion on which not only the truth, but the whole truth, is imperatively demanded, and on which I shall enter without fear of contradiction, and equally regardless of the consequences. My object is, without giving offence, to prove that in the first place, I have duly performed the sacred promise which I made to my gallant friend, in return for the deep interest he took for my rescue under similar circumstances; and, secondly, that my opinions and plans were right and ought to have been adopted; and, lastly, that my experience and knowledge ought not to have been treated with that consummate disregard, which must appear manifest throughout this narrative; but in this free and enlightened country the truth will always be triumphant.”

It is somewhat unfortunate for the veracity of the history following these high-sounding words, that the very next passage contains a mistake of so serious a nature as to shake our faith in the narrative. Sir John Ross says:—

“The nation was at peace with all the world, and on the 12th of December, 1844, another attempt for the discovery of the north-west passage was proposed by the Council of the Royal Society, and sanctioned in due time by the Admiralty. It was reported that my nephew, Sir James Clark Ross, was to have the command, but if that was the case, he declined it, when a volunteer was soon found in the gallant Franklin, then fifty-eight years of age, and two ships,

the Erebus and Terror, that had returned from the Antarctic expedition, were selected, and were nearly ready for sea when I returned from Stockholm, in February, 1845.

Now, the very contrary is the fact. The proposition for another Arctic Expedition to discover the North-west Passage emanated from the late Secretary to the Admiralty (Sir John Barrow), who submitted it to the Council of the Royal Society. That body, after long and serious deliberation, came to the conclusion, that as it was contemplated to recommend Government to fit out an Expedition to complete the investigation of a North-west Passage, it appeared to them that such an Expedition was likely to increase our knowledge of geography and terrestrial magnetism, and to promote the general interests of science; and that it was at that time peculiarly desirable in connexion with the magnetical inquiries then in progress. Nor can we accept the following story, as told by Sir John Ross:—

“On several occasions, I had conversations with Sir John Franklin, about being frozen in, and related to him that by leaving a *dépôt* of provisions, as we proceeded on our voyage in the Victory, we had saved our lives, and I enjoined him to adopt the same plan, and if possible to leave a boat or two. He replied, he could not spare boats. Two days before the Erebus left Woolwich I had a long conversation with him, when he told me his orders; and when, after repeating to him that he would be surely frozen in near Cornwallis Island, I said ‘Has any one volunteered to follow you?’ He replied, ‘No, none.’—‘Has not my nephew volunteered?’—‘No, he has promised his wife's relations that he will not go to sea any more.—Back is unwell—and Parry has a good appointment.’—‘Then,’ I said, ‘I shall volunteer to look for you, if you are not heard of in February, 1847; but pray put a notice in the cairn where you winter, if you do proceed, which of the routes you take.’ After this conversation, I met him at his lodgings in London, and reiterated the same request; and, lastly, when I took final leave of him, we shook hands, and his last words were—‘Ross, you are the only one who has volunteered to look for me; God bless you.’ I need scarcely add, that I repeated and expressed my most sacred promise that I should not fail to perform, and it now remains to be seen whether I have done my utmost to redeem my pledge.”

Sir John Richardson's gallant and noble conduct is a sufficient answer to this statement; for it will be remembered that this officer, at great personal sacrifice, searched a large extent of the North American coast, when it was assumed with good reason that there were hopes of finding the lost Expedition.

As Sir John Ross's publication professes to be historical, Richardson's endeavours to rescue his old friend could not be entirely passed over. Better, however, would it have been to have omitted any account of this Expedition than to have written of it in these terms:—

“But the most absurd of all the expeditions was that of Sir John Richardson, whom I heard bragging in the Royal Society that he would find Sir John Franklin; and at that august assembly I suffered the usual amount of abuse for *daring* to doubt his success, while I could not in any way discover that, even if he did find Franklin and his companions, he could have afforded them the smallest relief.”

The readers of the *Athenæum* are aware that we have not defended the conduct of the commanders of the expeditions despatched to search for Sir John Franklin, many of whom acted neither judiciously nor energetically; but Sir John Richardson is exempt from blame.

My Courtship and its Consequences; and Relations from the Foreign Office. By Henry Wikoff. Clarke & Beeton.

THE “suppressed book” has, of course, reappeared. Sent to America before the suppression, it was speedily reproduced in that

country; and is now reprinted in England from a New York text, by a London house which is largely engaged in the reprint trade. Such re-appearance was inevitable; and the fact of the suppression by our Foreign Office—if the book really was suppressed by the Foreign Office at all—only adds one more to the many instances to be found, in this very book and elsewhere, of the supreme folly which affects to regulate the relations of Downing Street to Literature and to the Press. How, in these days of steam-presses and steam-ships, is it possible to suppress a volume that is once in type? No power on earth is equal to such a task. It would be as easy to unfire the Tower guns as to destroy in our age a record that has once passed under the printer's wheel.

Nor does the fact of such suppression give us a high opinion of the moral courage of our Foreign Office. Does it fear to defend what it does not fear to do? Does it fear to "open the flood-gates" of the Secret Service by a bad example? After all, we must confess to some disappointment in this suppressed book as regards the political features. The "revelations" are not very dangerous. A system that has stood against the 'World' would have borne no irretrievable damage from this Russo-American onset. If Lord Clarendon has suffered from a Birch, why should not Lord Palmerston bear his share of castigation? He is part of the system, and he should in all fairness bear his part of the blame. We repeat, we have felt some disappointment about the "revelations," so largely worded on the title-page. When the most is made of them, they only amount to this:—Mr. Wikoff, a writer in *La Presse*, of Paris, and possibly in certain American journals (not named), was employed by our Government, on the strength of this literary connexion, to sustain its policy in France and America, and was paid for this service, or assumed service, out of the public money. Of course this was very wrong. If service were rendered for the money, we do not know, or care to inquire. We are willing to bear the loss of so much English gold; but we have a right, we think, to be somewhat jealous of English honour. Mr. Wikoff himself we leave out of question; he is not an Englishman, and not amenable to English opinion; but the Ministry is amenable.

The case may be stated in a few words, without exaggeration. The Government buys an article which is not for sale—the influence and circulation of the journals in hand,—and from a person who would have no right to sell it if it were for sale. Contributions to journals are manifestly confidential, like the services of an ambassador to his ministerial superior. To bribe a man to betray to your use the secrets of his legation, would, therefore, constitute precisely the same class of offence as our Foreign Office commits in bribing a writer in a public journal to favour its views. A contributor to a journal is its servant—its minister—retained and paid as such; and it is, consequently, quite as disreputable for any third party to attempt with secret bribes to influence his opinions, as it would be in Westminster Hall to corrupt the counsel of an opponent. Such is the offence with which the Foreign Office here stands charged.

These Ministerial "revelations," however, are merely incidental. The book contains the story of a love-chase as ardent in conception and as romantic in adventures as the materials of a novel. It deals with living people—uses well-known names quite freely—discusses this man's brain and that woman's beauty—is coquettish, lively, deferential, and satirical by turns—and has that dash of personal devilry in its treatment, which, it is said, makes men or

books attractive. The tale is a tale that ought never to have been told: but being told, it will unquestionably be read. It is on this hint we speak. So long as the book was not in circulation, we were silent. We hoped—against hope—that it would not re-appear. But it has re-appeared; and it becomes our duty not to allow such a work to pass without a word of protest and of caution.

The book—we say it with emphasis—ought never to have been written. That which is its greatest charm to the eager reader—the minuteness of its details of actual life, the Hawthorne-like analysis of emotions suffered by living people—people who will meet us at the morning exhibition, the afternoon ride, and the evening party,—will be its chiefest sin in the eyes of those good men and good women to whom delicacy is not one of the lost virtues. Fine feeling—good taste—high honour—any one of those elements of character which blended all together constitute social chivalry, should have dictated an absolute silence on the subject of this story. Mr. Wikoff, as an excuse for writing this page from real life, declares that he is calumniated. But any amount of calumny was better than this defence. Those, we fear, who thought Mr. Wikoff a "fortune-hunter" before, will think so still. Those who put a more charitable construction on his conduct will find in his book—in its tone, its structure, and intention—some reason to set their charity aside.

Mr. Wikoff introduces his ladye-love, and explains why he did not fall in love with her at first—before she inherited her large fortune.—

"To personal beauty of no ordinary kind, Miss Gamble added a very superior and highly-cultivated intellect, graceful manners, and a sprightly temper, which rendered her society at all times very seductive. If it be wondered at that I stood proof against so many charms, then at their culminating point, and which few did who dared to confront them, I would not have it set down either to my insensibility, or want of due appreciation. The fact was, that I had not long before escaped from the tiresome discipline of a protracted University career. Having come into the control of an ample fortune, I felt disposed, instead of settling prematurely down in life, rather to carry out the ardent dream of my youth, and to devote some years to a wide tour of Europe. It will excite the incredulity of none who knew this engaging person at the time I am speaking of, to say that my intimate acquaintance with her left upon my mind impressions so deep and pleasing as to preserve them unimpaired through long succeeding years. With occasional intervals of absence from England, my delightful-intercourse with the Dunlop family went on to the year 1840, when I returned to the United States. Not very long after this I learnt, to my profound sorrow, the death of Mr. Dunlop, which was followed in a few years later by that of his affectionate wife. Though in the habit of visiting Europe frequently at different periods after these sad events, I never had the good fortune to meet with my old and cherished acquaintance, Miss Gamble; and it was only during the winter 1850, in Paris, that I learnt, from a mutual friend, that she was residing in London, and would be pleased to renew our former friendship. The suggestion was not lost upon me, as may be supposed; and having occasion to come to London in the spring of '51 on business at the Foreign Office, I determined to employ my first leisure moments in the agreeable task of visiting my old friend."

Mr. Wikoff's "courtship" immediately began:—and the wife of an eminent historian was soon mixed up, though innocently enough, in the affair.—

"In the year 1839, I encountered in the *salons* of M. Guizot, at Paris, Mr. and Mrs. George Grote of London. Mr. Grote was at that time M.P. for the City of London, and noted for his desperate devotion to the forlorn cause of the Ballot. I found him a very amiable and unassuming person, and not a little remarkable for his profound erudition. It is

only true to say, however, that his wife interested me far more deeply. She was a singular-looking person, past middle age apparently, very tall, abrupt in manner, and with a countenance denoting decision and strength of character. It was not her personal traits, therefore, that attracted me. I discovered, though, as our acquaintance ripened, that her intellect for breadth and cultivation was far beyond the ordinary standard met amongst her sex. Her conversation had an elevation and force, even upon the most trifling subjects, that surprised and charmed me. Notwithstanding her somewhat stern and even masculine exterior, her nature seemed soft and kindly, and there was, besides, a dash of romance in her character that compelled her often to seek excitement in things or persons that were odd or eccentric. Fortunately, her fancy drew a sketch of me that resembled the original as little as fancy sketches usually do, but it served to interest her. On the other hand, I was fascinated by her marvellous gifts of mind, and hence a strong friendship sprang up between us."

Not content, however, with introducing these personages into his story, and printing letters which relate to it, Mr. Wikoff, under a pretence of illustrating his correspondent's talent, also prints her opinions, often very freely expressed, about people who have no concern with his "courtship," and who are still living. Here is an instance, where the lady in question is political.—

"I should prefer a certain degree of antagonism betwixt Chamber and President myself, for without this the people are 'sold,' as when Louis Philippe and the 'Majority' worked so cozily together. We all think here that Louis Napoleon will be elected, and that the nation will cause this illegal act to be accepted. In that case, at any rate, it is *felo de se*, which I prefer to manslaughter, and, if needs must, I will swallow it. I aver, though, that if the Republicans were to *set-to* like men, they might possibly carry a genuine Republican President; not by setting up a *roturier* or workman, but a sound, clear-headed statesman, like M. Dufaure, for instance, whose late speech on 'Revision' is admirable. I was not in town when your friend — came over, and so lost the pleasure of a talk with him. However, he is inaccessible to reason, so no great harm done. He is a half-instructed, clever, wilful man, who will always do more harm than good to his party; for, after all, mankind crave something tangible before they pump for it, and your mere Destructionists are losing their hold on popular faith. I quite agree with you in this. *Enfin*, nothing could be more wise than your reply about taking back — as Prime Minister, saying it was or would be a vital blunder of Louis Napoleon. If ever there was a broken-down politician, it is 'O'Drivelon —'; as I dubbed him once. He is too notorious a *hack* to serve even the President's turn now."

Mr. Wikoff, learning that his ladye-love had left London with some lady friends for Bournemouth, in search of health and recreation, followed her to that place. Here is a confession of his ideas and intentions.—

"Perhaps I ought to say now, in all seriousness, that when I came to Bournemouth I had no settled purpose of making love to my old friend, Miss Gamble, and still less any intention of proposing marriage. As far as I can remember, my purpose was chiefly to see that, if I attempted the former, I should meet with due encouragement, and there was then time enough afterwards to think of the latter grave alternative."

The mock love-making on the gentleman's part proceeded, with the following signs of success—as the oracle interprets in his own favour.—

"Miss Gamble was not so young by ten years as when I saw her last, nor was she as handsome, but her person still retained many charms for me. Her eyes were as bright and roguish as of yore, her smile still more significant, whilst her figure had lost nothing of its symmetry by the rounding of its outlines; her grace and dignity of manner were the same, and her intellect had grown stronger and more brilliant with larger instruction and greater experience. She had, besides, a good income, as far as I could judge, from

her late uncle's property, which was no object to me, as I had then enough for my own wants, but not enough for the support of a wife in the style I would prefer to live. Miss Gamble's income, whatever it was, united to my own, would be sufficient, I felt sure, for all the exigencies of married life. As there were no reasons, material or otherwise, that I could see to forbid the scheme, I made up my mind to try my luck. Whether from pride or nervousness, I felt exceedingly anxious not to make a mistake, and I watched the unsuspecting Miss Gamble, therefore, with a lynx's eye. Every mark of partiality, every attention, and every civility I took note of, and carefully weighed in the balance of my self-love. At the expiration of a week I began to remark symptoms that I did not hesitate to construe into favourable ones. The fair object of my loving designs by degrees grew more serious and meditative; she complained of not sleeping quite so well, in spite of our long walks; and, more significant still, her appetite, so good at first, sensibly fell off at last. I am no *connoisseur* if these signs are to be mistaken."

Complacency was never more deceived, if we may credit actual facts, and not the vain imagination of the wooer. Here is a supposed lover's scene, in which our cavalier makes any save an heroic figure.—

"I resolved, before going, to *propose*. It was on a Friday—ominous day. As usual we had settled upon a walk, and the weather was balmy and bright, just the sort of day to inspire gentle emotions. It was arranged that, instead of coming home to lunch, Thomas, the assiduous footman of Miss Gamble, should present himself at the hungry hour of two in some of the shady ravines that intersected the noble cliffs that overhung the beach, our favourite promenade, and with his basket suitably supplied with dainty sandwiches and refreshing stout. We set off, but our *parti carré* was disturbed by the absence of its gayest member, Mary, the lively daughter of Mrs. L., who was suffering from a cold and remained at home. One chance of interruption the less, I thought, if the occasion comes. For the first time in my life I went through all the phases of that panic which is said to precede the formidable act of 'popping the question.' I had always wondered at the pusillanimity of bearded men trembling under circumstances so trivial as these, but fighting a battle in theory is a different thing from a decisive encounter with the enemy hand to hand, and the flash from a woman's eye is sometimes as startling as the glare of a whole platoon of small arms. Mrs. L. frequently stopped to pick up shells along the shingles, and I found myself constantly alone with Miss G., but my offer, like Macbeth's 'Amen,' stuck in my throat, and resisted all unconscious of the deadly aim of the fowler lurking near. Up to this time I had never laid aside the mask I had worn from the beginning. Neither look nor word had ever once betrayed my thoughts or feelings, and I was certain that a bomb falling at the feet of my startled companion would scarcely astound her more than an abrupt offer of marriage on my part. As I failed to screw my courage to the 'sticking place,' I resolved to skirmish a little, thinking my secret might slip out in that way. Suddenly Miss G. directed my attention to a fine view on the right, but instead of it I regarded her, saying, that 'there were other objects I had more pleasure in contemplating.' Finding my eyes fixed on her, she blushed, and asked me, in downright astonishment, 'what I meant?' To my shame I confess, I was unable to tell her. Another chance occurred; for, taking off a 'kerchief she found too warm round her neck, she gave it me to pocket. I took it, and retained her hand in mine. Another look of excessive surprise upset me again, and her gentle admonition 'to be quiet' was quite unnecessary. My strong and varying emotions at last made me hungry, and I sat down to lunch with great relish. Thomas had selected a most inviting spot for the occasion. Our cloth was spread on a nice patch of sand in a lonely dell, protected from the hot sunshine by a thick group of trees, whilst the soft murmurings of some neighbouring rill discoursed most eloquent music. Our lunch passed off pleasantly enough, and

I felt my resolution revive under the stimulus of a tumbler of bitter ale. If I were only *elle-à-elle* now, thought I—when I was startled by Mrs. L. getting up in a wandering mood, and sauntering alone up the valley. Quaffing a little more ale, I began, quite determined. 'I was just thinking, Jane'—and I stopped.—'Why do you call me Jane?' she said, turning her inquiring glance full upon me.—'Because I have known you so long, I suppose. But I was just thinking'—I stopped again.—'Well, what is your thought?' she asked curiously.—'That it is strange you have never married.'—'I think so myself sometimes,' she dryly answered.—'What *can* be the reason, pray?'—'The simple one, that I have met no one to my liking.'—I was just a going to say, *à la* Richard in the play, 'take more pity in your eyes and see him here,' but I didn't.—'What sort of a man would suit you?' I continued, still hoping to sidle up to the main point.—'A nice-tempered person, who would go out after breakfast, and let me do as I pleased all the day long,' she answered in a bantering tone.—'You are, then, so very fond of having your own way.'—'That is one of my weak points.'—'But compromise is the surest basis of happiness in married life,' I expostulated.—'I might adopt that doctrine if I met anybody worth the sacrifice.'—Here was another chance, but the idea struck me, that it would be very awkward if Mrs. L. were to come back in the midst of my declaration, and I decided to postpone it. This was sheer cowardice, no doubt, but I gave up the attack and turned the conversation."

Mr. Wikoff declares himself in writing,—and receives an absolute, though civil, No! The civility, however, puzzles him. Because Miss Gamble does not treat him with disdain, he imagines she is only coquetting with his feelings—just as *he* is only playing with hers. He runs to Paris.—

"I endeavoured to turn my attention to the lively debates in the Assembly, and to watch the political coquetry going on between his Republican Highness, the President, and the veteran spinsters of the Right, Messrs. Molé, Thiers, and Co. To say nothing of my long acquaintance with the captive of Ham, my admiration was excited at his skilful manœuvring against tremendous odds. 'I wish him luck,' I used to say, 'but I shall be married long before he is Emperor. I am almost in sight of the altar, but he has a weary road to travel ere he gets even a glimpse of the throne.'"

Fortune-hunters, like other huntsmen, are sometimes at fault. Mr. Wikoff received a letter from a London friend, saying there was nothing to communicate, but promising influence in his favour with the object of his pursuit; and vanity immediately suggests that this fair friend is acting as a traitor to his cause.

After much intrigue and self-delusion, as it seems to us, on the part of the gentleman, the lady starts on a Continental tour. Mr. Wikoff follows; and, of course, meets her at unexpected and romantic places—once in the monastery at the top of the Mont St. Bernard—very much like the wandering knight in one of Mr. James's tales. The lady is, however, blind to his passion and his merits for a long time, even by his own account. At last he conquers.—

"At nine next morning we all set off for Geneva. I felt rather dull as the day was gloomy, and I thought, perchance, that my stupidity might be turned to some account. For the first time I was reserved and silent, as if I had been seized with a fit of repentance for the matrimonial folly I was going to commit. I was curious to see the effect. To my delight Miss Gamble became uneasy. She began to think over all her sins—and perhaps of some I didn't know—and she essayed to draw me into conversation; but I only sank, apparently, into deeper melancholy, sighing now and then as if something weighed on my mind. She began plaiting a shawl that lay upon my knee, for we were sitting next to each other on the deck of the steamer, and her face gradually assumed an expression of such tenderness, mingled with remorse, at all the pain she feared she had given me, that it cost me a great

effort to maintain my morose aspect, but I persisted. As we approached Geneva, I got up to look after my luggage. 'You are going, then, to another hotel?' she said.—'Of course,' I answered, 'and I must hurry away to secure a room.'—'Well, never mind,' she rejoined, taking my arm, 'come along with me; and off we marched to the Hôtel de Berg, where her courier had engaged an apartment. Miss B—— stared at this new contradiction with amazement; but, said I to myself, if my vinegar looks bring such sweet results, she shall have more of them. I was delighted to find that Miss Gamble had ordered a private sitting-room, for now I should be able to carry on my courtship without the necessity of strolling up and down a public garden, as at Ouchy. We had just entered the room in question, and I was gazing out of the window at the lake, the bridge, and other pretty objects in view, with Miss Gamble standing at my side, when she said, looking up in my face still imbued with acidity: 'Can you forgive me for all my follies?'—'It costs me an effort, Jane,' I replied in *thorough bass*, 'but I can.'—'Then,' she exclaimed, taking off her glove, 'there is my hand. I will be your wife, and a devoted one.'"

According as the reader receives or rejects this little love-scene, will be his patience or impatience with the rest of the story. It is on this consent that all future proceedings turn. It is quite clear that the lady either never made a serious promise, or quickly repented and withdrew it. The attempt at "abduction" at Genoa—the compulsory promise then extracted from Miss Gamble, under penalties, prove thus much at least. Mr. Wikoff represents this scene at Genoa as no other than a love-trick:—which Miss Gamble accepted and forgave. But even as Mr. Wikoff tells the story, there are ugly facts in it. The gentleman and the lady's courier—who is to receive 500*l.* on the wedding-day—are in consultation:—

"Well, we shall see what can be done," I continued, 'for I have got an apartment; the difficulty will be to induce her to come there. If I write to ask her, she will be sure to refuse.'—'Very likely, sir, for there's no counting on her a second. Can't you think of some excuse or other?'—'I have been thinking of it already—but I have fallen on none yet.' Before the courier went away I happened to mention my notion about threatening to put an end to myself in her presence if she would not change her conduct. 'That would be just the thing to please her, sir,' exclaimed the courier. 'Do try it—I am sure it would succeed!'—'Perhaps it might, and I regret now I did not buy the pistol!'—'No need of that, sir,' replied Figaro; 'I always travel as a courier with a pair of pocket pistols. I'll lend you mine!'—'Very well! Bring them round to-morrow.'"

Next day the plot deepens. The same persons are consulting:—

"What's to prevent your telling Miss Gamble you've lost the passport, and that she must come to the police-office to get another? you can then conduct her to the apartment I have taken.'—'That's a good 'un, sir,' returned the courier with a broad grin. 'Of course, I can do that! Nothing easier, but I hope she won't be angry with me.' * * In fifteen minutes later the courier was in my room again. 'All right, sir,' he cried, 'but look sharp, sir. She has ordered the carriage, and is going right off to the police after another passport.'—'Order a carriage for me, then, or she will be there before me.'—'Where are we to go, sir?'—'Here is the address,' and I wrote it in pencil, and gave it to him.—'Here are the pistols, sir,' returned the courier, handing them to me, 'now mind, and put both of them to your head if she drives you to despair.' * * The moment the courier left I drove off rapidly to the apartment I had hired, and found my *valet de place* making preparations for my occupying it. I had given him no explanation why I had taken it, and he supposed accordingly that I was going to lodge there. I told him the instant I entered that I expected two ladies, with a courier, to come there immediately, and that one of the ladies in black would, probably, say something about a passport, and ask for the *Intendente*.

In that case, all he had to do was to conduct her to the saloon where I should be."

All was now prepared:—

"About one o'clock Miss Gamble arrived, and was ushered, at once, by my master of ceremonies, into the room where I awaited her; Miss Bennet and the courier remaining in the ante-chamber. On seeing me, Miss Gamble exclaimed:—'Ah! it is you. Well, I thought it was all a trick.'—This surprised me, as I did not then know she had seen the address in my writing. 'Yes, it is all a trick,' I announced, 'but as you refused to see me at Turin, save in the company of your courier, I did not stop on this occasion to ask your permission. But pray be seated.'—'What do you want with me now?' she asked, perfectly at her ease.—'To make you some explanations, and to talk you into reason, if possible.'—'Is that all?' she inquired; 'you intend nothing else, I suppose.' * * —'Well, Jane, I continued, 'tell me, I beg of you, what do you intend to do?'—'I suppose, alas! that I must marry you.'—'You have declared that often enough already. But when?'—'When you please—to-night, or to-morrow.'—'I wish I could put faith in you,' I said, full of doubt. 'Try,' she replied, smiling.—'Will you give me a pledge in writing?' I asked.—'Most cheerfully.'—I rang for the valet, and ordered him to go and buy pen, ink and paper, as I had not foreseen their use. In a short time Pietro came back, having borrowed them, as it turned out, at the French Consul's opposite, there being no shop near.—'Well, what am I to write?' demanded Miss Gamble, seating herself at a table.—'What you have just said.'—'I don't remember now; you must repeat it.'—'How like you,' I observed. 'Well, write, "I bind myself to marry Mr. Henry Wikoff, according to the pledges I made him to that effect at Ouchy and at Geneva."'—'There,' she said, 'will that do?'—'Are you really in earnest this time?' I inquired.—'Perfectly so.'—'Will you give me still another guarantee?'—'What you please,' was her reply.—'Add then, "or to forfeit the half of my income."'—'Now I am sure,' I said, quite satisfied, rather than let me touch that precious income of yours, you would marry me or Beelzebub himself.'—'Are you not ashamed of yourself?' she said, assuming a mock air of rebuke. 'Any more?'—'Merely add, "I do this of my own free will and accord, and in consideration of my frequent violations of good faith heretofore."'—'That's all very fine,' she observed, as she finished, 'but that paper is worth nothing at law.'"

On such a "love-scene" it is not necessary to offer one remark. Neither will we dwell on the long after-drama, the lady's forcible detention, represented as a "childish struggle," as a piece of "temper," during which the lady broke a window to arouse the street below, and lay on the floor in hysterics. The incident that followed is made much of by the gentleman in his own defence.—

"It was considerably after midnight when we started off on foot to return to Miss Gamble's hotel. Pietro led the way, and as the streets were quite deserted, I walked with my arm affectionately thrown round Miss Gamble. I mention this simply to show the loving mood we were in. Mary accompanied us. When we had walked a short distance, Miss Gamble remarked:—'What's the use of going back to my hotel to-night?'—'What do you propose, then?' I asked in some surprise.—'Let us go somewhere else, and return in the morning.'—'As you please,' I replied, 'but do you wish me to go along with you?'—'Of course, I do; tell your servant there to stop at the nearest hotel.'—I gave the order, and directly Pietro knocked at the door of a house which he said was the 'Iron Crown Hotel.' We were admitted instantly. I asked if they had rooms, and we were shown to a couple of bed-rooms adjoining each other. Miss Gamble chose one, and I took the other. I chatted with her for a short time before retiring, and we agreed to be up and off at nine in the morning. I saluted her affectionately when I bid her good-night. I slept soundly, and was woke up by Mary knocking at my door by order of my mistress. 'It is near nine o'clock,' she cried, 'are you ready?'—'In five minutes,' I answered, and springing up immediately, I ordered a carriage

to be sent for, and after taking a cup of coffee, I paid the bill, and we started off once more for Miss Gamble's hotel. I was seated alongside of her in the carriage, and Mary occupied the place in front, and in proof of the kindly relations between us, I might add some details that, as a matter of taste, I think best to leave unmentioned."

The lady of these "kindly relations" immediately commenced criminal proceedings against the gentleman who, by his own account, had "saluted her affectionately"—which criminal proceedings ended in a sentence of guilty of "abduction." The story is continued beyond the trial; and some letters, from eminent Italians, are printed to show that, in their opinion, the offence of the writer was not one involving a "loss of honour." Why did not Mr. Wikoff accept this decision of a friendly mind, and rest content with the verdict of so good a judge as M. de Cavour? Surely, this would have been better for all parties.

Pegu, being a Narrative of Events during the Second Burmese War, from August 1852 to its Conclusion in June 1853. With a succinct Continuation down to February 1854. By W. F. B. Laurie. Smith, Elder & Co.

THE war in Burmah was an enterprise which tried the constancy of the soldiers engaged in it. There was all the labour of a great conflict, with little of its glory. It was not so much a series of brilliant feats to be achieved, as a succession of difficulties to be overcome. The eighteen regiments that marched against the King of Ava feared little from his armies; but they recalled the circumstances of a former struggle, between the British and the Burmese Governments, in that most dangerous country. Forty thousand men had then taken the field;—scarcely ten thousand were left fit for duty at the close of the campaign.

The army had now to pierce through a country of jungles and swamps, over a surface of rock and clay. When land-winds blew, a sickening odour filled the air; water was scanty and bad; nearly half the force was at one time smitten by the climate,—though as they advanced their health returned, and they had only to contend with the natural obstacles in their line of march and a desultory but harassing resistance from the enemy. Very different from a campaign in Europe, in India, or in Western Asia, is such an expedition in the region between the Ganges and China. No central fortress is to be lost and won, to determine the chances of defence or conquest; no concentrated army is planted across the invader's path, to decide the issue by a single collision. In Burmah our troops had not to penetrate through tremendous defiles, as they did beyond the Indus,—or to ascend vast fortified plateaus, as in the Mysore,—or to meet the shock of fierce and gallant armies, as in Sindh and the Punjab. The Burmese were scattered; they held many forts and stockades; they nursed their courage in the recesses of hills and thickets, and, as they retired from point to point, raised breastworks which served, first, to mask them while they fired, and then to secure them while they fled. All this seems petty, now that we have been so much accustomed to talk of Cyclopean masonry, of granite cubes, and triple tiers of ordnance; but the forest fortifications of Eastern Asia by no means fly to pieces under the discharge of European artillery. Tough walls, composed of enormous timber piles buried in earthen banks, resist a cannonade that might shatter a stone tower into ruins. One of them was battered, experimentally, with shot and shell for a considerable time without appreciable effect. Many of the shells plunged into a mass of clay and were choked, and shots were only effective when

they struck between the palisades. No method was so efficient as that of heaping bags of powder against these walls, and blowing them up.

Lieut. Laurie narrated, in a former volume, the series of operations at Rangoon in 1852. He has now carried on the story to the conquest of Pegu, and the close of the war. In fact, it was while writing this book that he received orders to start with a column, about to attack, in succession, the remaining strongholds of the Burmese. While the final preparations were going on, the gallant officers resolved to enliven their souls with reminiscences of London-life.—

"On the 26th of August the theatre at Rangoon presented a brilliant appearance. The performances were Douglas Jerrold's *Rent Day*, with the Farce of *The Happy Man*! The scenery and decorations of the house were in excellent taste, and the acting was admirable. General Godwin was present on the occasion, and a large audience of officers and men. The drama throughout was listened to with profound attention. Rachel Heywood, Martin Heywood, and the wily Bull-frog, were capital in their respective parts. As an old actor on the Indian boards, one may be allowed to express his approbation by asserting that after witnessing the *Rent Day* at Rangoon he felt a pleasure, surpassed only by that which we might feel after beholding the majesty of a Macready, or the genteel humour of Charles Mathews! Little the author thought, while writing his instructive play, that it would ever be performed off a grand staircase near the upper terrace of the Shwé Dagoon Pagoda! In the *Happy Man* the principal actor was evidently an amateur 'Power,' and we shall surely live a very long time if there be aught of truth in the saying, 'Every time a man laughs he adds a day to his life!' The drop-scene representing the storming party at the eastern entrance on the 14th of April, by an Artillery Officer, and a superb fancy scene, painted by an Officer of Engineers, were much admired; while the music was both of a plaintive and a spirit-stirring nature, as if composed to sympathise with the lights and shades of a soldier's life!"

It was on the morning following they made their unsuccessful attempt to breach a stockade; nevertheless, they set out cheerfully and confidently on their enterprise against the citadels of the "Golden Foot." Prome was the first place attacked, and it was captured in October, 1852. The report of this achievement filled five octavo pages in a Gazette, and Indian writers made themselves very merry *à propos* of the fact that only one man was killed. It was like Nelson's idea of having a Gazette "all to himself." But a military success is not always valuable in proportion to its cost in human life; otherwise many an Indian fray would excel in historical importance the victory of St. Vincent. However, a detachment moved from Prome to Pegu, which was more vigorously defended. Here the qualities of our Asiatic army were illustrated. They had to fight their way to the base of the walls through a dense, entangled jungle, with heavy grass up to their breasts, which working parties in advance were employed in cutting down. Thus, in the fearful heat, with shot flying round them, they marched in single or double files during four hours and a half. Only at times, when a mound or bank was reached, were they able to return their enemy's fire; but, whenever an opportunity did offer, they gave him half-a-dozen close and rattling volleys. As soon as this jungle had been passed, the different companies formed on an open space, in front of the walls and gates of Pegu. They were quickly at the entrance, and quickly within; and now that the combatants were fairly opposed, the British-Indian troops disposed of their task in a summary way. Their general harangued them:—

"Now," he said to the Fusiliers, 'you are Bengallies, and you are Madrassies, let us see who are

the best men !' A deafening cheer, a rush,—and all was over ! Pegu had fallen."

But the Burmese collected in large numbers round the town, and besieged it by day and night. Our soldiers, on the other hand, had learnt some of their arts, and erected stockades for their own defence. In return, their assailants dragged a heavy gun up a hill, and with several others of smaller calibre maintained a continual discharge. We have heard how the Dutch, in Java, fired the contents of their dust-holes on the enemy. The Burmese were equally miscellaneous in their assortment of missiles.—

"The foe seemed determined to drive the small band from Pegu; in addition to their rude iron and leaden balls, small brass representations of Gaudama, pieces of iron, necks of bottles, even stones, or round lumps of granite brought hither for the purpose, were fired on our troops from every quarter."

Relief speedily came to the garrison of Pegu, and, during a sortie upon the enemy, a singular spectacle was witnessed. A body of Sikhs, that had formed part of the army which Generals Hardinge and Gough gained their peerages for defeating, now rushed alone into the battle, and, 3,000 miles from Lahore, assaulted one of the Burmese positions, and cleared a way for the English, who followed them. But the grand episode of the war was a night attack on Prome :—

"With the exception of the trusty guardians of our position, Prome, on the night in question, was wrapped in slumber. These sentries, with wary eye, paced the fronts of their respective picquets. It was about midnight when the sharp and heavy report of three signal guns from the enemy's advanced post startled the 'night watch,' and roused their sleeping comrades. Now commenced a scene of energy and activity. The General, feeling assured that something like danger was at hand, sprang from his couch, but waited for some further indications of the presence of a foe ere he roused his sleeping soldiery. But he had not long to wait; for the sharp rattle of musketry and the heavier report of the jingal announced that our picquets were attacked. Soon the bright flash and deafening roar of our own heavy ordnance told that the advancing columns of the enemy offered a mark for their destructive fire. The attack was rapid, but much more so was the reply of our troops to the challenge of 'the assembly.' In a short space of time each picquet was reinforced, and every assailable point occupied. Staff officers were now to be seen here and there—some mounted, others on foot—rapidly conveying the orders of the Chief, who, ever active, flew to each post of danger. * * The enemy made repeated assaults; charge after charge—accompanied with wild yells and cries—was attempted, but the steady fire from the heights and from our left drove them back again and again."

Pegu was "annexed." It is a flat province, about 200 miles square, with a good soil, but has been so neglected that the rainy season lays nearly the whole of it under water, when the people go between their hill-villages in canoes. Arracan, however, was a similar swamp before the Company undertook to restore it, and it is now one of the granaries of the Indian coast.

As to the people, they were not unwilling to become British subjects. Of course, the chiefs, who lost their importance, regretted it; and since they are, like the Chinese, wholly without modesty, little can be done with them. Lieut. Laurie has an anecdote of their self-esteem, referring to the last war :—

"After the signing and sealing of the Treaty of Yandaboo, Sir A. Campbell and Mr. Robertson took the Burman Chieftains to view some of our troops and Artillery. The 'rebel English strangers' having astonished them with the evolutions of our Infantry, some field-pieces were then brought out, and fifty rounds fired to show the rapidity of our Artillery movements. Finally, some shells and rockets were thrown across the river. During the latter part of the exhibition one of the rockets exploded at the

moment it left the tube, and scattered the shot around, but fortunately without doing any injury. Sir A. Campbell then drew the attention of the Burmese Chiefs to the fact that we could make our shells explode at any distance we pleased. After the exhibition was ended, one of the mighty visitors, on being asked quietly what he thought of it, replied, 'Oh, we can do all this much better ourselves at Ava !' "

It was this Burmese vanity which brought the "Golden Supreme," who rules in the "City of the Immortals," into collision with the British Government. The nobles were as conceited as the Prince, and they believed they should be able to blow our ships to atoms and annihilate our entire army.

This is the series of events which Lieut. Laurie has described. We notice with regret that, like most amateurs, he is not improved by praise. His first narrative was by many degrees more rapid, direct and plain. The second is too digressive, dogmatic and ambitious; though it deserves to be read as a scrupulous and correct account of the military proceedings in Burmah. Lieut. Laurie can be a flippant writer; but he is a modest soldier, and fairly distributes the credit of the perilous and laborious adventures of the Burmese war.

History of England—[*Geschichte von England*].

By Reinhold Pauli; with a Preface by J. M. Lappenberg. Vol. III. Hamburg.

THIS work is the production of a writer who has already given proof of his ability to deal with the early history of England; and the reputation which he has gained by his 'Life of Alfred the Great' is not likely to be tarnished by the publication of the volume now before us. A lengthened residence in our country has familiarized him with our language and literature, ancient and modern; he is sufficiently acquainted with our laws and political institutions to feel an interest in tracing their gradual development; and he has made judicious use of the stores of unprinted materials illustrative of our national history which are still to be found in our libraries and record offices. However much we may regret that M. Lappenberg—with whom the present work originated, and to whom we are indebted for the first and second volumes,—finds himself unable to carry it on, we cannot but congratulate ourselves on the fact that he has intrusted its prosecution to one so competent to do it justice as Dr. Pauli.

The volume now before us treats of the history of England from the accession of the house of Plantagenet, in 1154, to the death of the feeble Henry the Third, in the year 1272. It consequently embraces the reigns of four kings,—each of which was marked by the occurrence of events not only of vast importance in their own day, but which have exercised, and are exercising, an influence of a permanent character. The struggle between the civil and the ecclesiastical power in the persons of Henry the Second and Becket, and the annexation of Ireland to the British crown;—Richard the First, and the influence produced by the Crusades upon the arts, the commerce, and the civilization of Europe;—John's loss of Normandy (the first step towards our insular nationalism), his submission to the Pope, and his concession of the Great Charter of English liberties;—and lastly, Henry the Third and his long minority, which on the one hand presented a favourable opportunity for the extension of the power of Rome, and on the other gave the Barons that preponderance in the balance of power as well against the Church as the Crown, whence sprang up that true source of England's greatness, the Middle Classes. All these are vast subjects, and demand a careful and impartial handling;—and

this they have received from Dr. Pauli. His narrative is clear and concise; his partialities are towards measures rather than men; and while it is not difficult to discover the bias of his tendencies, it is seldom that these leanings disturb his equanimity or warp his judgment.

In one respect the present work is worthy of especial commendation :—we allude to the care which its author has bestowed upon the authorities which he cites as confirmatory of his narrative. With true Teutonic perseverance he has examined not only the whole range of printed authorities, narrative and documentary, but he has plunged deep into the hidden recesses of the Chancery and the Exchequer, and has been rewarded for the patient investigation which he has evidently bestowed upon this department of his labours. By a careful perusal of the Chancery records in the Tower (the traces of which are frequent in the latter part of this volume), he has succeeded in throwing new light upon many an event in the troubled reign of Henry the Third; the true sequence of events has often been established; and the cause and the consequence—sometimes reversed in the pages of even contemporary historians—are no longer confounded.

We are induced to enlarge upon this department of the subject in consequence of some remarks 'Upon the Sources for the History of the first four Plantagenets,' which Dr. Pauli has added to this volume; and we the more willingly give publicity to his statements (with which we heartily coincide,) since they represent the estimate in which this department of our national literature is regarded by an impartial and well-informed German man of letters. No country is so rich as England in an almost unbroken series of the most important historical documents, and nowhere is it so difficult to use them. Our libraries contain numerous copies of our early chronicles, but the existing printed texts are, as a whole, incorrect and imperfect. Of some of these, the important Robert de Monte for instance, we have had no edition whatever printed in England; for some of the others we are indebted to the labours of Bouquet, Brial, and Pertz; while of many of the rest we have nothing better than the texts framed as far back as the reign of Queen Elizabeth. Matthew of Westminster has had no care bestowed upon him since A.D. 1573,—Hoveden, Huntingdon, and the History of the English Bishops by Malmesbury, are still as they were left by Savile in 1597. The latest edition of Walsingham is that of 1603, and the bulk of our other annalists stand in the same position. While we except from this censure the publications of the English Historical Society and the first volume of Messrs. Petrie and Hardy's 'Materials for the History of Great Britain,' we do not forget that the former of these undertakings languished and died from want of public encouragement; and that the second was suspended in consequence of a refusal on the part of Government to award the trifling annual grant by which it might have been carried on with energy and success. And this is the secret of that deficiency in our literature regretted by Lord John Russell,—the want of a satisfactory history of our own nation. Those who know most about the matter know that the time has not yet arrived when such a work can even be commenced. The historical inquirer has not gained access to the material out of which to construct his narrative; and until the text of our historians is placed upon a firmer critical basis, and some effort adequate to its importance be made to publish the more valuable of the documentary illustrations of our history, we need not wonder that men hesitate in expending their energies in the production of

works which they are conscious must become obsolete. Dr. Pauli has met the difficulty as few could, fewer would do, and none ought to be under the necessity of doing. He has taken upon himself the double task of first collecting his materials, and then writing his history. We are grateful to him for having undertaken this labour: for ourselves, we are ashamed to be constrained to admit that the labour was imperative. We cannot gainsay his remark, that in the collection of materials for the history of its middle ages our nation is behind nearly every other in Europe.

Mammon; or, the Hardships of an Heiress.

By Mrs. Gore. 3 vols. Hurst & Blackett.

CERTAINLY the hardships of those who are neither heirs nor heiresses are more patent to the world and more generally understood,—but as it is a received axiom that every state of life has its compensation to keep the balance true, we must accept as a fact, that heiresses have hardships, after their kind as painful as those which assail ordinary mortals; and it is for these hardships that Mrs. Gore in her present novel claims our sympathy. 'Mammon' is not so brilliant as many of its predecessors; but, on the other hand, there is less of that worldly tendency, which is the sin that lies at the root of Mrs. Gore's books in general. The idea intended to be worked out, is the impoverishing nature of a love of money. The author shows how it eats out all geniality, all kindness of nature,—destroying the very power to enjoy the much-beloved riches, even when they fall in golden showers without stint or limitation. The character of John Woolston, of Wraybury, is evidently a study from life,—carefully finished and elaborated: it is exceedingly well done. The gradual choking-up of all his faculties with gold-dust,—the rusting and blunting of all his mental gifts and natural affections,—are excellently brought out; and John Woolston, of Wraybury, may stand for a type of the intense vulgarity of selfish prosperity. But having said this, we have to complain that Mrs. Gore shows us nothing more elevating. The characters intended as a relief to the worldliness, which she paints as long, and as large, and in miniature, and in various shades of frivolity and worthlessness, are mere sketches,—not remarkably well done, nor like real life. Mrs. Gore has evidently no belief in goodness when she talks about it. She draws the redeeming personages with a feeble and uncertain touch; she makes them a present of a handful of virtues in the rough, but either does not like, or does not know how, to work them out into human naturalness. She does not succeed in imparting elevation of feeling, heroism, or enthusiasm to the reader for anything good or noble;—her good people are all dull, common-place, and in real life (to which Heaven forbid they should ever be translated!) they would be intolerable bores. Their goodness is the result of stupidity and slowness, rather than of preference for what is good; and this leaves a heavy, depressing effect upon closing the book. The good people are called good, and much is said in their praise; but their action is only indicated, and not developed,—and does not relieve the dreary worldliness of the others. The only exception is the slight sketch of Betsy Pennington, devoting herself to her imbecile father, and refusing to marry the man she loves and become Countess of Dinton, so long as she is needed at home. This might have been made a charming episode had it been made out and followed up at greater length. Mrs. Gore shows her power to paint genuine homely emotion by the manner in which she relates the illness and death of Lord Dinton,

and the desolation that falls upon poor Betsy Pennington, when the long-deferred happiness of her life is almost within her grasp. It is beautifully related, and only leaves us to regret that Mrs. Gore gives us so little of the kind.

As to Netta, the heiress, she is kept in a state of white muslin simplicity throughout:—her hardships consist in the violation of all her natural affections, owing to the cold shadow of wealth and of her father's pride, under which she has to dwell; but she has a good affectionate heart of her own, and struggles through into a happy marriage with the man she loves;—but we remember Eugénie Grandet, and Netta Woolston will not bear comparison. The sketch of Farmer, the keen, caustic Q.C., is good; but Reuben Howard looks like a daguerreotype.

Mrs. Gore's notions of money will seem remarkable to ordinary people. Woolston is, at the outset, represented as languishing in poverty, with the wants of "a pinched and needy household,"—with threadbare carpets, rusty grates, unbrushed boots and shabby dress,—in a "weedy villa,"—unable to pay his coal-merchant's bill, and reduced to the most sordid discomfort,—upon an income of 500*l.* a year, paid regularly by his father, in addition to which he is a rising barrister, by no means briefless, and the friend, pupil, and *protégé* of an eminent Queen's Counsel. The Rector of Hanals, also, with a living of 800*l.* a year, is represented in a condition of still more atrocious discomfort:—to be sure he has a large family. Luckily for the world, many people contrive to live in comfort and respectability, and bring up large families, on incomes far less than either of these; but Mrs. Gore makes sad confusion between money and management.

In conclusion, however, we must say that we prefer 'Mammon' to either of the other novels which Mrs. Gore has given to the world since her re-appearance in print.

MINOR MINSTRELS.

Idyls and Songs. By Francis Turner Palgrave. (Parker & Son.)—This scholarly, tender little volume of poems is dedicated to Mr. Tennyson. The verses are elegant and refined,—and are the very antipodes of the more popular clap-trap style. We have translations from Sappho, Simonides, and Euripides, — Catullus and Horace,—versions of Heine and Goethe,—songs on Italian airs, — and thoughts on reading Theocritus. What seems to us the chief want of the volume is the proof that the versatile and well-read author has any peculiar region of the imaginative world which he can call his own. He hovers over many spots, the Scotch ballad district and the Christabel parish, but never alights. His poems seem to us rather poetical reflections of other men's poems than distinct creations of his own; not that he ever plagiarizes, but that he always builds his castles in the air, so that his grounds hang over a neighbouring domain. His 'Idyls' are like Mr. Tennyson's,—his 'Christabel' is a very ambitious but very inadequate conclusion of Coleridge's poem. Such completions are always invidious and never successful. Mr. Palgrave's strength does not lie in invention, but in the feeling he throws into what he writes. He is essentially a poet of the affections, and his heart furnishes him with his best inspirations. Few depict better a father's or a husband's love;—few sing sweeter and more aerial dirges over the dead.

A poet of the sentiments, unless aided by music, like Moore, must always be rather vague and general in his subjects. No writer ever obtained popularity who wrote only on such class-subjects as 'The Birth of Art,' 'The

Sculptor,' and 'The Christian Artist.' The following lines, though Tennysonian in more than metre, will interest our readers, as recalling the beautiful picture which suggested them.—

The Burial of St. Catherine, carried by Angels to the Summit of Mount Sinai.

They bore her from the ruby West.
The roseate silver of their wings,
As on the rushing convoy springs,
Dies down within the grey dark East.

They bore her from the fading West,
Fair martyr-maid, brave heart and true,
Through mist-white spaces gem'd with dew
Within her dew-cool couch to rest.

Where, struck through lapping folds of cloud,
The splintery peak dark-moistened gleams,
High o'er the parting of the streams,
They wrapt her in her rock-hewn shroud.

For one last gaze their Angel eyes
Are bow'd upon the martyr-maid.
She sleeps within the grey cool shade:
The eddying mist around her flies.

The tearful mist around her flies.
The Sun strikes sudden through the white;
The dewy spaces swim with light,
And all is glory where she lies.

Poems. By W. Bell Scott. (Smith, Elder & Co.)—There is much eccentricity about these poems, but no juvenility. They are the work of a man of middle age,—they are pervaded by a mediæval feeling, and treat of mediæval subjects. The monk Bede is the hero of one poem, and a monk's beads part of the furniture of many.

The author has fair claims both to hereditary genius (a little wayward, perhaps) by relationship, for he is brother of the late David Scott, and to eccentricity by the sect he has embraced, for he seems by his designs to be a Pre-Raphaelite. From title-page to *finis* the volume is original, and that is something to say in the present age. His best poems are, a Ballad of Rosamund, 'Bede in the Nineteenth Century,' and a Scandinavian Incantation Scene. His sonnets are good, but rough; and his book concludes with some legends of St. Cuthbert,—fresh, quaint, and full of the spirit of early Saxon piety. The opening poem, a tale of village seduction, called 'Maryanne,' though worthy almost of Hawthorne for minute, startling touches and daring daguerreotyping of modern life, sadly wants rhyme, or some severer metrical restraints than it has at present. It quite sets our teeth on edge to peruse such lawless compositions.

The Sonnets on Haydon, and on Popular Criticism, are unworthy of the writer. The poem in which Bede awakes in the nineteenth century is of a quaint fancy, and in parts vigorous and nervous. The monks are well discriminated:—Alfin, who never awoke when the cock crew, but

started up
At the first clang of the cook's tin cup,—

and poor Alp, the old Saxon peasant, who strove so many years in vain to read the Psalter,—and Wulf, the loving, humble disciple, who relieved his master from all his daily cares, that left him more at leisure to finish the Gospel. Mr. Scott's mind is deeply and essentially Gothic; and his faults are Gothic and not Greek faults. He delights too much in archaisms; and seems to imagine that the beauty of mediæval poetry is to be obtained by the mere reproduction of mediæval language. 'Woodstock Maze' is a very original attempt to convey the weariness of Rosamund in her woodland prison, and the thought perhaps too much like that of 'The Moated Grange'; but the scenery and feeling are the author's own. His Rosamund is a life-like miniature. She is wayward, playful, full of a bold, pure love:—she chatters about Japes, the page, and her maiden Minnie, and Madge spinning like a sage,—prating so prettily that we dread grim Eleanor's coming, and ending at once her life and the ballad. We select the

most knotty and crude verses, but perhaps the most full of originality.—

The gorse and ling are netted and strong,
The conies leap everywhere,
The wild briar-roses by runnels grow thick;
Seems never a pathway there.
Then come the dwarf oaks knotted and wrung
Breeding apples and mistletoe;
And now tall clims from the wet mossed ground
Straight up to the white clouds go.
Oh the leaves, brown, yellow, and red, still fall,
Fall and fall, over churchyard and hall.

"O weary hedge, O thorny hedge!"
Quoth she in her lonesome bower,
"Round and round it is all the same,
Days, weeks, have all one hour;
I hear the cushat far overhead,
From the dark heart of that plane
Sudden rushes of wings I hear,
And silence as sudden again.
Oh, the shower and the sunshine every day,
Pass and pass, be ye sad, be ye gay."

We do not expect any better book from Mr. Scott; but we hope to see some years hence another volume of poems less archaic, more metrical, but no less full of keen, loving observation of Nature, honest independence, deep thought, and matured energy.

Ode on the Queen's Visit to Kingston-upon-Hull, October 13th and 14th, 1854. By R. W. Elliot, B.A. (Hull, Leng; London, Longman & Co.)—A short poem, full of the very exuberant loyalty manifested lately by the town where Marvell first saw the light, and where Wilberforce was born. There is life in the verses; and that is all we can expect in a poem written for an object so transitory that it cannot expect to earn even the immortality of Mother Hubbard's legend. Frequent inversions make the author's style seem rougher than it is.

England and her Palace of Peace. By Thomas R. J. Tolson, author of 'The Fortune-Teller's Intrigue.' (Shaw.)—In a poetical dialogue between the Czar and his double, Mr. Tolson, whose brain seems effervescing with warlike thoughts, inculcates the justice of the war. We would rather own ourselves defeated by our author's argument than be convinced at the cost of so much patience.

The Village Bridal, and other Poems. By J. H. Powell. (Whittaker & Co.)—The author is the son of a working engineer. In his fourteenth year he was sent to work at a paper-mill in Hertfordshire, for three shillings a week. Finding his health injured by the heat of the drying-loft and the dense vapours of the hot steam, he had resolved to go to sea, but, being suddenly discharged for some trifling fault, he ran away to London, going on foot the whole twenty-two miles. Residing with an aunt, he spent a fortnight wandering about London penniless, but seeking employment. At the end of that time, he returned to the paper-mill in Hertfordshire; it being evidently his destiny to make, or mar, paper all his life. At sixteen he was apprenticed to his father at another mill, and spent his spare time in making model steam-engines, one of which he exhibited at the London Polytechnic. Leaving Hertfordshire, he spent sixteen months in travels over England seeking employment; and soon became involved in the struggle of the Amalgamated Engineers for the abolition of piecework and overtime. In 1851, he published a volume of poems, of which he sold about thirty copies. While employed by the London and North-Western Railway Company at Wolverton, he delivered two lectures at the Wolverton Mechanics' Institution,—one on the 'Poetry of Feeling and the Poetry of Diction,' and the other on 'The best Means of elevating the Working Classes,'—both very creditable to his taste and sense. The poems are sadly crude and unmetrical, but they are full of feelings that do credit to the author. He knows the sufferings of the working classes and the vices

that beset them; and he denounces the latter with much honest force and a very attractive and ingenuous honesty of purpose. We advise him to practise verse merely for his own amusement, and to write prose for the amusement and instruction of his class.

The Martins of Cro' Martin. By Charles Lever. Nos. I. to III. Chapman & Hall.
Harry Coverdale's Courtship, and all that came of it. By F. E. Smedley. Parts I. to IV. Virtue & Co.

WE shall do little beyond announcing that two new novels, by two popular writers, have been commenced in the three pink and four green pamphlets introduced above in company. Yet company does not always imply similarity. No tale-tellers can be much less like one another than Mr. Lever and Mr. Smedley. The former novelist seems to have succeeded to the heritage of Captain Marryat's dashing style. No improbabilities ruffle him,—no difficulties scare him. Let him ride up to St. Paul's, by accident, and his Pegasus shall clear the dome, ball and cross so neatly, that when, two minutes later, we encounter the charger ambling down Cheapside, we cannot conceive that anything singular or dangerous has been attempted. This nerve is as great a quality in a novelist as in a heavy dragoon. It inspires confidence in all who are under his guidance. After the exhibition of Mary Martin, who shines out in the first scenes of Mr. Lever's new tale as the fairy Order—capable of dealing with any difficulties of Irish misrule and entanglement by the force of her mother-wit and the sweetness of her temper, and without the support of home sympathy,—we fear nothing. In No. II. Mischief appears, in the form of Maurice Scanlan, the sporting attorney;—and in No. III. we fancy Love, not without perplexity, may be seen peeping over the horizon. It matters little: this marvellous Mary Martin will prove, we suspect, a match for any amount of mischief in love, or of love in mischief.

Mr. Smedley is as quiet in his manner as Mr. Lever is the reverse. He does not astound his readers by brilliant fables: he endeavours to secure them by neatly appealing to their experience. He deals, ostensibly, with commonplace character. Yet nothing is so uncommon as true art made out of materials so little marked in form, so delicate (if so distinct) in colour. Perhaps success in the style is not to be won by a male right hand, and belongs to Miss Austen, or to the Lady who the other day painted the pale gentilities of 'Crauford.' We imagine that Harry Coverdale may be meant to prove that that half-prized, half-pitied personage, called by Society "a good creature," may turn out a very good man in times of trial or combinations of difficulty. If it be so, however, Mr. Smedley has hardly sufficiently trusted to his own conception. He makes his hero a very *Crichton* in the use of his fists, by way of teaching a poacher the true rights and wrongs of game property,—and he makes the poacher love the landlord who had thrashed him like a gentleman. Now, such victory and such love might pass, *perhaps*,—at least among those who regard "sport" as part of every Englishman's education, and who fancy our "bold peasantry" liable to be sweetened by the discipline of fisticuffs, as proving the existence of generous sentiments,—but when Mr. Coverdale is made to produce other accomplishments as fast as ever they are wanted, and this without having learnt them long or kept them up carefully, we feel that his case, however adroitly stated, becomes rather mythical; and fear that Mr. Smedley may be perilously ven-

turing too near that wonder-land which a novelist has small business to enter. Our fears are confirmed from seeing that an old-fashioned villain and wicked Lady are dressed, to be ready against future scenes, in Mr. D'Almayne and Miss Crofton. They are about, we apprehend, to attempt treasons against the happiness of Harry Coverdale's circle:—and let him "square up" to them ever so honestly, Harry may find that he has sharper antagonists to deal with than that burly yet forgiving hobnail, who shot rabbits without licence. No. IV. leaves us under a pretty strong impression of trouble to come,—even though Harry Coverdale has married Alice, and albeit he treats her with all that sensible, loving-kindness which is as rare in the honeymoons of private life as it is in those of Fiction!

Oxford Essays, contributed by Members of the University, 1855. Parker & Son.

PROBABLY few readers would gather from the above title that the work to which it is prefixed is the first number of a new periodical, resembling the *Quarterlies* in outward appearance, size, and the general character of its contents. Yet such it is, with one or two differences. It might as well have been called the *Oxford Review*, though the formality of heading the articles with a list of works is, except in two or three instances, dispensed with. If sufficient encouragement be afforded, it is to be an Annual,—but, of course, a very different thing from the publications to which that name is ordinarily applied. It is distinguished from other periodicals in not being the organ of any party or creed, whether religious, political, or social. It represents no individual or association:—not even the members of Oxford University as a body, still less the University itself, though all its writers are Oxonians. It has, in fact, no corporate existence. The editor, whoever he may be, has no control over the opinions advanced in its pages. Each writer, by affixing his name to his contribution, at once takes all the responsibility of his own statements, and disclaims that of any others which may be made by his fellow contributors. There is consequently a greater variety of sentiment than is usually observable in the same publication,—a variety occasionally amounting to positive discrepancy.

These peculiarities render the success of the experiment altogether uncertain, to say the least. It is questionable whether the mere circumstance of all the articles being written by Oxford men, without mutual concurrence of opinion or purpose, will be sufficient to enlist any great amount of sympathy, beyond the sphere of Oxonians of about the same standing. The title, though describing truly enough the nature of the contents, has the disadvantage of suggesting the notion of tame academical themes which no one will care to read,—a notion, however, which is at once banished on actual perusal. Both the subjects and their mode of treatment have an interest for many readers besides members of Oxford or any other University. Even the essay on Oxford Studies, though necessarily more exclusively Oxonian than the rest, is written under a full consciousness of the important bearings of the subject upon national interests. With historical information on the past course of the University, it combines warm aspirations for a higher education in future,—an education which has to do with methods of inquiry rather than facts and principles to be learnt, which the teacher communicates not so much by precept as example, becoming himself an investigator, and striving by the force of sympathy to lead the pupil along the same path of investigation. It is

scarcely necessary to observe, that all the writers are evidently men of cultivated and furnished minds; but justice requires the addition, that they are no less distinguished by native force of intellect, breadth of view, and liberality of spirit. With all their scholarship, they are no book-worms or cloistered monks, unconscious of what is going on in the busy world around them.

The contents of this first number are, as we have already intimated, not wanting in variety. Three articles are devoted to strictly literary subjects: the opening one 'On Lucretius and the Poetic Characteristics of his Age,' which is a skilfully drawn portrait of the poet;—a critical estimate of the Works of Alfred de Musset, introducing to Oxford readers a successful French writer but little known in that city;—and an account of Persian Literature, with illustrative specimens. Science is well represented by Prof. Phillips in an essay on 'The Neighbourhood of Oxford and its Geology.' A social question of great interest is discussed in the article entitled 'Crime and its Excuses.' There is a good summary of Hegel's 'Philosophy of Right,' which will repay the perusal of students of jurisprudence; and the dispute between the Author of the essay on the Plurality of Worlds and his opponent, Sir David Brewster, is handled with judgment and impartiality. One of the most interesting articles is that by Mr. J. A. Froude, called 'Suggestions on the best Means of teaching English History,' which is remarkable for combining the tone of the *laudator temporis acti* with the boldness of the innovator, not to mention its literary excellencies. The writer suggests that, as we have not at present—and are not likely to have for some time to come—a suitable work for an authoritative text-book on English history, it would be well to employ for that purpose the Statute Book, from the early part of Henry the Seventh's reign to the Restoration.

OUR LIBRARY TABLE.

The Art of Travel; or, Shifts and Contrivances available in Wild Countries. By Francis Galton. (Murray.)—Travellers, as a rule, are a teachable race. They value the experience of their predecessors. Free from restraint, untrammelled by conventional laws, and desirous only of security and comfort, they eagerly seek, and readily adopt, ways and means convenient for the wood and desert. Nevertheless, as Mr. Galton observes, many a wanderer, mid-way on his journey, regrets his deficiency in that part of "wisdom for a man's self" which enables him to discipline his servants, pitch his tents, light fires in a tempest, find water under suffocating sands, cure a snake's bite, or season green wood for an axle. In all such exigencies it will be well for him to possess this practical treatise on the art of travel. Mr. Galton, like all authors of didactic volumes, sinks now and then into a truism, or loses himself in a platitude; but, for the most part, his manual is pointed, useful and clear. The African hunter, as well as the Australian explorer,—the Ceylonese elephant-shooter as well as the Himalayan botanist,—the trapper of the prairies as well as the fur trader of Hudson's Bay, will profit by its suggestions, although they may have learnt, in the rude school of the wilderness, much that Mr. Galton here teaches in quiet phrases of advice. Still, such a handbook might prove a friend in need, even to an old traveller, while to a young one, who intends to venture beyond railways, it must be valuable. A man scarcely knows the extent of his own inventive skill until he has collected dew in a sponge to cool his thirst, or until he has caught fire from heaven by using the crystalline lens of a dead animal's eye as a burning-glass. To understand how far he can endure, he must feed on nettles or sleep within the ribs of the buffalo which supplied him with

supper, and ultimately pound its bones and make a feast off them. And to be safe from the effects of misplaced confidence, he must suspect that the Australian savage, who comes to his camp through the grass, apparently unarmed, has a spear trailing behind him, which he holds with his toes. If he has purchased costly jewels, they may be put into a silver pipe, and hidden under the skin of the left arm, for the opening soon heals, and no unpleasant sensation is produced. Mr. Galton suggests, however, that ignorant savages, discovering such a treasure, might conclude that the traveller's body contained other *caches*, and might mince him to shreds in search of them. With respect to the devices that are sometimes necessary in wild regions, he mentions that a safe path may be pursued through forests, in the latitude of Europe, by noting that the moss grows strongest on the north side of the tree. It will be inferred that Mr. Galton's little book is more than a dry recapitulation of advice as to arms, outfits and preparations for travellers on the highways and byways of the world. It is no less pleasant than practical, for the author has been an explorer himself, and has consulted the narratives of others, whose experience he compares with his own.

Handbook of French Literature: Historical, Biographical and Critical. (W. & R. Chambers.)—This 'Handbook' embraces a wide view of the literature of France. It begins with the Troubadours and concludes with Paul de Kock. The sublime and the ridiculous are here wider apart than they are said to be in the proverb. The 'Handbook' aims at accomplishing an historical, biographical and critical sketch of French literature in all ages; and it does this in a small space. We do not say this much as disparaging, but as describing the book. It will be found useful, as far as it goes; but some of the notices are very bald. We could have borne to hear less about Paul de Kock and more about Ronsard. Some specimens of the latter's cunning of craft, too, would not have been unacceptable. His imitation of the song of the sky-lark, for instance, is quite as good, in its way, as the *Qua, qua*, imitating the note of the duck, in the line of the Latin poet. We will add Ronsard's bit of metrical mimicry:—

Elle, guindée du zéphyr,
Sublime en l'air vire et revire,
Et y dedieue un joli cris,
Qui rit, guerit, et tire l'ire
Des esprits mieux que je n'écrie.

This fashion of imitating sounds in words is as old as the days of Ennius. Who has not trembled or laughed at his famous line?—

Tum tuba terribili sonitu tarantantara dixit.

Swift, undoubtedly, had this line in his mind when he penned his own drum and trumpet strains, celebrating the ancient glories of Eblana:—

The man with the kettle-drum enters the gate,
Dub, dub, a dub dub; the trumpeters follow,
Tantara, tantara; while all the boys hollow.

—To conclude, this volume will be found useful, in as far as it conveys a very fair general idea of the history of literature in France.

Brambles and Bay Leaves: Essays on the Homely and the Beautiful. By Shirley Hibberd. (Longman & Co.)—There is what may be called *healthy* reading in this unpretending and pleasant volume; and we do not know that, in these days, we could give a book of 'Essays on the Homely and the Beautiful' higher praise. The subjects, also written with a good end in view, are lightly, but gracefully, touched; and the book is not merely entertaining, but useful. This double merit is particularly exemplified in the paper on the formation of a Herbarium and in the article on the Floral Antiquities of the East. One may say of it emphatically, that it is a *nice* book.

Lobster Salad. Mixed up by Percy St. John and Edward Copping. (Ward & Lock.)—The concoctors have not forgotten the adage *ne quid nimis*,—and their bowl is but a small bowl, and the salad mixed therein is but in small quantities. It is inoffensive,—and that is not small praise for 'Lobster Salad,' which, generally speaking, is injurious to the taker. We may say of this, as Paillassé said of his master's specific for the tooth-

ache, "Take it; take it;—if it does you no harm, it will do you no good!"

The Life of William Cowper; with Selections from his Correspondence. (Seeley & Co.)—This is the first of a series of Evangelical Biographies, edited by the Rev. R. Bickersteth. 'The Life of Cowper' is a neat compilation,—it tells nothing new; but it contains, within brief limits, what is otherwise only to be found scattered diffusely through many volumes. The comments and reflections are not profound, but they are sensible. The compiler, of course, does not see that Newton was about the most unfit man into whose society a hypochondriac like Cowper could have been thrown. Mr. Willmott, in his Life, has taken a much more correct estimate of this connexion and its consequences. On the whole, the little volume deserves commendation. It should be a popular book with young people in their teens,—a class not yet very well provided with the literature most suitable to them.

History of the Origin, Formation, and Adoption of the Constitution of the United States; with Notices of the Principal Framers. By George Ticknor Curtis. 2 vols. (Low & Co.)—The late Daniel Webster meditated the writing of a book on the history of the American constitution and the administration of Washington. This idea he communicated to Mr. Ticknor Curtis, who was then engaged on an account of the origin and establishment of the United States constitution. Mr. Webster never carried out his project,—and we wish we could say that Mr. Curtis had fulfilled his own intentions. That he has not done so is owing less to any incapacity on his part than to a defect in his plan. To write a history of the American constitution, to comprehend its principles, and to understand why the people of the Union were under what may almost be termed a political necessity to adopt it, more extended researches would be required into the annals of the Western Continent while it was yet divided under colonial jurisdictions. Mr. Curtis does, indeed, notice the old components of American administration; but his view of the provincial, proprietary, and charter colonies up to the assembling of a Congress does not occupy more than ten pages. The federal institutions of the United States, in their details as well as in their genius, appear to us so intimately connected with organizations existing long before the War of Independence, that it seems impossible to render accurately any analysis of the one without examining and explaining the other. The present work, consequently, must be taken as a view of the subject which supposes much previous investigation. As such, and starting from so advanced a point, it is a careful and creditable publication. The early vicissitudes of Washington's political life, the assembling of the first Congress, in which the word "independence" was not once spoken, the great Declaration, the changes and perils of the confederated States, and their ultimate union, are brought, in their proper order, within the scope of the narrative,—which allows space, also, for biographical sketches to alleviate the dullness of pure constitutional history. Mr. Curtis writes with vigour and dignity, and his work, if the second volume be equal to the first, will be one of permanent interest.

Australia and its Gold Fields; with a Particular Account of the recent Gold Discoveries, and Observations on the Present Aspect of the Land Question. By E. H. Hargrave. (Ingram & Co.)—There are few who take an interest in Australia who would not be glad to hear from Mr. Hargrave an account of his adventures and discoveries. But he should have confined himself to a personal narrative. The historical chapters on Australian colonization, on ancient and modern gold mines, and on the various methods of working for gold, are but meagre abstracts of information which is to be found more fully and systematically detailed in other books. Mr. Davison's "New Theory" is also out of place, as well as Mr. Hargrave's arbitration between Sir Roderick Murchison and Mr. Clarke. We do not object to his statement of the land question in Australia; since it brings Mr. Hargrave's peculiar experience to bear on a very involved subject. There was, however, in the

relation of his own Californian wanderings, and of his search for gold, enough to fill an interesting volume; nor should we have regretted to find an autobiographical memoir on a more extended scale. The story of perseverance is always instructive. As it is, Mr. Hargrave is content to give bald outlines, which suggest rather than describe the enterprises of his life. At the same time, he evinces little disposition to modesty; for he appreciates, with *naïve* complacency, the extent of the service he has rendered to the human race. But we like the candour which induces him to confess the first ideas of his mind, after he had washed some grains of gold out of the rich dust of Lewes-Pond Creek. "This," I exclaimed to my guide, "is a memorable day in the history of New South Wales. I shall be a baronet; you will be knighted; and my old horse will be stuffed, put into a glass case, and sent to the British Museum." The Legislative Council awarded him 10,000*l.* for his discovery; but he wistfully remembers a plan by which he might have gained 250,000*l.*, and perhaps rivalled the retreat of the pious wonder-monger, Iranistan!

The Ferns of Great Britain. By John E. Sowerby. Parts I, II, III. (Sowerby.)—Mr. Sowerby proposes to bring out coloured illustrations of every British fern, in eight parts. Of this work, the first three parts are before us; and we can speak very favourably of the manner in which they are executed. The descriptive letter-press is by Mr. Johnson; who has given very full descriptions of each species, with critical remarks on their synonyms, and an account of the localities in which they are found. Those who are studying this department of the vegetable kingdom will find this work of great assistance, and worthy to be placed on their shelves with the best monographs on descriptive botany. The work is issued in two series,—the one set of drawings fully coloured, the other partly coloured. The latter are half the price of the former. Considering the excellence of the drawings and letter-press, the work is issued at a decidedly low price.

The Amateur Gardener. By the Rev. H. Burgess, LL.D. (Edinburgh, Black.)—When we say that the substance of this volume was written as a series of papers for the *Gardeners' Chronicle*, we shall have said enough to recommend it as a safe guide for all who need its directions. We should not, however, be doing our duty if we did not call attention to the very agreeable manner in which it is written, and to its literary pretensions. Such are its claims in this respect, that even those who are not placed in positions to become amateur gardeners may read it for the sake of enjoying the mental pleasure of attending to a garden. But those who have a garden not bigger than the frontage of one of the innumerable villas that extend along all the roads out of London, will read this book with pleasure and profit. The Londoner will see here that he may still make much of his plot, although situated too near the great atmosphere of smoke to grow all kinds of plants; whilst the countryman will assuredly find the best directions for availing himself of all the natural advantages by which he is surrounded for carrying on the art of gardening.

The Botany of the Voyage of H.M.S. Herald. Part V. By Berthold Seemann, Naturalist of the Expedition. (Reeve & Co.)—This Part contains descriptions and drawings of a large number of plants obtained in the voyage round the world of the *Herald*, under the command of Capt. Kellett. Amongst others, it contains a very interesting drawing of the *Phyllephas macrocarpa*, or ivory-nut plant, by Dr. Hooker and Mr. Fitch.

The Zoology of H.M.S. Herald. Part III. By Sir John Richardson. (Reeve & Co.)—This Part contains the reptiles and fishes obtained during the voyages of the *Herald* in the years 1845-51. The descriptions are accompanied with several beautifully executed lithographs of the new or rarer species. It also contains some additional remarks on the osteology of the Proboscidean Pachyderms described in the previous Parts.

A Plain and Easy Account of British Ferns. (Hardwicke.)—Those who have studied the ferns in their Wardian cases will have found considerable

difficulty in distinguishing some of the species. This little book professes to help such; but we fear those who are uninitiated in the science of botany will find it of little use. There is no short cut even to a knowledge of ferns. To appreciate the distinctions in one department of a science, the student must be acquainted with the principles of that science as a whole. Hence the failure of most attempts at what is called simplifying science.

We beg to call the attention of both teachers and self-instructing students to *Self-Proving Examples in the Four First Rules of Arithmetic*, by Alexander J. Ellis, B.A.,—a work from which they may derive great benefit, particularly as a means of obtaining an abundant supply of examples for practice. The earlier portion consists of exercises in Prof. De Morgan's rules, given in the 'Companion to the Almanac for 1844.' Besides full directions for the formation of examples in the first four rules, both simple and compound, there is a good explanation of Mr. Guy's rule for contracted division, and Horner's rule for the extraction of the cube root of numbers; with an Appendix, for the use of teachers, in which the theory of the preceding part of the work is clearly demonstrated.—*The Lexicon French Grammar, for the Use of Students, on an Entirely New and Improved Principle*, by Saint Ange Siméon, has little claim to novelty beyond the strangeness of its title. It is simply an ordinary grammar interspersed with exercises, in which the French words to be employed are either printed under the corresponding English ones or indicated by references to previous exercises in which they have occurred.

—Two classical exercise-books have just been added to the many already in use. They are, *Latin Exercises: consisting of English Sentences, translated from Cæsar, Cicero and Livy, to be re-translated into the Original Latin*, by W. W. Bradley, M.A., upon the plan of Ellis's 'Exercises,' from which the present work differs in containing sentences from Cæsar and Livy, as well as Cicero, and in being adapted to Kennedy's 'Latin Syntax' instead of the 'Eton Latin Grammar,'—and *Grammatical Exercises on the Moods, Tenses and Syntax of Attic Greek*, by J. Fergusson, M.D., which is also upon the plan of Ellis's 'Exercises,' the examples being taken from the works of Thucydides, Xenophon, Plato, Æschylus, Sophocles, Aristophanes and the Orators.

"The Diamond Library" of MM. Kiessling, Schneé & Co. includes, among its later volumes, *Un An de Mariage*, translated from the Swedish of Emilie Carlen,—and *La Robe de Nessus*, by Amédée Achard, which may be fairly characterized as a weak and objectionable story, in the style of Balzac, but without Balzac's power of keeping his reader rivetted.—An admirable Essay has been published by A. Ashtipal and J. Whichcord, on *Town Duellings*, suggesting the erection of fire-proof houses in flats, adapted for all classes. The writers argue forcibly on the subject of partnership with limited liability, declaring that the existing law acts as an impediment to all moral and sanitary improvement among the people.—"A Manchester Man," preferring the anonymous, offers *Practical Opinions against Partnership with Limited Liability*. He takes up the opposite side of the question in a manner which, as we think, will secure no new adherents for his theory. "The amount of fraud and insolvency in America I believe to be double or treble what it is in this country, on the same amount of business!" A transition so easy from *double* to *treble* is enough to satisfy us as to the writer's capacity for argument.—The same gliding style of rhetoric characterizes *The Traffic in Intoxicating Liquors*, by Samuel Couling, who, like our "Manchester Man," is far too positive to persuade.—The Rev. Mr. Field adopts a graver tone in his *Observations on the Discipline and Management of Convicts, and on Tickets of Leave*. He writes upon Bacon's text concerning "that shameful and unblest thing of planting portions of the earth with the scum of people," and discusses, with ability, the nature and the influence of punishment and of discipline. Those who dissent from his opinions must, nevertheless, respect his earnest and patient labours,—

On similar topics, we have *A Practical View of the Sanitary Question; being the General Report of a Local Board of Health in St. Pancras*,—*Suggestions for the Improvement of Municipal Government in Populous Manufacturing Towns*, by J. Robertson,—*Land Drainage and Drainage Systems*, by J. B. Denton, a scientific treatise of special utility to agriculturists,—and *Seven Letters on The Estuary of the Mersey*, by J. Boulton, which are reprinted from a newspaper.—Mr. F. R. Young has published *Hints how to make Home Happy*. A writer who sets up as a dogmatic moralist finds it easy to multiply "thoughts" about matrimony and domestic bliss. We look in vain, however, among Mr. Rowland's truisms for a single "hint" which could possibly have any influence in making a home either happy or unhappy.

LIST OF NEW BOOKS.

- A Beginning without an End, 12mo. 2s. 6d. cl.
Ainsworth's (W. H.) Old St. Paul's, 8vo. 6s. cl.
Alford's (Rev. H.) Memoir, by Rev. H. Alford, 8vo. 7s. 6d. cl.
Alford's (Rev. H.) Quebec Chapel Sermons, Vol. 2, 8vo. 5s. cl.
Allen's Old Testament Prophecies, 8vo. 3s. 6d. cl.
Archbold's (J. F.) Parish Officer, 2nd edit. by Glen, 12mo. 10s. cl.
Aunt Edith, new edit. 12mo. 2s. 6d. cl.
Birk's (Rev. T. R.) Treasures of Wisdom, 6s. 3s. 6d. cl.
Black's (J.) Pathology of the Bronchio-Pulmonary Mucous Membrane, Part 3, 8vo. 3s. 6d. swd.
Bradshaw's Shareholder's Guide, 3s. 6d. 7s. cl.
Brewer's Guide to Mythology, &c. of Ancient Greece, 12mo. 4s. cl.
Buxton's (Sir T. F.) Memoirs, edited by his Son, new edit. 8vo. 16s.
Chalmers's Select Works, edited by Dr. Hanna, Vol. 3, 8vo. 6s. cl.
Cicero's Offices, translated by Dr. Owen, 12mo. 2s. cl.
Civil Engineer's and Architect's Journal, 1854, Vol. 17, 4to. 26s. cl.
Clyde's (J.) Romic and Modern Greek, 8vo. 3s. cl. swd.
Confessions of Con Cregan, new edit. 8vo. 5s. cl.
Copper's Focal Works, with Life, new edit. 12mo. 3s. 6d. cl. gilt.
Crabbe's Poetical Works, with Life, new edit. 12mo. 2s. 6d. cl. gilt.
Edmund's (Rev. J.) Seven Lent Lectures, 12mo. 3s. 6d. cl.
Emily Herbert, by M. J. McIntosh, 18mo. 1s. cl.
Faul's English-Foreign Funds, 5th ed. by H. Ayres, 12mo. 7s. 6d.
First Steps to the British Flora, square, 3s. 6d. cl.
Fowler's (E. P.) Aideney and Guernsey Cove, 12mo. 1s. swd.
Grace Lee: a Tale, by Julia Kavanagh, 3 vols. post 8vo. 31s. 6d. cl.
Grey's (Sir G.) Polynesian Mythology, crown 8vo. 10s. 6d. cl.
Handel's Oratorios, 'Saul,' by Novello, royal 8vo. 6s. 6d. cl.

FOREIGN CORRESPONDENCE.

China.—The People and Productions of the Province of Chekiang.

In my last letter,—in which I gave a description of a Chinese country fair, and various other matters which came under my notice in the province of Chekiang,—I promised to send you an account of the natural productions of that part of China, and of my journey further to the westward. I now proceed to fulfil that promise. Much of the level land among the hills in this part of the country, being considerably higher than the great Ningpo plain, is adapted to the growth of other crops than rice. The soil in these valleys is a light rich loam, and is in a state of high cultivation; indeed, I never witnessed fields so much like gardens as these are. The staple summer crops are those which yield textile fibres, such as those I saw in the fair already described. A plant well known by the name of jute in India—a species of *Corchorus*—which has been largely exported to Europe of late years from India, is grown here to a very large extent. In China this fibre is used

in the manufacture of sacks and bags for holding rice and other grains. A gigantic species of hemp (*Cannabis*) growing from ten to fifteen feet in height, is also a staple summer crop. This is chiefly used in making ropes and string of various sizes, such articles being in great demand for tracking the boats up rivers, and in the canals of the country. Every one has heard of China grass-cloth,—that beautiful fabric made in the Canton province, and largely exported to Europe and America. The plant which is supposed to produce this (*Urtica nivea*) is also abundantly grown in the western part of this province, and in the adjoining province of Kiangsee. Fabrics of various degrees of fineness are made from this fibre, and sold in these provinces; but I have not seen any so fine as that made about Canton. It is also spun into thread for sewing purposes, and is found to be very strong and durable. The last great crop which I observed was that of a species of *Juncus*, the stems of which are woven into beautiful mats, used by the natives for sleeping upon, for covering the floors of rooms, and for many other useful purposes. This is cultivated in water, somewhat like the rice-plant, and is therefore always planted in the lowest parts of these valleys. At the time of my visit, in the beginning of July, the harvest of this crop had just commenced and hundreds of the natives were busily employed in drying it. The river's banks, uncultivated land, the dry gravelly bed of the river, and every other available spot was taken up with this operation. At grey dawn of morning the sheaves or bundles were taken out of temporary sheds, erected for the purpose of keeping off the rain and dew, and shaken thinly over the surface of the ground. In the afternoon, before the sun had sunk very low in the horizon, it was gathered up again into sheaves and placed under cover for the night. A watch was then set in each of the sheds; for however quiet and harmless the people in these parts are, there is no lack of thieves, who are very honest if they have no opportunity to steal. And so the process of winnowing went on day by day until the whole of the moisture was dried out of the reeds. They were then bound up firmly in round bundles, and either sold in the markets of the country, or taken to Ningpo and other towns where the manufacture of mats is carried on, on a large scale. It seems to me to be very remarkable that a country like China,—rich in textile fibre, oils of many kinds, vegetable tallow, dyes, and no doubt many other articles which have not come under my notice,—should afford so few articles for exportation. I have no doubt that as the country gets better known, our merchants will find many things besides silk and tea, which have hitherto formed almost the only articles exported in quantity to Europe and America.

When I was travelling in the part of the country I have been describing, the weather was extremely hot,—July and August being the hottest months of the year in China. When complaining of the excessive heat to some of the visitors to my boat, I was recommended to go to a place called by them the *Lang-shuy-ain*, or “cold water Temple,” situated in the vicinity of the town in which I was staying. In this place they told me both air and water were cold notwithstanding the excessive heat of the weather. On visiting the place I found an old, dilapidated building, which had evidently seen more prosperous days. Ascending a few stone steps, I found myself in the lower part of the edifice, when I felt at once a sudden change in the temperature, something like that which one experiences on going into an ice-house on a hot summer's day. My guide led me to the further corner of this place, and pointed to some stone steps which seemed to lead down to a cave or some such subterranean place, and desired me to walk down. As it appeared perfectly dark to me on coming from the bright sunshine, I hesitated to proceed without a candle. On this being brought, I was much disappointed in finding the steps only a few in number and led to nowhere. It appeared that in the more prosperous days of the temple there had been a well of clear water at the bottom of the steps, but now that was choked up with stones and rubbish. I was able, however, to procure a little water

nearly as cold as if it had been iced. The stones in this part of the building were also very cold to the touch, and a strong current of cold air was coming out of the earth at this particular point. I regretted much not having my thermometer with me to have tested the difference of the temperature with accuracy. On the floor of the temple a motley group of persons was presented to my view. Beggars, sick persons, and others who had taken refuge from the heat of the sun were lolling about, evidently enjoying the cool air which filled the place. It appeared to be free to all, rich and poor alike. There are some large clay-slate quarries near this place; and I afterwards found several springs of water issuing from the clay-slate rocks quite as cold as that in the “cold water Temple.”

Having spent several days in the town of Ning-kang-jou, I determined to proceed onwards to a large temple situated amongst the hills to the westward, and distant, as I was informed, some 20 or 30 le. Packing up my bed and a few necessities, I started in a mountain chair one morning, after an early breakfast. Leaving the town behind me, the road led me winding along the side of a hill, following the course of the little stream. The scenery here was perfectly enchanting. The road, though narrow, like all Chinese roads, was nicely paved and oftentimes shaded by the branches of lofty trees. Above me rose a sloping hill, covered with trees and brushwood, while a few feet below me was seen the little stream trickling over its gravelly bed and glistening in the morning sun. Now and then I passed a pool where the water was still and deep, but generally the river, which is navigable for large ships at Ningpo, was here not more than ankle deep. Shallow as it was, however, the Chinese were still using it for floating down the productions of these western hills. Small rafts made of bamboo, tiny, flat-bottomed boats, and many other contrivances were employed to accomplish the end in view. When the river was so shallow that the boatman could not use his scull, he might oftentimes be seen walking in the river and dragging his boat or raft over the stones into deeper water. As I passed along, I observed several anglers busily employed with rod and line—real Izaak Waltons it seemed,—and although they did not appear very expert and their tackle was rather clumsy, yet they generally succeeded in getting their baskets well filled. Altogether, this scene, which I can only attempt to describe, was a charming one,—a view of Chinese country life, telling plainly that the Chinese, however strange they may sometimes appear, are, after all, very much like ourselves.

My road at length left the hill side and little stream, and took me across a wide and highly cultivated valley, several miles in extent, and surrounded on all sides by hills, except that one through which the river winded in its course to the eastward. I passed through two small towns in this valley where the whole population seemed to turn out to look at me. Everywhere I was treated with the most marked politeness, and even kindness, by the inhabitants. “Stop a little, sit down, drink tea,” was said to me by almost every one whose door I passed. Sometimes I complied with their wishes; but more generally I simply thanked them, and pushed onwards on my journey. In the afternoon I arrived at the further end of the valley and at the foot of a mountain pass. As I gradually ascended this winding path, the valley through which I had passed was entirely shut out from my view. Nothing was now seen but mountains, varying in height and form,—some about 2,000, and others little less than 4,000 feet above the level of the sea,—some formed of gentle slopes, with here and there patches of cultivation,—others steep and barren, where no cultivation can ever be carried on, except that of brushwood, which the most barren mountains generally furnish. The Chinese pine and Japan cedar were almost the only trees of any size which I observed as I passed along. A little higher up I came to fine groves of the bamboo—the famous *maou-chok*—the finest variety of bamboo in China, and always found growing in the vicinity of Buddhist temples.

In a small valley amongst these mountains, some 2,000 feet high, the Temple of Tsan-ting was at last seen peeping out from amongst the trees. The building in itself is of a much less imposing character than others I have seen in this province and in Fokien; but, like all others of its kind, it is pleasantly situated in the midst of the most romantic scenery. In addition to the pines and bamboos already noticed, were several species of oaks and chestnuts, the former producing good-sized timber. But the finest tree of all, and quite new to me, was a beautiful species of cedar or larch; which I observe Dr. Lindley, to whom I sent specimens, calls *Abies Kämpferi*. Some of its seeds were sent to England last winter, where I hope they will vegetate; and, if so, another fine tree, perhaps the most useful of all I have sent from China, will have been added to adorn our parks and forests.

When I entered the court of the temple, the priests seemed quite lost in astonishment. No other foreigner, it seemed, had been there before, and many of them had only heard of us by name. Some of them stood gazing at me as if I were a being from another world, while others ran out to inform their friends of my arrival. My request for quarters was readily granted; and being now an old traveller, I was soon quite at home amongst my new friends. Late in the afternoon, long trains of coolies—men and boys—passed the temple from a district further inland, loaded with young bamboo shoots, which are eaten as a vegetable and much esteemed. The news of the arrival of a foreigner at the temple seemed to fly in all directions; and we were crowded during the evening with the natives, all anxious to get a glimpse of me. Some seemed never tired of looking at me; others had a sort of superstitious dread mingled with curiosity. One little urchin, who had been looking on with great reverence for some time, and on whom I flattered myself I had made a favourable impression, undecieved me by putting the following simple question to his father:—“If I go near him, will he bite me?” This, I confess, astonished me; for although I had no tail,—was not exactly the same colour as they were,—and did not wear the same kind of dress,—I did not expect to be taken for a wild animal. What strange tales must have been told these simple country people of the *barbarians* during the last Chinese war?

R. F.

OUR WEEKLY GOSSIP.

Mr. Layard has been put in nomination for the Rectorial Chair at Aberdeen: and his election is said to be pretty well assured.

The Council of the Society of Arts have presented a petition to the House of Commons calling upon the nation to purchase the Bernal Collection of Art and Antiquities.

A reception of literary and scientific celebrities was held on Saturday last, at the Panopticon in Leicester Square, when the new programme of the institution was adopted. Mr. Best played on the grand organ,—the diver dived into his glass well,—the showmen exhibited their dissolving views of the Crimea,—and the lecturers explained and experimented to the satisfaction of a pretty large party. The principal guest of the evening appeared to be the Lord Mayor:—an unexpected, but not, we suppose, an unwelcome, patron of science.

In answer to the question of our Liverpool Correspondent of last week, the Astronomer Royal writes:—“In communicating to the public, through the columns of the *Athenæum*, the information which I had received regarding iron ships, I did not desire to parade the names of my informants, as the responsibility for the trustworthy character of the evidence naturally rests upon myself. As the Liverpool Correspondent, however, to whom allusion is made in the last number of the *Athenæum*, wishes to know the names of the persons whose testimony I have quoted, I can have no further desire to withhold them. The person designated by the letter A is Mrs. Janet Taylor, of Hammet Street, London. The person to whom I refer by the letter B is Mr. John Gray, of Strand

Street, Liverpool. I am likewise indebted to Mr. Gray for the statement regarding the change of the compasses in the Pampero, and for the change in the screw-steamer making a voyage to the Mediterranean and back. The same gentleman has arranged the adjustable mounting of correcting-magnets to which I have adverted in the latter part of my paper in the *Athenæum* of February 3.

"G. B. AIRY."

"Royal Observatory, Greenwich, Feb. 20."

The selection of articles from the Museum of Ornamental Art at Marlborough House has been despatched this week to the Birmingham School of Art. The Queen has lent four Sevres Vases, valued at 4,000*l.*; whilst it is said that the British Museum Trustees actually refused the loan of even a single specimen of its numerous Etruscan Vases.

The same hour that brought us Mr. Dennistoun's 'Memoirs of Sir Robert Strange' may be said also to have brought us the tidings of the death of its accomplished author, which took place on Tuesday week. For the following notice of his life and works we are indebted to the *Edinburgh Courant*, having made only a few unimportant omissions:—"James Dennistoun, Esq., of that ilk and Colgrain, was born in the year 1803; descended from the noble or knightly house of Danyelstoun of Danyelstoun, in Renfrewshire, a family of great antiquity. He was educated for the profession of the law, and passed advocate in the year 1824. His first work, we believe, was the edition of 'Moyse's Memoirs of the Affairs of Scotland from 1577 to 1603,' which he contributed to the Bannatyne and Maitland Clubs in 1830. This was followed by the 'Cartularium Comitatus de Levenax, ab initio seculi decimi tertii usque ad annum mcccxcviii,' edited by Mr. Dennistoun, and printed for the Maitland Club by Mr. Campbell of Barnhill. In 1834 another illustration of Lennox history proceeded from Mr. Dennistoun's pen, in a reprint of 'The Lochlomonid Expedition, with some Short Reflections on the Perth Manifesto, 1715.' He also edited the volume of 'The Coltness Collections, 1608—1840,' for the Maitland Club, in 1842. The 'Ranking of the Nobility, 1606,' was printed, along with some other papers, in 'The Miscellany of the Maitland Club.' A residence in Italy gave a new bent to his pursuits. One of the first-fruits of these Transalpine studies was a deeply-interesting paper on 'The Stuarts in Italy,' published in the *Quarterly Review* for December, 1846. But by far the most considerable result of Mr. Dennistoun's Italian sojourn was his 'Memoirs of the Dukes of Urbino, published in three volumes in 1852 [*vide Athen.* No. 1224]. The *Edinburgh Review* for October, 1854, contained a review by him of Mr. Burton's 'History of Scotland,' and he lived to complete, if not to publish, two volumes of the Memoirs of Sir Robert Strange, Engraver, illustrating his Artistic Life; and of his brother-in-law, Andrew Lumisden, private secretary to the Stuart Princes, and author of *The Antiquities of Rome*. The original papers from which this work is mainly compiled came into Mr. Dennistoun's hands through his marriage with the eldest daughter of the late Lord Cringletie, whose wife was the grand-daughter of the Jacobite engraver." Of the latest labour of its author's life we shall speak next week.

M. A. d'Abbadie, our old and respected Correspondent, writes to correct a detail or two of his scheme, copied by us from the French journals:—

"Urrugne (Basses Pyrenées), Feb. 14.

"Your habitual care in noticing every scientific fact, having induced you to mention, in No. 1422, the four prizes which I have founded in the Geographical Society of Paris, permit me to correct a few errors in the announcement. The 120 miles to be travelled by, or navigated in, that branch of the White River ascended by M. d'Arnaud, are to be reckoned in ascending the stream from 4° 10' of north latitude. The three other medals are to be awarded, not for the comparative currents, but for the comparative volumes of water: a, of the White and Blue Rivers, near Khartum; b, of the Saubart and Keilak; c, of the stream generally navigated in ascending Lake Nu compared with the other affluent of that lake which is nearly parallel to the foregoing, but on the eastern side. These volumes of water are to be determined by measuring the breadth of the stream, taking several soundings from bank to bank, and recording the time employed by a slight floating body as it passes before a measured base on the river's bank. My object in proposing these prizes was to procure accurate data for geographers, who select generally the principal affluent of a river on ac-

count of its greater volume of waters. Even at Khartum, which so many Europeans have visited, it is not yet well known whether the Blue River has *always* more water than the White. I have only found the three following results from careful measures:—

By M. LINANT BEY.

a March 4 and 5, during the lowest height of waters—		
White River ..	297.20 cubic metres per second.	
Blue River ..	158.53 ditto.	
b July 26, the time of highest flood—		
White River ..	6,043.71	} 12,291.0

The first of my medals is to be awarded only after the original astronomical observations for latitude and longitude shall have been communicated or published. It may be well to mention here, that the most convenient way to get the longitude between the Tropics and on land, is to observe hour angles of the moon by an artificial horizon and sextant, carefully determining the index error of the latter before and after a series of lunar altitudes made with a well-regulated chronometer. The latitude of the same place must likewise be well determined in order to get the longitude, except in those few cases where the traveller can get equal altitudes of the moon within an interval not exceeding twenty-four hours, and on both sides of the meridian.—Believe me, &c.

"ANTOINE D'ABBADIE,
"Correspondant de l'Institut de France."

Mr. Bernal's "Prints" brought good—some of them extraordinary—prices:—the 560 lots realizing 1,313*l.* One of Hogarth's prints, 'A Modern Midnight Conversation,'—originally purchased by Mr. Bernal from Messrs. Colnaghi & Co. for 1*l.* 11s. 6d.—was sold to the British Museum for 81*l.* 18s. A portrait of the Great Condé, bought from Messrs. Grove for 10s. 6d., realized 19*l.* Hollar's works brought excellent prices. Mr. Wilks's representatives were not so fortunate as those of Mr. Bernal:—the 457 lots of his collection realized 471*l.* The Saint Mura's Bell, described in the 'Ulster Journal of Archaeology,' No. 4, sold for 75*l.* 12s. Mr. Bernal's Library, consisting of 1,530 lots, sold for 5,273*l.*—some of the lots fetching fancy prices.

The library of the late Rev. Parr Greswell—a classical and miscellaneous collection—is announced for sale.

We have received a letter signed "F. C. Adams," stating that the writer is not the author of the book called 'Tit for Tat,' noticed by us Jan. 20. We entertain no doubt that his statement is correct.

An attempt is being made by the workmen engaged at the Crystal Palace, Sydenham, to establish for their own use a Free Library. Lord Carlisle has sent the projectors 5*l.*; and a reprint house has offered its books to the workmen at the trade price—that is, at a discount of 30 per cent.

We have the following from a Correspondent.—Your assertion in your valuable *Athenæum* for the 30th ult., that the "paigle" is a totally distinct plant from the cowslip has induced me—as an old Suffolk man, who has never heard it given to any other plant,—indeed I might say that in that county the cowslip is scarcely known by any other name—but your comment has induced me to refer to old Bailey, where I find "Paigles,—cowslips, E.C." (for Eastern Counties),—to Johnson, who has "Paigles, flowers, also called cowslips," and to Don's "Hortus Cantabrigiensis, who gives it as "Primula veris, cowslip or paigle, E.B." (English Botany). I think I need hardly refer to any other work.

W. CHAPMAN.

—Our Correspondent, "an old Suffolk man," should know that there are three distinct spring flowers, which are something alike:—1, the primrose, the pale blossoms of which grow upon separate stalks; 2, the cowslip, the blossoms of which are a little smaller, and spread from one common stalk in an umbelliferous manner; 3, the paigle, the blossoms of which are still smaller, and of a brighter yellow, but spread from a common stalk like the cowslip. The primrose and the cowslip are flowers of the woods and hedgerows; but the paigle belongs to the open fields, and, in meadows shut up for hay, in April and May, may be seen in thousands. What is called cowslip-wine is usually made from the last; but it is properly paigle-wine, and is so termed in some parts of Essex.

Mr. Robertson sends us the following and its inclosure:—

"35, Lower Sackville-street, Dublin, Feb. 12, 1855.

"I inclose for insertion in your paper the correspondence on the Copyright question in Australia, referred to in my last letter. The success which has attended the efforts made, both at Sydney and at Melbourne, to diminish

and stop the evil complained of, will encourage the holders of copyrights, and others having an interest in the subject, to carry out similar efforts in all our Colonies, either individually or in an organized capacity, for the maintenance of their rights against the literary pirate; and as regards Australia, to see and press upon the authorities the duty of having the Customs there placed on the same footing of efficiency, as regards this important subject, as the London Customs.—Yours, &c.

WILLIAM ROBERTSON."

Copy of a Correspondence between George Robertson, Bookseller, Melbourne, and the Hon. the Collector of Customs for the Colony of Victoria, in reference to the Importation of Pirated Editions of English Copyright Books.

Letter No. 1, from Mr. George Robertson to the Hon. Collector of Customs, of date 27th of April, 1854, calls "Attention to the circumstance that American and German reprints of English copyright books are allowed to pass the Customs, and so obtain circulation in the Colony, although strictly prohibited by the Copyright law, which provides that in all parts in the British dominions the officers of Customs and Excise shall seize and destroy all such reprints which may be attempted to be passed into any such port.... and earnestly recommending the case to your serious attention."

Letter No. 2, from Hon. Collector of Customs, of date 2nd of May, 1854, in reply to No. 1, informs that "The subject will be brought under the notice of His Excellency the Lieutenant Governor."

Letter No. 3, to Hon. H. C. E. Childers—"85, Collins-street E., 30th of May, 1854.—Sir, I lately took the liberty of addressing you on the subject of the illegal importation of American and other reprints of English copyright works which are at present allowed to pass the Customs of Melbourne, and duly received your reply, dated 2nd instant, in which you promise to bring my application under the notice of His Excellency the Lieutenant Governor. In the mean time these importations have gone on and increased to the great injury and loss of Her Majesty's subjects, the proprietors of the copyrights, and of all parties here occupied in the importation of the genuine English editions. I have prefixed to this letter for your perusal an extract from the *Sydney Empire* newspaper, of 25th instant, in which you will find printed a copy of a letter from the London Board of Customs to Messrs. Longman & Co., Publishers, in London, in reference to similar importations attempted at Sydney. This letter shows that if any difficulty should exist as to enforcing the law here in consequence of your not having the necessary list of books in your office, an authentic copy of such list can now be obtained from the Customs department in Sydney. Hence, it appears that there is nothing to prevent the immediate enforcement of the law; and it is at present only through your department that these importations can be prevented. I therefore hereby, as a British subject, whose legitimate trade is injured by the introduction into this market of goods which it is your duty to seize and destroy, claim your prompt interference. In conclusion, I beg respectfully to state for self and others engaged in the trade, that we shall give you no peace till this affair is settled. Having commenced a business, in the legitimate carrying on of which we are entitled to the protection of British law, we shall not sit down contentedly to be made the victims of a dormant Colonial executive."

(Signed) "GEORGE ROBERTSON."

Letter No. 4, to George Robertson, Esq.—"Custom House, Melbourne, 8th June, 1854.—Sir, I have now the honour to communicate to you the decision of His Excellency with reference to your communication of the 27th of April, in which you urged me to take steps for preventing the introduction into the Colony of reprints of English copyright works. His Excellency has expressed his approval of the instructions which I have issued to the sub-collectors and landing surveyors, requiring them to cause packages declared or suspected to contain books imported from foreign ports to be examined, with a view to carry out the provisions of the several Acts relating to Copyright. But it would be impracticable, without a considerable increase to the staff of this department, to institute the same search for prohibited articles of this character which is customary at ports in the United Kingdom; and this increase His Excellency does not feel himself called upon to authorize. I take this occasion to acknowledge the receipt of your letter of the 30th ult., and, with reference to the last paragraph, to express my regret that you should have appeared to imagine that I should be influenced in the discharge of my duty by a threat conveyed in the language which you have thought fit to employ.

(Signed) "HUGH C. E. CHILDERS."

A union has been effected between two useful Societies in Dublin, to which we are indebted for the publication of about twenty volumes of historical illustration—the Irish Archaeological Society and the Celtic Society. The object of the amalgamated Society, as we glean from the prospectus, is to print, with accurate English translations and annotations, the unpublished documents illustrative of Irish history, especially those in the ancient and obsolete Irish language,—many of which can be accurately translated and elucidated only by scholars who have been long engaged in investigating the Celtic remains of Ireland. Should the publication of these manuscripts be long delayed, many most important literary documents may become unavailable to the students of history and comparative philology. The Society will also endeavour to protect the existing monumental and architectural remains of Ireland, by directing public attention to their pre-

servation from the destruction with which they frequently are threatened. Among the works in preparation we find,—‘Hymns of the Antient Irish Church,’ selected from the *Liber Hymnorum*, a MS. of the ninth century, in the Library of Trinity College, Dublin, by Dr. J. H. Todd,—‘The Wars of the Irish and Danes,’ edited, with a translation and notes, from a MS. in the Library of Trinity College, Dublin, collated with a MS. in the handwriting of Fr. Michael O’Clery, now in the Burgundian Library at Brussels, by Dr. Todd and Dr. John O’Donovan,—‘The Martyrology of Donegal’—Cormac’s Glossary, edited by Dr. J. H. Todd, with a translation and notes, by Dr. J. O’Donovan and Mr. Eugene Curry,—‘The Annals of Ulster,’ with a translation and notes, edited from a MS. in the Library of Trinity College, Dublin, collated with the translation made for Sir James Ware by Dudley or Dual Mac Firbis, a MS. in the British Museum, by Drs. Todd and O’Donovan,—‘The Annals of Innisfallen,’ from a MS. in the Bodleian Library, Oxford, with a translation and notes by Dr. O’Donovan,—‘The Liber Hymnorum,’ from the original MS. in the Library of Trinity College, Dublin, edited by Drs. Todd and Reeves,—‘The Genealogy and History of the Saints of Ireland,’ from the Book of Lecan, edited, with a translation and notes, by Drs. O’Donovan and Todd,—‘An Account of the Firlbolgs and Danes of Ireland,’ by Dual Mac Firbis, from a MS. in the Library of Trinity College, Dublin, with a translation and notes by Dr. O’Donovan,—‘The Origin and History of the Boromean Tribute,’ edited from a MS. in the Library of Trinity College, Dublin, with a translation and notes, by Mr. Eugene Curry,—‘The Topographical Poems of O’Heerin and O’Dugan,’ with notes, by Dr. O’Donovan,—‘The History of the Invasions of Ireland,’ by the Four Masters,—‘History of Ireland,’ by Dr. Geoffrey Keating,—‘History of the Noted Places in Ireland,’—and ‘The Works of Giraldus Cambrensis relating to Ireland.’

BRITISH INSTITUTION, Pall Mall.—THE GALLERY for the EXHIBITION and SALE of WORKS of BRITISH ARTISTS, is open daily, from Ten till Five. Admission, 1s.; Catalogue 6d.

GEORGE NICOL, Secretary.

PHOTOGRAPHIC SOCIETY.—THE SECOND ANNUAL EXHIBITION of this SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5; in the Evening from 7 to 10.—Admission, Morning, 1s.; Evening, 6d. Catalogues, 6d.

Will shortly close.

COLOSSEUM, Regent’s Park.—Admission, 1s.—The original PANORAMA of LONDON by DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatory, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON by NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

ROYAL GALLERY of ILLUSTRATION, 14, Regent Street.—Additional Pictures. The Battle of Inkermann, and Great Storm in the Black Sea.—The Cavalry Charge at Balaklava, Battle of the Alma, Pictorial Map of Sebastopol, &c., are also exhibited in the Diorama, illustrating events of the war.—The lecture by Mr. Stoecker. Daily at 3 and 8.—Admission, 1s., 2s., and 3s.

LOVE’S LENTEN ENTERTAINMENTS.—UPPER HALL, REGENT GALLERY, 69, QUADRANT, Regent Street, completely re-fitted for the occasion, with New Entrance, New Stairs, New Closets, &c. Every Evening at 8, except Saturday; Saturday, at 3.—Monday, Tuesday, and Thursday, Mr. LOVE will present his NEW ENTERTAINMENT, with appropriate mutative costumes and appointments throughout, called ‘THE LONDON SEASON,’ and other entertainments. On Wednesday and Friday, a LECTURE on the OCCULT POWERS of the VOICE, followed by the entertainment called LOVE IN ALL SHAPES; with LOVE’S LABOUR’S LOST.—On Saturday at 3, Love in all Shapes with other entertainments.—Pianoforte, Miss Julia Warman.—Stalls, 3s.; Area, 2s.; Gallery, 1s.—Tickets at Mitchell’s Royal Library, 33, Old Bond Street; Turner’s Music Depot, 19, Poultry; and at the Rooms, between 12 and 3.

SCIENTIFIC

SOCIETIES.

SOCIETY OF ANTIQUARIES.—Feb. 15.—Admiral Smyth, V.P., in the chair.—Mr. Franks exhibited a specimen of majolica ware, with the arms of Guicciardini and Salviati.—The Rev. Thomas Hugo exhibited an engraved Celt found in Ireland.—Mr. Major read a communication ‘On the supposed Site of the Submerged City of Vineta.’

ROYAL SOCIETY OF LITERATURE.—Feb. 14.—Sir John Dorant, V.P., in the chair.—Mr. Watkiss Lloyd read a paper ‘On the Central Group of the Panathenaic Frieze of the Parthenon.’—The scope

of this paper was an attempt to identify the twelve seated principal figures of this group, which are marked by superior proportions, as of superior nature, heroic or divine, to those that take part in the procession. The subject has been long under discussion, and is rendered difficult from the defects of drawings, but most of all from the omission by the sculptor in almost every case of any distinct attribute; elucidation has, therefore, to be sought by adopting as a key the few names that are incontrovertible, considering their reference to the Goddess, the Temple, the Panathenaic festival, the records of Athenian traditions and national feelings,—and hence inferring probable associates that also suit the forms, gestures, and expressions of the unappropriated figures. After a detailed exposition of the proofs by which he satisfied himself of the correctness and significance of the names he assigned, Mr. Watkiss Lloyd concluded with these observations on the work itself:—“The more the frieze is studied the greater will be the admiration of the genius displayed upon it in plan, invention, drawing, and execution:—whatever inequalities there are appear to be due to differences in execution alone, and not, as in the case of some of the Metopes, to the original defects of inferior design. The copy of the frieze placed round the exterior of the Athenæum Club, in Pall Mall, affords in some respects the best opportunity of studying the art of its design, though, of course, the position is too high, and has other disadvantages, as every position other than the original must have. It was from observation of the Pall Mall copies that I first pointed out the order of the cavalcade as following on in ranks of six or eight horsemen abreast.”

BRITISH ARCHEOLOGICAL ASSOCIATION.—Feb. 14.—F. H. Davis, Esq. V.P., in the chair.—The Earl of Perth and Melfort was enrolled an Associate, and three other members were elected.—Mr. Thompson produced a portion of Lead Pipe dug up in Broad Street during the last summer.—Mr. Dew forwarded a notice of discoveries now taking place at Comb Down, Bath. Five stone coffins have already been dug up, and in two of them were perfect skeletons,—one of a male, the other a female.—Mr. Syer Cuming read a short paper on a curious collection of Clay Tobacco Pipes, ranging fifty-two specimens, from the introduction of tobacco to the reign of George the First.—Mr. Planché exhibited a fine specimen of Bascinet, of the time of Edward the Third, with chain-mail attached, extending down the neck and upon the shoulders.—Mr. Horman Fisher exhibited a specimen of forgery in Mola Ware, reported to have been found in London.—Mr. Irving exhibited a plate of Delft Ware, with the portrait of Catherine of Braganza, queen of Charles the Second. The initials C. R. were placed on the sides of the portrait.—Mr. Jobbins exhibited some large vellum sheets of an Antiphonale, ornamented with most superb and elaborate illuminations. These had formerly been in the possession of Mr. Beckford, of Fonthill.—Mr. Vere Irving read a paper on a Seal reported to have been that of Marie Stewart, but which he clearly made out to be that of Mary of Este, the wife of James the Second.

STATISTICAL.—Feb. 19.—Thomas Tooke, Esq., V.P., in the chair.—J. M. Hammack, Esq., and J. L. Ricardo, Esq., M.P., were elected Fellows.—‘On the Loans raised by Mr. Pitt during the First French War, 1793—1801, with some Statements in Defence of the Method of Funding employed,’ by William Newmarch, Esq.—The author commenced by stating that it had been the habit for some time for writers on finance to assume, that in the loans raised by Mr. Pitt during the first French War of 1793—1801, there was not only great extravagance in the manner of obtaining contracts for the money, but also great ignorance and disregard of some of the plainest and most salutary principles of finance. It had been assumed, for example, that in selecting low-rate funds, such as Three per Cents., as the media of the loans, instead of raising the money at par, or in Five per Cents. or in terminable annuities, a gratuitous sacrifice was made of the public inter-

ests, both at the time and for the future; inasmuch as under the Three-per-Cent. plan, the public were cut off from the benefits to arise from reductions in the interest of the debt after peace should have raised the price of the funds. The object of the paper was to show that a careful investigation of the circumstances connected with the several loans raised by Mr. Pitt would not only fail to support these prevalent impressions and assumptions, but, in point of fact, would establish in a very conclusive manner propositions of a nature almost wholly different. The conclusions so arising from actual investigation were stated in the paper to be the following five, viz.,—1. That it would have been practically impossible to have raised most of Mr. Pitt’s loans in the amounts and at the times required, if the principle of borrowing at par had been enforced. 2. That even if the money had been raised in Five per Cents. instead of in Three per Cents., the difficulties would have been frequently excessive, and in every case the rate of interest, and therefore the annual charge, very considerably higher. 3. That when the facts were properly examined, there was no adequate justification for imputing extravagance to the Minister as regarded the manner in which the loans were raised; nor for believing that, in the contracts actually entered into, the country did not obtain the full benefit of whatever *bond fide* competition could be excited among persons qualified by wealth and character to afford proper security for the punctual fulfilment of their engagements. 4. That in the anxious and difficult situation of this country during most of the years of the Revolutionary War (1793—1801), it was a consideration as pressing, as to become a necessity of the first order, not to increase, even by the smallest avoidable amount, the pressure of the existing taxes. And, 5, that as a general result, it was not possible, with a due regard to the exigencies of the time,—especially during the six years 1793–98, both inclusive—to raise within the year, by means of old and new taxes, a larger revenue than was actually obtained. And with reference to the comparative eligibility of low-rate and high-rate funds, as applicable to Mr. Pitt’s loans, the paper was directed to show that from the operation of two causes—namely, 1. The pre-eminent eligibility of consols as a Stock Exchange commodity; and 2. Of the extreme non-eligibility of high-rate funds as a Stock Exchange commodity, the actual difference of price between Consols and Five per Cents as the media of new loans had been generally so great, as to make it prudent and profitable to adopt the low-rate method; and specifically, that this was the actual fact during the first French War. Statistics and calculations in considerable detail were adduced in support of these views,—and generally, the object of the paper was to invite and revive a discussion on specific and careful grounds of fact, of financial questions relating to the last war, and which, under the circumstances of the conflict with Russia, had become not only interesting as matters of history, but important as the last and most applicable of the lessons of experience to which we could refer.—The discussion of the paper was adjourned to Monday, the 19th of March.

SYRO-EGYPTIAN.—Jan. 9.—Dr. Camps in the chair.—Mr. Sharpe delivered a very interesting and instructive lecture in explanation of ‘Hieroglyphics and Hieroglyphical Writing.’ This lecture was illustrated by drawings by Mr. Marsden.

Feb. 13.—Dr. J. Lee in the chair.—Mr. Ainsworth ‘On the Izedis, or Devil Worshipers.’ The writer argued, after detailing the history and distribution of these remarkable people, and giving the opinions of other travellers and writers, that the discovery of the remarkable sculptures at Bavian, close to Shaikh Adi;—and of holy symbols analogous to the Malik Taus, or King Cock;—as well as the reverence paid to the same demon bird or Iynge, by the ancient Assyrians;—with the other analogies of the reverence of holy springs, in the same neighbourhood;—the worship of the sun and fire (the latter introduced among the Assyrians after the time of Zardusht, or Zoroaster);—the practice of sacrifices;—the reverence paid to

other Assyrian symbolic animals and objects, as the lion, the snake, and the axe;—and the physical aspect of the people, the men wearing ringlets, the women adorning themselves with the engraved stones and cylinders of the Assyrians of old, and their preserving their chief place of residence close to Nineveh, their most holy place being in actual juxtaposition to the great national sanctuary of the Assyrians;—would tend to establish strong presumptive evidence in favour of an Assyrian origin to these remarkable people.

MEETINGS FOR THE ENSUING WEEK.

- MON. Royal Academy, 8.—'On Sculpture,' by Sir R. Westmacott.
Geographical, 8.—'Letter from Mr. Wallace on Singapore and Malacca'—'Meteorological Observations, during a Passage from London to Algon Bay,' by Dr. Sutherland.

FINE ARTS

ROYAL ACADEMY.

Lectures on Painting, by Prof. Hart, R.A.

LECTURE II.

IN my previous Lecture, on Thursday last, I endeavoured to explain the true meaning of Imitation as applied to the art of painting, and to define the limits within which the artist should restrict its exercise. I now proceed, in conformity with the plan which I laid down at the commencement of this course, to consider the principles which I then enunciated, in their application to ancient Art, from the earliest times to the establishment of the Christian Church. For, as the distinguished artist who preceded me in this Chair well observed,—"The only mode in which instruction can be conveyed, after the principles derived from Nature are pointed out, is to draw attention, in detail, to the varieties of practice that have prevailed in different ages and schools, and ascertain how far they are founded in truth—not so much to recommend their imitation, as to quicken powers that may serve as guides in new and untried ways."

Before I enter on the inquiry which is to engage us this evening, I think it necessary to observe, in order that you may more clearly follow the course which I am about to pursue, that, in these early ages of their cultivation, the Fine Arts were made almost exclusively ministrant to the purposes of Religion. This will be sufficient to account for the fact, that the imitative principle, on which I have already expatiated, was, at that period, almost entirely subordinated to the dominant spiritual element. Nor was this mode of treatment limited in its application to Painting, it extended, in an equal degree, to Sculpture. Architecture, though less an imitative art, was subject, in no meaner extent, to the same influence.

And here I would observe, that when, for the purpose of illustration, I find it necessary to recur to Architecture or Sculpture, it will be with the object of enforcing such views in regard to forms, quantities, or other attributes, which I believe the art of painting has, more or less, derived from them;—nor do I make such allusion with any desire of obtruding my own observations respecting arts so ably represented here by their respective Professors. Interwoven as these arts have been from the earliest periods of their cultivation, and almost inseparable as they are, it would be next to an impossibility to treat of any one without entering into consideration of the others; and when we recollect that Painting, in

any state of perfection, was latest in its appearance, no one can hesitate to admit the obligations under which it exists to them both.

Of the obligation to Sculpture, the very education of a young painter is the best evidence. Without the study of Sculpture, his conception of the Ideal, his sense of Beauty, Grace, and Proportion would be dependent on the native perception of his own mind, and as each constitution of mind is individual, each perception, if undisciplined, must be equally so. In this way the standard of the Ideal would be vague and uncertain, and there would be among men no one point of concord on the subject.

It is by means of the sculptor's art, as I have before said, that we obtain in regard to Form and Character, a knowledge of their permanent attributes in embodiments no less remarkable for their beauty than for that variety which ranges through every condition of age, essence, or sex.

The symmetry of Architecture has so often influenced the operations of the painter's art, that it stands with Sculpture in a like category. Some of the most sublime pictorial creations have been provoked by the necessities of architectural situation—often apparently unpropitious—often resulting in successes exactly in the inverse ratio of the unpromising nature of such conditions. These are among the best attestations that can be offered of the fact, that Architecture, while she afforded an asylum to the painter for his art, gave him also the suggestion for his composition—a suggestion often as much the cause of exciting his mind to freshness of fancy as his hand to freedom of execution.

It will be necessary to consider the relative order of the three arts. Architecture administering to the first necessities of man, is of the earliest origin. In its development, through a succession of periods, it always shows itself governed by certain general principles, arising out of physical laws and mechanical rules. These have met with so much of the concurrent sanction of ages, as now to have become of a fixed nature—principles of conduct to the professor, and deemed so arbitrary that any departure from them is considered a violation of propriety. The code derived from ancient Greek practice is, in fact, considered by the best authorities, perfect.

Sculpture and Painting, on the contrary, though equally governed by principles and laws depending entirely on the representation of natural objects, are susceptible of greater variety,—the leading characteristic of the inexhaustible source whence their inspirations are derived—Nature. On the manifestations of the truth which they make, and the modes in which this truth is exemplified, much of their success depends. They deny to their votaries the implicit submission to types, which, it is contended, must be yielded by the architect. If these are permitted to control the painter or the sculptor to a similar extent, it must be at the expense of his originality; and if he indulge in any set habits of thought, the conventionalities with which he commences must terminate in the mannerism inseparable from such restricted thinking.

Of the three arts, Painting has most claim to vitality of purpose. Herein she has the advantage over Sculpture of enlisting a wider range and a greater number of imitative truths. Sculpture, with the power of producing positive relief, is wanting in the charm of colour as a means of external realization. Painting, by the aid of light and shade, simulates this relief so peculiar to Sculpture, but superadding colour gives the semblance of superficial truths,—and by superficial, I mean the external and characteristic traits of hue or tint which distinguish the special object.

The eye, that "mirror of the soul" which the sculptor is constrained to render in an abstract sense, and by means little calculated to compensate for the deficient appliances at his command, the painter expresses by agents that will comply with every regard to variety in structural particular,—colour, light and shade, and condition,—and can thus portray the inward emotions of the soul with a power and intelligence that make the appeal no less extensive than sure. The appreciation of Painting and Sculpture, based as they are on the

imitation of natural objects, is certain, although it may, as I have already shown you, not always be sound; yet the objects themselves, which it is the purpose of these arts to represent, form so many data whence the relative degrees of the truth of the representation can be estimated.

The architect, on the contrary, labours under fewer advantages. He must depend on his public to have either a special organization, or a specially instructed intelligence, to have either his plans or his elevations justly estimated, for the principles he applies being abstract, it is more by the material agency he employs that his art is judged. In proportion as he administers to material wants, he is successful. Our daily experience satisfies us of the defective appreciation of this art. One fact is undeniable:—that the great beauty of Architecture consists in its fitness.—How much is comprehended in that single word!

I shall only dwell on the relative value of the three arts, by observing that where any fusion of their principles takes place, the inevitable consequence is a certain loss of the separate integrity of the conditions special to each. For example, Sculpture becomes too picturesque, when it indulges in imitation beyond the range of its means, or when the imitations can only be partial for the want of the use of colour to make them complete; just as Painting becomes too sculptural when the formality peculiar to the plastic art—one of the conditions essential to the expression of repose—gives an impression of permanence of action; and both Sculpture and Painting may become too architectonic if, when not employed for purposes of mural decoration, they are suggestive of forms and spaces that arise out of architectural intention.

Our acquiescence, then, in the manifestations of either of the three arts is just in proportion to the degree in which the principles peculiar to each have been complied with by the artist.

The Arts are the landmarks of Civilization. By their means we are instructed no less in the social progress than in the extent of refinement to which at various periods the most celebrated nations of the earth have arrived. Like the Nilometers of old, they inform us of the precise changes they have severally undergone, no less than of the different degrees of elevation to which, in the fluctuations of empires and states, they have attained.

Long anterior to any written record found in the pages of the poet or historian, even to that Volume which we all hold in veneration, nations existed who employed, though in a rudimentary form, the language of Art—that "inestimable Art"—which has been properly described as one which "softens, refines, and embellishes the intercourse of life."

The means which the graphic and plastic arts supplied were among the earliest employed by the nations of antiquity for the expression of their religious aspirations, and the preservation of documentary or biographical details; these were recorded in characters and forms of objects with which they were familiar, subordinated to an imaginative treatment which was not the mere result of accident, but a studied reflection of their spiritual wants as well as of their social condition. Thus, when we should now be otherwise deficient in a knowledge of primitive history, or dependent for it on fragments of fabulous tradition or unauthenticated travel, the language of Art, supplied by the sculptor's chisel, or the painted wall, fills up the blank, and furnishes the information we require.

The peculiar mission which it was the province of the Arts, from their earliest appearance and until a comparatively recent period, to fulfil, it will be my endeavour to explain. The aspiring tendencies of the human mind first considered Art in its spiritual essence rather than in its material nature. Devotional fervour in the earliest times, as in the Middle Ages, rose superior to the deficiencies of optical observation, or the dexterities of manual skill. The end and object of Art being to aid in the promulgation of Religion,—the highest and most deep-seated principle of which our nature is susceptible,—the absence of other sources of knowledge, the peculiar condition of the major part of society, and the power of ruling hierarchies,

invested Art with the privilege of communicating to masses of the human family intelligence which could not have been conveyed in any other manner. Although the living principle that animated these Arts was manifested in systems in which our sympathies have now no share, they may yet command our attention for having endured through lengthened periods and furnished for our contemplation some of the noblest exercises of man's ingenuity.

Art, then, as a mental exercise, and in its loftiest application, may well challenge our calm inquiry, no less than furnish reasons for the successes which it achieved; and this also explains why, when that aspiration ceased to afford an impulse and give a direction to the energies of its professors, it should have declined from a great and sanctified system of expression, from an elevating and expanding exercise of mind, into a narrow and limited channel of material agency.

At a time when there was a spirit abroad which rose superior to material forms, the artist looked beyond and out of himself, into spiritualisms; and dealt in abstractions congenial with the feelings and the poetry of his own times;—if he did not fully recognize Art in its imitative capacity, it was in consequence of respect for creeds, no less than of the shortcomings which a defective education may have induced,—and when afterwards he did employ natural objects with more strict regard to their artistic presentment, he did so by availing himself of their highest and completest forms.

Whenever departures from formal or actual circumstance occur, they are so marked as to satisfy us that they are not the result of chance. The differences are so specific and so obvious as to warrant the belief that they arose from positive intention. For instance, in very remote times, when the idea of greatness or sublimity was intended to be conveyed, vastness of scale was resorted to. The colossal form was the mode of its expression. Thus we have the Tower of Babel, the Egyptian Memnon, the Pyramids of Gizeh, the colossal figure set up in the plains of Dura, the Assyrian deities, the Jupiter and the Minerva of Phidias, the Mausoleum of Hadrian. Other attributes of Power found expression through means as significant. These were the figurative modes by which nations possessing poetry as an inheritance gave their other arts embodiment. It would be unreasonable to estimate such arts by the tests which our present condition and feelings supply; we must endeavour to carry ourselves back to estimate them—back through their several poetic conditions—to days when not one of those facile modes existed of interchanging ideas which now follow each other in such rapid succession,—when the electric current or the high pressure, with their material advantages, had not supplanted the poetical machinery of spiritual aspiration,—when the prophetic page of Holy Writ, or the strains of the Greek or English bard, had not to yield in interest to the monthly division of the popular tale.

Cimmerian darkness envelopes in mystery the original derivation of the Fine Arts—a poetical condition worthy of their birth and significant of that mission in which they were first engaged. In lands where the poetical images employed by the Deity for the promise of a countless population were “as the stars of the heaven, and as the sand which is upon the sea-shore,” we may well realize the condition of mind in which Art would be accepted,—where Nature would be regarded with the eyes of the heart rather than according to the classifications of the naturalist. In Chaldean lands, where a shepherd people encamped under the vault of its rich Oriental sky, accustomed to contemplate nightly those magnificent images which, according to their pastoral reveries or domestic affections, were invested with sacred attributes, we can readily understand how highly attuned must have been their intelligences to the reception of the imaginative treatments of man in Fine Art. To these lands all authorities agree in ascribing its earliest practice.

Egyptian Art, next in order, presents us with some of the simplest forms of artistic expression—forms which the hieratic system imposed as conditions on the artist, which restricted his imi-

tative capacity, and sought to make his representation not so much the “counterfeit presentment” of natural truth as the symbol of religious personification.

Among aboriginal people, Art is always an important instrument of education, and it is sometimes their sole teacher. In Egypt this was accomplished through rocky masses on which the sculptor's chisel had engraved its lessons, or through the outspread lotus on which forms in ink had become eloquent of ideas, or of facts of history, or principles of religion. Thus, on the roll of papyrus or on the basalt block are some of the earliest applications of graphic agency in hieroglyphical or sacred-written character; but their art is of a rudimentary kind. Nor was this habit confined solely to the Egyptian people. The practice is known to have existed among primitive nations in more modern times. When Cortez and his followers arrived in Mexico, Montezuma was informed of the fact by the drawings which the Mexican emissaries made of the Spaniards, their vessels, cavalry, and other munitions of war. And on wigwags and other properties of North American tribes which have been exhibited in this country I have seen many instances of similar religious symbols in picture-writing.

When we consider that the reputation of the works of Parrhasius, Zeuxis and Apelles is only traditional, how great must be the interest with which we behold specimens of painting long anterior to the days in which those artists flourished! There are in the British Museum proofs of the pictorial skill of the Egyptian:—Fresco pictures, certainly the earliest examples of painting to be found in this country, crude in their general design, yet with the traits of refinement and feeling that are not always to be met with in works in which the technical and imitative conditions have been more fully complied with. Many of these studies are no less remarkable for refinement than feminine grace. And the late Mr. Flaxman remarks of Egyptian sculpture generally, that “The forms of the female face have much the same outline and progression towards beauty in the features as we see in some of the early Greek statues.”

It is the custom to believe that the Egyptian artist was so completely restricted by religious dogmas as to have been excluded from every chance of producing variety either in form, proportion, or character. This is not entirely the fact. From a close examination of existing specimens, I believe that they exhibited Variety in their forms. That they had varied standards of proportion for their several personifications is proved by certain monuments, in which four different standards of proportion are applied to the production of statues. That they exhibited variety of physiognomical character must be clear to those who have not looked in an indifferent or indolent manner on the statues themselves. Individuality is no less to be remarked in their efforts in portraiture. An inferior or superior degree of anatomical knowledge are among the evidences of earlier or later styles. The casual observer may pronounce as mannerism what I would rather accept as generic or ethnographic condition. Individualized forms may be discerned that not only evidence intentions of producing individual resemblance, but justify the inference of accuracy in their representation. Eminent ethnologists have not only recognized in their outlined profiles great accuracy in the representation of conformations, corroborated by local and other circumstances, but they have detected specific differences to such an extent as to satisfy them of the intention to pourtray individual character. It is, however, to be remarked that in these profiles the eye is always represented as if seen in full front. This peculiarity of treatment arose from ignorance of the principles of perspective. For want of a knowledge of those principles, the Egyptian artist could no more delineate the human eye as it appears in a profile view of the head than he could represent the front view of the head in a picture or bas-relief. And this incapacity is not characteristic of Egyptian artists alone.

The Assyrians, Persians, Mexicans, and even

the Greek and Etruscan Vase-painters are equally remarkable for the selection of the profile aspect. Their treatments, however, were relatively improvements on Egyptian precedent. A greater degree of carefulness and accuracy was shown by the Egyptians in other important physiognomical particulars; differences of country and race are clearly distinguishable, and a larger amount of observation and pains-taking was always manifested in the delineation of the head than in that of the other portions of the human figure.

Extreme vividness of Colour is a great peculiarity in the architectural and other decorations of the Egyptians. The primitive colours were more generally employed than their combinations, and there was but little attempt at gradation. Flesh was represented on their bas-reliefs (perhaps the first form of their pictorial art) or on the flat surface of a wall or tomb by flat tints,—differences of race being indicated by differences in those tints. The quantity of white ground left in juxtaposition with the primitive colours was one of the main reasons of the intensified appearance of those colours. All travellers agree in their expressions of astonishment at the brilliancy of these decorations. Many Oriental nations at this day, as you are well aware, continue to employ similar motives. More than one object in the Eastern department of the Great Exhibition in Hyde Park might be traced to the influence of a taste that two or three thousand years before had prevailed on the borders of the Nile.

Whatever arts the Israelites may have originally possessed, it was obviously the policy of Assyrian and Roman conquests to annihilate. To the pages of Holy Writ we must refer for information on this subject,—although the scattered and incidental notices which they contain only make the task of realization more difficult. Those illustrations which have been furnished by learned Fathers of the Romish Church must be accepted with the reservation due to mere assumption.

It must, however, be recollected, in considering Hebrew Art, that the great incentive to Art-study was wanting to the Israelite. Forbidden, by Divine command, from employing it on the noblest objects and for the highest purposes, Religion, which in other countries enlisted and almost engrossed the artist's assistance, in Judæa rejected his aid; and thus deprived of its patronage, and excluded from its service, it is not surprising that no school of Art should have been formed worthy of a nation which, by its poetry and its music, has established a character for all time.

The knowledge necessary for the production of the Tabernacle and its furniture (entrusted to Bezaleel and Aholiab) may be partly ascribed to the influence of types suggested by the Court of which they had so long been subjects. Of Painting we hear nothing. The embroidered works which are described to us suggest an hypothesis of no great extravagance. Their execution implies a previous design,—the possibility of supplying which is established by the present existence of such pictorial examples as I have already alluded to as having been produced in Egypt three centuries before this time. It is then not too much to assume that they may have called into requisition for their embroidery such coloured designs as were necessary to furnish the worker in blue, purple, scarlet, and fine linen with the patterns for his occupation. Embroidery was an early form of the pictorial expression. Tyre and Babylonia were celebrated for their works of this kind; and although Homer, so explicit in his descriptions of sculptured shields, is silent on Painting, he particularly describes the productions of the needle. That early display of Chromatic Art was, by a curious coincidence, among the latest suggestions and incentives to the production of some of the noblest creations of one of the greatest minds the world ever saw:—you will recollect that the Cartoons of Raphael were designs to be elaborated through the instrumentality of the embroiderer's skill.

That the adequate amount of native talent did not exist when, in the height of Jewish prosperity, it was sought to execute a most important work involving multifarious considerations of Fine-Art character, is made apparent when King Solomon,

in seeking to realize the plans which his father transmitted to him for the construction of the Temple, found himself necessitated to apply for assistance to a neighbouring monarch. The solicitation itself is an admission made by the Hebrew king, that his native resources, either in material or skill, were inadequate to the importance of his task,—while the reply of Hiram is eloquent of the great degree of refinement to which the several arts had attained among the Phenicians. The extent of their maritime and commercial enterprise is strikingly made known in that chapter of Ezekiel which predicts the fall of their capital. The Phenicians are known also to us through the page of more modern history, and could our own coast speak, it would be eloquent of their frequent visits. With their arts, we have no more specific acquaintance.

An attentive consideration of the Assyrian monuments cannot fail to convince that this people was advancing in civilization. Their sculpture shows progressive powers; they exhibit more effort at composition,—more attentive observation of Nature,—more manipulative excellence and completeness in their parts. Differences of style and epoch explain this variety. A single figure standing behind an altar, recently added to the collection in our Museum, is an advance in taste and skill on any of the other monuments, and not unlike evidence of the early Greek schools. Compared with the manifestations of Egyptian Art, there is evidently less subjection to religious control. The monuments of Egypt and Assyria signify two distinct conditions: they express that the Egyptian belonged to times of abstraction,—his means of representation were emblematic, and his language conventional; the Assyrian belonged to times more prosaic, and dealt in modes more real. The art of the Egyptian was made almost entirely ministrant to his religious system;—that of the Assyrian was more a record of his military triumphs. The personages of his sacred system caused the Egyptian an intentional departure from Nature in the more square—more simplified—more stern expression of human form as the medium of the spiritual idea,—the Assyrian, more spherical in his forms, was more material—more realistic in treatments which aimed at a greater degree of anatomical truth, attention to details in accessory particular, or excellence of execution. The Egyptian yearned after the Ideal—the Assyrian after the Picturesque. The Egyptian expressed Repose—the Assyrian, Action. In their painted monuments they, like the Egyptians, sought to express races and character as much by differences of flat colours or tints as by differences of form.

There is a moral significance attached to some of these bas-reliefs, which it is impossible to overlook. By their artistic forms some of the objections of the sceptic are successfully refuted. In beholding those remarkable scenes of the Siege of Lachish he may be satisfied that Sennacherib did actually appear against that city, no less than he may discern in those mysterious forms, part human, part animal, correspondences with, if not corroborations of, what Daniel dreamed, or Ezekiel sang.

But few remains of Painting have been hitherto discovered either in the ruins of Nineveh or Babylon. The ancient writer who speaks of the pictured forms of men and animals on the walls of the Palace of Semiramis must be supposed to refer to those painted bricks of which specimens exist in our own Museum, and a few interesting examples of which are given in Mr. Layard's 'Second Series of the Monuments of Nineveh.' Future excavations will probably add to our knowledge of their figure-painting, of which these bricks furnish so valuable an example—an example, we are to recollect, only intended for an ordinary constructive purpose. As far, however, as I have yet seen, they are inferior in intensity of colour to existing specimens of Egyptian painting. More than one example of Assyrian ornamentation has been appropriated by the Greeks. Some of the very decorations of the British Museum itself owe their origin to the same source. The modern architect was probably little aware that he was reproducing the motives of such ancient times.

On the consolidation of the Median with the Persian Empire, Babylon became one of its capital cities. It will then not be difficult to comprehend the influence of Assyrian upon Persian Art. The discovery of the Assyrian remains has modified an opinion previously entertained that it was Egyptian example which exercised most influence on the Fine Arts among the Persians. Artistically, it may be said, Egypt acted on Persia only through the medium of Assyria. A comparison between Babylonian and Persian antiquities clearly shows how much the latter had borrowed from Assyrian precedent; and a small amount of examination will not only satisfy us of the close general resemblance between these several styles, but will also exhibit a gradual progress, on which the Greeks were soon to engraft their superior tastes.

In bas-relief, there is a striking correspondence between the profile figure of Cyrus at Mourgaub and the profile monarchs of Nineveh, and in the various processions of warriors and captives. A more remarkable correspondence is that existing between those winged monsters, half man half bull, or half lion half man,—one of which at Persepolis is almost identical with those of Nimroud and Khorsabad. In Persian Art we observe greater fluency in the general treatment, greater simplicity in the attitudes, and more truthfulness in the characters of the limbs—the anatomical markings are more defined, and there is less general exaggeration. The profiles of the soldiers, with their circular shields,—the well-cast draped figures, with their long hair collected together and bound round the head by a fillet,—the horses and other animals, are highly suggestive of the Grecian type of the Etruscan Vase. The progress in Persian Art is manifest and undoubted.

Few traces of Painting, however, have been preserved in Persia; even that which is known in reference to its cultivation, through the instrumentality of Herodotus, amounts to little more than a record of the decorations of the walls of one of the palaces, or treasure-cities, of one of the Kings of Ecbatana.

Enough, however, has been said to show how the taste of Egypt and Assyria was transmitted to Greece through Persia; and the value of Assyrian example is enhanced when we discover that Greece, at first, appears to have adopted her style of ornamentation as much as Persia had done her treatment of the human figure. I may here observe, incidentally, that it is thought that Apelles had travelled into Asia, with his friend Alexander, in some of his expeditions against the Persians.

Lydia, as a state, rose into eminence when the Assyrian Empire fell into decay, and the monarchies of Babylon and Media were established. Under Gyges, at Sardis, the Lydians became a people of great consideration. They were the first to coin gold and silver. From them the Ionic Greeks are said to have derived various improvements in the useful and ornamental arts, especially in the weaving and dyeing of fine fabrics, in the process of Metallurgy, and in the style of their music. When Sardis in the time of Croesus fell into the hands of Cyrus, the Persians naturally benefited by those arts for which the conquered nation had become so distinguished. The proximity of Sardis to the Greek cities of Ionia, probably exercised an important influence on the latter. Candaules and Gyges both enjoy the reputation of having been the encouragers of the liberal arts. Candaules paid Bularchus for his picture of the Battle of the Magnetes, according to its weight in gold. Gyges, as will presently be seen, not only encouraged the Arts, but, as we are told, showed some disposition to practise them himself. And here it may not be inappropriate to mention, in connexion with the reputation which the Lydians enjoy for having coined the first money, that to Numismatics, *i. e.*, to impressions from the examples of Sicilian dye-sinking, which are to be met with in the cabinets of *virtuosi*, we are indebted for some of the oldest examples in existence of classic Art. These are remarkable for a more important quality than that of mere antiquity, their great and unsurpassed beauty of design and relief.

Language has already been exhausted in essaying to put in proper estimation the taste and refinement of that section of the human race with whom Beauty is more expressive of an intuitive faculty than of a cultivated perception. There is, I feel, no sufficient definition under the control of any dialect that can grasp the full extent of so vast a subject as that of Greek Art,—composed as it is of so many elements, seen systematically contributing to the expression of one great principle—the principle of Beauty; not beauty in the sense physical, as developed through agencies of technical excellence, but the superior Beauty of the Ideal, revealed either in Essence, Form, Action, Character, or Expression.

A gallery of Greek sculpture or a view of its great edifices, will bring before us either spiritual or selected forms, or exemplifications of proportions and quantities, that as much fascinate our vision as they enthrall our imagination. Art here has an ennobling purpose. Creations of character, embodiments of poetic fictions, intended as abstract representations of Divine Attributes, exhibit the plastic art administering to the promulgation of a mythology eminently suggestive of almost endless presentment. Although it is not permitted to me to make more than a general allusion to Sculpture, I may add that we enjoy in our Museum a privilege in respect of that art which could only be obtained in reference to Painting by means of foreign travel. You have its history from periods anterior to the Dædalian time down to the days of Pericles,—from its rudimentary struggles to its most accomplished results; in each, in all, animated with similar earnest, spiritual motive, though expressed in terms or modes often in striking contrast.

For examples of Painting we are less fortunate. Time has dealt ruthlessly with her more fragile materials—traditions only of her triumphs survive the destruction of their chemical elements. It is unreasonable to believe that the Greeks, whose architecture is unsurpassed, and whose sculpture supplies the principles of our daily practice, should have possessed inferior powers in the art of painting. To what extent both Sculpture and Architecture made demand on its co-operation is well known. This was, it will be remembered, a practice when the sculptor's talent finding itself insufficient to realize the ideal, sought extraneous agencies to embellish his wooden figure or clay model. And it is but little likely that the architect who recognized in Painting an important auxiliary to the decoration of his edifice, should have been satisfied with the presence of mediocre pictures for its embellishment.

Phidias and others, themselves no mean cultivators of the art of painting, were, we may be assured, competent to judge of pictorial excellence, and unlikely to permit the introduction of works which were either ill calculated to sustain the sanctity of their religious system, or likely to disturb the harmony of their architectural arrangement. Phidias of all men is unlikely to have allowed this,—he who had executed his statue of Jupiter at Elis so beautifully that it is said "to have increased the devotion of its votaries; so that," observes Quintilian, "this great master's work equalled our highest ideas of Divine Majesty." The earliest notices of Greek painting depend almost entirely on tradition or casual mention. To divest them of their ordinary fanciful accompaniment would be to deprive them of some very poetical idea, congenial with the times, the subjects, or the associations with which they are so intimately blended. We should be sorry, for example, to abandon the fabled origin of the practice of the simple contour which, as Pliny informs us, arose from the fact that Gyges the Lydian, observing his own shadow cast on a wall, immediately outlined it with a piece of charcoal. Notwithstanding the physical difficulties of the situation, the story is in keeping with the poetical genius of the remote period to which the incident is ascribed. The simple monochrome of the School of Corinth announces a further advance in the early practice of painting,—of which, if no mural or moveable tablet exists, it is yet attested through the instrumentality of the fictile vase. If the charms of colour or light and shade do not exist in these vases,

there still remains the power of specifying beauty of contour in the various effects of the different passions on the human form. It is also easy to express differences of race as well as physiognomical and other peculiarities. But it was not long before attempts were made to enhance the simple contour by the introduction of colour; and as we again learn from Pliny, Cleophrastus the Corinthian was the first to avail himself of chromatic agency by employing in his designs the ground fragments of a red potsherd.

Attempts at perspective were beheld in those *catagrapha—oblique imagines*—attempts at foreshortening, the discoveries of Cimon of Cleonæ. Subsequently came Polygnotus and his school, whose historical pictures adorned temples and porticoes. Some of these applied principles of linear and aerial perspective, or at least of sciagraphy, with the illusive powers which they contribute, to the realization of scenic effect, and to the decoration of houses. Apollodorus and Agatharcus carried these arts to great perfection. Even earlier than the days of Sophocles, these appliances are supposed to have been cultivated. The resources of the art were now being increased by the aid of Science, which supplied additional powers by whose means the fascinations of illusion conciliated and won the popular favour.

The rivalries between Zeuxis and Parrhasius prove the extent to which imitation was carried, as well as the value attached to it by public appreciation. The hand of Alexander holding the lightning, by Apelles, so well foreshortened that it appeared to project from the picture, is another evidence of the application of scientific principles. Like other fables, they point a moral, and prove to us that there were then, as now, persons who attached an undue importance to the mere realization of imitative truth. As an evidence of the extent to which Nature was studied, they may be accepted; but we are not, therefore, to believe that these artists based their claims to renown on such humble views. The fame of Zeuxis was established on more solid grounds. His celebrated single-figure pictures of Juno, of Venus, of Cupid, and of Marsyas, were all of high repute. That he was fastidious, also, in his endeavour to embody character, as I have before remarked, we know from the account of the variety of models he employed for the production of his 'Helen.'

It would, however, transcend the limits of my brief sketch, and be tedious to enumerate schools, artists, or styles, which you may more conveniently make acquaintance with in ancient authors. I have mentioned only those more remarkable for especial excellence. Great must have been the number of Greek artists whose tablet-pictures, when afterwards removed to Rome, contributed so extensively to the enrichment of her temples and public buildings. The panegyrics passed on them by Pliny, who had personally inspected them, and by other writers who could appreciate beauty of sentiment or form, are among the best testimonies that, by understandings cultivated to estimate the excellence of Greek sculpture and architecture, their painting was held in equally high estimation.

In corroboration of this view, I will only cite the opinions of two late distinguished members of this Academy. Sir J. Reynolds says of the Greek painters,—“If we had the good fortune to possess what the ancients themselves esteemed their masterpieces, I have no doubt but we should find their figures drawn as the Laocoon, and probably coloured like Titian.” And Mr. Flaxman even believed “that the improvements in Sculpture succeeded those in Painting, according to the dates, as we are able to ascertain them, of remaining works.”

The people known as Rasenians or Etruscans, possessing a distinct language and customs, cultivated, or perhaps originally naturalized, Greek art among themselves, and certainly derived much advantage from its adoption. The history and traditions which their *fictilia* record show the extent to which they availed themselves of Greek literature and civilization. Nor were they slow to profit by familiarity with and imitation of Egyptian tastes. Many of the objects which have been discovered, if not originally of Greek manufacture,

may have been executed by them after very approved Greek types; and this is supported by the fact, that a large number of discoveries have been made near situations proximate to the sea and Grecian enterprise. Pictures on the walls of tombs proclaim diverse influence from early Greek, and bear the marks of more unfinished modern execution. In many of the twelve Etruscan cities it is curious to notice the existence and cultivation of Art,—a precursor of those tastes and powers which afterwards, in the Middle Ages, on the identical sites, though with corrupted names, were conspicuously displayed in the Italian Republics by a Giotto, an Angelico and a Perugino.

Many of the most captivating forms have been conferred by the powers of design on the arts of pottery, whether for funeral or convivial purposes. These have been adorned with some of the most graceful compositions that have ever emanated from the human brain. The variety of designs, either exemplified in religious or other principles, that decorate these vases indicate varieties of country, of schools and of painters. Sometimes the subjects are historical, at others oriental in their character, asserting a belief in the good or evil principles, attended on by their respective genii or priests. This perpetual struggle is an ordinary form of expression lent also to Sculpture.

Strength, no less than Delicacy and Grace, were among the qualities that distinguished the Arts of the Etruscan nation, who cultivated with success all the Arts that embellish life. The minds that could conceive and the hands that could execute the admirable designs on the Etruscan Vase, with that wondrous precision, delicacy and beauty, were not thereby rendered incapable of constructing great architectural masses,—the Cloacæ or the Cyclopean wall. Volterra, Cortona, and other cities speak through their many-sided stones. The Cloaca Maxima is, I believe, in these great days of constructive science, not deemed a mean exhibition of architectural intelligence; while their cavern-hewn sepulchres, with their monolith portals, are additional evidences of that universal feeling pervading the human breast, of perpetuating the memory of the dead through the agency of Art. No fancy can hope to estimate and no powers describe the extent of their artistic acquirements. Mystic mirrors, whose purposes have excited the conjecture of the antiquary, testify to the engraver's talent; no object and no purpose were beneath the attention of the artist, and all were alike elevated into importance by the skill with which he endowed them.

The subjects often appear of the most inconsistent character as decorations for the chambers of the departed. Scenes of festivity and mirth—the Symposium and the Dance are intended to represent the enjoyment of the soul in another state of existence; and their only idea of its future happiness was through the means which during life the deceased person enjoyed. For as the materiality of the soul constituted a condition of belief, a reference to their previous modes of life and a beatification of it, expressed their idea of a future state. Nor were there wanting more serious and gloomy views, as is exemplified by the Medusæ and monsters, with demons, genii, furies, and the whole tribe of revengeful personifications. These terrific agencies are contrasted by some of the most exquisite combinations of animal and vegetable forms, which, if we have now lost their mystic significance, remain as examples for decorative purpose worthy of our emulation. Far distant epochs, different tastes, and ideas of pecuniary cost, may explain varieties of style. Thus, while Veii affords specimens of animal-painting of rude but archaic interest, 'The Chamber of the Boar-Hunt at Corneto,' from its incontestably genuine Hellenic design, is allowed to be one of the most instructive examples of pictorial art in Etruria. Though they have existed on some of the tombs for more than 2,000 years, the colours on the stucco are wonderfully brilliant, and “as fresh,” says Mr. Dennis, “as when first laid on.” Instances might be multiplied, but I have no time to specify them. It is sufficient to add that, through the instrumentality of the art of Painting (though we know so little of their language) we are able to learn

more of the Etruscan religious belief, their poetical views of the transit of souls into unseen worlds, and their various conditions when arrived there, than from any other source.

The works of the great masters to which I referred when speaking of Greece, were not destined to remain either as objects of divine worship or heroic example in the situations to which they were first devoted. The Greek Empire, in which culminated the elegancies of life, and which suffered no source of intelligence to pass unheeded that would advance her character, was destined in her turn to yield. Thus conquered, her objects of Art became the reward of military and other service. Roman notices of the Greek painters allude to their productions in their new abodes. The spoils of the Greek cities, more especially of Corinth, filled Rome with works of Art. Public edifices, porticoes and temples were in consequence adorned with statues and tabulated pictures. Engaged in acts of spoliation, there were many whose tastes led them to a superior appreciation of the objects with which their prowess has been rewarded. Verres is conspicuous among those provincial governors who were active in the appropriation of such property,—nor were even the Emperors deficient in their cupidity, but shared with their generals and other officers in the work of plunder. Their rapacity filled Rome with many thousand statues, of which, however, in the Pontificate of Nicholas the Fifth only about six remained. Thus fearfully had conflagrations and iconoclastic fury diminished their number. Nor was religious fanaticism the only cause of this destruction. Stimulated by the avarice of Maximin (in the third century), “the temples,” says Gibbon, “were stripped of their most valuable offerings of gold and silver, and the statues of gods, heroes and emperors were melted down and coined into money. The statues of Maximin himself, in retributive justice, shared at the time of his deposition a similar fate.” So great, in fact, was the number of statues of bronze and marble, that it was said that there were then in Rome more statues than men. What was the state of Rome, may be inferred by recollecting what had been done towards its embellishment by Augustus, Vespasian, Trajan, Agrippa, Hadrian and the Antonines. Other parts of Italy followed this example. Hadrian, Valentinian, and many distinguished Roman nobles, were themselves no mean artists with the pencil. I cannot omit to mention two works by Diocletian, the Baths in Rome (so admirably adapted, in after-times, to another purpose by Michael Angelo) and the Palace at Spalatro, considered no less expressive of the decline of the Arts than of the greatness of the Roman Empire in his time. No one object marks the decline of Art more strikingly than the Arch of Constantine. To celebrate his victory over Maxentius, the customary form of its expression was sought; but there was no native artistic resource available when the triumphal arch was raised to adorn it. A composite mass of styles was the result. Portions were taken from the Arch of Trajan, and other monuments, without any regard to harmony of style or consistency of purpose, while details, in bas-reliefs and ornaments, are piled upon each other, neither consistent with the era of the personage it was designed to flatter, or the countries, or the people, over whom he had triumphed. Those exhibitions of native talent which were there made proclaim a degraded taste, and are lamentably deficient, both in excellence of design and completeness of execution.

The wants of the Christian Church, now rising into power created a demand on the architectural mind, whose depression is revealed by the extent to which the *débris* of the heathen buildings were employed in constructing the new edifices. The traveller meets in other districts as well as Rome with churches rich in the combination of forms and materials previously devoted to Pagan worship. Rome and Ravenna, among the other cities which I have seen, present numerous examples of such combinations. The removal of the seat of Empire and the rise of Constantinople were circumstances necessary to complete the ruin of the Arts in Rome. This removal carried with it the choice

productions, which before they had been her ornaments, had conferred importance on the States of Greece. Grecian states which had hitherto escaped were now to be spoiled to contribute to the enrichment of the new metropolis. The native school of architecture was so powerless that when these spoliated sculptures were to be applied to the construction and ornamentation of the new capital a system of instruction had to be organized to furnish the necessary plans. Time developed energies that soon adorned the favoured city and contributed to make it the cynosure of wondering eyes. Subsequently, it was reserved for Justinian to add to these splendours by the completion of a design that has exercised no mean influence over the architectural expression of the Middle Ages—an incrustation of precious marbles that has called forth the wonder of all time. Those who have been in Venice and seen St. Mark's, will acknowledge the extent to which the architect adopted the Byzantine edifice for his type; neither did other republics disdain the influence of Sta. Sophia; Brunelleschi and Michael Angelo have each testified to the value of the thought. But it is the architect who first erected an aerial cupola who is entitled to the praise of bold design and skilful execution. Those objects in Ravenna that now remain, bear witness to the glories of the Ostrogoth Theodoric—a Byzantine in education and taste. The advantages resulting from his power and station were soon conferred on Art. Mosaics in churches formed the staple order of their decoration, and gave the foretaste of a class of painting that is now accepted under the denomination of Christian Art. A perfect museum, this city contains objects and sites filled with associations and memories for those who have lingered in its streets of classic days—of Dante—basilicas, baths, porticoes, mosaics, remains of palaces and frescoes crowd the city, nor is the great monolith roof of the royal Mausoleum less an object of our present wonder.

In endeavouring to maintain a chronologic sequence, and to avoid unnecessary repetition in so brief a sketch, you will see the difficulty in which I am placed. I shall only revert to the Imperial days of Rome when Pliny laments the decline of painted pictures, and the preference for mural decoration,—a species of Art, then regarded more as an instrument of chromatic display than pictorial excellence.

In the decorations of Herculaneum and Pompeii—in the Baths of Titus, or the Villa of Hadrian, there are recurrences, I believe, to types of Etruscan character. In the employment, however, of these, the religious motives were abandoned. Sufficient evidence exists that many of the Etruscan tombs had been previously opened, objects peculiar to such situations being either wanting, injured, or in disorder. The discovery of a tomb near Perugia, perfect in its appointments, which I saw in 1842, was highly instructive, not only as showing the precise arrangement of its several details, but as satisfying us of the extent of change which others had undergone. The portraits, subjects, landscapes, animals and fruit which had combined to serve in the emblematic presentment, were now made the separate and special branches of pictorial treatment, and became distinct pursuits. The great absorbing purpose was gone; and the sensuous and the picturesque supplanted the more stern and spiritual.

The specimens of Roman Painting of which we have now any knowledge, are not, I believe, considered of a date anterior to the first century, and by contemporary writers are deemed works of an inferior character. The facile look of execution of the Pompeian pictures suggests the idea of an inferior or decorative class of artists. Occasional exceptions to such slight or hasty treatment are observable in examples in the Borbonico Museum at Naples,—with the engravings of which you may make acquaintance.

By these means we have been enabled to trace the nature of the declension of these Arts, until we reach a period when, under the classification of "Christian," Art returns to one of those forms of her ministrations to which she was at first most exclusively devoted,—the Service of Religion. This

is early exemplified in the Church of St. Vitale, or Apollinare, in Ravenna, or in the Baptistery at Florence.

To India, Mexico, China, New Zealand and other aboriginal countries, I can now only make a passing allusion. To the Cave paintings at Ajunta and elsewhere I shall on a future occasion find it necessary to refer for some very remarkable facts. The Arts of these nations, however, do not come within our scope as elementary forms in the history of the progress of Fine Art proper; and they have exercised so little influence on it that I have not deemed it advisable to disturb the continuity of my review of the history of Art among more civilized nations.

In taking this brief retrospect of the various epochs over which the Art-history has extended, one principle co-existing with its practice, and marking the course of the Fine Arts, is maintained. Unable to sever the connexion between Painting and her sisters, Sculpture and Architecture, I have sought such allusion only as I deemed I might be allowed to make—allusion in which I have desired only to generalize practices which it is the vocation of others to teach. At those times when, stimulated by a dominant feeling of faith, the Arts exhibited character and force individualized and expressive of their several aspirations, we have seen them successfully cultivated in systems to which they lent us many distinct modes of expression. For some time, and under peculiar conditions, there is a marked congeniality with or resemblance to the members of a common family; but the Arts are progressive in observation, and amplifying the means which that observation had stored up. Symbolism, which adopted a rudimentary form in its earliest state, contrasted with the more perfect development of the Greeks, was but so many varied poetical conditions expressed in terms either stern or rigid—graceful or beautiful—a blending of styles into each other, like inflections of a dialect. Practices which have arisen possibly from some special admiration—commercial circumstance—or accident—make it difficult to ascribe the changes to their proper sources.

The very aspect of the works we have been considering reveals everywhere that no common motive inspired the artists,—that it was for a great purpose they were labouring, and that if they did not seek to conciliate by mere imitative truths, or by displays of technical skill, they had no egotistical ideas of professional immortality.

A great aim and purpose, then, controlled the entire resources as well as the whole energies of the artist. The tributary sources that once were united in one great stream of expression—tributaries that, when the motive ceased, as the various systems subsided or states declined, became at length the separate integrities of distinct styles. The sympathies that once held them together in intimate association no longer existed, and these separate branches soon enjoyed relative degrees of esteem.

These distinct practices are nowhere so powerfully exemplified as in the labours of the present British School; which is acknowledged to possess both resources and excellencies which I trust hereafter to show are capable of application to the more immediate condition of our own times in such special significance as shall reflect them to a future age.

FINE-ART GOSSIP.—"Your 'Old Subscriber' and I," says the writer of some recent paragraphs of Art Gossip in these columns, "differ. I believe Art to be not a 'matter of prejudice,' but of 'principle.' In referring to engraving as a School, I naturally mentioned Robinson and Doo,—for it is not 'prejudice' to class 'history' before 'landscape.' I am not sure that it is a 'fact' that the French beat us in historical line engraving." All who study the subject cannot fail to perceive that the French are deficient in one great quality in which we excel,—namely, in 'handling,' and in its great results, 'colour' and 'expression.' Henriquet Dupont is one of the few foreign engravers whose works

possess real 'sentiment.' No one denies the pre-eminence of our landscape engravers. They have been more fortunate than their brethren of history. J. M. W. Turner, who loved, fostered, and practised their art, died but yesterday,—while Stothard, Wilkie, and the other champions of the historical school, departed long since—West, Sir Thomas Lawrence, and 3,000 guinea copyrights,—a system commenced degrading to painters, who ought to have a more noble ambition than that of keeping a 'large account with Courts.' Art languishes, and its professors generally suffer,—for their interests are sacrificed at the shrine of the popular idol of the day. Mammon is not a patron of the art—unless Art can offer him a large per cent."

The duplicates of several hundred casts of great value are about to be offered for sale by the curators of the old Museum of Berlin.

Mr. Thornton writes in relation to an alleged discovery or improvement effected by Mr. Mayall in the art of copying photographs by the collodion process:—

"Bayswater, Feb. 13.

"In a notice of some photographs by Mayall, which appeared under the head of 'Fine-Art Gossip,' in the *Athenæum* of last week, I find that that gentleman claims the origination of a new process for copying and enlarging daguerreotypes. The value of this discovery is best shown by the fact that, although for the last two years that identical process has been employed, for the purposes named, at the several photographic establishments, up to this time no person has thought it worth his while to claim it. There is not the slightest originality in it, nor ever was. The means for obtaining enlarged collodion copies from daguerreotypes are so exceedingly simple, that they would suggest themselves at once to the mind of the merest tyro; and what there is in that to be entitled 'a discovery,' I am certainly at a loss to conceive. Further, to say that these enlarged pictures possess the minuteness of detail of the original, is to state what is contrary to the fact. They are coarse and ill defined; and until they have been through the artist's hands, are barely presentable. The lithographic appearance of many of the large photographs exhibited,—and which you allude to in your notice,—is entirely due to these after-touches. A true photograph has a character of its own, and no more resembles a lithograph than it does a line engraving. The photographer often gets the praise to which the artist alone is entitled.—I am, &c.

"B. THORNTON."

We are glad to hear that the Crystal Palace Company are at last about to supply a deficiency in their Art-treasury, which we have often pointed out,—and to furnish an Indian Court. The East India Company have, we hear, promised to lend them a series of copies from the curious frescoes in the Caves of Ajunta, and other curiosities will no doubt be forthcoming. Casts could be procured from the statues in the India House, and in time we might have arches and gateways from Agra and Delhi. The omission has hitherto been a serious one, for India unrepresented is as bad as no Egypt or no Assyria.

"Will you permit me to reply in few words to the 'comment' of your Correspondent upon my former letter, with reference to the Oxford Museum competition. I am willing to acknowledge that I have unintentionally made it appear that Mr. Hardwick took part in the selection of the six designs submitted to his inspection for the purpose of testing the correctness of their respective estimates, which I am aware was not the case, as I have by my copy of the *Times*, dated the 16th of November, in which it is distinctly stated that the Delegates had chosen 'six designs to be submitted to the scrutiny of professional judges not interested in the competition.' Having admitted thus much without, as far as I can see, affecting the justice of my complaint, permit me to offer one or two remarks with reference to certain statements in 'A Competitor's' letter. He somewhat satirically observes, that 'I may, as "one of the six," have received information not vouchsafed to the other competitors'; this evidently implies a suspicion that I have 'friends at court,' and am acquainted with some of the Judges. Such influence, I am sorry to say, is too often unfairly exercised; but it has not been so in my case, since I obtained my position as one of the selected in a strictly honourable manner. I have not the slightest knowledge of a single person having the remotest connexion either with the University or its Delegates,—and therefore, in my case, no unfair advantage has been taken of the other competitors. The remainder of the six must, of course, speak for themselves. Then your Correspondent complains that the delegacy did not request Mr. Hardwick to examine the other designs after he had reported as he did upon the six. Now, however desirable it may be as a general rule for committees to have professional judgment to guide their decisions in matters connected with Art, it was not sought by the Delegates in this case,—they reserved for themselves the choice of those designs, the external appearance and internal arrangement of which most agreed with their taste and requirements,—and then, not understanding 'taking out quantities' and 'making estimates,' they called in professional aid for that purpose. That the design chosen should be executed for 30,000*l.*, was only one of the 're-

requirements, and it is absurd to suppose that the Delegates are bound to adjudge the prizes to *any* design, however ugly and inconsistent, just because it possesses the 'money qualification.' The six chosen are nearly all of different architectural character, and, I presume, represent the different tastes of the Delegates; and it is certainly something in favour of their artistic judgment that their selection included those most favourably reviewed in the *Athenæum* and *Builder*—this inference, however, will, no doubt, be objected to by 'A Competitor,' not being

"ONE OF THE SIX."

The first part of a new architectural work by the well-known Dr. Kügel has just been published at Berlin.—Dr. Burgsch announces an important book on Egyptian antiquities, to investigate which he was two years ago sent to the East by the King of Prussia, by the recommendation of Baron Humboldt.

The niches in the double portico of the Palace Uffizi, at Florence, are about to be filled with statues, in accordance with the tardily-executed plan of Cosmo de' Medici's architect, Visari. The best sculptors of Tuscany have been at work on statues of Dante, Petrarch, Machiavelli, &c., forming a petrified gathering of incongruous poets, statesmen, and philosophers,—part of that rich intellectual crop which seems to have entailed barrenness upon the soil of Italy for all future generations.

MUSIC AND THE DRAMA

MUSICAL WINTER EVENINGS.—THURSDAY, March 1.—Ernst, Goffrie, Hill, Piatti, and Pauer, will perform.—Halle, not sufficiently recovered from his late accident at Manchester, will be engaged at a subsequent concert. Subscriptions for the remaining three evenings, One Guinea; single tickets, Half-a-Guinea, at Cramer's, Chappell's, and Oliver's.

J. ELLA, Director.

St. MARTIN'S HALL.—MENDELSSOHN'S 'St. PAUL' will be performed on WEDNESDAY EVENING, February 28, under the direction of Mr. John Hullah. Principal Vocalists:—Mrs. Sims Reeves, Miss Palmer; Mr. Sims Reeves, Mr. Henry Buckland, and Mr. Thomas (his second appearance in London). Tickets, 1s, 2s, 6d, and 5s, may be had at the Music-sellers, and at St. Martin's Hall. Commence at half-past seven o'clock.

Mr. ALFRED MELLON respectfully announces that a series of Grand ORCHESTRAL UNION CONCERTS under his direction, will take place during the season at St. MARTIN'S HALL. The first on Monday evening, April 2, 1855. Subscribers' names received by Messrs. Cramer & Beale, 201, Regent Street.

NEW PUBLICATIONS.

La Nonne Sanglante. Music by Charles Gounod. (Paris, Brandus, Dufour & Co.)—When the first performance of 'La Nonne Sanglante' was noticed in the *Athenæum* [vide No. 1409], the grim and dolorous nature of the story, and the many patching processes which had been applied to the *libretto*, were mentioned as conditions calculated to influence the composer, and to weigh heavily on the success of his second opera. M. Gounod was further unfortunate in producing his work at the *Académie* when only third-rate singers were at his disposal for the female parts, and when his tenor, M. Gueymard, was wanted to hold up the train of that wandering princess, Mdle. Cruvelli. 'La Nonne,' therefore, as might be foreseen, only ran its fifteen or twenty nights. These facts might be forgotten, and the limited life of the opera might be cited as ascribable solely to the composer's fault, were not some of the music published. The perusal of this merely in arrangement has revived every good impression that we derived from the performance of 'La Nonne,' and should satisfy all, save the resolutely perverse, that M. Gounod is the composer of power, knowledge and individuality which we have from the first asserted him to be. Had the music of 'Sapho' been printed, we are satisfied that such impression would have been already more general, since 'Sapho' is still the better opera of the two. Some of the best portions of 'La Nonne' defy all arrangement. The fantastic *intermezzo*, with chorus of wordless voices, No. 10, must be heard with the orchestra, and on the stage, to be properly appreciated; since the excellence of it does not reside in form and construction merely, but in sonority also, and in illustration of the scene. Others of the numbers (to use the publishers' phrase) are unequal. Among the four duets published, Nos. 3, 4, 13, and 15, (what a merciless apportionment of duets to the same tenor singer!) only one closes as well as it commences,—the windings-up of the other three are chargeable with common-place. Yet there is not one of these

four in which the strong hand of a new master is not evident. The manner in which the French love of *couplets* is provided for in the passage, 'Agnes, ma douce idole,' (No. 3),—the legend of 'the Bleeding Nun,' and its reply, (No. 4),—the commencement of the duet betwixt the hero and his page (No. 13),—and the entire scene betwixt himself and his spectral visitant (No. 15),—can hardly be perused without the reader feeling that he has to do with real music, in a real style, exhibiting a real taste for and new treatment of melody. The phrases are charming to sing, and easy to retain; the sentiment is musical, not verbal,—yet dramatic truth is closely attended to. There is force without exaggeration,—a sweetness which does not weary,—a skill which grows upon the reader, since it is within, and not on the surface of, the writer's work. Higher in quality, because in no bar calling for comment and qualification, is No. 1,—the bass air and chorus for *Peter the Hermit*,—the close of which our French friends, in their ignorance of Handel, unanimously dubbed to be Handelian, because it is pompous in phrase and harmonized in the old style. More exquisite still—the most exquisite *scena* for tenor in modern opera with which we are acquainted—is No. 14, 'Un jour plus pur.' This was heard to disadvantage in the theatre:—first, because the voice of its singer had hardly been ever out of our ears from the moment when the curtain rose; and, next, because M. Gueymard, who executed it, is neither *suave* in tone nor graceful in finish;—but even on the stage the air was felt to be enchanting. On examination, it proves as perfect a picture of repose, conveyed in the sweetest of sounds, as exists; and in saying this, we except the works of no composer living or dead. It is constructed, too, in a thoroughly excellent fashion,—being in this superior to similar *cavatinas* of the Italian school. While, however, we call attention to traits, features, and entire passages, such as confirm us in that regard for the genius of M. Gounod, and that expectation from his future career, which we have always expressed, we must mention a point or two which call for guard and revision. He is too fond of one particular rhythm: the triplet plays too large a part in his melodies. He indulges too largely in chromatic modulation,—possibly from that over-anxiety as to *bit-by-bit* truth of expression, which is apt to distinguish composers of the thoughtful school. The really hard thing is to attain general propriety of colour, without tormenting the voice through too many half-tones and new keys:—a good second part to a melody is becoming a rarity in these days. M. Gounod, again, has to study varieties of instrumentation. The *tremolando* is somewhat abused by him; and though he writes for M. Meyerbeer's public, it will not suffice if he only uses M. Meyerbeer's means of seduction. In his instrumentation he has hitherto shown his feeling for sonority as stronger than his invention of figure,—and monotony, in the latter quality, is even more felt in a pianoforte arrangement than where the full orchestra breathes in rich harmony, to soothe, should it fail to surprise, the ear.—All faults deducted for, to the utmost,—and while we repeat that 'Sapho,' as a whole, is a finer opera,—we repeat, also, that this music, extracted from 'La Nonne,' is the most sterling, most promising, and most individual collection that we know from the hand of modern composer; and we recollect no case in which a writer having so little experience as M. Gounod has, at once, so legitimately and decidedly assumed the forms and features of a new master of his art.

St. JAMES'S.—This theatre re-opened on Saturday with two new pieces. The first is entitled 'Clarisse; or, the Foster-Sister.' It is in two acts; and some perplexity is created by the heroine changing names with one *Lisette*, the foster-sister of the title. By this appellation, she introduces herself into the house of her father, the *Marquis de Longueville*—who, in former years, had privately married her mother, and also for a long time had lost all traces of his daughter. Her attention to the Marquis is so marked, that the jealousy of his young wife is excited, and at length compels the discovery of the relationship. A similar series of

scenes occur with the nephew of the Marquis, who attempts a real *liaison* with the real *Lisette* and feigned *Clarisse*,—which, however, ends in an honourable marriage. Whatever merit may pertain to this piece was somewhat marred by incompetent acting.—The next venture was more fortunate. It is an adaptation, by Mr. C. Reade, of a French *vaudeville*, in which already, under the title of 'The Tragedy Queen,' both Mrs. Stirling and Miss Helen Faucit have won considerable laurels. The piece, in its newest shape, is entitled 'Art'; and the heroine, *Mrs. Oldfield*, is personated by Mrs. Seymour. Mr. Reade has somewhat encumbered the dialogue with didactic remarks on the Acting Art; but the action, nevertheless, proceeds with great spirit, and the characteristics of a professional actress are dashed off with much of truth and effect. Mrs. Seymour appears to have taken a liking to this kind of parts; and it must be confessed, supports them with a genial aptitude that goes far to justify their assumption.

MUSICAL AND DRAMATIC GOSSIP.—Mr. Mitchell is about to give a series of four afternoon vocal concerts at the Hanover Square Rooms,—the first on the 6th of March, exclusively devoted to the music of Sir H. R. Bishop:—this will be executed by Masters Cooke and Sullivan, Messrs. Francis, Benson, Bodda, Lawlor and Land.—Such an advertisement, let us again remind our readers, implies performance of some of the best English music in being.

The second concert of the *Amateur Society* was held on Monday evening. Among other items in the programme was the novelty of a pleasing Ballad, composed by H. Leslie and sung by Mrs. Weiss. The voice of this lady, always a *soprano* of superb volume and quality, has been smoothed and mellowed by practice; and seems now more available, as well as more agreeable, than at any former period.

Mr. Alcroft's *Concert*, with its programme, some half-a-hundred ballads strong, was given as usual on the penitential evening of Ash-Wednesday, at the Lyceum Theatre. Among the Lady-singers, Miss Leffler, daughter of the well-known *basso*, was a novelty. Why 'My Pretty Jane' and the 'Carnaval de Venise' should be deemed fit and fair inauguration of the Great Fast, when Prince Prettypet and the Butterfly are perforce driven into retirement on salt-fish for that day, remains a mystery of orthodox censorship, very nearly as inconsistent and barbaric as one of the Mysteries of the old Church-dramas for which Lent's curtain used to be drawn up.

A new organ by Messrs. Gray & Davison, purporting to include the most approved improvements in organ-building, just finished for Magdalen College, Oxford, has during the past week or two been exhibited at their manufactory. Of this, we may possibly speak again on some future day,—remarkable, meanwhile, that whatever may be the admirable intrinsic qualities of an organ, seeing that it is a fixture in the edifice for which it is contrived,—a shrine within a shrine—its special value can never be finally determined till it is heard in the place of its destination. After this, it should be added, that *Gamaliels* more learned in the acoustics, mathematics, and mechanics of organ-building than ourselves speak in terms of high praise of this new Magdalen organ.

The fate of the Reid Legacy at Edinburgh will not encourage many lovers of music to bequeath their substance to any institution or establishment in the hope of benefiting their favourite art. From first to last, it has been till now a history of folly, jobbing, and perverse contravention of the wishes and hopes of the legatee, such as is rare,—even in the history of English charities. Truly, it may be described by the quaint Scottish word used on testamentary occasions as "a mortification." The men of science and learning who care nothing about the fine arts some years since pounced on the fund and its revenues. One incompetent Professor was appointed after another (the history of whose elections alone would be a story of its kind instructive), and the Senatus of the University adjourned the production of any further musical result

"to the coming of King Sebastian," or some future millennial period. The town, however, has for some years shown itself alive to the discredit arising from such malversation of a testator's intent, and thus there has been going on an argument betwixt "town and gown" in the courts, ingeniously diverting a large part of the income from either the coffers of Science or the class-rooms of Art, into the bags of Law. The other day, the *Edinburgh Advertiser* announced something like a possible close to a state of matters so far from creditable. It was announced in that paper, that—

"at the instance of Bailie Morrison, the College Committee of the Town Council was recently directed to meet with a Committee of the Senatus, in order, if possible, to effect an extra-judicial settlement of the differences. The two Committees agreed upon certain terms, and after various unimportant modifications, the Senatus had given its consent to the following arrangement. They have agreed to set apart the under-mentioned sums for the purpose indicated:—1st. To provide a salary for the Professor, 12,000*l.* At 3½ per cent, this will yield 420*l.* per annum; if it produces less, the Senatus are to make up the difference from the Reid Fund, while, if it produces more, the excess is to be repaid to that fund. 2nd. For an organ, 2,000*l.* 3rd. For assistants, apparatus, musical instruments, and wear and tear, 8,500*l.* This will produce 297*l.* 10*s.* per annum, at the rate of 3½ per cent.; and the same arrangement has been adopted as to an excess or diminution as in the case of the Professor's salary. 4th. For a site and building a hall, 10,000*l.* This is for a new class-room, and, if practicable, there is to be combined with it a building for general University purposes. 5th. For the Reid concert, yearly, 300*l.* It has also been arranged that Prof. Donaldson shall consult with the Town Council as to the mode in which the tickets for this concert shall be hereafter distributed. This will leave in the hands of the Senatus about 30,000*l.*; and it seems to be understood that the Council will not look very narrowly into the past application of the fund."

—This seems to us but a lame settlement, supposing, even, that the Senatus respects the line of demarcation which leaves it in undisturbed possession of half the sum bequeathed; but as our times, and colleges, and courts of law go, we suppose it may be considered a boon, and the public of "Auld Reekie" be glad, if they manage to get an organ, a class-room, a concert, and a Professor, out of the bounteous fund intended to promote their enjoyment and cultivation.

Our foreign news of the week is not important. As M. Meyerbeer's new opera is at this moment our musical "question of questions," it may interest some to learn that, on the recent production of 'L'Étoile' at Dresden, the master added to his score a *Polonoise* and a *cavatina* for Herr Tichatschek, the tenor, in order to make the part of *Danilowitz* better worthy acceptance by a *tenore primo*. But such after-thoughts always cause disproportion. The hundredth performance of the opera in Paris took place on the anniversary of its production.—At Florence, 'Le Prophète' has been represented, with Mlle. Parodi for the *Fides*,—and the success which that Lady gained in the part confirms our last year's speculation concerning her, as better qualified to please as a *mezzo-soprano* or *contralto*, than as possessor of the unnatural and uncertain higher voice, by which unhappily she made herself known in England.

From Paris we hear little, save that Madame Lafon, a Lady from Marseilles, has been engaged for the *Grand Opéra*,—that 'Miss Fauvette,' a one-act work by M. Massé, has been produced at the *Opéra Comique*,—and that 'I Puritani' has been revived at the Italian Opera without any result in the matter of theatrical success, except it be loss of credit to Madame Bosio, of whom the Parisians seem beginning to tire; and to Signor Baccardé, whom the Parisians seem beginning to like. As we had occasion to remark, when 'I Puritani' was tried in London by Mlle. Lind and Madame Sontag, Madame Grisi so entirely exhausted the part which she "created" (to adopt the French phrase), as to leave nothing for any successor to do. Neither was there much chance, we submit, of Signor Baccardé, whose voice is already worn for want of cultivation, acceptably replacing Signor Rubini, whose voice, when it was worn, was rendered delicious by the exquisiteness of its cultivation. Madame Viardot was to appear there in 'Il Barbiere,' and as *Azucena* in 'Il Trovatore.' For this part, it may be remembered, our Correspondent declared the Lady in question to be excellently fitted.

The East End theatres are about to renew their periodical system of receiving the stars from the West-End to illustrate the legitimate drama. We hear of Mr. and Miss Vandenhoeff appearing at the City of London. Some reluctance was, we understand, at first shown by those performers; but the proper education of the popular mind in dramatic taste being urged as the object, their acquiescence was at length obtained. Miss Glyn also is engaged to appear on the 3rd of March in *Cleopatra* at the National Standard Theatre; the tragedy being underlined as in preparation on a spectacular scale of expenditure, and to be followed by other Shakspearian dramas revived on the same plan. It is thus that the highest stage-talent, shut out by actor-managements from the fashionable theatres, finds refuge with the people in those humbler play-houses which, in the operative districts, are opened at low prices for the amusement and instruction of the working classes.

Another star at the dramatic horizon of Germany! On the 18th of February a comedy by Herr Emanuel von Geibel (the first, we believe, which that author has produced on the stage) was performed at the Munich "Hoftheater." The name of the renowned poet had brought together a most select audience; the intellectual *crème* of the capital was assembled in the pit; Herr von Geibel himself was to be seen in the *parquet*. The subject of the play, which is entitled 'Meister Andrea,' is taken from the collection of Italian novels, by Herr von Bulow. Maestro Andrea is the same stout jolly sculptor who, by a trick of his friends, is persuaded that he is not himself, but quite a different person,—a hallucination which, of course, cannot but lead to a number of comical conflicts. These conflicts Herr von Geibel is said to have managed in a spirited, though not in an original way:—the great pattern of the comedies of Shakspeare (so at least the journals report) is visible throughout the whole comedy. The diction is praised as chaste and elegant. After the dropping of the curtain, a stormy applause rewarded the poet, yet it was evidently more a *succès d'estime* than anything else, confirming only what we have lately said about the present state of the drama in Germany.

MISCELLANEA

New Zealand.—12, Norland Terrace, Notting Hill.—In your review of Mr. Shortland's 'Traditions and Superstitions of the New Zealanders,' in the *Athenæum* of December 30, you say, "What he (the author) chiefly considers it important to lay down is, that New Zealand was peopled about 500 years ago," &c. This position, unsupported by native tradition, must be considered untenable on every ground of probability. A country so recently peopled, and from such small beginnings, could hardly have exhibited to its first European visitors the spectacle of a tolerably dense and settled population, a mere remnant, nevertheless, as we are expressly told by every writer on New Zealand, saved from a continuous succession of wars and massacres. The traveller would be perplexed indeed to remember the names of a tithe of the ruined and abandoned hill fortifications, or *pahi*, which met his view in any one district of the Northern Island. I myself saw a large *pahi* at the back of the town of New Plymouth, which I was assured had not been tenanted for 100 years. Moreover, supposing Mr. Shortland's hypothesis to be correct, what time are we to allow for the gradual fusion of races, of which we have such unmistakable evidence before us at the present day? How shall we explain the fact of no native of the thick-lipped and woolly-haired race being found holding the hereditary rank of *rangitira* or chief, or indeed any situation of importance in a tribe? This social inferiority of perhaps the greater half of the native population the Maories themselves are quite unable to throw any light upon. So remarkable a fact, coupled with a total absence of any trace of a distinction of languages, has led M. Dieffenbach to assign the amalgamation of races, whether the result of conquest or otherwise, to a very remote period indeed. This latter gentleman, the first writer who brought a truly philosophical mind to the investigation of this important subject, seems rather to throw discredit on the notion of New Zealand being reached by savage voyagers in frail canoes, after an ocean navigation to which their descendants are perfectly unequal. He considers it less repugnant to probability to make them arrive by the safer as well as easier route of a chain of detached fragments of the vast antipodean continent which, in the shape of islands, must have existed for many ages, and of which, indeed, most unequivocal traces remain to this day in soundings for a considerable distance from the shores of New Zealand. I am, &c., H. SCOTLAND.

TO CORRESPONDENTS.—M.—J. H.—G. II. I.—J. B.—received.

Now ready, an Edition of

TULLEARD'S SCHOOL MUSIC, for Superior Schools and for Private Families.
The two Collections of Sacred and Secular Music may now be had bound together in one handsome volume, with Music Antiquary Cloth Covers and Gilt Title. Price 5*s.*
London: J. Alfred Novello; Longman & Co.; National Society; Home and Colonial School Society; and Congregational Board of Education.

MR. NEATE begs to announce that he intends, in the course of next month, to publish an *ESSAY on PIANO-FORTE FINGERING*, chiefly as connected with Execution. Price 10*s.* to Subscribers (whose names must be addressed to the Author, No. 2, Chapel-street, Portland-place), and 15*s.* to Non-subscribers.

Just published, a New Edition, with German and English Words,
SONGS for the SEASONS, on MELODIES of BEETHOVEN. By JOSIAH PITTMAN, Organist to the Hon. Sec. of Lincoln's Inn.
Leipzig: F. Hofmeister. London: G. Scheurmann, 86, Newgate-street.

On the 28th inst. will be published, price One Shilling, Part 18 of
"THE NEWCOMES." By W. M. THACKERAY.
WITH ILLUSTRATIONS by RICHARD DOYLE.

The First Volume is completed, and may be had, bound in cloth, price 1*s.*
Bradbury & Evans, 11, Bouverie-street.

Just published, in a handsome folio volume, price 12*s.*, containing upwards of Six Hundred Wood Engravings.
PICTURES of LIFE and CHARACTER.

Bradbury & Evans, 11, Bouverie-street.

18th Edition, just out,
A SHILLING'S-WORTH of MAGIC. By Professor ANDERSON, Great Wizard of the North. Explaining the Mechanism of 100 Tricks, and teaching how to be a Conjuror. With Exposures of Spirit-Lapping, and of the Various Practices of Gamblers. Profusely Illustrated. Portrait of Author, &c.—To be had everywhere; at the Railway Book-stalls; of W. H. Smith & Son; and wholesale of R. S. Francis, 3, Catherine-street, Strand, London.

Now ready at the Libraries, price 10*s.* 6*d.*

DEDICATED BY SPECIAL PERMISSION TO THE QUEEN.

ANNE, OF BRITTANY,
TWICE QUEEN OF FRANCE.

By MISS LOUISA STUART COSTELLO.

OPINIONS OF THE PRESS.

Morning Post.

"Miss Costello's heroine will win general sympathy and admiration. The dual crown of Brittany graced her youthful brows at a very early age; and she was only fourteen when, at the head of her troops, she bravely approached the walls of a rebellious town.... Miss Costello has done justice to her character."

Morning Chronicle.

"Few stories possess more interest than does that of the last Duchess of Brittany.... The circumstances attending the difficulties which surrounded Anne in her early life, and those of her subsequent prosperous and happy career, are related in a graphic and pleasing manner."

Morning Herald.

"We know of no character during the chivalrous and eventful times in which she lived so eminently entitled to our sympathy and admiration as that of the youthful daughter of Francis, last Duke of Brittany. In Miss Costello's interesting narrative, the fortunes of Anne will be followed with eagerness and sympathy by the reader. Her character is described with consummate skill and judgment."

Athenæum.

"Miss Costello has been lucky in her selection of a heroine, and she has told her story briefly, rapidly and gracefully.... For the record of the times and of their moving accidents, we refer our readers to the most accurate volume for which we are indebted to the pen of Miss Costello."

London: W. & F. G. Cash, 5, Bishopsgate-street Without.

This day is published, in 2 vols. 8vo. cloth boards, price 15*s.* unit formly printed with the Clarendon-Press Editions of the Author's other Biographical Works, *Strype's Lives*, &c.

THE LIFE of DR. JOHN FISHER (1458—1535), BISHOP of ROCHESTER in the Reign of Henry VIII.—with an Appendix of Illustrative Documents and Papers. By the Rev. JOHN LEWIS, M.A. Author of 'The Life of Dr. John Wickliffe.' Boston: Peckham & Co.
Now first printed from the Original Manuscript, prepared by the Author for the Press, with an Introduction by T. H. DODSON TURNER, Esq.

The Life of Bishop Fisher, now presented to the public, supplies an important deficiency in English biography, for with the single exception of the short and partial memoir published by Dr. Bailey in 1655, the career of this prelate, who occupies so prominent a place in a remarkable era of English history, has received but little attention from the successive writers who, with very different aims, have treated of the stormy times in which he flourished.

The progressive steps in the fall of Bishop Fisher, who, strictly speaking, suffered for denying the king's supremacy, have been either confused or overlooked by the generality of historical writers, and the merit of being the first to investigate them belongs to the author of this work.

A limited number of this valuable and important biographical work, consisting of above 800 closely-printed pages, were struck off, including 25 copies upon Large Paper, forming two very handsome volumes, price 3*l.* 3*s.*, for which early application is necessary.
London: Joseph Lilly, 19, King-street, Covent-garden.

CORREGGIO: A TRAGEDY. By ADAM OEHLER-SCHLAGER.
Translated, with Notes, by THEODORE MARTIN.

RURAL CHEMISTRY:

AN ELEMENTARY INTRODUCTION TO THE STUDY OF THE SCIENCE IN ITS RELATION TO AGRICULTURE.

BY EDWARD SOLLY, F.R.S. F.L.S. F.G.S.

Honorary Member of the Royal Agricultural Society of England, Professor of Chemistry to the Horticultural Society of London, Lecturer on Chemistry in the Honourable East India Company's Military Seminary at Addiscombe, &c. &c.

PREFACE TO THE THIRD EDITION.—In accordance with numerous suggestions, very considerable additions have been made to this little book in preparing it for a new edition; several important practical matters, not treated in any former editions, having been introduced. Brief descriptions of the more important of the domestic arts, such as Wine and Vinegar Making, Brewing, the Manufacture of Spirits, Baking, Cheese-making, Cookery, &c., have been added, together with some account of the Scientific Principles involved in those arts. Numerous recent analyses of agricultural crops have likewise been given, and the whole has been carefully revised and corrected.

CONTENTS OF THE VOLUME.

Absorption of manure	Blubber	Combustion	Flint	Kidneys	Musk	Poppy seed	Silica in plants	Tabasheer
Acetates	Bones	Combustion, results of	Flouring malt	Kiln-drying	Must	Porter	Silica in soil, use of	Tannin
Acetic Acid	Brandy	Composition of animal matter	Flour, damaged	Kirschwasser	Mustard	Potash	Silicate of alumina	Tanning
Acetic fermentation	Brass	Composition of organic matter	Flowers	Lactic acid	Naphtha	Potash, binxalate of	Silicate of lime	Tapioca
Acids	Brick	Composition of plants	Flowers, their effect on the air	Latent heat	Nascent state	Potash, bitartrate of	Silicate of magnesia	Tar
Acids, organic	Brimstone	Composition of soils	Fluorides	Lead	Natural vegetation	Potash, carbonate of	Silicate of potash	Tarnish on silver
Acids, test for	British gum	Composition of stones	Fluorine	Leaven	Night soil	Potash, caustic	Silicate of soda	Tartar
Action of plants on the air	Brown stout	Compounds	Food of animals	Leaves	Nightsoil, disinfected	Potash in plants	Silicates	Tartrates
Active principles	Buckwheat	Contagious matter	Food, chemical use of	Leaves, fall of the	Nitrate of lime	Potash in the soil	Silicic acid	Teeth
Adulterated manure	Buds	Cookery	Formation of seed	Leaves, office of	Nitrate of potash	Potash, muriate of	Silicon	Ternary compounds
Affinity, chemical	Butter	Copper	Formation of soils	Letting	Nitrate of soda	Potash, nitrate of	Silk dyeing	Tests, vegetable
After-damp in mines	Butter, clarified	Copper, oxide	Foul smells	Light, effects of	Nitrate of silver	Potash, silicate of	Silver	Thermometer
Air	Butter, how co-soured	Copper, pyrites	Freezing, effects of	Light, influence on plants	Nitrates in plants	Potash, sulphate of	Silver, chloride of	Thunderbolt
Air contains ammonia	Butter, salt	Copper, salts of	Freezing of water	Lighting a fire	Nitre	Potashess	Silver, nitrate of	Tiles
Air contains carbonic acid	Butter, soured	Copper, sulphate of	Fruit, ripening of	Lighting a fire	Nitre beds	Potassium	Silver, oxide of	Tin
Air, inflammable	Butter, soured	Copper, sulphate of	Fuel	Lighting a fire	Nitric acid	Potassium, chloride of	Silver, salts of	Tin, oxide of
Air necessary to life	Butter, soured	Copper, sulphate of	Fumigating by chlorine	Lighting a fire	Nitric acid in manure	Potato	Silver, sulphate of	Tin, sulphuretted
Air, composition of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Potato haulm	Size, resin	Toast
Air resists compression	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Potato spirit	Skimmed milk	Toasted cheese
Air, weight of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Potato starch	Skin	Tobacco
Alabaster	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Potato, sweet	Slag	Toddy
Albumen	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Pottery	Smells, foul	Treacle
Albumen, vegetable	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Principles, active	Smelling	Tropical countries
Alcohol	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Proportions	Smoke	Tubers
Alkalis, test for	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Proteins of plants	Soap-boiling	Turnip
Alkali, volatile	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Proto-salts	Soap, decomposition of	Turnip
Alkalies	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Proximate animal principles	Soap, soft	Turnip
Alkalies—vegetable	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction	Soap, transparent	Turnip
Alloys	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soap, yellow	Turnip
Almonds	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soapmakers' ash	Turnip
Alum	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda	Turnip
Alumina	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda, carbonate of	Turnip
Alumina absorbs ammonia	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda in rocks	Turnip
Alumina in soil, use of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda in plants	Turnip
Alumina, phosphate	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda in soils	Turnip
Alumina, silicate of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda, muriate of	Turnip
Alumina, sulphate of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda, nitrate of	Turnip
Aluminium	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda, silicate of	Turnip
Aluminium, oxide of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soda, sulphate of	Turnip
Ammonia	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Sodium	Turnip
Ammonia absorbed by alumina	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Sodium, chloride of	Turnip
Ammonia absorbed by charcoal, &c.	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soft water	Turnip
Ammonia, carbonate	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soil	Turnip
Ammonia, fixing of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, analysis of	Turnip
Ammonia in air	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, colour of	Turnip
Ammonia in rain-water	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, composition of	Turnip
Ammonia, loss of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, exhaustion of	Turnip
Ammonia, muriate	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, formation of	Turnip
Ammonia, phosphate	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, mixture of	Turnip
Ammonia, salts of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soils, nature of	Turnip
Ammonia, sulphate	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Solder	Turnip
Ammonia, urate of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Soot	Turnip
Analysis	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Spruce	Turnip
Animal heat	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Springs	Turnip
Animal manures	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stall feeding	Turnip
Animal principles, proximate	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Starch	Turnip
Animal substances	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearic acid	Turnip
Animals, breathing of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Animals, fattening of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Animals, treatment of	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Ammonia	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Apple jelly	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Aquafortis	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Argol	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Arrack	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Arrow-root	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip
Arteries	Butter, soured	Copper, sulphate of	Fumigation by sulphur	Lighting a fire	Nitric acid in manure	Putrefaction, influence of lime in	Stearine	Turnip

ROSS'S PHOTOGRAPHIC PORTRAIT and
LANDSCAPE LENSES.—These Lenses give correct deli-
 nation at the centre and margin of the picture, and have their
 visual and chemical acting foci coincident.

Great Exhibition Jurors' Report, p. 274.
 "Mr. Ross prepares lenses for Portraiture having the greatest
 intensity yet produced, by procuring the coincidence of the chemi-
 cal, actinic and visual rays. The spherical aberration is also very
 carefully corrected, both in the central and oblique pencils."
 "Mr. Ross has exhibited the best Camera in the Exhibition. It
 is furnished with a double achromatic object-lens, about 3 inches
 in aperture. There is no stop, the field is flat, and the image very
 perfect up to the edge."

Catalogues sent upon application.
 A. Ross, 2, Featherstone-buildings, High Holborn.

THE IODIZED COLLODION, manufactured
 by J. B. HUCKIN & CO. 289, STRAND, LONDON, still
 remains unrivalled for *tenderness and density of Negative—It*
exceeds all others in its keeping qualities and uniformity of constitu-
tion.—Albumenized Paper, 17s. by 11, 5s. per quire; Waxed ditto,
 7s. of very superior quality.—Double Achromatic Lenses, *equal in*
optical points to those of any other manufacturer: Quarter Plate,
 £1. 2s.; Half Plate, £1. 10s.; Whole, 10s.—Apparatus and pure Chemi-
 cals of all descriptions.

 Glacial Acetic Acid, 6d. per oz.; Hyposulphite of Soda, 1s. per lb.
 CAMERANS, LENSES, and every description of Apparatus, of
 first-class workmanship.

Chemicals of ABSOLUTE PURITY, and every material re-
 quired in the Photographic Art, of the finest quality.
 Instruction in all the processes.

Catalogues sent upon application.
 BLAND & LONG, Opticians, Photographical Instrument Makers
 and Operative Chemists, 153, Fleet-street, London.

XYLO-IODIDE of SILVER, exclusively used
 at all the Photographic Establishments.—The superiority
 of this preparation is now universally acknowledged. Testimo-
 nials from the best Photographers and the highest scientific men of
 the day, warrant the assertion, that hitherto no preparation has
 been discovered which produces uniformly such perfect pictures,
 combined with the greatest rapidity of action. In all cases where
 a quantity is required, the two solutions may be had at Wholesale
 price in separate Bottles, in which state it may be kept for years,
 and exported to any climate. Full instructions for use.

CAUTION.—Each Bottle is stamped with a Red Label bearing my
 name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to
 counterfeit which is felony.

CYANOGEN SOAP, for REMOVING all kinds
 of PHOTOGRAPHIC STAINS. The genuine is made only by the
 inventor, and is secured with a red ink bearing this signature
 and address, RICHARD W. THOMAS, CHEMIST, 10, PALL
 MALL, Manufacturer of pure Photographic Chemicals; and may
 be procured of all respectable Chemists, in Pots, at 1s., 2s., and
 3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Church-
 yard, and Messrs. Barclay & Co. 95, Farringdon-street, Wholesale
 Agents.

WHOLESALE PHOTOGRAPHIC DEPOT.
 —DANIEL MUMILLAN, 132, Fleet-street—where every
 article used in Photography may be had of the best quality, and
 at prices worthy the attention of the trade.—Price List sent free
 upon application.

PHOTOGRAPHIC CAMERAS of EVERY
DESCRIPTION CAN BE HAD AT

OTTEWILL & MORGAN'S MANU-
FACTORY, 24 and 25, Charlotte-terrace, Caledonian-road,
 Islington. OTTEWILL'S REGISTERED DOUBLE-BODY
 FOLDING CAMERA, adapted for Landscapes or Portraits, may be
 had of A. Ross, Featherstone-buildings, Holborn, Photographic
 Institution, Bond-street, and at the Manufactory as above; where
 every description of Cameras, Slides, and Tripods may be had.—

SPECIAL NOTICE.

TO SECURE THE ADVANTAGE OF THIS YEAR'S
ENTRY, PROPOSALS MUST BE LODGED AT THE
HEAD-OFFICE, OR AT ANY OF THE SOCIETY'S
AGENCIES, ON OR BEFORE 1ST MARCH.

MUTUAL LIFE ASSURANCE.
SCOTTISH EQUITABLE LIFE
ASSURANCE SOCIETY.

Head Office—26, ST. ANDREW-SQUARE, Edinburgh.
London—126, BISHOPSGATE-STREET.

Instituted 1831.

Incorporated by Special Act of Parliament.

The Profits are divided every Three Years, and wholly belong
to the Members of the Society. The next division takes place at
1st March, 1856.

EXAMPLE OF ADDITIONS

On a Policy for £1000, dated 1st March, 1832.
152d. ss. will be payable if it become a claim during the current
year, after payment of this year's Premium. This is an addition of
more than Fifty per cent. on the Sum Assured, and averages
22.36 7d. per cent. per annum.

Supposing such a Policy to have been effected at the age of
Thirty, the additions might now be surrendered for a present
payment of 221l. 7s. 10d., or if applied in reduction of the future
Premium, would reduce the Premium from 25l. 10s. 10d. to 6l. 3s.;
and even this small payment must be reduced every Three Years
during the subsistence of the Policy.

AMOUNT OF EXISTING ASSURANCES. £424,593
ANNUAL REVENUE. 132,615
AMOUNT OF ACCUMULATED FUND. 839,354

Copies of the Annual Report, Forms of Proposals, and all in-
formation may be had on application at any of the Society's
Offices in Town or Country. W. COOK, Agent.
126, Bishopsgate-street, London.

GREAT WESTERN RAILWAY.—COALS.

—Orders for the best RUABON HOUSE COALS, equal to
the finest Durham, may be executed at 8s. 6d. per Ton (cash
price), delivered within 4 miles of the Paddington Station.
These Coals are bright and durable in burning, and contain only
one-half per cent. of dust.

They are now for the first time introduced into the London Mar-
ket by the recent opening of the Great Western Railway into
North Wales.

Address the Superintendent of the Company, Paddington
Station.

BOOKBINDING.—W. HOLMES, Practical

Bookbinder, 195, Oxford-street, London. Books bound in
Morocco, Russia, or Cal, be plain and elegant, on the lowest
terms. Gentlemen waited upon with patterns. Estimates given
for large or small Libraries.—Address, 195, Oxford-street.

Maker, by appointment to the Queen and Prince Albert, sole
Successor to the late E. J. Dent in all his patent rights and busi-
ness at the above Shops, and at the Clock and Compass Factory,
at Somerset Wharf, Maker of Chronometers, Watches, Astrono-
mical, Turret, and other Clocks, Diploidescopes, and Patent Ships'
Compasses, used on board Her Majesty's Yacht. Ladies' Gold
Watches, 8 guineas; Gentlemen's, 10 guineas. Strong Silver Lever
Watches, 6l. 6s.

WATHERSTON & BROGDEN caution the

Public to have the carat gold stated on the invoice, and
redress is obtainable in a County Court. Watherston & Brogdens's
Gold Chains are sold on this principle only, at manufacturers's
prices.—Crystal Palace, Central Transept Gallery, and Manufac-
tory, 16, Henrietta-street, Covent-garden. Assays made of chains
and jewellery for 1s. each.

ELKINGTON and CO.,

PATENTEES OF THE ELECTRO PLATE.
MANUFACTURING SILVERSMITHS, BRONZISTS, &c.
Respectfully urge upon Purchasers to observe that each article
bears their Patent Mark, "E. & Co. under a crown," as no others
are warranted by them.

The fact frequently set forth of articles being plated by "Elking-
ton's process," affords no guarantee of the quality. These pro-
ductions were honoured at the late Great Exhibition by an award
of the "Council Medal," and may be obtained at either Establish-
ment.

22, MOORGATE-STREET, LONDON;
NEW ALLEY-STREET, BIRMINGHAM.
Estimates, Drawings, and Prices sent free by post.

TEED.—Ladies or Gentlemen are instructed in the New,
Elegant, Ornamental Arts of WHITE, GOLD, or OAK DECORA-
TION, for articles of general use. "THE ARTS TAUGHT" for
One Guinea each, and constant employment "GUARANTEED,"
by which from 2l. to 3l. may be realized weekly. Ladies wishing to
increase their incomes cannot pursue a more elegant, artistic, or
pleasurable occupation. Private Lessons given at Ladies' own re-
sidences. Mr. LAWRENCE, who is an exhibitor at the Stationery
Court, Crystal Palace, Royal Polytechnic, and Panopticon, invites
Ladies to see his unique specimens at the above public buildings,
or at Mr. L.'s Show Rooms, daily, from Ten till Five, 15, Percy-
street, Bedford-square, near Rathbone-place. The Arts taught by
correspondence.

TO THE CLERGY, ARCHITECTS, AND

CHURCHWARDENS.
GILBERT J. FRENCH, BOLTON, Lancashire, having de-
clined appointing Agents for the sale of his Manufactures of
Church Furniture, ROBES, &c., replies immediately to all
inquiries addressed to him at Bolton, from which place only
orders are executed. He respectfully invites direct communi-
cations, as far as the most economical and satisfactory arrangement.
Parcels free at the principal Railway Stations.

2s. each, or 10s. per dozen (hamper included), sent to any
address in town or country. Wedding breakfasts, Balls, &c.,
Dinner attended. Men Cooks of first-rate ability, can be hired for
jobs, or constant places.—J. CATT, Ship Tavern, Eastcheap, City.

HARVEY'S SAUCE.—The admirers of this

celebrated Fish-Sauce are particularly requested to observe,
that none is genuine but that which bears the name of WILLIAM
LAZENBY on the back of each bottle, in addition to the front
label used so many years, and signed ELIZABETH LAZENBY,
6, Edwards-street, Portman-square, London.

BERMUDA ARROWROOT, unremoved from

the tin cases in which it is shipped, weight, case exclusive,
24lb. lb., price 5s. Small quantities can be had at 2s. 6d. per lb.
JAMES EPPS, Homoeopathic Chemist,
Egyptian Hall, Piccadilly;
112, Great Russell-street, Bloomsbury; and
83, Old Broad-street, City.

ROYAL BANK BUILDINGS,

LIVERPOOL, FEBRUARY 14, 1855.

(CIRCULAR).

The great fluctuations in the price of Tea during the last
two years have caused much confusion among Retail
Dealers,—whilst there have been loud complaints by Families
of the inferiority of the quality. These complaints too
frequently have their origin in the indifference displayed in
the Selection.—A STRIKING TESTIMONY to the contrary
may be witnessed in our business,—which exhibits a large
increase in the number of Families supplied—as well as in
the quantity disposed of,—being greatly in excess of any
similar period during the last fifteen years.

The support which has been so liberally accorded to us
affords the most conclusive proof of the importance and
value of constancy—in the selection of suitable qualities—
with an especial view to the satisfaction of Consumers.

Our inflexible regard to QUALITY has been the gradual
means of opening to us a new feature of Trade—Foreign
orders—from English Families residing abroad. Shippers
of fine Teas will find our Stock to consist of suitable Pack-
ages (in bond) for Export—and the PRICES fixed upon a
principle calculated to give continued satisfaction, and with
every possible security—as to the QUALITY.

Notwithstanding the continuance of the Rebellion in
some districts of the Chinese Empire, there is no sound
apprehension of a short supply of Tea. The Imports this
year will prove at least equal to those of the last year—the
present estimate being upwards of 80,000,000 lb.—a toler-
able scope will therefore be afforded for a constant and per-
sonal attention in the selection of proper qualities.

Having already obtained—by many years' experience—a
large amount of distinguished patronage—Families may
rest assured—of our continued candour in recommending
only such descriptions as will please.

Your obliged and faithful Servants,

ROBT. ROBERTS & COMPY.

Tea and Coffee Salesmen,

LIVERPOOL.

N.B.—Other remarks and the present

List of Prices may be had on application.

MORGAN'S PURE LLANGOLLEN ALE.

—This nutritious beverage, recommended for invalids by
the highest medical authorities of England and Scotland, brewed
from the choicest malted barley and the mountain streams, in 18-
gallon casks, quarts and pint bottles—Sole consignee, SAMUEL
MORGAN, 16, Old Change, City, London.

PRIZE MEDAL TO CAISTOR'S SADDLES

(MILITARY AND PARK) AND HARNESS.

SADDLERY, Harness, Horse Clothing, Blankets, Brushes,
Sponges, and every other Stable Requisite, Outfits for India.
Prices cash, from 2s. to 30s. per cent. below those usually charged
for credit. Materials, Workmanship, and Style not to be surpassed.

cation at CAISTOR'S, 7, Baker-street, Portman-square, where the
Great Exhibition Saddles and Harness may be seen.

CAMP LANTERNS for the CRIMEA, com-
bining every recent improvement, adapted for burning the

Patent Fusee Candles, which can be instantly ignited as a lucifer.
These Lanterns are equally suitable for workhouses and others.
Price 9s. each; Fusee Camp Candles, 3d. per box. Sold by all
Lamp Dealers; by S. CLARKE, 55, Albany-street, Regent's Park;
and wholesale by PALMER & Co. Sutton-street, Clerkenwell.

PATENT FUSEE CARRIAGE CANDLES,

can be instantly ignited as a lucifer, are of different lengths,
adapted for journeys of two, three, or four hours, and of two
thicknesses to fit all lamps.—Sold in Boxes, at 18. 3d. per box, by
all Grocers, Candle-Dealers, and Chemists; and wholesale by
PALMER & Co. Sutton-street, Clerkenwell, London.

IMPROVED DASHBOARD LAMPS, made

so that they can be instantly affixed to the Dashboard of any
Gig, Drag, or other description of Vehicle, and can be as quickly
removed and used for a Hand-Lantern in the stable. They are
adapted for burning the new Patent Fusee Carriage Candle. The
appearance and effect are equal to that of a carriage lamp of supe-
rior finish, but the price being less than half, these lamps are
placed within the reach of every person requiring a light when
driving.—Price 12s. 6d. each, at any of the Lamp-Dealers; and
wholesale by PALMER & Co. Sutton-street, Clerkenwell; and by
the Patentee, S. CLARKE, 55, Albany-street, Regent's Park,
London.

DR. ARNOTT'S SMOKE-CONSUMING

FIRE-GRATE is manufactured by F. EDWARDS, SON &
Co., 43, Poland-street, Oxford-street; where one may be seen in
daily use. The advantages of this Grate consist in the smoke
being perfectly consumed, no chimney sweeping being required,
and a saving of from 40 to 50 per cent. being effected in the cost of
fuel. Prospects, with Testimonials, sent on application.

street, Liverpool; 16, Market-street, Manchester; and Horsley
Fields, Warrington.

GASLIGHT AND FROST.

THOMAS GLOVER, GAS METER MANU-

FACTURER, SUFFOLK-STREET, Clerkenwell-green,
London.—The present very severe frost suggests to him the pro-
prietor of reminding Gas Companies and Gas Consumers of the
Advantages of his Patent Dry Gas Meter, and the Disadvantages
of Wet Gas Meters, as stated below:—

Advantages of his Patent Dry Gas Meter. **The Disadvantages of the Wet or Water Meter.**

1. Cannot become fixed by frost, however severe; thus saving Gas Companies and Gas Consumers much trouble, expense, and annoyance in business.
2. Steady lights are secured, there being no evaporation from the meter, and consequently no condensation in the fittings, all expense of the Inspector's attend-
ance and gasfitter's charges are saved, which is a matter worthy of consideration.

3. The Advertiser's Patent Dry Gas Meter is not increased in price, and cannot be tampered with, which is a great security to Gas Companies and Gas Consumers.

1. Does become fixed by frost; and thus the lights are extin-
guished, causing great trouble and expense both to Gas Com-
panies and Consumers, fre-
quently rendering the meter useless.
2. Unsteady lights are caused when there is too much or too little water in the meter. In the first case, the consumer is paying too much; and in the next case, the Gas Company is losing.

The Wet or Water Gas Meter is like a measure with a shifting bottom: the quantity of water put into it may measure too much or too little against or for the Gas Company.

THOMAS GLOVER'S PATENT DRY GAS METERS are as cheap as any Wet Gas Meter manufactured, and cheaper than any other. And they are the only Gas Meters that do not vary in measurement.—Thomas Glover has manufactured upwards of 7,000 of these Patent Dry Gas Meters, and would have great pleasure in exhibiting to any one the numerous testimonials he has received in his favour—too numerous for advertisement, and there-
fore will content himself by giving an extract from a letter he received last mail:—

(Dated) "Charlottetown, 19th Jan. 1855.

"I have had great pleasure with your wet meters, so much so that
I have had to put up with them, and I have had no trouble with them
whatsoever; not so with the few Wet Meters, all of which I have had to re-
place with your Patent Dry Meters; and although your Dry Gas
Meters are placed in exposed stores and shops, not one has got out
of order, notwithstanding the rigour of our climate."
(Signed) "ALEX. MAUSLAND, Manager."

AT MR. MECCHI'S ESTABLISHMENT, 4, LABENHALL-STREET, London, are exhibited the finest specimens of British manufactures, in DRESSING CASES, Work Boxes, Writing Cases, Dressing Bags, and other articles of utility or luxury, suitable for presentation. A separate department for Paper Maché Manufactures and Bagatelle Tables, Table Cutlery, Razors, Scissors, Penknives, Straps, Paste, &c., as usual. Shipping Orders executed for Merchants and Captains. An extensive assortment of superior Hair and other Brushes for the Toilet.

ONE THOUSAND BEDSTEADS TO CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron, with China and Danish Patterns complete. Their new Ware-rooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanese Deal for Servants' Rooms, to the newest and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture—HEAL & SON'S LIST OF BEDDING, sent free by post.—HEAL & SON, 192, Tottenham Court-road.

DURABILITY OF GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND J. KIRBY, Bart., VENTNOR, ISLE OF WIGHT. "I received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be adopted generally in the houses that are being erected here." N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE OF WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-Road, LONDON.

HOT AIR, Gas, Vesta, Joyce's STOVES.—STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of Register and other Stoves, Fenders and Kitchen Ranges, is the largest in existence.

THE PERFECT SUBSTITUTE FOR SILVER.—The REAL NICKEL SILVER, introduced 20 years ago by WILLIAM S. BURTON, when PLATED by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible means it is distinguishable from real silver.

	Fiddle.	Thread.	King's.

See the *Times*, February 19th.

RUPTURES.—BY ROYAL LETTERS PATENT. WHITE'S MOC-MAIN LEVER TRUSS is allowed by upwards of 2000 Medical Gentlemen to be the most effective invention in the curative treatment of RUPTURE. The use of a steel spring, so often hurtful in its effects, is here avoided; a soft bandage being worn round the body, while the requisite resisting power is supplied by the MOC-MAIN PAD and PATENT LEVER. Fitting with so much ease and closeness that it cannot be detected, and may be worn during the most descriptive climate may be had, and the Truss (which cannot fail to fit) forwarded by post on the circumference of the body, two inches below the hips, being sent to the Manufacturer, Mr. WHITE, 228, Piccadilly, London.

ELASTIC STOCKINGS, KNEE CAPS, &c. For VARICOSE VEINS, and all cases of WEAKNESS and SWELLING of the LEGS, SPRAINS, &c. Elastic, strong, light in texture, and inexpensive, and are drawn on like an ordinary stocking. Price, from 7s. 6d. to 10s. each; postage 6d. MANUFACTORY, 228, PICCADILLY, LONDON.

GLENNY'S WINTER HOSIERY, Soft, Warm, and Elastic.
Glenny's Irish Hand-knit Wool Hose and Half Hose.
Glenny's Cashmere Wool Waistcoats.
Glenny's Cashmere Wool Drawers.
Glenny's Fur Coats, Rugs, Capes, and Gloves.
Ballbriggan House, 23, Lombard-street.

VIOLETS.
H. BREIDENBACH, Distiller of Flowers H. and Pau de Cologne to the Queen, has now in great perfection several EXTRACTS of that favourite flower the WOOD VIOLET. It has a lasting odour, and will not stain the handkerchief. Violet Pomade, Cold Cream of Violets, Violet Sachet Powder, and several toilet preparations of the same flower equally fragrant.
157 B, New Bond-street, facing Redmayne's.

USE BARKER'S RAZOR PAPER for Wiping the Lather from the Razor while Shaving; by which simple process alone—giving not the least trouble—Razors, once properly set, instead of getting dull by use, improve in keenness and evenness, and are constantly preserved in perfect shaving order.
It is an invention that should be patronized on every gentleman's dressing-table; and in saying thus much we speak from long and comfortable experience. *Morning Advertiser*.
Sold in Packets of 12, 24, and 48, and Boxes at 3s. and 6s. by all Perfumers, Stationers, Chemists, &c.; and by the Inventor and Sole Manufacturers, F. BARKER & SON, Stationers, Hammer-smith; who will, on receipt of sixteen postage stamps, return a Shilling Packet for trial, post free.

METCALFE & CO.'S NEW PATTERN TOOTH BRUSH & PENETRATING HAIR BRUSHES.—The Tooth Brush has the important advantage of searching thoroughly into the divisions of the Teeth, and is famous for the hairs not coming loose. An improved Clothes Brush, incapable of injuring the finest nap. Penetrating Hair Brushes, with the durable unbleached Russian bristles. Flesh Brushes of improved graduated and powerful friction. Velvet Brushes, which act in the most successful manner. Smyrna Sponges.—By means of direct importation, Metcalfe & Co. are enabled to secure to their customers the luxury of a Genuine Smyrna Sponge. Only at METCALFE, BINGLEY & CO'S Sole Establishment, 1208, Oxford-street, one door from Holles-street.
Caution.—Beware of the words "From Metcalfe's," adopted by some houses.
METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

YOURSELF! WHAT YOU ARE! AND WHAT IT FOR!—The secret ART OF DISCOVERING the CHARACTER OF INDIVIDUALS from the peculiarities of their HANDWRITING, has long been practiced by Miss Graham, with astonishing success. Her startling delineations are full and detailed, differing from anything hitherto attempted. All persons wishing to "know themselves," or any friend in whom they are interested, must send a specimen of their writing, stating sex and age, including 13 penny post stamps to Miss Graham, 10, CHICHESTER-PLACE, KINGS-CROSS, LONDON, and they will receive a minute detail of the mental and moral qualities, talents, tastes, affections, virtues, failings, &c. of the writer, with many other things hitherto unsuspected. "Miss Graham is a most successful graphologist."—*Family Herald*.

INFANTS' NEW FEEDING BOTTLES.—From the *Lancet*:—"We have seldom seen anything so beautiful as the nursing bottles introduced by Mr. E. B. of Oxford-street. They are adapted for milk, biscuits, and all kinds of food; and, whether for weaning, rearing by hand, or occasional feeding, are quite unrivalled."—BENJAMIN ELAM, 106, Oxford-street. 7s. 6d. The bottle and mouthpiece are stamped with my name and address.

DINNEFORD'S PURE FLUID MAGNESIA has been for many years sanctioned by the most eminent of the Medical Profession as an excellent remedy for Acidities, Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient it is admirably adapted for delicate Females, particularly during Pregnancy; and it prevents the Food of Infants from turning sour during digestion. Combined with the ACIDULATED LEMON SYRUP, it forms an Effervescent Aperient Draught, which is highly agreeable and efficacious. Prepared by DINNEFORD & CO., Dispensing Chemists, at 172, New Bond-street, London, and sold by all respectable Chemists throughout the Empire.

EFFICACIOUS HOUSEHOLD MEDICINE.—KAYE'S WORSDELL'S PILLS may be taken by the most delicate with perfect safety. They are adapted for all ages and constitutions.—Sold everywhere at 1s. 1d., 2s. 9d., and 4s. 6d. Wholesale Depot, 22, BREAD-STREET, London.

DR. DE JONGH'S LIGHT BROWN COD LIVER OIL. Prepared for MEDICINAL USE in the LOFODEN ISLES, NORWAY, and put to the test of Chemical Analysis.

THIS pure and unadulterated, transparent, light-brown Cod Liver Oil, long known and justly appreciated on the Continent, has now acquired the general confidence of the Medical Profession in this country, by whom it has been extensively and successfully prescribed, and with almost immediate and remarkably beneficial results—in many instances where ordinary Cod Liver Oil had been copiously, though ineffectually, administered.

It owes its superior efficacy not only to its method of preparation, but to the fact—clearly established by chemical analysis and therapeutic experiments—that the liver of the species of cod-fish from which it is exclusively procured naturally contains a larger quantity of iodine, of the elements of the bile and other essential remedial properties, than is found in other kinds of the genus GADUS. It is of the finest quality, free from any admixture, or the usually repulsive, sickly, and nauseous flavour or after-taste of the Pale Oil, or of the coarse Brown Oil, commonly sold, though totally unfit for medicinal purposes.

Being sold by IMPERIAL MEASURE it is as low in price per ounce as any other genuine Cod Liver Oil, whilst its regular and speedy effects render it incalculably cheaper. Medical and Scientific Testimonials of the highest character delivered or forwarded, GRATIS, on application to Dr. De Jongh's Sole Agent and Consignees, ANSAR, HARFORD & CO., 77, STRAND, LONDON, by whom the Oil is sold Wholesale and Retail, in bottles capsuled and labelled with Dr. De Jongh's stamp and signature; and in the country by respectable Chemists and Vendors of Medicine. Where difficulty occurs in procuring the Oil, four half-pint bottles will be forwarded to any part of England, CARRIAGE PAID, on receipt of a remittance of ten shillings.

Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 0d.; Quarts (40 ounces), 9s.

DO YOU WANT LUXURIANT HAIR, WHISKERS, &c.? No other compound for the Hair has maintained such an enduring celebrity as EMILY DEAN'S CRINOLINE. It is guaranteed to produce Whiskers, Moustaches, Eyebrows, &c. in a few weeks, and restore the Hair in baldness, from whatever cause, strengthened it when weak, prevent its falling out, and effectually check greyness in all its stages. For the nursery, Dr. Wilson says, it is unrivalled. Price 2s. per Package (elegantly perfumed); sent post free on receipt of ten penny-postage stamps, by MISS DEAN, 37A, Manchester-street, Gray's Inn-road, London. Sold by every Chemist in the Kingdom. "In one fortnight it produced a beautiful set of moustaches," *H. Adams*. "It has prevented my hair falling off," *J. Hudson*. "It has quite checked the greyness that was coming on," *Thos. Eldon*.

BEAUTIFUL HAIR, WHISKERS, &c., are INVARIABLY PRODUCED IN TWO OR THREE WEEKS by COUPELLE'S CELEBRATED CRINUTRIAR, which is universally acknowledged as the only preparation to be totally dependent upon for the unfailing production of Hair, as also check the greyness, baldness, &c., and rendering the Hair luxuriant, curly and glossy.—*Mr. Williams, 8, Leather-lane, Liverpool*. "I can now show you fine hair and whiskers, and a beautiful set of your Crinutriar."—*Sergeant Crown, Longford Barracks, Ireland*. "Through using your Crinutriar, I have an excellent Moustache, which I had before despised of."—*Mrs. Carter, Pangbourne, Berks*. "My head, which was quite bald, is now covered with new hair."—*Prior*. "I have been cured of my hair loss, and my hair is now sent post free for 24 penny stamps, by ROBERT GUILLELL, 69, Castle-street, Newman-street, Oxford-street, London, and against imitations under closely similar names. Twenty pages of Testimonials, with list of Country Agents, post free for two stamps.

DR. BARRY'S HEALTH RESTORING REVALENTA ARABICA FOOD counteracts Dyspepsia (Indigestion), Constipation and their consequences.—*Andrew Tre, M.D. F.R.S., London*. These consequences are Nervous, Bilious and Liver Complaints, Acidity, Heartburn, Flatulency, sick Headaches and General Debility, Low Spirits, Cough, Asthma, Incipient Consumption, Nausea, &c. It is, moreover, the best food for infants and invalids generally, as it never purges or turns acid on the weakest stomach, nor interferes with a good night's sleep, but is a healthy reagent for lunch and dinner, and restores the faculty of digestion and nervous and muscular energy to the most enfeebled. Highly approved of by Drs. Ure, Shorland, Harvey, Campbell, Gattacker, Wurzer, Lord Stuart de Decies, and 50,000 other respectable persons, whose names have been perfectly recorded by it after all other causes of cure had failed.

In canisters, 1lb. 2s. 9d.; 2lb. 4s. 6d.; 5lb. 11s.; 10lb. 22s.; refined, 1lb. 6s.; 2lb. 11s.; 5lb. 22s.; 10lb. 33s. The 10lb. and 22lb. carriage free on receipt of Post-office order. Barry Du Barry & Co. 77, Regent-street, London; Fortnum, Mason & Co. Purveyors to Her Majesty, Piccadilly; and 100, at 6, Gracechurch-street; 230 and 451, Strand; 4, Chancery-lane; 68, Cornhill; 49, Bishopsgate-street; 55, Charing-cross; 54, Upper Baker-street; 63 and 150, Oxford-street.

RUPTURES CURED WITHOUT A TRUSS.—DR. BARKER'S great European remedy for these alarming Complaints has been successful in curing thousands of cases during the last sixteen years. It is applicable to every variety of single or double Rupture, in either sex, of any age, however bad or long standing, and causes no inconvenience in its use whatever. Sent free by post to any part of the world, packed so that no one can know the contents, on receipt of 7s. 6d., in postage stamps, post-office order, payable at the General Post-office, to Alfred Barker, M.D., 2, Argyle-square, Kings-cross, London. Consultation hours, daily (except Sunday), from Eleven till Three o'clock. A copy of the last Quarterly Report, with numerous cases and testimonials, will be sent gratuitously to any one, on receipt of a penny postage stamp and envelope.

DEAFNESS AND NOISES IN THE HEAD.—Institution for the Cure of Deafness, 9, Suffolk-place, Pall Mall, London. The Institution is under the immediate management of a qualified Physician, and is guaranteed, without the use of ear-trumpets, instruments, or causing one moment's inconvenience to the most aged or nervous sufferer. Dr. HOGHTON'S new and extraordinary discovery, by one consultation enables deaf persons of either sex to hear immediately with perfect ease the lowest whisper, and magically removes all ringing in the ears. Hospital and private testimonials and certificates from the most eminent Physicians and Surgeons in England, in whose presence deaf persons have been cured, and many hundreds of private patients cured can be seen or referred to. Hours of consultation, 11 till 4 every day. Francis Holm, 1, Hoger Lane, the London and Royal College of Surgeons, May 2, 1845; Licentiate of the Apothecaries Company, April 30, 1846.

Just published, "SELF-CURE OF DEAFNESS," for country patients; a step to empiricism, quackery, and exorbitant fees, sent on receipt of seven stamps, free. Examination free, 9, Suffolk-place, Pall Mall.

KEATING'S COUGH LOZENGES.—Upwards of Forty Years' experience has fully confirmed the superior reputation of these Lozenges, in the cure of Asthma, Winter Cough, Hoarseness, Shortness of Breath, and other Pulmonary Maladies. Prepared and sold in boxes, 1s. 1d., and tins, 2s. 9d., 4s. 6d., and 10s. 6d., each, by Thomas Keating, Chemist, &c., No. 79, St. Paul's-churchyard, London. The Testimonials of their efficacy are too numerous for publication.

KEATING'S COD LIVER OIL, imported direct from Newfoundland, of the finest quality, pale, purified, and nearly tasteless. Imperial Measure, half-pint, 2s.; pints, 3s. 6d.; quarts, 6s. 6d.; five-pint bottle, 15s. Addressed to Mrs. Keating, who is the country should expressly state "KEATING'S COD LIVER OIL."

FREEDOM FROM COUGHS is ensured by taking DR. LOCOCK'S PULMONIC WAFERS. "From Mr. W. J. Dale, Chemist, 65, Queen-street, Portsea. "From the immense sale I have had of Dr. Locock's Pulmonic Wafers throughout this populous locality, I must do you justice to say that I consider them invaluable for coughs, colds, asthma, &c."

TO SINGERS and PUBLIC SPEAKERS they are invaluable for clearing and strengthening the voice. They have a pleasant taste. Price 1s. 1d., 2s. 9d., and 11s. per box. Sold by all Druggists.

THE EARL OF ALDBOROUGH and HOLLOWAY'S PILLS.—An astounding cure by this miraculous medicine after every other means had failed. See Extract from his Lordship's letter, dated "Villa Messina, Leoboro, Feb. 12, 1845. To Professor Holloway.—Sir, I beg to acquaint you that your Pills have effected a cure of a disorder in my liver and stomach, which all the most eminent of the faculty at home and all over the Continent had not been able to effect—namely, not even the waters of Carlsbad and Mariensbad. (Signed) A. Lubbock." These wonderful Pills will cure any disorder of the liver or stomach. Sold also Holloway's Pills, at Professor Holloway's Establishment, 248, Strand, London, and 80, Maiden-lane, New York; and by all Medicine Vendors throughout the civilized world.

PROFESSOR JOHNSTON'S
CHEMISTRY OF COMMON LIFE.

VOLUME II., COMPLETING THE SERIES, IS NOW PUBLISHED,

With a copious Index, price 6s. 6d., bound in cloth.
The First Volume has been reprinted, price 5s. in cloth.

MR. NEWBY'S

NEW PUBLICATIONS.

Now ready, in 3 vols. 42s.

THE LITERARY LIFE and CORRESPONDENCE

OF THE

COUNTLESS OF BLESSINGTON.

By R. MADDEN, Esq.

Author of 'Travels in the East,' 'Life of Savonarola,' &c.

"We may, with perfect truth, affirm, that during the last
fifty years there has been no book of such peculiar interest
to the literary and political world. It has contributions from
every person of literary reputation—Byron, Sir E. Bulwer (who
contributes an Original Poem), James, D'Israeli, Marryat,
Savage Landor, Campbell, L.E.L., the Smiths, Shelley, Jeukyn,
Sir W. Gell, Jekyll, &c. &c.; as well as Letters from the most
eminent Statesmen and Foreigners of distinction: the Duke of
Wellington, Marquis Wellesley, Marquis Douro, Lords Lynd-
hurst, Brougham, Durlam, Abinger, &c."—*Morning Post*.

"The book is rich in matter which must interest, and will fur-
nish its quota of anecdotes to the literary records of the first half
of the century."—*Athenæum*.

"Since the life of Haydon this is the most interesting biography
which has been published. Dr. Madden knows how to make a
book readable."—*Dundee Advertiser*.

"This book will be found to answer expectation. It contains
something about every one who has been anybody for the last
quarter of a century, of either sex and all countries, from the Duke
of Wellington to Lola Montes—from Brougham to Bonaparte—
from 'Boz' to Rachel—from Charles Mathews to the Queen of
England."—*Liverpool Albion*.

"A most interesting work."—*Diviningham Journal*.

"It is without exception the most valuable book of the last half-
century."—*Tribune*.

"The volume is full of biographical anecdotes and traits which
will secure them a general reading."—*Manchester Advertiser*.

"Comprises letters from every illustrious name who has taken a
permanent or temporary seat in the Temple of Fame."—*Leader*.

"These volumes are highly amusing, containing much of the
'gossip' of fashionable and literary life which is so agreeable to
read."—*Naval and Military Gazette*.

MARRIED WOMEN.

By the AUTHOR OF 'BROOMHILL.'

"Mr. Newby is indefatigable in his endeavours to produce novels
of real worth; and these endeavours have been crowned with com-
plete success. This book should be read by every married woman
and every spinster—it will instruct by its moral, and deeply inter-
est by its story."—*Herald*.

THE WARHAWK.

By the AUTHOR OF 'THE TWO MIDSHIPMEN.'

"Mr. Newby commences the year with an admirable novel,
'The Warhawk'—a novel that will please all readers; and the
author more firmly establishes his position as the successor of the
late Capt. Marryat."—*Guardian*.

"It opens with a bit that might pass for Scott."—*Spectator*.

"It is intensely interesting and exciting."—*Sun*.

THE QUICKSANDS OF FASHION.

By Mrs. LUCAS,

Author of 'Treachery,' 'Gabiella Witherington.'

THE STORY OF A NUN.

By the AUTHOR OF 'THE LADY of the BEDCHAMBER,' &c.

Just published, Second Edition, crown 8vo.

Price 1s.

**THE CRYSTAL
PALACE:**

AN ESSAY,

DESCRIPTIVE and CRITICAL.

REPRINTED FROM THE

LONDON QUARTERLY REVIEW.

"The perfect picture drawn of the persons of note
present, is done by the hand of an artist. Sir Joseph
Paxton, Laing, Owen Jones, Layard, Professor Owen,
Aberdeen, Palmerston, Gladstone, Disraeli, and many
others, all stand before the reader like the very life.
... THE TWO DEEPLY IMPORTANT SUBJECTS OF THE
STATUARY and OF THE SUNDAY OPENING are discussed
in a most able and convincing manner."

Rugby Advertiser.

"The *questio vexata* of 'nude figures' is raised by
our Essayist, and treated, we think, with much acute-
ness, although we differ from his conclusions."

Oldham Chronicle.

"We can truly say that, in other respects, the
Essay is a production of which the author may be
proud; and if that author be not Ruskin, we are at
fault to discover his imitator. Some of the senti-
ments are lofty, and really grandly expressed. Whilst
such thinkers labour amongst us truth cannot die,
nor the Gospel of truth cease to purify, to elevate,
and instruct the human mind. Under such guidance
Art cannot expire, nor Science grow dim."

Western Luminary.

"We fancy we do not err in attributing it to the
pen of Mr. Ruskin. [The Critic *does* err.] All the
opinions in this Essay, crude and ill digested as they
often are, fanciful rather than profound, and tinged
frequently with fanaticism, are yet delivered in a
style of gorgeous eloquence, and adorned with the
images of a glowing fancy, which give them an
irresistible fascination."—*Cork Examiner*.

"In fact, having once perused it, we feel it indis-
pensable to our enjoyment, and would sooner be with-
out our lorgnette at the Opera than *minus* this Essay
at the Crystal Palace."—*Brighton Examiner*.

"To say that the Essay is ably written would be
by no means to give a full impression of its charac-
ter. It is evidently from the pen of one of the master
spirits of the age: there is a poetry in its style, and
a vein of quiet humour running through its descrip-
tive pages; whilst it is instinct with sage instruction.
The question of 'nude figures' is well treated, and
that of opening the Palace on a Sunday is placed in
a remarkably clear and, as we conceive, convincing
light."—*Weston-super-Mare Gazette*.

HAILEYBURY and the EAST INDIAN CIVIL SERVICE.—Gentlemen intending to present the CLASSICAL and MATHEMATICAL subjects at the newly-instituted entrance Examination at the above College, may receive the requisite assistance from two gentlemen actively engaged in tuition in London, one of them a Graduate of the University of Oxford, First Class in Literis Humanioribus, and Scholar of his College, the other a Master of Arts of the University of Cambridge, one of the highest Wranglers of his year, and Fellow of his College.—For full particulars apply to X. Y. Z., at Messrs. Bell & Daldy's, Publishers, Fleet-street.

ST. JOHN'S-WOOD PROPRIETARY COLLEGIATE SCHOOL, 25, St. John's-Wood Park. Head-Master.—The Rev. THOMAS MARKBY, M.A., late Scholar of Trinity College, Cambridge, and Classical Master in King's College School. Second Master.—H. DEIGHTON, Esq., M.A., Scholar of Queen's College, Cambridge. The school is supported by the proprietors subscribing 21l. each, and by the fees paid by the pupils. Each proprietor has the right of nominating one pupil at a time to the school. Half-term commences Monday, March the 5th. R. HOPSON, Hon. Sec. * * * The Second Master RECEIVES BOARDERS at Bounding-road.

BEDFORD GRAMMAR SCHOOL.—The Office of MASTER of the above School will be VACANT on the 24th of June next, by the resignation of the Rev. Dr. Briereton. Applications and testimonials may be sent to the Rev. the Warden, New College, Oxford, on or before Saturday, March the 24th. Extracts from the Scheme, settled by order of Vice-Chancellor Sir W. P. Wood, dated the 12th of March, 1853:—

* The Master and Second Master of the said Grammar School for the time being shall always be Fellows of New College, or Clergymen of the Church of England, being Graduates of one of the Universities of Oxford, Cambridge, Dublin, London, or Durham, properly qualified to teach the Latin and Greek Languages. * There shall be allowed and paid to the future Master the yearly sum of 300l., and so many additional sums of 5l. each as will be equal to the number of Boys up to and not exceeding 140, who shall have been bona fide educated at the said Grammar School for at least six months in each year. * The Master may, with the consent of the Warden and Scholars of New College and the Trustees respectively, take 30 Boarders. There is a residence (rates and taxes free), kept in repair by the Trustees of the Bedford Charity.

ORIENTAL LANGUAGES.—The Rev. G. SMALL (ten years in India) gives INSTRUCTIONS in HINDUSTANI, PERSIAN, SANSKRIT, and BENGALI, either at his own house, St. John's-grove, Croydon; at 33, Moorgate-street, City; or at the Pupils' residences. Terms moderate.

GERMAN, ITALIAN, AND FRENCH.—DR. ALTSCHUL, Member Philological Society, London, Examiner Royal College of Preceptors, gives LESSONS in the above-mentioned LANGUAGES and LITERATURE. Pupils may study TWO Languages in the same Lesson, or alternately, without any addition to their terms.—Chandos-street, Cavendish-square.

EDUCATION in GERMANY.—A Professor at one of the German High Schools (Höhen Schulen) receives into his Family a LIMITED NUMBER of PUPILS. Every attention given to secure a correct knowledge and pronunciation of the German language; the comforts of a home afforded, and the best facilities furnished for the successful prosecution of other Studies. For instruction in German and for Board and Lodging the terms are 60l. per annum, paid quarterly in advance. The residence is in one of the chief towns of Hanover. References can be given to a Merchant in London, whose Sons have recently experienced the Professor's faithful and valuable instruction. Address A. Z. (post paid), care of Messrs. Nissen & Parker, 43, Mark-lane, London.

DOUBLE REFRACTING SPAR, from ICELAND.—Mr. TENNANT, Mineralogist to Her Majesty, No. 149, Strand, London, has just received a supply of this interesting Mineral, which can be had at prices varying from Five Shillings to Six Pounds.

THE ORGAN TAUGHT.—Mr. H. F. HAMMOND, Organist of Christ Church, Camberwell, continues to GIVE LESSONS at his residence, 1, Surrey-place East, Old Kent-road. A large Organ, with two rows of keys and 2½ octave of pedals, for the use of Pupils.

MILITARY TUTOR.—Lieutenant Colonel MANSTRUTTER RECEIVES a limited number of GENTLEMEN, candidates for Commission in the Army, and, assisted by experienced Masters, prepares in the various branches of study required by Her Majesty's Regulations. References permitted to the parents of former Pupils.—4, Chestow Villas, Bayswater.

MILITARY EXERCISES for the SONS of CIVILIANS.—UNDER THE PATRONAGE of His Grace the DUKE of RICHMOND, K.G. &c. Colonel of the Royal Sussex Militia.—At a respectable School, near London, Young Gentlemen are received as Boarders, and, in addition to the usual studies of youth, are regularly instructed in Military Exercises, and the use of Sword, Rifle, and Cannon, by a well-qualified officer. Such exercises secure an erect and gentlemanly carriage, and superintend the development of the physical powers. Terms moderate. A drawing of the uniform will be sent on application to Mr. E. G. LIVESAY, Salvador House, Tooting-Graveney, Surrey.

MR. B. H. SMART, formerly of Connaught-terrace, now of 37, Wyndham-street, Bryanston-square, acquaints his friends that he CONTINUES to INSTRUCT clerical and other PUPILS in ELOCUTION, to meet Classes in Families and Schools for English generally, and to engage for Public Readings and Lectures.

HYDROPATHY.—MOOR PARK MEDICAL and HYDROPATHIC ESTABLISHMENT, near Farnham, Surrey, within two miles of the Camp at Aldershot. This Institution is now open for the reception of Patients under the Superintendence of Dr. EDWARD W. LAKE, M.D. Edin. Dr. Lane may be consulted in London every Tuesday between half-past 12 and 2, at 61, Conduit-street, Regent-street.

THE PRESS.—The EDITOR of a Provincial Journal, who has experience in Newspaper management and as a Political writer, will be disengaged in a few weeks. Salary not to be less than 150l.—Address C. D., care of John Corderoy, Esq., 3, Kennington-green, Lambeth.

AUDITOR, BOOK-KEEPER or CORRESPONDENT.—A Gentleman holding a responsible post in all the above capacities, disengaged from four o'clock in the day, offers his services to any House of Business or Secretary. Money not so much an object as the employment of leisure time. Highest references.—Address X., care of Messrs. Smith, Elder & Co. Cornhill.

TO PHILOSOPHICAL INSTRUMENT MAKERS.—A FOREMAN WANTED.—Apply to Mr. GRIFFIN, 119, Bunhill-row.

COMPASS COMMITTEE—LIVERPOOL.—WANTED, the services of a Gentleman of Scientific and Nautical attainments to act as SECRETARY to the Committee, and to conduct Experiments on the Compasses of Ships.—For particulars apply to the Honorary Secretaries, Underwriters' Rooms, Liverpool.

PARTNERSHIP.—WANTED, a Gentleman of business habits and capital to join in the purchase of a BOOTSELLER and RUBBER'S BUSINESS in London. About 2,500l. required.—Address, by letter only, to A. Z., care of Mr. J. A. Lewis, 125, Fleet-street.

A LADY, who has had considerable experience in HOUSEKEEPING, wishes for a RE-ENGAGEMENT either as Companion and Housekeeper to a Lady, or to superintend the domestic arrangements of a Gentleman's House and Family. She can offer the highest testimonials.—Address to T. K., 7, Grove-place, Camberwell-rove.

NEWSPAPER PROPERTY.—TO BE SOLD, on a late day in MARCH, the COPYRIGHT of the WOLVERHAMPTON and STAFFORDSHIRE HERALD. Any Gentleman who can undertake the principal Reporting and Literary Department himself, will find this a rare opportunity.—Further particulars may be had by addressing Herald Office, Snowhill, Wolverhampton.

CONTRACTS FOR NEWSPAPERS, &c.—WILLIAM THOMAS & CO., 19 to 21, Catherine-street, Strand, CONTRACT for the SUPPLY of LONDON, COUNTRY, FOREIGN, COLONIAL, and AMERICAN NEWSPAPERS and Periodicals to Reading-Rooms, Clubs, and all public Establishments in England or on the Continent. Lists sent free on application.

CAPITAL is required to develop an important LITERARY UNDERTAKING already established.—To any Gentleman desirous to co-operate in the management of a High-class Journal, the present opportunity offers an eligible mode of investing from 500l. to 1,000l.—Address, Cosmos, care of H. D. Hildon, Esq., Solicitor, Ingram-court, Fenchurch-street.

CONSTANCE HERBERT: A NOVEL.

By GERALDINE JEWSEBURY,
 Author of 'Marian Withers,' 'Zoe,' &c.

HURST & BLACKETT, Publishers, Successors to Henry Colburn, 13, Great Marlborough-street.

Now ready, in 2 vols. 21s. bound,

MR. SHEIL'S LEGAL AND POLITICAL SKETCHES.

Edited, with Notes, by M. W. SAVAGE.

"We can cordially recommend these sketches as interesting in matter and brilliant in composition. Their literary merit is very great. The revelations of the Jesuits are very remarkable. The sketches of the Irish Bar paint the characters of the leading persons in Irish politics with graphic felicity."—*Athenæum*.

"The intrinsic merit of these volumes will delight the student and charm the general reader. They will in no respect suffer by contrast with the Essays of Macaulay and Stephen, Mackintosh and Sydney Smith, and other brilliant literary worthies."—*Messenger*.

ALSO, NOW READY,

MRS. JAMESON'S WORKS.

1.

A COMMONPLACE BOOK OF THOUGHTS,
MEMORIES, AND FANCIES.

ORIGINAL AND SELECTED.

Part I. ETHICS and CHARACTER. Part II. LITERATURE and ART.

With Etchings and Wood Engravings. Square crown 8vo. price 18s.

From the NEW MONTHLY MAGAZINE, February, 1855.

"Mrs. Jameson has long ago secured to herself the certainty of a constant, hearty, and respectful welcome. Her presence is ever felt to be refreshing, elevating, bettering. She humanises and refines the mind—makes us feel the world is too much with us, and allures to a brighter, if not always another. Especially in this latest work of hers do we recognise such a spiritualising influence; it is rich in words of wisdom, deeply felt, calmly pondered, and often exquisitely expressed—the beautiful book of a

beautiful writer. Within and without, in the spirit and in the letter, by the value of the text and the adornments of letter-press and illustrative designs, it is such a gift-book as may well be called pleasant to the sight, and to be desired to make one wise. Wisdom and the law of kindness are eminently, pre-eminently characteristic of the ethical and critical writings of Mrs. Jameson.

2.

SACRED and LEGENDARY ART. Second Edition, complete in One Volume; containing Legends of the Angels and Archangels, the Evangelists, the Apostles, the Doctors of the Church, St. Mary Magdalene, the Patron Saints, the Martyrs, the Early Bishops, the Hermits, and the Warrior-Saints of Christendom, as represented in the Fine Arts. With numerous Woodcuts and 16 Etchings by the Author.

Square crown 8vo. price 28s.

3.

LEGENDS of the MONASTIC ORDERS, as represented in the FINE ARTS. Second Edition, corrected and enlarged; comprising St. Benedict and the Early Benedictines in Italy, France, Spain, and Flanders—the Benedictines in England and in Germany—the Reformed Benedictines—Early Royal Saints connected with the Benedictine Order—the Augustines—Orders derived from the Augustine Rule—the Mendicant Orders—the Jesuits—and the Order of the Visitation of St. Mary. Forming the Second Series of *Sacred and Legendary Art*. With 11 Etchings by the Author, and 88 Woodcuts. Square crown 8vo. price 28s.

With 11 Etchings by the Author, and 88 Woodcuts. Square crown 8vo. price 28s.

4.

LEGENDS of the MADONNA, as represented in the Fine ARTS; comprising, I. Devotional Subjects: 1. The Virgin without the Child; 2. The Virgin and Child.—II. Historical Subjects: 1. The Life of the Virgin from her Birth to her Marriage with Joseph; 2. The Life of the Virgin Mary from the Annunciation to the Return from Egypt; 3. The Life of the Virgin from the Sojourn in Egypt to the Crucifixion of Our Lord; 4. The Life of the Virgin Mary from the Resurrection of Our Lord to the Assumption. Forming the Third Series of *Sacred and Legendary Art*. With 55 Drawings by the Author, and 152 Woodcuts. Square crown 8vo. price 28s.

With 55 Drawings by the Author, and 152 Woodcuts. Square crown 8vo. price 28s.

THORNEY HALL:

A STORY of an OLD FAMILY. By HOLME LEE, Author of 'Maude Talbot.' One volume, small post 8vo. Price 6s. cloth.

FOUR YEARS at the COURT of HENRY VIII.:

Being a Selection of the Despatches of SEBASTIAN GIUSTINIAN, Venetian Ambassador, 1515-1519. Translated by RAWDON BROWN. Two volumes, crown 8vo. Price One Guinea, cloth.

"These letters throw considerable light upon the customs and feelings, the ambitions and intrigues, which prevailed in civilized Europe at the beginning of the sixteenth century. Apart from their historical value, these two volumes will be interesting to those who seek only a casual amusement."—*Times*.

"A work valuable alike to the antiquarian and the historian; as full of anecdotes as a biography, and as amusing as a novel."—*Economist*.

"These volumes contain genuine matter full of interest, and most valuable information. A more attractive book altogether it would be very difficult to imagine."—*Examiner*.

A MANUAL of the MERCANTILE LAW of GREAT BRITAIN and IRELAND.

By LEONE LEVI, Esq., Author of 'Commercial Law of the World.' 8vo. Price 12s. cloth.

"Sound, clear, and practical. The topics are, international commerce, restraints on trade, patents, copyright, joint-stock and banking companies, partnership, bills of exchange, and liability. Its contents are strictly those of a manual, a hand-book for law chambers, offices, and counting-houses; requisite in most of such places, and superfluous in none."—*Athenæum*.

"An admirable work of its kind, and for those for whose use it was especially written."—*Law Times*.

"An excellent manual of mercantile law."—*Times*.

London: SMITH, ELDER & CO. 65, Cornhill.

or, ADVENTURES in the EAST. By SADYK
PASHA. Revised, with Original Notes, by COLONEL
SZYRMA, Editor of 'Revelations of Siberia.'

From the Examiner.

"Sadyk Pasha, the author of this work, is a Pole of noble
birth. He is now commander of the Turkish Cossacks—a
corps organized by himself. The volumes on the 'Moslem
and the Christian,' partly fact and partly fiction, written by
him, and translated by Colonel Szyrma, display very well
the literary spirit of the soldier. They are full of the adven-
tures and emotions that belong to love and war; they treat
of the present time; they introduce many existing people,
and have the Danubian Principalities for scene of action.
Here are sources of popularity which the book fairly claims.
As a translation it is excellent."

From The Messenger.

"In every respect a remarkable book, containing a his-
tory of the exploits of one of the leading characters in the
present important Eastern campaign."

From the John Bull.

"A real history connected with the present war in the
East has been worked up into a tale of the most attractive
kind in these volumes. The work possesses an unusual
degree of interest."

HURST & BLACKETT, Publishers, Successors to HENRY
COLBURN, 13, Great Marlborough-street.

Now ready, at all the Booksellers,

The MODERN ORLANDO. By
Dr. CROLY. Second Edition. Post 8vo. 5s. bound.

"Dr. Croly has only done justice to himself in putting his name
to the wittiest poem of its day. Throughout the satire is sharp,
but not ill-natured; and the sketches of men, manners, and
things, as true as if recorded by a social and physical daguerre-
type."—*Brianston*

Also, just published,

CHEAP EDITION of PEPYS'
DIARY and CORRESPONDENCE; comprising all the
recent additional Notes and Emendations, printed uni-
formly with the last Edition of Evelyn's Diary, in 4
vols. post 8vo. with Portraits, price only 6s. each bd.

LIVES of the QUEENS of ENG-
LAND. By AGNES STRICKLAND. Cheap Edition,
with all the late Improvements, and Portraits of every
Queen. 8 vols. post 8vo. 7s. 6d. each bound; either of
which may be had separately.

The CRESCENT and the CROSS.

By ELIOT WARBURTON. Cheap Edition. 1 vol.
with 15 Illustrations, 6s. bound.

"This admirable book of Eastern travel alone sufficient to in-
sure to the name of its author immortal fame, lies before us in an
eleventh edition. Its re-appearance at this moment, when our
thoughts and sympathies are so powerfully drawn towards the
East, is singularly opportune."—*John Bull*.

Published for HENRY COLBURN, by his Successors,
HURST & BLACKETT, 13, Great Marlborough-street.

Now ready, at all the Libraries,

Mrs. GORE'S NEW NOVEL,
'MAMMON; or, THE HARDSHIPS of an HEIRESS.'
3 vols

"We prefer 'Mammon' to either of the other novels which Mrs.
Gore has given to the public since her re-appearance in print."
—*Athenæum*.

"The most lively and entertaining novel Mrs. Gore has yet
written."—*Literary Gazette*.

"In the novel of 'Mammon' the style of Mrs. Gore is as buoyant,
rapid, and pointed as usual."—*Spectator*.

NATURE and HUMAN NA-
TURE. By the Author of 'SAM SLICK.' 2 vols.

The SECRET HISTORY of a
HOUSEHOLD. By the Author of 'ALICE WESTWORTH.'

"This tale abounds with passion and power. The author has
wrought out a natural subject with feminine tact and graceful
eloquence."—*Messenger*.

"This tale is powerfully told, and an intense interest is sus-
tained from first to last."—*John Bull*.

to meet."—*Chambers's Journal*.

JOHN MURRAY, Albemarle-street.

LONDON, SATURDAY, MARCH 3, 1855.

REVIEWS

Memoirs of Sir Robert Strange, Knight, Engraver; and of his Brother-in-Law, Andrew Lumisden, Private Secretary to the Stuart Princes. By James Dennistoun, of Dennistoun. 2 vols. Longman & Co.

THIS book has a deep fascination. Mr. Dennistoun, if not a clear writer, was a careful one. He showed, too, in many portions of the narrative before us, a finer sense of the marking trait, the characteristic word, the moment of interest, than had been evinced in his Italian memoirs. It is true that this time he had a subject calculated to make any author's heart glad,—doubly glad, supposing that author to be a Scotchman. The career of one who gave an impulse to Art in England, at a period when Art could get small schooling here, and enjoyed comparatively little favour,—and who achieved a success which, like the successes of Hogarth, Wilson, and Sir Joshua Reynolds, has not been outdone by any successor,—offers an attractive theme. But more of romance than belongs to these interests was mixed up in Strange's life, by his connexion with the Lumisdens, those faithful adherents to the exiled Stuarts. Though the story of his Jacobite brother-in-law is episodic in an engraver's biography, it is so full of interest that no one will protest against the decision of Mr. Dennistoun to interweave the political with the artistic thread. We are made the more lenient by our delight in a third strain, full of humour and character, introduced in the person of Lady Strange—the engraver's wife, the Jacobite secretary's sister. No Scottish woman of the olden time more quaint, more racy, more shrewd, and more incessant exists in Mr. Galt's gallery of imaginary *Miss Mizys* and *Leddy Grippys*. It is long since such a compound of fantastic loyalty and amazing orthography,—of shrill self-assertion and homely heart-warm affection—a figure so bright, so bold, and so individual, has stood before us on the literary canvas, as the helpmate of Mr. Dennistoun's hero. The biographer, we repeat, was thrice fortunate in his subject and in its surroundings.

The Strangs (or Strong Men) were an old Orcadian family,—and Robert, Mr. Dennistoun's subject, eldest son by a second marriage of David Strang, treasurer at Kirkwall, was born, on the 14th of July 1721, in the island of Pomona. The boy, till he was fourteen, was brought up among his own people, his education there “terminating in an excellent grammar-school, where he attained some general knowledge of the classics.” His relations had determined on making a lawyer of “Robbie”—but the boy was determined to go to sea;—and, thanks to the indulgence of his mother, and the fatherly sympathy of his half-brother, he carried his point. A cruise in a man-of-war,—the *Aldborough*, including a storm during the ship's homeward voyage from Gottenburg,—disenchanted the youngster, whose ideas had, probably, been merely one of those promptings of aimless restlessness by which Genius announces its presence. A born sea-boy, Orcadian to boot, would not have listened to the terrors of the first gale he encountered, still less to the sober counsels of a wise midshipman! The sea being abandoned, young Strange (as it is best to call him) consented to try the law, under the guidance of his considerate half-brother. “Before leaving my native country,” says he in an autobiographical fragment here reprinted, “I had wrote an excellent hand of write, but had been out of the practice of it for several months. It was not to be doubted but that I should soon

recover it.” This “excellent hand of write” was soon recovered, and while Robert was copying his half-brother's papers he beguiled his leisure by drawing “little sketches in pen-and-ink,—some few,” says he, “from my own fancy, and others from the ornaments and title-pages of books, &c.” These were carefully concealed, in obedience, we suppose, to the old notions, which attached loss of position—guilt, almost—to the pursuit of Art;—and which made secrecy necessary, in avoidance of persecution. But young Strange was more fortunate than other “visionary boys” have been. His half-brother, one day, fell upon “the budget” of concealed treasure, and, so far from being wroth on the occasion, “was placid to a degree,”—showed the drawings to Mr. Cooper, an engraver in Edinburgh, and consulted him on the practicability of making something of the talent of “the excellent hand.” This Mr. Cooper, pupil of “John Pine, who published the Armada tapestries from the old House of Lords,” was a man of some substance and pretension in Edinburgh, who built and decorated for himself a spacious house in St. John Street, and had a school for apprentices. In this school,—allowing for an outbreak or two of the restlessness which seems never utterly to have forsaken Strange,—the youth distinguished himself. Betwixt 1737 and 1740, he was entrusted with the conduct of a folio edition of Albinus's ‘Anatomical Plates,’ executing with his own hands the subjects of osteology. Some peril he ran from the society of a fellow apprentice, one Michael Hay, who was a showy, debauched fellow, not to be made an engraver of; but the influences of Michael's bad example harmed him little,—and, ere his connexion with Cooper was well over, he had mixed himself up with interests more absorbing than those of passing the night in a tavern or flaunting about “bedaubed with lace, and with a sword hanging by his side.” The fever of “the ‘45” got hold of him; and, at the same time, a passion equally strong—for he made friendship with the Lumisdens; and, in ‘44, was accepted by Isabella Lumisden, “on condition that he should fight for the Prince.” He was able to render more lasting services to “the Pretender” than those of bow and spear.—

“Mr. Robert Chambers, in his ‘Biographical Dictionary of Eminent Scotsmen,’ tells us that Strange, then residing in Stewart's Close, was commissioned, during the Prince's visit to Edinburgh, to engrave a half-length portrait of him; he looks out of an oval window or frame, over a stone ledge or pedestal, with the motto, *Everso missus succurrere seculo*. This print [was] the earliest known work of its author on his own account.”

Strange accompanied the Jacobite army, and was called into the councils of the Prince, who withdrew from a ball to concert, with Sir Thomas Sheridan, the renegade Murray, of Broughton, and our young artist, a plan for the issue of “one species of money or other, for the service of the army in general.” Strange produced a design for a paper note or token.—

“It consisted, I said, of nothing but the slightest compartment, from behind which a rose issued on one side, and a thistle on the other, as merely ornamental: the interior part I meant should be filled up by clerks, with the specific sums which were intended, &c.; and I proposed etching or engraving, in the slightest manner for expedition, a considerable repetition of this ornament on two plates, for the facility of printing; that such should be done on the strongest paper [so], that, when cut separate, they should resist, in some measure, the wear they must sustain in the common use of circulation.” The Prince had at this time taken the compartment out of my hand, and was showing [it] to Mr. Murray, and seemed much pleased with the idea of the rose and the thistle. In short, everything was approved of, and the utmost expedition

recommended me. * * Next day, being Sunday, my carpenter was early employed in cutting out this wood, in order to begin on Monday. It was not so with a coppersmith, whose assistance I more immediately required. He was a good Presbyterian, and thought he would be breaking the Lord's day. But necessity has no law; he turned out even better than his promise, overcame his prejudice, went to work, and furnished me with a copper plate on Monday about noon.”

The rout at Culloden, which was simply and vigorously described by Strange in an autobiographical fragment, put an end to the engraver's employment as “moneyer,” and drove him, like other loyal servants of the Stuarts, into holes and corners.—

“Of the incidents during his hiding in the Highlands after the catastrophe at Culloden, and of his eventual escape to the Continent, we possess but scanty particulars. One printed anecdote comes to us on the authority of Cooper, his instructor, that, when hotly pressed, he dashed into a room where the lady, whose zeal had enlisted him in the fatal cause, sat singing at her needlework, and, failing other means of concealment, was indebted for safety to her prompt intervention. As she quickly raised her hooped gown, the affianced lover disappeared beneath its ample contour, where, thanks to her cool demeanour and unfaltering notes, he lay undetected, while the rude and baffled soldiery vainly ransacked the house. * * When the vigilance of pursuit was somewhat abated, he left the Highlands, and returned to Edinburgh, where, for the first time, he began to turn his talents to account, contriving to maintain himself in concealment by the sale of small drawings of the rival leaders in the rebellion, many of which must still be extant, and which were purchased at the time in great numbers at a guinea each. A fan, also, whose intended owner gave it in his eyes additional value, and on which his pencil had, on that account, bestowed more than usual pains, was sold at this time with a sad heart (*non hos quesitum munus in usus*) to the present Earl of Wemyss, who was too sensible of its value to allow it to be repurchased, when that was proposed a short time afterwards.”

—This fan, we suppose, was intended for the Jacobite Lady to whom Strange was united in 1747, having won his spurs as a true knight. On proceeding further with the record of his life, we are disposed to fancy that Strange's own politics may have been, like his love of the sea, romantic rather than real. When, in 1760, he declined to engrave Allan Ramsay's full-length portraits of George the Third and the Earl of Bute, in consequence of the insufficient remuneration offered to him, he explained, in clear terms to Ramsay, that he “considered himself most unjustly calumniated by the prevalent reports of his having, from political feelings, refused to occupy his hand upon a portrait of the heir-apparent to the throne; and, farther, that the slights he received from Lord Bute satisfied him that his conduct must have been looked on at Court in this light.”

It could have offered little matter for wonder had Strange refused the allegiance of his *burin* to the House of Hanover, considering what its earlier labours had been, what the humour of his helpmate was, and what the principles and position of her family remained until the last spark of Jacobite hope smouldered out among the ashes!

The Lumisdens were a devoted family, though not singular in their devotion. That spell which often constrains affection and retains loyalty—a compound of selfishness, superciliousness, and sensibility—was possessed to the full by the Stuarts. They were not only served by better men than themselves, but were served on bended knees. It was a favour (according to their code) in one of their anointed race to permit Fidelity to spend its life-blood for him;—yet, after that blood was spent, Fidelity's orphan often got but icy thanks, rarely the smallest kind deed,

in substantial return. Few mysteries of life are more common than this subjugation of the better by the worse creature—than this waste of love and service; but even the suffering of innocent children is hardly more painful to contemplate than such a phenomenon. We have called the Lumisdens "devoted." William Lumisden, the father of Isabella and Andrew, "a weak, but harsh and selfish man," carried arms for the Stuarts in 1715, and refused to take oaths to Government. Andrew, educated for the law, joined Charles Edward's standard when he was twenty-five; and had, like his royal master, to fly the country, and, for a time, to lead a precarious, scrambling life. Isabella seems to have negotiated betwixt him and his father, in a matter where women rarely fail to negotiate with success,—the getting of supplies for the refugee; and from this time forward—1747—the letters from the brother and sister begin to form an interesting feature in the book. Andrew described foreign usages and foreign parts—"the French stage, with an imitation of 'Venice Preserved,' from Otway"—and the absurdities of the Opera (then a fertile theme for satire with all who pretended to intelligence and taste),—begged to have Scot's Magazines sent to him,—and entreated "papa" to use his influence with some Scotch merchants residing at "Cadix, in Spain," to do something for him. "From the Prince," he says, writing from Rouen in 1748, "I expect nothing; his own situation is too dismal."

The same tone of excuse is observable throughout Andrew Lumisden's letters. If he was passed over, he would not avow it,—if he was maltreated, he besought his sister to conceal it. By Isabella, too, the good cause was clung to, with true feminine "vivacity" (her own spelling). Writing to her brother in sympathetic ink or milk—

"Pray," says she, "make Robie's compliments and mine to Sir Stewart and Mr. Hamilton, and tell them my daughter sends her honest wishes to them: the poor infant has early shown the spirit of Jacobitism; she had almost suffered martyrdom the tenth of this month, for having two white roses in her cap."

We must add other passages from the later letters of this sprightly woman. Shortly after her marriage, Strange began to travel on the Continent, and from the first idea of proceeding to Rome, with a view of exercising that "excellent hand" of his in miniature painting, was gradually led on to plan that fine series of engravings from the foreign pictures, by which he is so nobly known. Is it scandal to fancy that "Robie's" wandering fancies may have been quickened by the quick spirits and masterful temper of his wife? The couple seem to have loved and trusted each other; but the lady was somewhat of a wrangler, and may have introduced other acids into his working-room than the aquafortis of his art. Here are some suspicious outbreaks of "vivacity" at all events, from her epistles to her brother.—

"My dear little Mary Bruce is as thriving an infant as ever was seen. * * I must not neglect to tell you that I have taken great care of her education: for example, whenever she hears the word Whig mentioned, she grins and makes faces that would frighten a beau, but when I name the Prince, she kisses me and looks at her picture, and greets you well for sending the pretty gum-flower; I intend she shall wear it at the Coronation, such is the value I have for it, as 'tis a mark of your remembering my foster."

"I have taken a very pretty genteel house at the Cross, in that land where Sandy Stevenson has his shop; 'tis the third story: an easy scaled stair; looks very low from the street. I design to make more than the rent, of my five large windows at the Restoration, tho' it [is] fourteen pounds and a crown."

About the year 1751 Andrew Lumisden joined the Stuarts at Rome, at first as Under Secretary to the Chevalier St. George. Some interesting chapters are devoted by Mr. Dennistoun to the colourless and rapid life of the exiled Court, stirred from time to time by little attempts to intrigue and conspire. Andrew Lumisden's letters, though dry and formal, and larded by those moral reflections and generous sentiments which letter-writers of those days seemed to regard as necessary as superscription or seal,—are still interesting and characteristic. In 1756 his father died,—in 1766 the Chevalier St. George. But a mere note of these events must suffice us, since the career of Strange is to be followed. After some indecision, and but little employment, the young engraver joined the Scottish exiles at Rouen in 1748. While in France he worked with Descamps and Le Bas. The latter engraver was the favourite engraver of pictures of the Watteau school (here somewhat unfairly contemned, by the way). But Strange began early to select for himself—picked out "a sparkling little Wouvermanns,"—a Corregiesque Vanloo, and brought out engravings from them, "at the humble price of half-a-crown each." On returning to England, he began to traffic with his brother-in-law in Roman wares, more innocent in quality than Jacobite treasons, and to import Italian engravings. This connexion, and the influence of Andrew Lumisden's elegant and scholastic taste,—the want of much better employment than Hunter's anatomical works could supply—the home presence of one who may have teased as much as she pleased him—may have conspired with his naturally roving disposition to encourage him in the frequent absences from England, which bore such good fruit for the print-shops, however unpalatable they were to Mistress Strange.—She, however, had her own occupations and her own resources during her lord's absence. Her family, which had increased, claimed much attention; and she had to battle with absent husband and far-away brother-in-law in defence of her educational practices, some of which seemed to distant relatives more giddy than rational. Her son, Jamie, had been taught to dance by a Frenchman of the name of Lalauze,—who, on giving what we suppose to have been a dancing-master's ball at one of the theatres, naturally wished one of his best pupils to figure there. Hearing of this, Andrew Lumisden, noting how "the Earl of Massareen (who is now in Italy) has been laughed at by the Italians, as well as by his own countrymen, on account of his theatrical dancing," wrote a protest home to his sister, at the instance of Strange. The Lady was perfectly able and ready to defend herself and her dancing discipline; and indulged in a spirited rejoinder.—

"Jamie knows no more of a theatrical carriage than you do; he moves and dances like a gentleman. His master is as unlike a dancing-master as your Holy Father. Fear me not, I have given neither you, nor any of the world, any reason to suspect my want of what's call'd common sense. I think I have seen thow things you yourself have been blind to, as to the foibles of men or women. I will but do myself the justice when I say I have as few of them as any she that ever wore petticoats. I know I have passion; and plenty of revenge, which is, to be sure, the child of the Devil, and not the brat of a weak brain. My wayward love is the only blot you can stamp [on] my scutcheon: with that, when I see you, I shall vindicate myself, in the deafest side of your head. * * But, to begin again, Robie and you must submit the care of the children to me for this year. I foresee, tho' I might get the blame was things to turn out ill, yet when they flourish I may never be thought of: but I hope to live to tell my own merit in their education myself."

Jamie never learned ought but the Minuat and Lewer, which is a sort of Minuat; he never saw a country-dance; he, nor his sister, has not been within the playhouse door since April last."

A few months later, however, we find a wail as characteristic of the woman as her "fling" had been.—

"I am far from being well, which I do not choose to signify to Robie. Was he to be with me to-morrow, it would do me no service. The immoderate fatigue I have had these many years in bringing in a family into the world, and the anxiety I have had in rearing them, join'd to many sore hearts, has wore out the best constitution in Europ. 'Tis true I have had a severe additional fatigue since Robie went abroad, but I have had one substantial comfort; I have been my own mistress. I have had no chiding stuff, which I believe I sometimes brought on myself, but when I did, it was in defence of some saving truth. My frugality has often been dear to me, but yet I'm of opinion had my disposition been otherwise, he would have more justly found fault. * * Robie is of a sweet disposition, but has not so much fore-thought, nor so discerning a judgment as I have. When I'm gone, he will soon be flatter'd out of himself. * * Peace and quiet is my wish, but I despair of ever attaining it. Since ever my lord left me, my application to business, my constant desire of doing good and being obliging, has fatigued me beyond measure. The thing that has late most hurt me is speaking. I exert with such spirit and vivacity that, when I'm left alone, after having entertained my visitors, I feel such a violent pain in my breast that I am useless for some time. I have had a dreadful cough this spring, which still sticks to me. To sum up all, when I sit down alone, and enters into a train of thoughts, I grow low-spirited."

—Mrs. Strange is not the first gentlewoman of "vivacity" who has scolded in substantiation of her love for "peace and quiet." Her attachment to her husband appears to have been as real as her temper was quick and her style quaint.

Meanwhile the course of Robert Strange's travels across the Alps did not run smooth. He conceived that in Italy he was followed by home persecution, on the score of his politics, which took the form of denied access to the pictures which he desired to examine, copy, and engrave,—the thorn in his side being Mr. Dalton.—

"This gentleman, originally a coach painter, had studied in Rome, and been made librarian to the Prince of Wales, by whom, on his accession, he was sent to Italy, in order to purchase works of art for his Majesty."

In the hindrances which Dalton threw into Strange's way there may have been Hanoverian vengeance and suspicion:—no less than a pure mercantile desire to play into the hands of Bartolozzi, the engraver. It may be remarked, that amateur conspirators have often no objection to assume the importance of martyrdom on the strength of their conspiracies, long after such deeds are wholly forgotten by those against whom they were directed. Whether this was Strange's case or not, the Jacobite engraver outwitted

the wee bit German lairdie,

and managed to secure the Aldobrandi 'Sleeping Cupid,' which had been offered to the King of England for 2,000 zecchins, at little more than a fourth of that price, for Sir Laurence Dundas contrived, also, to engrave the picture, and by means of the Cardinals York and Colonna di Sciarra to break down the obstacles raised by English court disfavour. On his return to England in 1765, Strange conceived that the prejudice against him had not subsided. How he brought himself to memorialize Lord Bute in a submissive strain is not told,—neither are we informed how far, if at all, Mrs. Strange was privy to the submission. Finding that one objection after another was raised as to his admission into the "Society of Artists," just incorporated by royal

charter, he prepared to withdraw to Paris, there to exercise the profession in which he had become a celebrity. The moral of such grievances may seem clear to those who fancy that a man is bound to abide the consequences of his opinions and acts, whether they yield bitter apples or fruit of Hesperus. Further, in considering the facts and bearings of Strange's difficulties with respect to the Academy, it must not be altogether forgotten what were his times and what his connexions. Those were days of spies and whisperers,—when men's wives carried on plots and conveyed intelligence "underneath their hoops" (as Gray sings) to powers intent on revolution. There is not much cause for wonder if the governing powers (who have always been more or less interfering ones also), acting in the spirit of their epoch and of their order, were not large-minded enough to separate the man of Art from the woman of Intrigue,—and did not embrace and welcome on the threshold of a new institution one who might at home be winking at restless attempts to upset their rule and annul their governance.

In spite, however, of checks and chills like these, the remarkable powers of the Scottish engraver began to make themselves known,—and his success as a picture-dealer had so far contributed to better his fortunes that we find him, "in the summer of 1767, planning a more fixed residence with them in Castle Street, Leicester Fields, so soon as he should meet in Paris with a qualified assistant, willing to accompany him to England." That Art was a kinder master than Politics he had good opportunity of learning, in observing how the life of his brother-in-law, Andrew Lumisden, flowed on. In 1766, the death of the Prince Charles Edward's father invested that worthless and heartless person with the headship of the Stuart family, and with the allegiance of the few followers who still hoped against hope. Andrew Lumisden announced his loss to the Chevalier, hurried from Rome to escort his new King thither, and entered into a second term of secretaryship in his service. The record of Lumisden's new occupations is interesting, though as they were entered on with misgiving, none can be surprised to read how they were closed.—

"On the 14th of December Mr. Lumisden announced to Lords Dumbar and Alford, with others of his habitual correspondents, 'The King was pleased last Thursday to dismiss Sir John Hay, Mr. Urquhart, and me from his service. This melancholy event must give you, as it gives us all, the utmost affliction. But although I am obliged to inform you of it, I beg your lordship will forgive me not entering into any detail of the unlucky circumstances which have given occasion to it. What I think only permitted to me is to say in general, that his Royal Highness the Duke has been pleased publicly to approve of our conduct, and to thank us for our behaviour in the most gracious manner.' The circumstances thus veiled, from motives of delicacy, are understood to have redounded little to his master's credit, and no doubt arose from some outbreak of temper by the Prince, while excited by wine, in which he had long indulged to excess, and possibly by the remonstrances of his devoted adherents. In one letter, the secretary refers, as if hypothetically, to what a sudden 'gust of passion may have led him to do.'"

"*The King was pleased!*"—What a commentary is here on the word "loyalty"! One more emphatic still is to be found in the letter where his sister acknowledges the tidings of this new stroke of adversity.—

"O! entreat the person [Cardinal York] whom I never saw, but even for his father and family's sake I ever lov'd, to, if possible, patch up things so as, in the eye of the world, you may bid a respectful farewell. I could walk barefooted to kneel for this favor."

Some particulars of the scene, the perform-

ance of which the Lady would have gone barefooted to insure, are to be found in a letter written in 1771, from Lumisden to a son of the titular Lord Nairne.—

"Were I to begin the farce of life again, I would do the same. The world perhaps may think that I have partaken of the Duke's generosity, but I can in confidence tell you that I never received a shilling from him; no, not even at a time when a little money might have been properly given, and surely it would not have been inconvenient for me to have received it. 'Tis true, the day before I left Rome, when I took leave of his R. H. at the Conclave, he gave me a snuff-box which belonged to the late King, which he was graciously pleased to call a small token of his grateful remembrance of my long and faithful services to the Royal family. As I was not in absolute want, such a present I confess was more agreeable to me than a trifle of money he might perhaps have given me."

Set free from his melancholy thralldom, Lumisden moved homeward so far as Paris; and we shortly after find his friends doing their utmost "to make his peace,"—otherwise to procure him liberty to re-enter England without being liable to a prosecution for high treason. After a while these efforts were successful:—though the following fragments, from Mrs. Strange's letter on the occasion, would indicate that pardon was neither applied for, nor accepted, without a reserve.—

"London, May 17, 1773.

"My dear Andrew,— * * * It is very flattering to us to be took notice of by great folks at a time when *Virtue* is so little in fashion, for indeed we have nothing else to recommend us to them. Your sweet obligon disposition will soon convince them that they have made a proper, if not a valuable choice. * * * I have not yet heard of your letter of liberty. Col. Masterton says it is lying in Lord North's office, and he is sure you will be safe to come here. But I say we must have better security than that. Whatever I learn you shall know without loss of time. * * * When will you write me of a pregnancy: on that I depend; it's my last stake! Thank God, we are all well, only now and then I take low spirits. As my good friend Lady Clackmanan says, 'O! my dear, send me something to raise my spirits in these bad times.' Remember me to the good Principle [Gordon], and all our honest friends. I ever am, my dear Andrew, your afft. sister,

"ISABELLA STRANGE.

"'Honest friends,' in Mrs. Strange's vocabulary, were of course true Jacobites, and the 'pregnancy' for which she longed was that of Charles Edward's consort."

Andrew Lumisden's "full pardon" was granted in the year 1778.—

"The immediate cause of this tardy favour is said to have been the zeal and judgment with which Lumisden executed a commission entrusted to him, through Lord Hillsborough, to purchase for George the Third some rare books at a great sale in Paris."

Some six years later, Strange made up his quarrel with the Court of St. James's by engraving West's picture of the Apotheosis of the Princes Octavius and Alfred. His Lady's letter to her son Robert pleasantly narrates the event and the sequel.—

"Jan. 13, 1787.

"Your dear father has been employed in engraving a most beautiful picture painted by Mr. West, which he liked so much that he was desirous to make a print from it. The picture was painted for his Majesty: it represented two of the Royal children who died. The composition is an angel in the clouds; the first child sitting by the angel, and the other, a most sweet youth, looking up: there are two cherubs in the top, and a view of Windsor at the bottom. This print was lately finished, and Friday the 5th curr. was appointed for your father's presenting some proofs of it to his Majesty. He went with them to the Queen's house, and had a most gracious reception. His Majesty was very much pleased. After saying many most flattering things, [he] said, 'Mr. Strange, I have another favor to ask of you.' Your father was attentive, and his Majesty, 'It is that you will

attend the levee on Wednesday or Friday, that I may confer on you the honour of knighthood.' His Majesty left the room, but coming quickly back, said, 'I'm going immediately to St. James's, if you'll follow me I will do it now; the sooner the better:' so calling one of the pages, gave him orders to conduct Mr. Strange to St. James's, where, kneeling down, he rose up SIR ROBERT STRANGE. This honour to our family I hope is a very good omen. I hope it will be a spur to our children, and show them to what virtue and industry may bring them. My dear Bob, I hope you will equally share in our virtues as you do our honours; honours and virtue ought never to part. Few families have ever had a more sure or creditable foundation than ours: may laurels flourish on all your heads!"

We cannot do better than drop the curtain to such a flourish of trumpets as this; though an abundance of topics in these interesting volumes remains almost untouched. We have merely glanced incidentally at the claims and career of Sir Robert Strange as an artist,—being seduced by the traits of more universal interest which mark this piece of family history. Five years later Sir Robert Strange died. His Lady survived him till the year 1806—a Jacobite in tongue to the last, says Mr. Dennistoun.—

"Dr. Munro remembers the contemptuous energy with which, subsequent to this period, she, with a licence of language then indulged by Scottish gentlewomen in moments of excitement, reproved some one who, in her presence, applied to Charles Edward the term in which he was usually designated by all except his 'friends;'—'*Pretender*, and be d—d to ye!"

That the Lady's temper, too, did not sweeten with time, though her spelling grew worse, the following scrap from her epistles to her husband humorously indicate.—

"We are again in want of an upper maid: the one we had said the place did not suite her, so in three weeks she trotted off; in four days after she came she gave warning. Curse them all!"

My Lady's letters are surely as precious of their homelier pattern and stuff as the best bits of Sévigné ware; and characteristically bear out the impression of the Stranges which we derived from Madame D'Arblay's 'Memoirs of Dr. Burney,' and her own journals. The great engraver did not stand in need of praise and appreciation from posterity. His works speak for him; but it was reserved for Mr. Dennistoun to draw out and set before us the partner of his fortunes, as a clearly-marked figure in days when society was full of contrasts and characters—when Wa'pole could write that "my Lady Townshend would not dine anywhere for fear of meeting with a rebel pye"; and when the Thrales and Montagues could amuse themselves with watching the odd ways in which Boswell idolized their idol Johnson; and in trying (perhaps) to worm out from the author of 'Rasselas,' supposing him placable after a huge dinner,—what *he*, too, had been about in the momentous year 1745.

THE WAR.

ALL courtesy is due to a Lady, and we shall therefore endeavour to treat Mrs. Tobin's *Shadows of the East* (Longman & Co.) with more consideration than we should be disposed to do if it were written by one of the sterner sex. 'Shadows of the East' is a very pretty book,—a very pretty book. The illustrations, though not spirited or characteristic, are sometimes pleasing and always inoffensive. The printing, paper, and the general getting-up of the book are all excellent, and do credit to the good taste and business-like qualities of the publishers. We are sorry to say that our praise must almost stop here, for we have given it readily, and would still more willingly go on in the same agreeable strain.

It is a common observation, that the East is

written out; but this is by no means the case. The obliging reader, able to pass the severest examination in literary advertisements, might number the good books recently written about the East upon the fingers of one hand, and yet have some to spare. It is surprising to think how little we have that is really sound and useful in our knowledge of the East. Our complaint is not that there are too many books, but too few. 'The Crescent and the Cross' and 'Eöthen,' perhaps the most popular modern books, have given us very little but the personal impressions of the writers. Mr. Lane has, indeed, done better, but his valuable labours have been confined to Egypt.

Thus it happened that at the outbreak of the present war we knew next to nothing about the vast empire of the Turks. We were curiously ignorant of its strength and its weakness. Asia Minor, except the immediate neighbourhood of Smyrna and the Seven Churches, was as unknown to us as Mongolia, and Roumelia was almost as much a *terra incognita* to us as Kochan or the territory of the Oosbeks.

We were absolutely unacquainted with the nature of the climate, the produce, and the resources of Turkey. We knew neither the state of their roads nor the perils of the seas. We had no reliable information respecting the social state or the local customs and government.

Hence the sufferings of our armies at Gallipoli and Varna. Hence the fearful wrecks in the Black Sea, which might have been predicted with positive certainty by any observant inhabitant of the coasts which witnessed the destruction of the Prince and the loss of the winter clothing of our troops. Hence the disasters which have pressed so heavily on our legions before Sebastopol.

Our curse has been our ignorance. Not that we possessed too many books about the East, but too few, or none which contained the information, accessible as it was, which might have saved us from national humiliation and disgrace:—from the needless shedding of our best blood, and from the idle waste of our treasure.

This state of things is, however, easily explained. It was scarcely possible to travel with safety or advantage in these countries unless clothed with high official rank; and then the experience of the traveller was left to moulder amid the records of the Foreign Office, after having merely become part of the opposition capital of the Minister who resigned office last week, and the Under-Secretary who was superannuated yesterday. The few adventurous spirits who, like Sir Laurence Jones, were rash enough to underrate the difficulties in the way of enterprise in this direction, fell victims to their necessarily imperfect knowledge of the state of these countries, and perished by the felon shot of some Zebeck or Albanian bandit.

Even our Consuls, who should have possessed, among their archives or the living stores of their own experience, all the information which we so imperatively required, failed us most notably. They failed us because they had not been chosen for their attainments and knowledge of Eastern affairs, or from among men who had given proofs in other careers of the intellect and observation necessary to fit them for their posts; but from among the wild sons of noblemen's stewards, or tradesmen who had mismanaged their affairs and had at last succeeded in interesting powerful and compassionate patrons in their behalf. Our consular service, as well as our diplomatic service, in the East and elsewhere, was a mere refuge for incapacity, and the result might have been foreseen.

It is due to Mrs. Tobin to state that she frankly admits that "not the slightest attempt

at erudition or political speculation will be found in (her) pages; on the contrary," she says "they chiefly dwell upon the trifling incidents of a tourist's life in the East, &c." Now of these subjects we have had, assuredly, rather a surfeit. We see a richly bound and illustrated volume, which we gather from the preface relates to the "Biblical Eastern Countries." It is dedicated to a Bishop of high reputation as a scholar; one of the first publishing firms in London give the sanction and credit of their name to it. On the title-page is a solemn quotation from the prophet Isaiah. We proceed to turn over the leaves of a book thus introduced to us, with the respect and reverence it appears to demand; and it causes an unpleasant revulsion of feeling to read,—

"On Tuesday, the 19th of September, 1853, we left London for Southampton, our party consisted of four. The weather was lovely, and we were glad to escape from the crowded and busy streets of the metropolis. About half way the two vacant seats in the railway carriage were amply filled by a good-humoured Jersey couple, whose dimensions and jollity would not have been lost on Dickens or Cruikshank. In fact, the lady fairly stuck fast in the doorway for a moment, and the gentleman carried a bundle nearly as large as himself."

We have not the smallest doubt that Mrs. Tobin was a merry and agreeable travelling companion; that the "party of four" were much amused by her good-humoured sense of the ridiculous, even where it could hardly be fairly said to exist: but we do not see why she should have recorded these fugitive impressions in an expensive and carefully got-up book relating to the "Biblical Eastern Countries." "A dish," says a culinary critic, "should be either fish or fowl,"—and this is neither.

Mrs. Tobin, however, does not always write in the same style. She is in raptures with the *Memnonium* at Thebes. "But what pen can describe the Memnonium!" (cries Mrs. Tobin, with a burst of pretty enthusiasm)—"its massive architecture—its gigantic statues!—its highly-finished sculptures!"—So, with three notes of admiration, and as many dashes, Mrs. Tobin very gracefully gets out of her difficulty, and declines to go into further details except to inform us that there are "numbers of sundried bricks . . . scattered about," which "may have been the work of the children of Israel while in bondage in Egypt." A most charming and feminine mode of settling the matter, and one which by no means exhausts the mind of the reader with dry and wearisome arguments.

Mrs. Tobin has also a nice lady-like appreciation of the value of *italics*. While still at Thebes, she writes with her usual vivacity:—"We returned briskly homewards; with other steeds than our well-trained donkeys, and less-experienced leaders than our Arab guides, our path might have been deemed somewhat *perilous*," &c. 'The Map of Route' obligingly annexed by our authoress is, we regret, entirely useless for any practical purpose. We learn by it, indeed, and with the liveliest satisfaction, that Mrs. Tobin was at Smyrna "April 26, 54," but we cannot unhappily pin our faith to what appears to be Mrs. Tobin's opinion, that she passed no place of importance on the European coast between Athens and Constantinople, excepting always "*Solanika*,"—a place which we do not remember to have seen marked in any map but her own. On a cursory view, also, it appears that the island of Mytilene was in the interior of Asia Minor, and that the Bosphorus formed a considerable portion of the Black Sea; but we are glad to be able to add, that some study and attention set us right in these respects.

We have taken only two or three pages of

the book, but it is all in the same strain; and there is nothing to be gathered from it, save that Mrs. Tobin saw "a *boxful of archbishops*" at Mount Sinai; and that, at Jerusalem, "Miss Cubley, one of our fellow-passengers in the Ripon, paid us a visit during the day and talked about the Jews." We confess we should like to have learnt the nature and extent of Miss Cubley's observations, in the hope that something might have been got out of them; but Mrs. Tobin leaves us provokingly in the dark, and disdains to have recourse to the experiences of her fellow-traveller in any way.

Calisthenics.—[*Die Weibliche Turnkunst*]. By M. Kloss. Leipzig, Weber; London, Nutt.

Herr M. Kloss, Director of the Royal Saxon Gymnastic Institution at Dresden, has determined that it shall not be his fault if his art is not sufficiently known. The whole theory and practice of those bodily exercises to which schoolmistresses give the name of "Calisthenics" (to distinguish them from the male "Gymnastics") are here set forth with a perfect luxury of illustration. The different sorts of movements are scientifically classed;—the feats of fair athletes form the subjects of striking woodcuts. When numbers are to move in a certain order, the figure is shown by a diagram, as in certain erudite works on the mysteries of the country dance;—and, in some cases, appropriate tunes are given, that time and measure may be properly observed. Had Herr Kloss lived at Sparta, in the good old days, he would, questionless, have been "Master of the Revels" at the Court of some Archidamus or Leonidas.

However, though there are no Spartans now,—at any rate, in the antique style,—modern gymnastics are much more serious and imposing than the uninitiated may imagine. Gymnastics not only have their tumblings and their climbings, but they have their literature and their history; so that it is possible to be theoretically learned in gymnastics without being able to jump over so much as an ottoman. As every history has its hero, so is it with the history of gymnastics,—where the hero is Friedrich Ludwig Jahn, born in 1778, deceased in 1852, who not only Germanized the art, but devised for it a German name. Had it not been for F. L. Jahn that word "*Turnkunst*," which looks so stately on the title-page of Herr Kloss's book, would never have existed.

It was during the time of the French rule in Germany that the thought occurred to Jahn,—then a schoolmaster at Berlin,—of reviving the old Teutonic strength by a systematic course of bodily exercise. In 1810, he stated his views in print; and, in the following year, he opened his first "*Turnplatz*," or gymnastic ground, which, at once, attracted about 1,000 young men, and set a fashion which soon spread all over Germany. Personally, Jahn was the very man to shine as the founder of an athletic school. With his tall, powerful figure,—his strongly-marked features,—his white, flowing beard,—he stood (says Herr Kloss) as the veritable representation of the old German nature. During the War of Liberation the name of "Father Jahn," as he is affectionately called, stood high on the list of patriots, for most of his pupils entered that famous Lützow corps of which Theodor Körner sang so nobly. When the war was over, the old "*Turnplatz*" was re-opened on the old spot—the Hasenhaide. Every Wednesday and Saturday the exercises took place, lasting from 3 o'clock in the afternoon till 7 o'clock in the evening; and then all the gymnasts returned singing into the city. However, at the very time when "Father Jahn" seemed most prosperous, his

fall was at hand. It was said, that the young gymnasts thought of other revolutions than those which were ostensibly taught,—and after the murder of Kotzebue and the affair of the “*Wartburgfest*,” Jahn himself was arrested, for supposed demagogic propensities, and the gymnastic schools were shut up all over Germany. Although Jahn was afterwards liberated, his gymnastic life ended with his incarceration.

However, though Jahn is the hero of German gymnastics, flourishing in a heroic age, he is not the scientific representative of his art. His zeal seems to have been greater than his knowledge; and though he served very well to give an impulse in his own time, reflective men began to perceive that his system was not capable of universal application. The intellectual chief of gymnastics is Adolph Spiess, born in 1810, who found out that too much attention had been bestowed on those positions of the body which are produced by the apparatus of gymnastic schools, while the ordinary acts of standing, walking, running, &c. were comparatively disregarded. It is on the cultivation of the “free exercises” (*Freiübungen*), as they are called, that the fame of Spiess is chiefly based. Through Spiess, also, did gymnasts cease to be solitary—each confined to the development of his own excellence. He formed his pupils into organized troops; whereby, as Herr Kloss sagely observes, the educating power of gymnastic exercise was accompanied by the awakening of “the ideal consciousness of a united effort.”

That nothing may be wanting to give importance to gymnastics, a schism has sprung up among the professors. During the dark ages of German athletic science, when “Father Jahn” and his arena were locked up, gymnastics were slowly, but steadily, progressing in Sweden, under the auspices of a Northern genius, yclept Henrik Ling. Now, the Swedish gymnastics, finding their way into Germany, came into collision with the native system of Spiess; and, strange to say, in the contest between the Scandinavian and the Teuton, the latter proved the more practical man of the two.—Those of our readers who wish to look into the merits of the case, we refer to the ample volume of Herr Schloss; but, in the meanwhile, let us rejoice that the Germans turn out to be practical in something.

Mountains and Molehills; or, Recollections of a Burnt Journal. By Frank Marryat. With Illustrations by the Author. Longman & Co.

THE besetting sin of writing travellers is a tendency to represent what they see, not as they really see it, but according to their previous notions of how it ought to look. They prefer themselves to all the countries under the sun, and are rapturous or cynical in proportion as they admire an enthusiast's or a cynic's reputation. It is a little too bad that a man should judge of the Nile as he would of a looking-glass,—by its facility in representing his own countenance. Unfortunately, however, travellers do judge so. Mr. Wagg goes to Athens pre-determined to compare it to Wapping.—Mr. Mooney to Stamboul with rose-colour in his portmanteau.—What is very refreshing in Mr. Marryat is, that he does not prefer himself to the places that he visits. He does not appear to have succeeded in his main Californian projects, but no trace of that fact is to be found in his Californian descriptions. He moves along light of heart and light of hand, sketching what he sees and feels with shrewdness and good humour. Like his father's “*Jacob Faithful*,” he “takes it easy.” Hence, an honest, healthy

glow of good-nature breathes from his pages; and of this quality the natural expression is a kindred style, sagacious and genial. A pleasant book is the result; and though Mr. Marryat appears to less advantage than he possibly would had the “devouring element” spared his journal, yet “even in its ashes” lives more fire than belongs to many a publication making much more pretension.

Mr. Marryat arrived at San Francisco on the occasion of a fire on a greater scale than his own private misfortune. As he entered the bay, dense masses of smoke were rolling to leeward. The “great June fire of 1850” had desolated the town. Here, then, our traveller found a strange city in a crisis, where the peculiarities of its popularities might be expected to be strongly developed. We cannot have a better opportunity of learning his impressions of San Francisco.—

“Everybody seems in good humour, and there is no reason why the stranger, who has lost nothing by the calamity, should allow himself to be plunged into melancholy reflections! Planks and lumber are already being carted in all directions, and so soon as the embers cool, the work of rebuilding will commence. I found it amusing next day to walk over the ground and observe the effects of the intense heat on the articles which were strewn around. Gun-barrels were twisted and knotted like snakes; there were tons of nails welded together by the heat, standing in the shape of the kegs which had contained them; small lakes of molten glass of all the colours of the rainbow; tools of all descriptions, from which the wood-work had disappeared, and pitch-pots filled with melted lead and glass. Here was an iron house that had collapsed with the heat, and an iron fire-proof safe that had burst under the same influence; spoons, knives, forks, and crockery were melted up together in heaps; crucibles even had cracked; preserved meats had been unable to stand this second cooking, and had exploded in every direction. The loss was very great by this fire, as the houses destroyed had been for the most part filled with merchandise; but there was little time wasted in lamentation, the energy of the people showed itself at once in action, and in forty-eight hours after the fire the whole district resounded to the din of busy workmen. On the ‘lot’ where I had observed the remains of gun-barrels and nails, stands its late proprietor, Mr. Jones, who is giving directions to a master carpenter, or ‘boss,’ for the rebuilding of a new store, the materials for which are already on the spot. The carpenter promises to get everything ‘fixed right off,’ and have the store ready in two days. At this juncture passes Mr. Smith, also in company with a cargo of building materials; he was the owner of the iron house; he says to Jones interrogatively,—‘Burnt out?’—Jones: ‘Yes, and burst up.’—Smith: ‘Flat?’—Jones: ‘Flat as a d—d pancake!’—Smith: ‘It’s a great country.’—Jones: ‘It’s nothing shorter.’—And in a couple of days both Smith and Jones are on their legs again, and with a little help from their friends live to grow rich perhaps, and build brick buildings that withstand the flames.”

A people who take their calamities with so much good-nature are probably not less cheerful in their easier hours. So it would appear from the following sketch.—

“The stranger in San Francisco at this time is at once impressed with the feverish state of excitement that pervades the whole population; there is no attention paid to dress, and everyone is hurried and incoherent in manner. Clubs, reading-rooms, and the society of women are unknown; and from the harassing duties of the day's business, there is nothing to turn to for recreation but the drinking-saloons and gambling-houses, and here nightly all the population meet. Where the commerce engaged in fluctuates with every hour, and profit and loss are not matters of calculation, but chance—where all have hung their fortunes on a die, and few are of that class who bring strong principles to bear upon conduct that society does not condemn—the gambling-tables are well supported, and the merchant and his clerk, and perhaps his cook, jostle in the crowd to-

gether, and stake their ounces at the same table. Drinking is carried on to an incredible extent here; not that there is much drunkenness, but a vast quantity of liquor is daily consumed. From the time the habitual drinker in San Francisco takes his morning gin-cocktail to stimulate an appetite for breakfast, he supplies himself at intervals throughout the day with an indefinite number of racy little spirituous compounds that have the effect of keeping him always more or less primed. And where saloons line the streets, and you cannot meet a friend, or make a new acquaintance, or strike a bargain, without an invitation to drink, which amounts to a command; and when the days are hot, and you see men issuing from the saloons licking their lips after their iced mint juleps; and where Brown, who has a party with him, meets you as he enters the saloon, and says, ‘Join us!’ and where it is the fashion to accept such invitations, and rude to refuse them;—what can a thirsty man do? The better description of drinking-bars are fitted up with great taste, and at enormous expense. Order and quiet are preserved within them during the day; they are generally supplied with periodicals and newspapers, and business assignments are made and held in them at all hours. Everybody in the place is generous and lavish of money; and perhaps one reason for so many drinks being consumed is in the fact that there is ever some liberal soul who is not content until he has ranged some twenty of his acquaintances at the bar, and when each one is supplied with a ‘drink,’ he says, ‘My respects, gentlemen!’ and the twenty heads being simultaneously thrown back, down go ‘straight brandies,’ ‘Queen Charlottes,’ ‘stone-fences,’ ‘Champagne-cocktails,’ and ‘sulky sangarees,’ whilst the liberal entertainer discharges the score, and each one hurries off to his business. There is no one in such a hurry as a Californian, but he has always time to take a drink. There is generally a sprinkling of idlers hanging about these saloons, waiting for any chance that may turn up to their benefit, and particularly that of being included in the general invitation of ‘drinks for the crowd,’ which is from time to time extended by some elated gentleman during the day. These hangers-on are called ‘loafers.’ There is a story told of an old Judge in the southern part of the country, who was an habitual frequenter of the bar-room, and who with his rich mellow voice would exclaim, ‘Come, let’s all take a drink!’ Gladly the loafers would surround the bar, and each would call for his favourite beverage; but when all was finished, the Judge would observe, ‘*And now let’s all pay for it!*’ which the loafers would sorrowfully do, and then retire wiser men.”

The following is a curious anecdote, and when the history of gold-digging comes to be written will deserve a place in it.—

“One of the miners died, and having been much respected, it was determined to give him a regular funeral. A digger in the vicinity, who, report said, had once been a powerful preacher in the United States, was called upon to officiate; and after ‘drinks all round,’ the party proceeded, with becoming gravity, to the grave, which had been dug at a distance of a hundred yards from the camp. When this spot was reached, the officiating minister commenced with an extempore prayer, during which all knelt round the grave. So far was well; but the prayer was unnecessarily long, and at last some of those who knelt, began, in an abstracted way, to finger the loose earth that had been thrown up from the grave. It was thick with gold; and an excitement was immediately apparent in the kneeling crowd. Upon this, the preacher stopped, and inquiringly said, ‘Boys, what’s that? Gold!’ he continued, ‘and the richest kind of diggings,—the congregation are dismissed!’ The poor miner was taken from his auriferous grave and was buried elsewhere, whilst the funeral party, with the parson at their head, lost no time in prospecting the new digging.”

There is a judicious blending of information and observation all through the book, with the livelier element which gives gaiety to the narrative,—characteristics more than sufficient to entitle its author to our commendatory good word.

Curiosities of London: exhibiting the most Rare and Remarkable Objects of Interest in the Metropolis; with nearly Fifty Years' Personal Recollections. By John Timbs, F.S.A. Bogue.

'CURIOSITIES of London!' This ought to be the most entertaining book that was ever written. Its theme is inexhaustible. Considered separately, there is scarcely a spot or a house that has not its "curiosity";—taken in the aggregate, how wonderful the vastness, how full of "curiosity" the multitudinous combinations of contrivances which enable the enormous population to transact the business of the world, and at the same time to live lives replete with convenience and luxury! 'Curiosities of London!' Where are we to begin, or where to end? Everything we hear, see, or read of, is part of a system,—a unit in a total,—every smallest atom of which, as well as the enormous whole, is brimfull of "curiosity." Men may indeed travel from Hyde Park Corner to Mile End with eyes sealed or sated by familiarity, and thoughts inactive or fixed upon the necessities of their daily life; they may return, and pronounce all "barren." Having eyes, they have not seen,—having hearts, they have not understood. But send out with them a reflective guide, one who can instruct them in the past history and the present real character of the objects with which they will come in contact,—one who can inspire them with a manly and rational delight in the acquisition of knowledge, and gratify that feeling by making them acquainted with some of the wonders connected with this great heart of our social system:—how different then does the scene become! Every step of the long way is instinct with instruction. Marvels rise above marvels, until the mind is driven back upon itself, fatigued and wearied with inexhaustible amazement. Mr. Timbs aspires to be some such guide; and enters upon the task after five-and-twenty years of preparation, and fifty years of personal observation. We cannot say that he comes up to our mark. His notion of the "curiosities of London" is not quite the same as ours. We would expand the meaning of the word "curiosity," so as to satisfy the moralist and the philosopher; he contracts it until it scarcely goes beyond the idea of a mere antiquary. But let us take him as he is. Such preparation cannot have failed to bring together a great many curious facts,—and we will be thankful for what we get.

His arrangement is partly alphabetical and partly according to subjects. He treats of Battersea, Bayswater, Kensington, Chelsea, Hampstead—no, not Hampstead, we do not find that he mentions that place, nor Highgate, nor Greenwich,—although he includes the Isle of Dogs and Blackwall. On further consideration, we do not see what are the exact limits of his "London," nor what his grounds for including any place within his pale. This should have been explained. But the places which he does include—for example, Islington, Primrose Hill, Piccadilly, Westminster, and so forth—are all arranged alphabetically; whilst things respecting which he descants are thrown together into an alphabetical classification according to their generic character. Prisons, for example, palaces, bridges, churches, clubs, schools (under the title of "Collegiate and other Public Schools"), churches, parks, theatres, and so forth. We wish he had carried this classification further. It would have enabled him to give his book more of the essay character, and less that of the dictionary,—which would have been an improvement, unless he had strictly confined himself to the latter. That, with a full

Index of subjects and persons, would probably have been the easiest classification of all. On his present plan, the article on "Churches and Chapels," for example, is, of course, enormously puzzling and cumbersome. Preferring, however, a partial classification by subjects, he should have carried it out completely; as, for example, "The Monument" should, on his principle, have been placed under "Columns," and "Kensington Gardens" under "Gardens." Irregularities of this kind impede the use of the book and occasion repetitions. They are, therefore, proper subjects of observation.

But without dwelling upon irregularities of this kind, we will allow Mr. Timbs to speak for himself by presenting our readers with a few of the "curiosities" which his long inquiries have enabled him to gather.

The following is his account of the ancient nightly ceremony of Locking-up the Tower. It is singular that such a curious old combination of the military and the civil,—and, equally so, of the sensible and the absurd, should have continued down to our time.—

"*Locking-up the Tower* is an ancient, curious, and stately ceremony. A few minutes before the clock strikes the hour of eleven—on Tuesdays and Fridays, twelve—the Head Warder (Yeoman Porter), clothed in a long red cloak, bearing a huge bunch of keys, and attended by a brother warder carrying a lantern, appears in front of the main guard-house, and loudly calls out, 'Escort keys!' The sergeant of the guard, with five or six men, then turns out and follows him to the 'Spur,' or outer gate; each sentry challenging as they pass his post, 'Who goes there?'—'Keys.' The gates being carefully locked and barred, the procession returns, the sentries exacting the same explanation, and receiving the same answer as before. Arrived once more in front of the main guard-house, the sentry there gives a loud stamp with his foot, and asks, 'Who goes there?'—'Keys.'—'Whose keys?'—'Queen Victoria's keys.'—Advance Queen Victoria's keys, and all's well.—The Yeoman Porter then exclaims, 'God bless Queen Victoria!' The main guard respond, 'Amen.' The officer on duty gives the word, 'Present arms!' the firelocks rattle; the officer kisses the hilt of his sword; the escort fall in among their companions; and the Yeoman Porter marches across the parade alone to deposit the keys in the Lieutenant's Lodgings. The ceremony over, not only is all egress and ingress totally precluded, but even within the walls no one can stir without being furnished with the countersign."

Amongst notes upon old fashions in dress, we have the following,—which, as tending to impress upon the mind accurate notions of the personal appearance of celebrated people, is worth preserving:—

"Wilkes wore a flap-waistcoat of scarlet and gold; and Murphy, the dramatist, a good deal later, a suit of the like fashion, and a large cocked hat. The fashion of scarlet coat, flap-waistcoat, and frilled sleeves, survived into this century. The last man in London who is believed to have worn this costume was a quack-doctor, who lived in a corner-house of Salisbury-square, and who might be seen any day pacing the pavement in front of his establishment, until he took to his bed and died of extreme old age. Mr. Pitt usually wore a blue coat, buckskin breeches, and boots, round hat, with powder and pig-tail. Mr. Fox had been a beau in his youth, but lived to be Quaker-like as to dress, with plain coloured clothes, a broad round hat, and white stockings."

The City Companies offer many subjects for remark, not always, as we think, sufficiently taken advantage of by Mr. Timbs. The following, in reference to the Needlemakers and the article of their manufacture, may be worthy of note:—

"The Needlemakers' is the only City Company not incorporated by a crowned head, they having received their Charter from Cromwell in 1656. They have no Hall, but these characteristic arms: *vert, three needles in fess argent, each dually crowned or: crest, a Moor's head, couped at the shoulders in pro-*

file proper, wreathed about the temples argent, and in his ear a pearl (the crest originally was an apple-tree and serpent); supporters, a man and woman (termed Adam and Eve), wreathed round the waist with leaves, all proper, in the woman's dexter hand a needle argent; motto, 'They sewed fig-leaves together and made themselves aprons.' Stow tells us that needles were sold in Cheapside in the reign of Queen Mary, and were then made by a Spanish negro, by a secret art; they are also said to have been made in London by a native of India, in 1545; and by one Elias Krause, a German, in 1566. Needles were first made, or rather finished, in Whitechapel, by one Mackenzie; hence the cry of 'Whitechapel needles, twenty-five for a penny.' The trade then removed to the borders of Warwickshire and Worcestershire; but Whitechapel labels are still used, and the fame of 'Whitechapel sharps' has reached the interior of Africa."

From the City to the West End is an easy leap in a book arranged dictionary-wise. Take Mr. Timbs's account of the doings in old time in the now genteel May Fair.—

"The district north of Piccadilly, and between Park Lane and Berkeley Square, was originally Brookfield; but received its present name from a fair being held there by grant of James II., after the suppression of St. James's Fair, to commence on May 1, and continue 15 days, where multitudes of the booths were 'not for trade and merchandize, but for musick, shows, drinking, gaming, raffling, lotteries, stage-plays, and drolls.' It was frequented 'by all the nobility in town,' but was suppressed in 1708, when the downfall of May Fair quite sunk the price of Pinkethman's tame elephant, and sent his ingenious company of strollers to Greenwich. (See *Tatler*, Nos. 4 and 20.) The fair was, however, revived; and John Carter describes its 'booths for jugglers; prize-fighters, both at cudgels and back-sword; boxing-matches, and wild beasts. The sports not under cover were mountebanks, fire-eaters, ass-racing, sausage-tables, dice ditto, up-and-downs, merry-go-rounds, bull-baiting, grinning for a hat, running for a shift, hasty-pudding-eaters, eel-divers,' &c. The site of the Fair is now occupied by Hertford Street, Curzon Street, Shepherd's Market, &c.; but the old wooden public-house, 'The Dog and Duck,' with its willow-shaded pond for duck-hunting, is remembered: at fair-time, the second story of the market-house was let for the playhouse. The Fair was not finally abolished until late in the reign of George III."

Once again, see what melancholy memories abound in all parts of London. Writing of Gardener's Lane, Westminster, which runs from Duke Street,—in the seventeenth century a very fashionable part of the town,—to King Street, where Spenser died "for lack of bread," Mr. Timbs commemorates:—

"Here died, in 1677, Wenceslaus Hollar, the celebrated engraver, aged 70, at the moment when he had an execution in his house; he desired of the sheriff's officers 'only the liberty of dying in his bed, and that he might not be removed to any other prison but his grave.' (*Oldys*). He was buried in the New Chapel yard, near the place of his death; and no monument was erected to his memory. Hollar engraved 2,400 prints, and worked for the booksellers at 4d. per hour; yet his finest prints bring rare prices."

The ignorance of pure Cocknies of the varied notes and distinctive characters of birds is registered in every village to which they have ever penetrated. A boy, who had passed through Christ's Hospital, once visited a country place in which we were residing. Having had his attention directed to the note and soaring motion of a lark, he supposed that "lark" was a generic name for all birds, and, shortly afterwards, passing into a field but newly ploughed, from which, as he entered, there arose a flight of cawing rooks, the blue-coat boy exclaimed: "There's a deal of larks!" The ignorance was inexcusable in a boy who ought to have received something of an education; but to the lower classes of Londoners the

note of the lark is an unknown sound, except when coming from the cruel cage. Sparrows, and a few rooks and pigeons, are the only birds who build nests and rear young in the metropolis. The swallow, swift and martin are occasionally seen in the suburbs.—

"In 1826, Mr. Jennings observed martins' nests in Goswell-street Road, and on Islington Green. The redbreast has been occasionally seen in the neighbourhood of Fleet Market and Ludgate Hill: in November, 1825, Mr. Jennings saw it in the City Road; where, in November, 1826, he saw the wren. The thrush is often heard in the Regent's Park. Some of the migratory birds approach much nearer London than is generally imagined. The cuckoo and wood-pigeon are heard occasionally in Kensington Gardens. The nightingale is often heard at Hornsey-wood House, Hackney, and Mile End. (See Jennings's '*Ornithologia*,' 1829.) * * In James Street, on the north side of Covent Garden, a bird market was formerly held on Sunday mornings. The canary is much reared in the metropolis; there are Societies for this purpose, the principal being the Friendly, the Royals, the Amateurs, and the Hand-in-Hand. Several varieties are distinguished; and there is a 'London criterion of a perfect canary.' The Fancy hold their principal shows in November and December, at the Gray's Inn Coffee-house, Holborn, and the British Coffee-house, Cockspur Street."

Our extracts from Mr. Timbs's volume will have clearly shown its character. It does not come up to what we should have expected from so long a period of preparation, with such a subject, and from such an experienced hand. The book has suffered a good deal from having obviously been a long time in the press. It seems to have been completed in 1850. Things which have been altered since then,—and in our metropolis a great deal is occasionally accomplished in four or five years,—remain *in statu quo*, or are insufficiently noticed in a few brief additions. Thus, the Marble Arch, now standing at Tyburn, appears here as still at Buckingham Palace, "reserved for the especial entrance of the sovereign and the Royal Family." The interment of the Duke of Wellington is noticed in two or three lines of the Appendix,—and the Crystal Palace secures no more than a brief notice on the final page. In these days, and after the publications on this subject of Mr. Knight and Mr. Cunningham, an inquirer should have been a little more alive.

Wanderings in Corsica; its History and its Heroes. Translated from the German of Ferdinand Gregorovius, by Alexander Muir. 2 vols. Edinburgh, Constable; London, Hamilton & Co.

THE Greek and the Etruscan, the Roman and the Carthaginian, the Pisans, the Genoese and the French, have in turns been lords or tyrants in the fair island of Corsica; and by turns also have heroes arisen from out of the native population to protect or do battle against their foreign masters or oppressors. In later times especially, has the island been fertile in heroes, chiefly when these fiery patriots found it their vocation to assail the savage tyranny of the Genoese or the unwelcome intrusion of the French. Of such patriots there has been an almost uninterrupted succession. Among them were the Della Roccas, and Vincentello d'Istria, the indomitable Sampiero, Gaffori, and Paoli,—and even Napoleon. The latter was, at one time, most patriotically indignant against a foreign ruler: his diatribes against France were spirited, and probably sincere; his denunciations against Corsican nobles with little patriotism, written when a mere lad, and dated "from my cabinet,"—as if the boy looked upon his little room as an imperial palace,—might have been penned by M. Ledru Rollin. We do not suppose these will find place in the

collected works of "the great man," now in progress of publication in France; and yet his character will not have justice done to it if these early samples of his quality be omitted.

That portion of the author's volumes devoted to the history of the island is very skilfully executed. It is but a mere sketch; but every important point is laid down; and the intervening outline is so artistically rendered, that the reader, at little trouble, finds himself in possession of an intelligible history of an island, whose story is a drama full of moving incidents, surprises, and startling situations.

The record of the summer tour, made by the author in 1852, is not less interesting in its way. It reminds us of Seume's '*Syrakus*.' The latter is more humorous, perhaps, because the author is constantly watching for an opportunity to say something witty; but the '*Wanderings in Corsica*,' without being wanting in wit, is a more useful, and hardly a less amusing book. Its wit is incidental to its descriptions, and the descriptions are not made for the sake of the wit.

Herr Gregorovius must have made a pleasant summer of it. His original intention was merely to take a glance, but he ended by making a survey. He left few places unvisited,—and has something agreeable to say upon all. His book, in short, is not a "guide-book"; it is as a pleasant and accomplished traveller, who agreeably and instructively tells us of his experiences, amuses us by his stories, and wins our respect for his modesty and good sense. He has history and philosophy for the scholar,—statistics for the political economist,—gracefully written pages for the naturalist,—and a world of charming matter for that well-known individual—the general reader.

Of course, the author has much to say of the *Vendetta*,—the hereditary active spirit of revenge which is carried on for ages through the descendants of two families, or two branches of the same family, at deadly feud. At home here, family quarrels are very pretty things, warmly and enduringly maintained; but in Corsica they have more dignity; they rise to the majesty of the epic,—begin with winged words, and end in red blood. In England, an extravagant kinsman, whose relations are unwilling to pay for his extravagance, "speaks daggers, but uses none." The Corsican *Skimpole*, in such a case, thrusts his dagger beneath the fifth rib of his cousin, upon which the two branches of the family would go on shooting at one another for an indefinite period. The English apprentice, of whom *George Barnwell* is the representative, attempted to introduce, among our great-grandfathers, this fashion of slaying unamiable relatives; but the gallows took all the poetry out of the heroic deed. We suspect, too, that the poetry of the *Vendetta* has been sadly marred by the French law, the guillotine and the galleys.

The thirst for blood is, nevertheless, still the pleasant torment of many a true and thoroughbred Corsican. Here is a sample of one who looks as scenically savage as poor O. Smith, that most demoniacal of stage bandits, and most kindly-hearted of men:—

"I happened to cross early in the morning the Place San Nicolao, the public promenade of the Bastinese, on my way to bathe. The executioners were just erecting a guillotine beside the town-house, though not in the centre of the Place, still on the promenade itself. Carabineers and a crowd of people surrounded the shocking scene, to which the laughing sea and the peaceful olive-groves formed a contrast painfully impressive. The atmosphere was close and heavy with the sirocco. Sailors and workmen stood in groups on the quay, silently smoking their little chalk pipes, and gazing at the red scaffold, and not a few of them, in the pointed barretto,

brown jacket, hanging half off, half on; their broad breasts bare, red handkerchiefs carelessly knotted about their necks, looked as if they had more to do with the guillotine than merely to stare at it. And, in fact, there probably was not one among the crowd who was not likely to meet with the same fate, if accident but willed it, that the hallowed custom of the *Vendetta* should stain his hand with murder, and murder should force him to the life of the bandit.—'Who is it they are going to execute?'—'Bracciamozzo (Stump-arm). He is only three-and-twenty. The sbirri caught him in the mountains; but he defended himself like a devil—they shot him in the arm—the arm was taken off, and it healed.'—'What has he done?'—'Dio mio!—he has killed ten men!'—'Ten men! and for what?'—'Out of capriccio.' * * An hour had elapsed, when a confused hum and the trample of horses' feet brought me to the window—they were leading Bracciamozzo past, accompanied by the monks called the Brothers of Death, in their hooded capotes that leave nothing of the face free but the eyes, which gleam spectrally out through the openings left for them—veritable demon-shapes, muttering in low hollow tones to themselves, horrible, as if they had sprung from Dante's Hell into reality. The bandit walked with a firm step between two priests, one of whom held a crucifix before him. He was a young man of middle size, with beautiful bronze features and raven-black curly hair, his face pale, and the pallor heightened by a fine moustache. His left arm was bound behind his back, the other was broken off near the shoulder. His eye, fiery, no doubt, as a tiger's, when the murderous lust for blood tingled through his veins, was still and calm. He seemed to be murmuring prayers. His pace was steady, and his bearing upright. Gendarmes rode at the head of the procession with drawn swords; behind the bandit, the Brothers of Death walked in pairs; the black coffin came last of all—a cross and a death's-head rudely painted on it in white. It was borne by four Brothers of Mercy. Slowly the procession moved along the street of the Jesuits, followed by the murmuring crowd; and thus they led the vampire with the broken wing to the scaffold. * * His story throws a great deal of light on the frightful state of matters in the island. When Massoni was at the height of his fame (this man had avenged the blood of a relation, and then become bandit), Bracciamozzo, as the people began to call the young Giacomino, after his arm had been mutilated, carried him the means of sustenance: for these bandits have always an understanding with friends and with goat-herds, who bring them food in their lurking-places, and receive payment when the outlaws have money. Giacomino, intoxicated with the renown of the bold bandit Massoni, took it into his head to follow his example, and become the admiration of all Corsica. So he killed a man, took to the bush, and was a bandit. By and by he had killed ten men, and the people called him Vecchio—the old one, probably because, though still quite young, he had already shed as much blood as an old bandit. One day Vecchio shot the universally esteemed physician Malaspina, uncle of a hospitable entertainer of my own, a gentleman of Balagna; he concealed himself in some brushwood, and fired right into the *diligenza* as it passed along the road from Bastia. The mad devil then sprang back into the mountains, where at length justice overtook him."

There is much sympathy among the Corsican population for bold villains like these; but we must not be too virtuously ready to cry shame upon them. In Irish rural populations murder is hardly accounted of as it is set down in Heaven's Canon; and it is in the remembrance of our fathers, if not of ourselves, that among our coast cottagers a mounted smuggler was a highly respectable personage who expanded into a hero if he had only killed a custom-house officer or an exciseman.

There is no part of these volumes more interesting than the chapters which speak of Ajaccio and the family of Buonaparte, once residing there, in the modest but not unpatrician-looking house on the *Place Lelitia*. There dwelt that respectable lawyer, Carlo,

and his handsome wife, Letitia Buonaparte. The "practice" of the former was so indifferent that the worthy couple were much troubled as to the future prospects of their five boys,—from the eldest and laziest, and most incompetent, Joseph, to little Jerome in his cradle, who yet survives in good preservation, under the shadow of the throne occupied by the son of his brother Louis. The good couple were as sorely perplexed about their three girls,—and there was good reason. A poor, but honest, provincial lawyer, with eight children, may be excused for lying awake at nights cudgelling his brains to devise some plan for the future welfare of his five sons and triad of wild daughters. The poor lawyer's reason would hardly have been rendered more steady had the wisest seer in the island informed him that nearly all those eight children would possess thrones, and the rest would have the refusal of them. No romance ever so wild equals in its wildness this story of the Buonaparte family,—the romance and the grand reality of which are not yet run to an end. How different would all things have been, both for the Buonapartes and for Europe, had the lawyer Carlo quitted Corsica, as he had resolved upon doing at the period when it fell under the dominion of France.

The hopes of the family soon rested upon Napoleon, a younger son, who used to "pummel" his elder brother Joseph, with merciless severity. Even when Joseph was old enough for the question of a profession for him to be discussed between himself and his family, his father and his brother Napoleon agreed that he had not courage enough for a soldier; and the only alternatives that could be thought of were the Church, and, failing that, "to make a law-clerk of him."

The French Revolution made of Napoleon a democrat and a Frenchman. Previous to that time he was as thorough an "Anti-Gallican" as Lewis Goldsmith himself. Witness the following extract from a letter addressed to Paoli, having reference to Napoleon's projected History of Corsica,—the fragment of which is about to be published by his nephew.—

"I was born when our country died. Three thousand Frenchmen investing our island, the throne of freedom sinking in waves of blood—such was the detested spectacle that first shocked my gaze. The groans of the dying, the sighs of the oppressed, the tears of despair, surrounded my cradle from the moment I was born."

Here is a view of the interior of the house of Carlo Buonaparte. It is a pleasing picture.—

"Napoleon visited Ajaccio every year, and made his influence be felt on the education of his brothers and sisters. They were brought up simply, after the fashion of their country, and with a primitive strictness. 'It was almost,' says Nascia, 'as if you were living in a convent. Prayers, sleep, study, refreshment, pleasure, promenade—everything went by rule and measure. The greatest harmony, a tender and sincere affection, prevailed among all the members of the family. It was in those days a pattern to the town, as it afterwards became its ornament and boast.'"

But let us turn from these experiences of the past to the incidents of the present. The Corsicans, it would seem, deem themselves as the civilized people, but have their doubts with regard to "outer barbarians." Here is a pleasant scene.—

"When at any time I sat down on the bench by the little chapel of San Rocco, I was soon surrounded by the curious, who would frequently take a place beside me with a kind of simple confidence, and ask me whence I came, what I came for, and whether or not my fatherland was civilized. This last question was very frequently addressed to me when I said that I came from Prussia. A very gentlemanly person sat down beside me one evening, and when we had fallen into a political conversation regarding

the present king of Prussia, he suddenly expressed his surprise that Prussians should speak Italian. I have frequently, on other occasions, and in all earnest, been asked whether Italian was spoken in Prussia. My good friend then inquired whether I spoke Latin. When I replied that I understood it, he said that he also was acquainted with it, and immediately began: '*Multos annos jam ierunt, che io non habeo parlato il latinum.*' When on the point of replying to him in the same language, I suddenly made the discovery that my Latin insisted on slipping into Italian, and that I was just about to express myself with greater elegance than even my Bonifazian friend. Two cognate languages are very apt to be mingled on the tongue if we are in the habit of daily expressing ourselves only in one of them."

It may be noticed here that America has not the entire monopoly of strong-minded women, as she is usually thought to have:—Corsica can show a large assortment of ladies with uncommonly resolute hearts and intellects.—

"The Corsicans are perfect devils of jealousy; they avenge insulted love as they do blood. My fellow-traveller related to me the following incidents:—'A young man had forsaken his betrothed, and attached himself to another girl. One day he was sitting in the open square of his village at a game of draughts. His rejected sweetheart approached, and after overwhelming him with a torrent of imprecations, drew a pistol from her bosom and blew his brains out. Another forsaken maiden had, on one occasion, said to her lover, "If you ever desert me for another, she will never be yours." Two years passed away. The young man led another maiden to the altar. As he left the church-door with her, the girl whom he had forsaken shot him; and the people exclaimed, "Evviva, may your countenance live!" The judge sentenced the maiden to three months' imprisonment. Many youths sued for her hand, but none desired the young widow of the murdered bridegroom.'"

What sort of mothers these strong-minded ladies make we cannot well tell. The young Belgian naturalist, Julien Deby, in a pleasant contribution to the Brussels *Revue Trimestrielle*, entitled '*Vingt-quatre Heures à la Pointe Manabique*,' tells us of a Negro named Tata-Pous, whose acquaintance he made, and who informed him, among other things, that he had eaten his own mother out of spite at her having brought him into the world. We should fancy that the high-spirited women of Corsica, who are so expert with pistol and dagger, may be mothers of equally strong-minded sons with Tata-Pous.

We must not omit to state that these volumes give a fuller account of that extraordinary adventurer, Theodore, King of Corsica, than any we have yet met with. It is a common error to suppose that he was a Corsican by birth. He was in reality a German, named Von Neuhoff, who in 1731 landed on the island from an English ship, with a princely retinue and a respectable amount of piastres and ammunition, with an intent to put down the Genoese supremacy. He had been an adventurer of the Königsmark school; and scarcely a court in Europe but had been a stage on which this glittering actor had fretted his little hour, only to leave misery and dupes behind him. He had married and deserted an Irish lady, related to the Duke of Ormond. He was a gambler, a duellist, and a man of coarse mind, savagely satirical wit, and exceedingly light principles. How the people of Corsica elected him as king, and settled the succession in his family, reads like an improbable melo-drama. How the Doge issued manifestoes against him, in which his past disreputable life was laid bare, and how the new King jocosely answered them, intermingling menaces with mockery, and treating the illustrious Doge, now as a brother potentate, and now as a dealer in general wares, for whom King Theodore had the profoundest contempt, reads like the mock threatenings that pass

between the rival monarchs of a Christmas extravaganza. But Theodore had a serious turn: he was for ever protesting, like the Czar Nicholas, that Heaven was with him,—and the mendacity of the Westphalian was as appalling as that of the Muscovite. He gave full employment to the executioner, and was as fond of leaving his kingdom, to pay visits to Germany, as his contemporary, "Sir, and Brother," George the Second. The Corsicans grew weary of him in time,—and, after growing weary, got rid of him. He visited some of his old haunts in London, sank into destitution, and after being the inmate of a debtors prison, was buried—not "in Westminster Churchyard," as it is here incorrectly written, but in an obscure corner among the paupers in the churchyard of St. Anne's, Soho. The author is fond of this adventurer, and has a profound respect for his countryman. Interesting, however, as are the details which he communicates, he will hardly succeed in persuading others of what he appears to be convinced himself—namely, that he was "most praiseworthy, because he employed his head and hand in defence of the freedom of a brave people." He cared as much for the freedom of Corsica as the Duke of Guise did for that of Naples, of which he contrived to make himself the temporary king after the fall of Masaniello.

We now leave this pleasant book to its merited popularity. The Corsicans have never been more skillfully depicted than we find them here. We might say summarily of them, that their character is like one of the productions for which the island was famous in ancient times—namely, its honey, which was abundantly sweet, but which was also terribly bitter, from the yew and hemlock which abounded in the districts where the bees collect.

The Commercial Products of the Vegetable Kingdom. By P. L. Simmonds. Day.

If any one interested in the general question of the nature and supply of the raw materials for the vast manufacturing industry of this country were to inquire for some book in our language devoted to this subject he would find that no such work existed. Not only have we no comprehensive treatise, but the monographs devoted to particular branches are remarkably destitute of the facts of the natural history of the minerals, plants, and animals supplying the staple of our great industrial occupations. So blindly do we pursue our manufacturing operations as mere acts, that we have not yet thought it necessary to give our artisans, manufacturers, and merchants the slightest elements of an education that would enable them to appreciate the properties of the organic and inorganic substances on which they daily work, and by which they earn their daily bread. At the last meeting of the British Association, at Liverpool, it was stated that valuable products frequently rotted in the bonding warehouses of that town from the want of knowledge. The Great Exhibition of 1851 showed our manufacturers a variety of raw materials which they had never seen or of which they had never heard. The fact is, with all our surprising energy and industry we have forgotten that intelligence is superior to brute force, and that muscles and steam-engines are subordinate to mind. Every report on the manufactures of France, Germany, and the United States, speaks of an intelligence being applied to the industrial arrangements of these countries which is lacking in our own.

We are glad, however, to find evidence that the country generally is coming to a sense of this deficiency, and that successful efforts are being made to raise the standard of education, not

only amongst our artisans and manufacturers, but amongst all classes of the community. It is very clear that in proportion as the nations of the earth apply the principles of natural science for the production of food, clothing, luxuries, and implements of war, that it is not only against the interest of any nation to lag behind, but must eventually be destructive of its independence, if not of its existence.

Mr. Simmonds's work, on 'The Commercial Products of the Vegetable Kingdom,' teems with proof of the importance of the special and orderly study of the nature of the materials in which a man has to work and deal. The author has been led to this labour by a sense of its need, and the admission on the part of those most interested in the nature and value of vegetable products that no comprehensive work existed on the subject. The same may be said of the products of the Animal and Mineral kingdoms.

Although Mr. Simmonds set to work in earnest after the Great Exhibition, he has been able to give only an instalment of the whole subject. The present volume includes an account of substances used as articles of food, as sugar, tea, coffee, chocolate and cocoa; the grain crops, edible roots and farinaceous plants forming the bread-stuffs of commerce; spices, aromatic condiments, and fragrant woods; dyes and tanning substances; and plants yielding oils and drugs. Although this list is comprehensive, it will be seen that it does not include any notice of gums and resins, of India rubber or gutta-percha, or of the various fibrous materials, cotton, flax, hemp, jute, &c., used in the manufacture of textile fabrics.

It was not to be expected that a first effort of this kind would exhaust the very wide field over which the author has travelled; but with regard to the majority of substances treated in this volume, we may say that in no other work will so large an amount of useful and valuable information be found.

In his statistical accounts of the consumption of the various substances mentioned, the author has everywhere consulted the latest authorities. He has taken pains in discussing the important question of the cultivation of the plants yielding commercial products, and also paid considerable attention to the quality, uses, and chemical composition of the substances examined, so that a person working or dealing in the articles treated of cannot fail to derive a large amount of useful information from the perusal of this volume. We hope Mr. Simmonds will continue his labours, and that before long he will publish his volume on the important vegetable products which form the staple of the manufacturing industry of this country. The field of the commercial products of the animal kingdom is also open, and is less occupied than the one taken up by Mr. Simmonds; and it seems to us that he is well fitted for undertaking this further labour, of the importance of which there can be no doubt.

OUR LIBRARY TABLE.

The Cousins: a Tale. With a Preface by the Author of 'Naomi.' (Nisbet & Co.)—'The Cousins' is a story which we would keep out of the hands of any young person in whose education we took any interest. It belongs to a class of books the style and treating of which we consider highly objectionable. The story, as a mere story, is watery and sentimental, written much in the style of the old Minerva Press novels; it is to the teaching and spirit of the story that we especially object. We have read too many trashy stories in our time to be extreme in marking shortcomings, and we would "gently scan" mere faults in construction or incongruities of plot; but we cannot pass over what we consider the mischievous tendency of the school of religious tale

writing to which this book belongs;—the less so, as it comes with an especial recommendation on the face of it from an author who is held in great reputation by a portion of the religious public. We have seldom seen the faults of this class of books so glaringly set forth as in this tale of 'The Cousins.' It is the fashion to represent the parents, and all those placed in authority, as vain, weak, frivolous, worldly persons; or if endowed with any fine qualities, they are made of none effect,—but rather treated as sins, because unaccompanied by a certain phase of religious feeling, indicated by a certain terminology to which it is difficult for impartial and uninitiated people to attach any meaning. The children and the young persons, however, who for the most part are represented as having received the virtue of this mysterious formula from some old nurse or aunt, or some one not in direct authority over them, begin to teach and preach and set an example to their parents with a sweet obstinacy and arrogant meekness, which is not only highly exasperating, but at the same time entirely subversive of all the juvenile virtues which one would most wish to see flourish in their due season. This is represented as holding the truth in faithfulness; but we cannot think that books which so freely paint parents and guardians as characters whom it would be difficult for the most dutiful child to respect, are advisable books to put into the hands of young people.—In the story before us, Miss Mary Melville, one of the heroines, being of tender years, but mature consideration, finds her tastes and opinions in opposition to those of her mother, who is represented as a vain, weak-minded woman, whose highest ambition had been to keep her place in that exclusive circle to which even she had not without toil and difficulty been admitted. "Her father, on the contrary, was a man of splendid talents and great capacity; but he looked upon his wife with a feeling of contempt, which he in some degree extended to all her sex." The young lady dextrously avails herself of the differences between her parents to obtain the permission from her father to have her own way. Of course, it is only a "strong sense of duty" that obliges her to this course; and it is the same "sense of duty" which makes her as obstinately insist upon marrying the man with whom she falls in love; this same "sense of duty" is made the excuse for all the good people in the story thwarting all who hold different views to themselves. Of course in this story, as in all others of the same class, the circumstances are made extenuating; but it is somewhat unlucky for the principle at stake to find that it invariably exhibits itself in wilfulness, and that the main interest of the story, such as it is, turns upon the sorrows and perplexities of a young girl, who, whilst she has been induced to accept one man, wishes to marry another, a common perplexity in which heroines, from the earliest period to the present time, have found themselves involved.—To go back to our strictures upon this school of novels, our main objection lies in this, that children are taught to sit in judgment upon their parents; and so far from "ordering themselves lowly and reverently to all their betters," they see it inculcated in facts, if not in words, that the possession of certain religious feelings and formulas comes before all ordinary duties. We are old-fashioned enough to think that obedience to such parents as it may have pleased Providence to give them is the first, best virtue children can learn,—far better than setting up to be precocious young martyrs in pinafores!

Past Meridian. By Mrs. L. H. Sigourney. (New York, Appleton & Co.)—A piece of American sentimentality, written apparently to console those who are growing old, and to keep up their spirits with the mildest of cordials and sweetest of words. It is written with an affable amiability which we should find peculiarly aggravating were we "past meridian"; and the rose-coloured curtain which Mrs. Sigourney drops upon "the last scene of all," may possibly find admirers,—but we are not amongst them.

The Californian Crusoe; or, the Lost Treasure Found. A Tale of Mormonism. (London, Parker; New York, Stanford & Swords.)—Mormonism—its rise, progress, growth and prosperity—is the

great phenomenon of the nineteenth century; it has an originality which places it in an entirely different category from the innumerable sects and shades of religion which chequer the face of Christendom. The history of it has yet to be written, and the secret of its success has yet to be found. Those who compendiously term it a "delusion," are quite as far from the fact as they who adopt it as a religion and a revelation. No religion which was nothing more than the embodiment of all that is greedy, sensual and base in human nature could obtain any wide acceptance as a religion;—the religious instinct is too strong in the human heart to be satisfied with earthly things. Religion appeals to the supernatural element in men. Mormonism, even more literally than Catholicism, professes to translate and make tangible and visible the mysteries of that "invisible world" in the midst of which we darkly move; and we are inclined to think that much of the charm of Mormonism lies in the homeliness and literalness with which mysteries are expounded, and in the religious mysticism which invests the common events of daily life with something of sacerdotal dignity. But how so much that is discordant with the social policy of our modern civilization is made to conduce to such remarkable material prosperity and practical success in life, is a problem the true secret of which has not yet been uttered;—it is a chapter in history that still remains to be written—and in the meanwhile 'The Californian Crusoe' does not throw much light upon the subject. It has all the internal evidence of being a tolerably true narrative of personal events. The writer seems to be a weak, wavering, unstable person, easily carried about by any wind of doctrine,—one of the drifting mass whose adhesion may swell the multitude, but gives no weight to any cause or opinion. He is one of those who judge of things by their personal result. There are some rather interesting details of a Mormon band of emigrants—of Nauvoo and Joe Smith,—but the book itself is vulgar, and has a genuine American accent.

Shakspeare's Midsummer Night's Dream—[*Ein Sommernachtsstraum*]. (Leipzig, Keil; London, Nutt.)—Herr C. Abel having achieved a success with the 'Winter's Tale,' [*Athen*, 1401], comes forward with another creditable specimen of Shakspearian translation. To make way for himself, he would elbow out Augustus Schlegel, whom, in a little Appendix, he charges with divers inaccuracies. In Act I. scene I, where *Theseus* says, "The old moon wanes!" the erring Schlegel says, "nimmt ab," when he ought to have known that "wane" does not denote a growing less, but a decline in strength and beauty. How nobly therefore rises Herr Abel's line from the mist of error:

Gar träge will der alte mir verschwinden.

In the very same speech, where *Theseus* says:

Four happy days bring in
Another moon;

Schlegel should not have adopted such a matter-of-course version of "happy days" as "frohe Tage." No; he should have recollected that "happy" also meant "rapid," and then he would have attained the felicity of Herr C. Abel, who triumphantly sets down "rasche Tage." We fear a jury of Englishmen would find Schlegel right and Abel wrong in these matters. At all events, the censure of the old translator by the new one is the very perfection of "hole-picking."

Geological Pictures—[*Geologische Bilder*]. By B. Cotta. (Leipzig, Weber; London, Nutt.)—A series of geological papers, written by Herr Bernhard Cotta, Professor of the Mining Academy at Freiberg, and published in the 'Illustrierte Zeitung' for the benefit of the educated (*gebildet*), as distinguished from the technically learned public, met with such high favour, that the publishers of the journal thought they might judiciously be collected into a comely volume, with an independent title. This view was carried out by the author, and 'Geologische Bilder'—a popular treatise on geology, liberally illustrated with well-executed woodcuts,—is the result. Like a truly scientific man, Herr Cotta duly appreciates the value of popular treatises, warning his readers that they must not expect to become profound geologists through peeping at his pictures and skimming over his letter-

press,—at the same time, that he hopes he has diffused a quantity of useful knowledge, and given a stimulus to more serious study. The soundness of the publisher's notion is proved by the fact, that Herr Cotta's book has reached a second edition, distinguished from the first by an increase in the number of woodcuts.

Farm Implements and the Principles of their Construction and Use: an Elementary and Familiar Treatise on Mechanics. By J. T. Thomas. (Low & Co.)—A work that has had some influence in the practical agriculture of the United States, and which English farmers would do well to study. Mr. Thomas computes that a capital of five hundred millions of dollars has been applied to furnish the farms of the Union with implements, and that a similar amount is paid annually for the labour of men and horses. He thinks that continued expenditure in machinery would add profits in a five-fold ratio; and argues boldly in favour of adopting all inventions, however costly or elaborate, that really bring new forces to the culture of the soil. The labourer, with unsuitable tools, applies his strength badly, and the horse wastes half his power when pulling an ill-constructed plough. A story is noticed by Mr. Thomas of a man who fastened his smaller horse to the shorter end of the whipple-tree to balance the large horse at the longer end,—and of another, who must have come from Ireland had he not come from America, who rode to the mill, seated on a sack of grain across his pony's back. About half way, he fancied the animal was tired, and, dismounting, shouldered the sack, and sprang himself into the pack-saddle, thinking the pony must have been greatly relieved. Of course, these illustrations are meant to imply that farmers in America, as elsewhere, have much to learn beyond that which tradition and practice have taught them. The present treatise is well suited to its object. It is entirely of a practical character; the woodcuts are numerous and neatly executed; and enough is proved, in the most simple terms, to show to farmers how much they lose by neglecting, or affecting to despise, the improvements in agricultural science that have distinguished our century. A work so sound and so valuable ought to be diligently studied by those in whose interest it has been written.

The Revelations of a Square: exhibiting a Graphic Display of the Sayings and Doings of Eminent Free and Accepted Masons, from the Revival in 1717 by Dr. Desaguliers. By the Rev. G. Oliver, D.D. (Spence).—Although, in the opinion of many, Freemasonry has lost its value and its meaning, and exists as an institution after its spirit has passed away, there appears to be no want of activity among its supporters. They still believe in the importance of their craft, and possibly look for a new revival similar to that of the eighteenth century. Dr. Oliver has a large and minute acquaintance with the history of the Order. He has studied it in relation with the antique ceremonies of the East, the occult sciences of India and Persia, Grecian, Celtic, Gothic, and Mexican initiations; and he puts faith in a legitimate connexion existing between the ancient mysteries and Freemasonry, though this, regenerate, is now inseparably interwoven with the Christian faith. In the oddly-named volume before us, he professes to trace the ramifying progress of Masonry from its small beginnings, as well as to illustrate, by dialogue and anecdote, the doctrines, practices, habits of mind, manners and customs, of the fraternity. But, assuming that his book contains too vast an accumulation of facts to be the result of any single life labour, he tells us it is the collections of three generations of Olivers. In some respects, we can bear witness to its usefulness. It affords some lively pictures of Masonic life; it describes many usages now obsolete and generally forgotten; and it professes to give the names of all the books and pamphlets written for or against the Order, or pretending to disclose its secrets, which appeared in the eighteenth century. Dr. Oliver "believes that no book or paper which possessed the slightest pretension to publicity has escaped his notice." Whether he has fulfilled this promise we cannot undertake to say, but we have certainly

found the title, at least, of every work we have looked for among these "Revelations of a Square." We regret, however, that Dr. Oliver's method is so injudicious. He puts his statement into the mouth—if we may adopt an Irish form of speech to describe an absurdity—of a silver medal, and mixes up trivialities of the most ridiculous character with much that is really interesting. There is no unity or regularity in the book. A show of learning is neutralized by a display of astonishing frivolity. Historical anecdotes are wedged amid pages of miserable puns; and curious criticisms of Masonic literature are twisted into lame and lengthy dialogues, altogether supposititious. Consequently, the book, though it displays industry and knowledge, is not very readable. Dr. Oliver by trying to be amusing, has lost all chance of becoming popular.

The following reprints lie upon our table:—The seventh volume of Dr. Smith's *Gibbon*,—the eleventh volume of Mr. Bell's *Hume and Smollett*,—the third volume of Mr. Henry Rogers's *Essays from the Edinburgh Review*,—the third volume of Dr. Chalmers's *Select Works*,—the first volume of *The Family Friend*,—*Voyages and Discoveries in the Arctic Regions*, edited by F. Mayne,—Prof. Airy's *Treatise on Trigonometry*, from the 'Encyclopædia Metropolitana,'—*Transatlantic Wanderings*, by Capt. Oldmixon,—*Chronicles and Characters of the Stock Exchange*,—Sir Howard Douglas's *Remarks on the Naval Operations*, from the fourth edition of his 'Naval Gunnery,'—and a translation of M. de Lavergne's *Rural Economy of England*, with interesting and valuable notes by a Practical Scotch Farmer. We have before us new editions, number not specified, of Mr. Denny's *Alpha*,—Donne's *Essays in Divinity*,—and Mr. Jolliffe's *Letters from Palestine*. The following appear in second editions:—*A Dozen Pair of Wedding Gloves*,—*A Month before Sevastopol*, by a Non-Combatant,—Mr. Eode's *Ballads from Herodotus*,—Mr. Jones's *Blanche de Bourbon: a Poem*,—the Rev. Dr. Townsend's *Flower from the Garden of the Church*,—and the Rev. F. Freeman's *Plain Directions for understanding and using the Morning and Evening Services*.—We have a fourth edition of the Rev. G. W. Montgomery's *Illustrations of the Law of Kindness*,—a sixth edition of Mr. T. S. Harvey's *What to do with my Money?*—and an eighth edition of *Cheap, Nice, and Nourishing Cookery*.—Messrs. Chapman & Hall have added Mrs. Hall's *Whiteboy* to their "Select Library of Fiction,"—*Rob Roy* and the first part of *Napoleon* have appeared in the Messrs. Black's cheap reprint of Scott. In the "Parlour Library" we have Mrs. Marsh's *Castle Avon*, and Mr. James's *Stepmother*.—*Ruth Hall* has been reproduced by the Messrs. Routledge, who have also added *The Disowned* to their "Railway Library."

We must also announce the appearance of Mr. Foster's very useful *Pocket Peçage*,—the *Scottish Newspaper Directory*, 1855,—the first number of *The Statist*, a magazine for actuaries,—the *London Catalogue for January, 1855*,—the annual supplement to *Willich's Tithe Commutation Tables*,—No. 34 of the *Journal of the Royal Agricultural Society*,—*The University College, London, Calendar for the Session 1854-5*,—Messrs. Letts's *Commercial Summary for 1854*,—Part 2 of the *Stanley Papers*, published by the Chetham Society,—*The London University Calendar for 1855*,—and the first volume of the *Liverpool Photographic Journal*.

LIST OF NEW BOOKS.

Baxter's *Saint's Everlasting Rest*, Essay by Erskine, 8th edit. 3s.
Bell's *English Poets*, Chaucer, Vol. 3, f. 2s. 6d. cl.
Bickersteth's (E. H.) *Sabbath Evenings at Home*, 18mo. 1s. 6d. cl.
Bohn's *British Classics*, Addison's Works, by Lund, Vol. 4, 2s. 6d.
Bohn's *Class Lib.*, Demosthenes on the Crown, tr. by Kennedy, 5s.
Bohn's *Extra Vols.*, Cervantes' *Exemp. Novels*, tr. by Kelly, 3s. 6d.
Bohn's *French Memoirs*, Philip de Commines, edit. by A. Scoble, Vol. 1, 12mo. 3s. 6d. cl.
Bohn's *Scientific Library*, 'Handbook of Domestic Medicine,' 5s.
Bohn's *Stand Lib.*, Smith's *Modern History*, new ed. Vol. 1, 3s. 6d.
Crimes, its Towns, Inhabitants, &c., by Lady, f. 2s. 6d. cl.
Danvers, and Friend of the Family, by T. Hook, new edit. 1s. 6d.
Dick Diminy, by Priam, new edit. 12mo. 1s. 6d. bds.
Donne's (Dr.) *Essays in Divinity*, edit. by Jessopp, 18mo. 3s. 6d. cl.
Drummond's *Reply to Wilberforce's 'Church Authority'*, 3s. 6d.
Fisher's (Dr. J.) *Life*, by Rev. J. Lewis and Turner, 2 vols. 15s. cl.
Harding's (J. D.) *Lessons on Trees*, 2nd edit. imp. 4to. 15s. cl.
Lardner's (Dr.) *Museum of Science and Art*, Vol. 5, 12mo. 1s. 6d.
Liberty's *Christian Biography*, 'Life of Felix Neff,' 12mo. 2s. 6d.
Longfellow's *Poetical Works*, new edit. f. 4s. 6d. cl.
Lund's (Rev. T.) *Geometry as an Art*, 12mo. 2s. 5d.
McCheyne's *Memoir and Remains*, by Bonar, new edit. 12mo. 5s.
Mottos and their Morals, f. 8vo. 1s. cl.
Mysterious Parchment, by the Rev. J. Wakeman, 12mo. 1s. bds.

Nature and Human Nature, by Author of 'Sam Slick,' 2 vols. 24s.
Nicholas Ferrar, Two Lives, by his Brother John and Dr. Jebb, edited by Rev. J. E. B. Major, f. 7s. 6d. cl.
Niebuhr's *Rome*, trans. by Hare and Thirlwall, new ed. 3 vols. 36s.
Popular Educator, Vol. 6, 4to. 4s. 6d. cl.
Prairie, a Tale, by J. F. Cooper, f. 1s. 6d. bds.
Tacitus, Germanica, Agricola, and Book I. of the *Annals*, edited by Dr. Smith, 3rd edit. 12mo. 5s. cl.
Taylor's (T. W. F.) *Mormon's Own Book*, cr. 8vo. 3s. 6d. cl.
Traveller's Library, De Foe and Churchill, by J. Forster, 2s. 6d.
Waugh's (E.) *Sketches of Lancashire Life*, cr. 8vo. 6s. cl.
West's (Miss T. C. J.) *Frescoes and Sketches from Memory*, 10s. 6d.
Wikoff's (H.) *My Courtship and its Consequences*, 2nd edit. 10s. 6d.

SCOTT AND 'MOREDUN.'

THOSE who have read the narrative of the alleged discovery in Paris of a manuscript romance of Sir Walter Scott, contained in the *Journal des Débats* of the 15th and 27th of December, 1854, will no doubt concur with me in denying any authenticity to that work if I can demonstrate that Miss Anne Scott never did possess any such manuscript of her father's; and even had it been otherwise, that no one acquainted with the character and peculiarity of the existing circumstances at the time of Sir Walter Scott could suppose him capable of making so preposterous a use of one of his unpublished manuscripts as he is there stated to have done.

To establish these facts, therefore, I shall have, in the first place, to advert to some circumstances occurring at the time of Sir Walter's involvement in the unexpected failure of Mr. Constable, the publisher of his works. That that catastrophe was an overwhelming surprise to Sir Walter himself I have good reason to remember, as the day before its announcement to him he returned to Edinburgh from Abbotsford; and, as his wont on these occasions, dined and passed the evening at my house in his usual light-hearted spirits and gaiety, unaware of the coming evil which awaited his arrival at home. Next morning, before day-break, I was roused by a note from my friend, requesting me immediately to come to him. On reaching his room, I found him immersed among stores of papers, which he had been all night engaged in examining and arranging. He accosted me in these words: "Here I am, Skene, reduced to beggary."—"How, and by whom?" I asked in surprise.—"By printers, publishers, and bankrupts, who thus victimize us poor authors. Sad it is; nevertheless, I have but one course, and must now, while life lasts, strive and labour to work myself out of it; and here," pointing to his library table crowded with manuscripts, "is, I think, every scrap of composition or notes I possess,—and these shall be forthcoming as speedily as I can manage to prepare and dispose of them in any quarter to lessen this burden." And, accordingly, within the year from that time he managed to throw into the account for the liquidation of the debt, from that source alone, about 20,000*l.* sterling, continuing, year after year, with unremitting labour and fidelity, to discharge this sad duty, so long as his much over-worked strength could sustain the effort. He was not the man, therefore, under the pressure of such circumstances, to neglect or divert any of his compositions admitting of profitable use, such as the manuscript in question attributed to his pen, and stated to have been thrown away for a purpose so utterly ridiculous, at a time when claims existed in discharge of which his high sense of honour engaged him to disregard the sacrifice of health and life. Besides, that a distinguished author, jealous, as Sir Walter was to a high degree, of his literary reputation, should consent to place in the hands of an unknown and seemingly not very sane foreigner an unpublished work stated to extend to three volumes, which this stranger might dispose of at pleasure, is a tale too preposterous for belief. Of the same incredible character, also, is the explanation given in the *Journal des Débats* how Miss Anne Scott came to be made the medium of this very questionable transaction; and had she been still in life, it is more than improbable that any such scheme would ever have been attempted in the face of her evidence, but fortunately an evidence nearly equivalent exists in that of her near relative, the constant, affectionate, and confidential companion of Miss Scott, from childhood to the close of her life. Sir Walter's niece lived much in the family, and with reference to the subject in question, writes as follows, of date 17th

of February, 1855:—"As to the mendacious attempt lately noticed in the newspapers, soon after our dear friend Mr. Lockhart was no longer here to contradict and expose it, I know the whole so well to be a fabrication that I fancied, as my conviction, that the whole world did so too. During the months that I was with my cousin Anne at Abbotsford, immediately before their journey to London and Paris, I am quite certain that she possessed no such manuscript. We were affectionate and perfectly confidential with each other, shared the same room, and were never apart; and I can recollect conversations which would have led to the circumstance of the manuscript had it existed. On their return from Paris in spring, 1818, I accompanied them from Cheltenham to Scotland, and remained at least a year with them. The visit to Paris was often talked of by Anne, all the people they saw there, and among the rest Mr. Spenser was spoken of both by Uncle Walter and her, but no such thing was ever mentioned as a manuscript having been given to him. The idea of Uncle Walter giving away his writings, at a period when I know that he was working early and late to forward the then great object of his life,—the clearing off the entanglements consequent on Mr. Constable's failure, is quite inconceivable. I have the impression as I write now as fresh on me, as if long years had not slipped away, that before they went to London and Paris Mr. Blackwood, the publisher, being at Abbotsford, urged Anne and I to write a story for his *Mag.*, as he called his Magazine; now if such a manuscript as Anne is supposed to have possessed had existence, we would certainly have examined it on that occasion—but its absence only certified the proverb that *'a lie has no feet.'* Again, how could Anne come to be carrying a great manuscript with her on her visit to Paris? It could not have been with any intention of giving it to Mr. Spenser, whom she had never seen, or probably heard of, before that visit, being quite unknown to her. Anne I knew possessed no desk in which such a manuscript might have been lying, and so accidentally taken with her to Paris:—she had merely a writing-book when she left home, and she could have had no end or purpose in incumbering herself with a voluminous manuscript. So incredible does the story appear to me that, although I ought not to deal in surmises, I cannot think that foreigners alone would have ventured on this, and how sad if any man of real talent in any way lent himself to such a purpose."

As to the pretended letter of Sir Walter Scott's accompanying the manuscript, it in no respect resembles his epistolary style,—and the clumsy device of substituting the initials W. S. (which he never used) instead of his accustomed signature, only shows that the fabricator wisely avoided trenching on the confines of forgery.

Oxford, Feb. 26.

JAMES SKENE.

On seeing in your columns a note from Mr. Skene, of Rubislaw, expressing some doubts of my existence, I wrote to that amiable and accomplished gentleman, for whose opinions in general, and especially on any matter relating to Sir Walter Scott, I have the highest respect,—and received by return of post a delightful answer, in which he tells me he intends writing to you fully on the "Romance of Moredun," and I dare say you will soon hear from him, if you have not already done so. It is strange that the uncertainty as to each other's being numbered among the living was mutual, for some dozen years ago I had heard a false report of Mr. Skene's death.

He was the most cherished and confidential friend of Scott from the year 1796 to his last hour; and as I doubt not he will conduct it triumphantly, I shall leave to him the argument against the genuineness of these manuscripts from external evidence. Mr. Skene will, I am confident, show how utterly impossible it is that such a stain could be attached to the fair fame of my illustrious friend as would be implied by the mere conjecture (not to say belief) that he had made a gift in 1826 of a tale in three volumes to Mr. Spenser, or any other person, just after he had formed the stern resolution

of consecrating to the payment of his gigantic debt the profits of every line he had written, or might in future, by the extremest tension of his strong mind, produce. All the world knows (or ought to know) how successfully for the creditors, though fatally for himself, he carried that resolution into effect.

My opinion of 'Moredun,' however, from the internal evidence of the handwriting may, I hope, be regarded as *ex cathedra*, as I transcribed for the press 34 vols. of Scott's then anonymous writings, down to the first 2 vols. of the 'Life of Napoleon,' when Scott's avowal of the authorship rendered it no longer necessary to withhold the original manuscript from the hands of the compositors.†

I have now seen three pages in fac-simile of 'Moredun'—the letter beginning "My dear W. S." and signed "W. S."—the notice prefixed,—and a page from the body of the tale. The first is a very clever *contrefaçon*,—but I may remark, parenthetically, that the beginning and end have the least *vraisemblance*, as Sir Walter never addressed any one by their initials, and, as Mr. Skene truly remarks, never signed his own *only*. Many of the letters are too tall, and some not formed after Sir Walter's fashion,—one especially is *always* written in a manner in which I am quite certain there will not be found one example in the numerous manuscripts of the novels and tales now dispersed over the world. This is still more obvious in the page from the tale itself, and is alone quite sufficient to condemn the whole mass of papers;—three volumes which must have cost the real author many a "midnight vigil," as he had set himself the task not only of *composing* but of *writing*, like the dead giant! The little I have seen of the style and sentiments is not more in accord with Scott's than the writing;—for example, it is most improbable that he would have said in a short introduction, "Dante's only object is to interest," for he did not much relish the great Italian, who was too mystical and theological for one of the most picturesque and descriptive of poets. But I shall now leave this strange imposture to share the fate of the volume of letters by Shelley and Byron, which you will remember was some years ago actually printed and published; though that was a far superior *contrefaçon*, even the foreign postmarks on the letters having been imitated *à merveille*!

GEORGE HUNTLY GORDON.

March 1.

OUR WEEKLY GOSSIP.

THE facts reported to our readers, illustrating the practical results of our copyright legislation, should command attention on the part of those who have the power to check a growing abuse. Our Cape Correspondent points to a Colonial Act having for its object evasion of an Imperial statute and legalization of robbery and fraud. This Act is now before the English ministry for—we will assume—*rejection*. But it is here; and it has passed through a Colonial Parliament. Such a fact requires grave consideration. It proves how active and how callous are the instincts of self-interest in one district, and the absolute necessity for a firm and uncompromising resistance at home. Australia, as we learn from Mr. Howitt, and Canada, as we learn from Mr. Chambers, has each adopted the pirate system as regards English books, and perhaps only awaits the result of this precious Cape enactment to legalize the system. In Melbourne, Mr. Howitt tells us, the leading journals openly propose to set law and right aside; and to import the stolen literary wares of the New York printers. Will our Government have the weakness to close its eyes on these doings? If it shall do so, where is its guarantee that the pirate system will not grow upon us? The instincts which may tempt a colony to legalize the trade in stolen books, may, on a first

† M. Cabany, in his letter in the *Athenæum* of the 10th of February, does not seem to understand why Sir Walter employed an amanuensis! The "name full of L's" was William Laidlaw, who wrote from Scott's dictation ("the Great Unknown" being too unwell to hold a pen) two of his most splendid romances, "The Bride of Lammermoor," and, relieved occasionally by John Ballantyne, nearly the whole of 'Ivanhoe.' Afterwards, the only amanuensis had "a name full of G's" (as M. Cabany says), that of "the under-

success, tempt it to legalize a trade in stolen wool, sugar, pale ale, and other goods. Once depart from the strict line of law, and the process which may transform an English colony into an Algerine settlement is already begun. The evil must be stopped at the source—as we cannot for a moment doubt it will be—by the prompt rejection of the Cape proposition. Mr. Robertson's suggestion to the London publishers, that care should be taken to register the copyright of their works, is one of those practical hints that every firm will at once accept as necessary for the protection of its special interest. But where is the body to protect the general interests of the trade? Who is to appeal to Ministers in the name of Literature? Of all professions in England, will that of Letters always disdain the benefits of organization?

The Keepership of the Regalia of Scotland, vacant by the death of Sir Adam Ferguson, is, we are told, about to be conferred on Mr. James Grant, author of 'The Romance of War,' 'The Aide-de-Camp,' 'The Scottish Cavalier,' 'Bothwell,' 'Jane Seton,' 'Phillip Rollo,' 'The Memorials of Edinburgh Castle,' and 'Memoirs of Sir William Kirkcaldy of Grange.' The historian of the Castle in which the Regalia are kept seems a very proper person to be appointed as custodian.

At the last meeting of the Liverpool Architectural and Archaeological Society some remarks were made on the London journals devoted more or less to the interests over which that Society may be said to watch. We leave the particular paper assailed to fight its own battle—as it is fully able to do,—and confine ourselves to the well-meant, but not very felicitous, compliment paid to ourselves. The speaker described the *Athenæum* as a journal of sixteen pages, devoting "five-eighths of its space to the real and legitimate purposes of the periodical." We need not stop to urge that our advertisements are part of our literary news and of our literary usefulness; but we will remind our Liverpool readers that although "sixteen pages" was the original size of our journal, when it sold for eightpence, that has long ceased to be its limit. The nominal size is now twenty-four pages, and the real size—with a rare exception—is thirty-two pages,—so that the reader gets more literary matter, over and above the advertisements, for his fourpence than he formerly received for eightpence.

Mr. Layard has been elected Lord Rector of the Aberdeen University, by a majority of three out of the four Nations.

An officer of the literary department of the Crystal Palace writes:—

"I am anxious to remove any misconception which might arise from a statement which has place in the columns of last week's *Athenæum* relative to a Free Library at the Crystal Palace. The movement there alluded to was the private proposal of one of the workmen, and had no connexion with the Crystal Palace Company, although from the circular which has been issued such might be inferred, and it was hastily set on foot without the knowledge of the Company, and in ignorance of the fact, which I am happy now to state, that the Directors have empowered me to organize a large Crystal Palace Free Library in connexion with our new reading-room here. The Directors have for this purpose placed at my disposal the very valuable library which has hitherto been used only by the staff of the Company; and for this Free Library I am now receiving presentations in books and funds from the book-trade, the shareholders of the Crystal Palace Company, and those friends to improvement and the extension of educational privileges, who will recognize in this an important feature, not only for the advantage of the very numerous workmen always employed here, but for the advancement of the great purposes of the Crystal Palace Company. I am happy to add, that every success is attending our object. I am, &c. F. K. J. SHERTON."

"Sydenham, Feb. 27."

The Institute of British Architects, at a special general meeting of the members, on Monday, the 26th inst., unanimously resolved to recommend to the Queen, that the royal gold medal for the present year should be conferred on M. Hittorff, architect, Member of the Institute of France, and Honorary and Corresponding Member of the Institute of British Architects. This nomination is as creditable to this Institute, as it must be gratifying to the French school, to see the merits of one of its most distinguished artists recognized and honoured by their foreign brethren.

Mr. Landor writes:—"May I trespass once more, sir, on your valuable pages? In the 'Life

and Correspondence of Lady Blessington,' the learned Editor, who notices me so kindly, has pointed out a mistake of mine on Lord Blessington's vote on the Union. It would be unbecoming in me to offer any defence by pointing out my authority. But in the account of my life I find a slight inaccuracy, which, although of no importance to the public, I will rectify. My private tutor at Rugby was Dr. John Sleath, afterwards Master of St. Paul's School. Again, let me remark that I never was under the care of my godfather, General Powell, in London, nor was he ever there while I was. Out of kindness to my father, an old friend, he told him he would give me a commission in the army if I would 'abstain from sporting my republican opinions.' My reply was, 'No man shall ever tie my tongue; many thanks to the General.' He made the offer to my next brother. But the rectory of Colton was destined for a second son: it was at that time held by my uncle. My brother Charles rented the tithes to the squire of the parish, who paid him 1,000*l.* a year for them. In London, I accepted no hospitalities, and received few visits, occupied in studying Italian, and in improving my knowledge of Greek. Permit me, sir, to offer, through you, my acknowledgement of the friendly courtesy of Dr. Madden. WALTER SAVAGE LANDOR.

Our attention is drawn to a case of deep distress in one of those humble homes of literature of which the world hears little,—but which, nevertheless, exercise a salutary and chastening influence on the circles by which they are surrounded. John B. Rogerson, a servant of the muses, living in Manchester, and author of 'Rhyme, Romance, and Revery,' 'A Voice from the Town,' 'The Wandering Angel,' and 'Flowers for all Seasons'—besides numerous prologues and commendatory verses written for bazaars and charitable institutions—a poet introduced and characterized to our readers some years ago [*Athen.* No. 790]—has been stricken with a kind of rheumatic paralysis, and rendered incapable of holding the situation which gave bread and salt to his large family. A Committee has been formed in Manchester for the poet's relief; and it is hoped that, from so wealthy and intellectual a community as Manchester—on which the poet has claims of birth and of service—aided, perhaps, by the sympathy of distant appreciators of the taste, culture, and high purpose involved in a career so useful and praiseworthy as that of the now stricken bard—a fund may be raised sufficient for the purchase of a modest annuity.

Among the most startling wonders in connexion with electricity, is the announcement that M. Bonelli, of Turin, has invented a new electric telegraph, by which trains in motion on a railway are enabled to communicate with each other at all rates of velocity, and at the same time, with the telegraphic stations on the line; while the latter are, at the same time, able to communicate with the trains. It is added, that M. Bonelli is in possession of a system of telegraphic communication by which wires are entirely dispensed with.

We learn that Commodore Perry, acting under instructions from the Government of the United States, is preparing for the press an account of the Exploring Expedition to Japan. The Report, says the *Publisher's Circular*, is expected to fill three quarto volumes, and to be ready for publication in about twelve months.

The Author of 'My Courtship and its Consequences,' now in New York, is claiming support as an American citizen from the attacks of the English press,—but with no very distinguished success so far as we have seen. While inserting Mr. Wikoff's statement—in which he affects to treat with scorn the charge of being "a Russian agent," and announces his "intention to follow up, by literary and other means, his vindication in England, and to make known to the public there that he is not only undeserving of the calumnies the journals have circulated against him, but that if he was sentenced to fifteen months' imprisonment in an Italian jail, as they truly allege, it was done at the special desire and through the open influence of the agents of the English Government at Turin and Genoa, who had their instructions from home

to that effect"—the *New York Herald*, to which appeal is made, treats the whole subject with ridicule, and in mock gravity attributes the Eastern War, the Anglo-French Alliance, the present attitude of America towards the Allies—in consequence of the failure of a marriage between Miss — and a Bonaparte—to this profound "political agent."

The MSS. and books of "a well-known Collector" were sold at the beginning of the week by Messrs. Sotheby & Wilkinson, and realized 548*l.* The MS. of 'Kenilworth'—wanting some pages—sold for 41*l.* to Mr. Boone—perhaps for the British Museum. The original design for Chantrey's 'Sleeping Children' brought 6 guineas,—a Letter from Nelson to Lady Hamilton sold for 5 guineas,—Moore's fourteen letters to Power brought 10 guineas,—Moore's MS. of 'The Last Rose of Summer' brought 2*l.* 2*s.*—Southey's letter to Lamb respecting Hone, 2*l.* 12*s.* 6*d.*—Burns's letter to Dr. Moore, containing his own life, 13*l.*—the MS. of Burns's 'Cottar's Saturday Night,' 20*l.* 10*s.*—Fielding's assignment of 'Tom Jones,' 8*l.*—Scott's letter to Terry respecting 'Quentin Durward,' 3*l.* 16*s.*—a letter from Charles II. to Rupert, 3*l.* 13*s.* 6*d.*—Killigrew papers relating to Drury Lane, 3*l.*—a letter from Shenstone to Dodsley, 4*l.* 15*s.*

Mr. Windus's collection of works of art and antiquity, sold this week by Messrs. Christie & Manson, contained some beautiful specimens, which brought good prices under the hammer. A head of Aspasia sold for 12*l.*—a boar's head, called the "Shaksperian relic," 25*l.* 4*s.*—a carved Dyptic, 37*l.* 5*s.*—the tankard of Matthias Corvinus, 39*l.* 10*s.*—a tankard by Fiammingo, 112*l.*—the Triumph of Venus, a chasing, after Le Brun, 17*l.* 17*s.*—the opal bust of Augustus, "sculptured by Dioscorides," 136*l.* 10*s.*—and the Blandford Missal, 41*l.* 9*s.* 6*d.* The pictures sold at very ordinary prices.

On the cause of Paige *versus* Cowslip, a Lady Correspondent sends us the following note.—

"As is but too often the case where the botanical name of a plant is not expressed, I think that you and Mr. Chapman differ in opinion with regard to the plant to which the name of *paige* is applied; while, in reality, no difference exists between you. The plant which you describe as 'Number 2, the *cowslip*, the blossoms of which are a little smaller [than the primrose], and spread from one common stalk in an umbelliferous manner,' is the *Primula elatior*—known in botanical works, as well as in most country districts, as the *oxlip*; while the *cowslip*, or *paige*, is the *P. veris*. Botanists and country people are equally agreed on this point, also; hence, there is no mistake in terming the wine or the tea which is made from it by the name of 'cowslip.' It is the plant which you rightly describe as 'still smaller, and of a brighter yellow, but spread from a common stalk like the *P. elatior*, and as growing in open fields in April and May, &c.' You will probably recollect several instances which show that the *cowslip* signified the smaller, more yellow *P. veris* in earlier days, just as it still does. I will but allude to the following: Shakspeare

These be cowslips, fairy favours,
In their freckles left their savours,
Midsummer Night's Dream.

And again:— A mole,
Cinque-spotted, like the *cowslip*.
Cymbeline.

—The description only applies to the little *P. veris*. At the base of each cleft of its cinque-partite, monopetalous corolla, is a deep orange, sometimes almost scarlet, spot; while the *oxlip* has but the deeper-hued, and not spotted, eye, of its cognate the primrose. It would be beside the question to enter on any discussion of the controversy existing—and always likely to exist—on the subject of the convertibility of the several plants. Whatever may be the state of the actual facts, the names were bestowed without the contemplation of any such circumstance. I will, therefore, but further draw your attention to the 'tasty-tasty,' the '*cowslip* leaf' of children, which I am sure you will remember was never made of *oxlips* (*P. elatior*), even in such less frequent districts as yield them in a sufficient quantity to render them thus available.

"I am, &c. CAROLINE CATHERINE LUCAS."

Mayals, Swansea, Feb. 27."

The Emperor of France has given 40,000 francs for the purpose of founding a new laboratory in connexion with the High Normal School in Paris. It will be placed under the direction of M. Sainte-Claire Deville, and will be confined to researches and analyses in mineral chemistry. An order has been given to construct a vast number of cuirasses and other military armour of aluminum tested at this laboratory. This metal possesses the great advantage of being inoxidable, and at the same time extremely light.

Joseph Remy, the poor fisherman of the Vosges, recently died at Bresse from a disease brought on by exposure to inclement weather in his researches on the artificial production of fish. A pension of 1,200 francs had been awarded him for his labours in this interesting branch of ichthyology. His son, Laurent Remy, is a zealous disciple of his father; and has exhibited so much skill in the art of pisciculture as to have been entrusted by Government with the duty of keeping the waters in the Department of the Loire stocked with fish. This business has become a recognized feature in the list of alimentary productions in France; for it has been found that, without the aid of artificial production, the stock of freshwater fish would soon be exhausted.

From Paris correspondence we glean a few paragraphs of interest, as proving how close is the assumed relations of literature to events in France. Madame Sand, we hear, has received a warning not to publish in *La Presse* that portion of her memoir which relates to the year 1812 and the retreat from Moscow. M. Eugene Sue's romance, 'Le Diable Médecin,' appearing in the *Sicéle*, has been suspended by superior order:—the story is said to have given offence in high quarters by its free description of "the luxury that is called prosperity." M. Berryer's reception at the Institute has produced more surprises than were expected. His speech—more political even than has lately been the case in the arena which, as Government alleges, is now the only debating club left in France—was prohibited to the journals, but only after the country editions had been printed and sent out. Paris consequently could not read what all the provinces could read:—and next day the sensitive authority withdrew its bann. Government, however, was not satisfied; and it is whispered that the power which has swept the whole horizon of intellectual France will not respect the Institute, unless the members "learn how to respect themselves." Unhappily, the Institute has put itself, morally, to a certain extent, in the power of Government; as its late elections, though of eminent men, have not always commanded the approval of that intellectual public which stands apart from political coteries. M. Berryer is a party chief,—not one of the writers of whom the France of posterity will be proud. M. M. Salvandy, Molé, Pasquier are not known as French classics. Why, then, are they members of the Institute? Such is the grave question which M. Berryer's *escapade* has raised?

BRITISH INSTITUTION, Pall Mall.—The GALLERY for the EXHIBITION and SALE of the WORKS of BRITISH ARTISTS, is OPEN DAILY, from Ten till Five. Admission 1*s.*; Catalogue 6*d.* GEORGE NICOL, Secretary.

PHOTOGRAPHIC SOCIETY.—The SECOND ANNUAL EXHIBITION of this SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 3; in the Evening from 7 to 10.—Admission, Morning, 1*s.*; Evening, 6*d.* Catalogue, 6*d.* N.B. The Exhibition WILL CLOSE at the end of the present Month.

Will shortly close.

COLOSSEUM, Regent's Park.—Admission, 1*s.*—The original PANORAMA of LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatories, Swiss Cottage, &c. The extraordinary PANORAMA of LONDON BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

ROYAL GALLERY OF ILLUSTRATION, 14, Regent Street.—Additional Pictures. The Battle of Inkermann, and Great Storm in the Black Sea.—The Cavalry Charge at Balaklava, Battle of the Alma, Pictorial Map of Sebastopol, &c. are also exhibited in the Diorama, illustrating events of the war.—The lecture by Mr. Stoeckler. Daily at 3 and 8.—Admission, 1*s.*, 2*s.*, and 3*s.*

LEICESTER SQUARE.—The AZTECS and the EARTHMEN. The first of either race ever seen in Europe. Exhibited daily from 3 to 5, and 7 to half-past 9. Lectures at 4 and 8. Vocal and Instrumental Concerts every Exhibition.—Admission, Stalls, 2*s.*; Reserved Seats, 1*s.*; Gallery, 6*d.*

SCIENTIFIC

SOCIETIES.

GEOGRAPHICAL.—Feb. 26.—Mr. E. Osborne Smith, in the chair.—Mr. C. Bovet, the Rev. W. B. Clarke (of Sydney), Messrs. J. M. Nab, J. A. Otway, M.P., W. H. Smith, H. Stevens, and W. E. Tennent, were elected Fellows.—The papers read were—'Letter from Mr. A. R. Wallace, the late Explorer of the Rio Negro, dated Sarawak, November, 1854,' giving an account of Singapore

and Malacca as far as Mount Ophir, on his way to Borneo.—'Meteorological Observations, &c., during a passage from London to Algoa Bay,' by Dr. P. C. Sutherland.—'Extracts of a Letter from the Rev. Dr. Rebmann to the Secretary of the Church Missionary Society, Rabbaï, S.E. Africa.—The Rev. Dr. Rebmann, of the Church Missionary Society, contributes information derived from a native in his service, relating to the Great Lake Nyassi and its neighbourhood, in Tropical Africa, never yet visited by Europeans, but long since reported to exist.—'On the Coast Survey of South Africa,' by Mr. T. Maclear, Her Majesty's Astronomer at the Cape of Good Hope. Mr. Maclear points out the present defective state of the charts on the coast of South Africa. He urges the importance of the survey to the increasing trade springing up in connexion with recent discoveries; and intimates that, with the assistance of a small steam-vessel, an officer (Lieut. Dayman, R.N.) then engaged on the spot, could readily effect the survey of a considerable portion of the west coast. This subject requires the attention of the Admiralty.—'Notice on the Departure of the North Australian Expedition.'—In the absence of official information, it was reported that the party and stores from England would be despatched on the 5th of March for this long deferred Expedition. Regret was expressed that Capt. Stokes, R.N., had not been ordered to take the command of the Expedition, and continue his surveys in the Gulf of Carpentaria. At present only two gentlemen had been appointed to join the Expedition from the mother country.—Mr. Wilson, in the capacity of geologist, and Mr. Baines, an artist; but Mr. Gregory was expected to take the command at Sydney.—A communication has reached England from the Consul at Murzuk, intimating that a letter had been received from Dr. Vogel, on his way to Mandara, stating that he had been assured by many people that Dr. Barth had been seen in Timbuctu so late as July last, and that the report of his death was not confirmed.

ASIATIC.—Feb. 17.—Sir George T. Staunton, Bart., in the chair.—The Secretary read a letter, recently despatched to Prof. Wilson by B. H. Hodgson, Esq., from his residence among the Tartar populations of the Himalaya Mountains. This letter is intended as a brief statement of what the learned philologist is doing in the Tartar languages,—an investigation in relation to which he had published some essays in the *Bengal Journal* of January and February, 1853. The writer has obtained thirty new vocabularies, from Tibet, Horsok and Sifan; and, by their aid, he has completed a comparative analysis of all the languages of this class, reaching nearly over the whole globe, in which he finds a perfect uniformity of the laws regulating the composition of words and their arrangement, extending over the whole class. The researches of Mr. Hodgson demonstrate the affinity of the Sifan, Horsok, Tibetan, Indo-Chinese, Himalayan and Tamulian tongues, by identity of roots,—identity of compounds,—and, above all, by the absolute uniformity of the laws regulating them. All the Tartar tongues, from America eastward, through the Old World to Oceania, constitute one great family. All the Tamulian languages, and those of the aboriginal tribes of India, are of one class, and that class is Tartar. All derive their vocabularies from the Northern tongues, either directly or *via* Indo-China; and the routes, or relative lines of passage, are plainly traceable. A great many Arian vocabularies, even in Sanscrit, are Tartar, as well in their composite and ordinary state as in their roots. Mr. Hodgson is, finally, of opinion, that the Tartar tongues, taken all together as a great unity, throw a brilliant light on the state of language in general, as it existed prior to the great triple division into Semitic, Iranian and Turanian languages.—Some portions of an enumeration, by John Muir, Esq., of papers, containing contributions to Sanscrit literature published on the Continent and in India, were also read.

SOCIETY OF ANTIQUARIES.—Feb. 22.—Viscount Mahon, President, in the chair.—Mr. R. N. Phillips was elected a Fellow.—A communication was

read from Mr. Wylie, 'On the Ancient Graves of the Alemanni, found at Oberflacht a few years since.'

NUMISMATIC.—Feb. 22.—Dr. Lee, LL.D., in the chair.—Dr. Freudenthal, M.D., was elected a Member.—Mr. Vaux read a paper, by Richard Sainthill, Esq., of Cork, 'On an Unpublished Pattern of the Rupee of William the Fourth, A.D. 1834, engraved by W. Wyon, R.A., of H.M. Royal Mint,' which Mr. Sainthill had procured at the sale of Mr. Cuff's coins, and which he believed to be nearly unique;—and another paper, by the same gentleman, 'On a Rare Penny of Henry the Third, reading on the reverse ANG. LIE. TER. CIS.'

INSTITUTION OF CIVIL ENGINEERS.—Feb. 27.—James Simpson, Esq., President, in the chair.—The paper read was, 'On Steam and Sailing Colliers, and the Various Modes of Ballasting, &c.,' by Mr. E. E. Allen, who directed attention to the chief subjects for discussion:—1st. Whether the comparative cost of transit by screw vessels and sailing colliers had been fairly shown?—2nd. What was the best system of ballasting for colliers?—3rd. Whether the use of screw colliers could be advantageously extended, for supplying distant stations?—4th. Whether it was commercially desirable, that proper coaling stations should be established between England and Australia?

SOCIETY OF ARTS.—Feb. 28.—The Right Hon. Earl Granville, V.P., in the chair.—The paper read was, 'On the Iron Industry of the United States,' by Prof. John Wilson.

INSTITUTE OF ACTUARIES.—Feb. 26.—Charles Jellicoe, Esq., V.P., in the chair.—Benjamin Gompertz, Esq. was elected an Honorary Member.—The Chairman announced that Mr. Archibald Day, an examined Associate, had been admitted a Fellow, under the provisions of Rule 5 of the Constitution and Laws.—A discussion then took place 'On the Methods pursued at the Present Day for Estimating the Value of Contingent Reversionary Interests.'

MEETINGS FOR THE ENSUING WEEK.

- MON. Royal Academy, 8.—'On Sculpture,' by Sir R. Westmacott.
- Entomological, 8.
- Royal Institution, 2.—General Monthly Meeting.
- TUES. Horticultural, 2.
- Institution of Civil Engineers, 8.—'On Steam and Sailing Colliers, and the Modes of Ballasting,' by Mr. Allen.—'On the Application of the Screw Propeller to the larger class of Sailing Vessels,' by Mr. Robinson.
- Royal Institution, 3.—'On Electricity,' by Prof. Tyndall.
- WED. Society of Arts, 8.—'On the Sewage of London; its Composition and Value as a Fertilizer,' by Mr. Lawes.
- Geological, 8.—'On the Geology of the Ballarat and Creswick Greek Gold-fields, Australia,' by Mr. Rosales.—'On the Geology of the Peel River District, Australia,' by M. Odenheimer.—'On the Occurrence of Fossil Mammalian Bones, and of Obsidian Bombs, in the Auriferous Alluvia of Australia,' by the Rev. Mr. Clarke.
- THURS. Society of Antiquaries, 8.
- Royal, 8.
- Royal Institution, 3.—'On English Literature,' by Mr. Donne.
- FRI. Philological, 8.
- Royal Institution, 8.—'On the Mining Districts of the North of England,' by Mr. Sopwith.
- SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

FINE ARTS

ROYAL ACADEMY.

Lectures on Painting, by Prof. Hart, R.A.

LECTURE III.

In my last Lecture I endeavoured to trace the gradual progress of the Arts from the most remote times, in Aramæan lands,—in Egyptian and Assyrian discoveries illustrating the page of Scripture,—and in Greek, Roman and other remains illustrative of Classic History, until we arrive at the epoch of the establishment of the Christian Church.

I have hitherto had to deal with periods when the personality of the artist was merged in the all-absorbing consideration of the system in whose service he wrought, and of which he was but the humble instrument when faith and sincerity animated him to the most zealous efforts. We shall hereafter behold him when these pure emotions were supplanted by more personal considerations.

In those early works which I have described, record of personal or individual service is rarely

to be discovered. Praise or censure must be awarded to the achievements of a class or school, for it was not then the habit for the individual artist to make the confession of authorship; and the disinterestedness that led him to refrain from the avowal renders it almost impossible for us to ascribe the master-pieces of antiquity to their original authors with any degree of certainty.

That the abandonment of more serious views was the primary cause of that decline which, at last, enlisted Art in the decoration of the Villa rather than of the Temple, it is hardly necessary to remind you.

It is difficult, as I have already observed, to classify the arts of early ages in any gradual or systematic manner, or in the strict order of their chronology.

The undulations in their progress, caused by changes in religion or the fluctuations of taste, are among the difficulties encountered in essaying to establish any such system. When we admit the influence of Egyptian example, controlling some of the earlier, and Greek Art acting no less powerfully on the later styles, we are more readily able to interpret much of the apparent obscurity and perplexity that exist in objects presenting intermediate or composite conditions of progress.

By one of these undulations in the artistic progress, you may observe that the presentment afforded by the Etruscan pictorial Art, to which I have before alluded as having met with misapplication in the Roman Villa, was destined to re-appear, though under other auspices. Its spirit was to re-appear, though its form and purpose were to be changed. Its spirit was destined to be rendered subservient to the Christian Church, to which in the earliest days of her establishment it was to be devoted as a silent and safe mode of giving utterance to her new doctrines.

The earliest disciples of the Christian Church sought refuge from Roman intolerance and persecution for the performance of Divine worship according to the tenets of the new religion, and for the means of providing with a last resting-place the remains of those who had paid the price of their sincerity with their lives—either in the fastnesses of the subterranean passage or in the abandoned excavations of the quarry. These they made temples for worship, sepulchres for the dead, and asylums for the living. Whether as the secret conventicle in which the zealous were stealthily to assemble for the celebration of their religious rites, or as a receptacle for the bones of martyred men, the walls of these excavations were soon selected as the media on which to give the earliest utterance of the expressions of their faith. The Etrurian idea was caught and applied. The revelation of many of the mysteries and parables set forth on the walls of the funeral chamber corresponding in no mean degree with Pagan ideas and developing no inconsiderable influence of classic types, will on examination cease to surprise us.

When the pictorial appliance was sought, it is easy to understand that the impressions with which the artistic mind had now been stored—from Pagan building and Pagan statue—would apply the classic taste to the development of the pictured form on the stuccoed wall.

It has been observed with much justice, "that the early Christian artists in seeking for models had thrown a parting glance on the master-works of antiquity, and had for the last time been guided by the genius of Apelles." No one who has looked at M. Perret's volume on the Catacombs can withhold his assent to this observation.

In this way we are able to account for the expression of the Christian sentiment by the adoption of the heathen form. The artists were compelled to employ an old language, because the new religion then struggling to give utterance to its ideas had neither the power, the means, nor the time to create a new style for its accomplishment. The force of necessity compelled the adoption of the Pagan form; and this may be considered as among the most conclusive proofs of the antiquity of the paintings in the Catacombs. The classic taste that pervades the general character of the designs reveals many varieties of form and condition. It distinguishes

between the impassioned oratory conveyed in the simple yet earnest attitudes of the female saints, and between the dignity of manhood or the beauty of youth displayed in the several versions of the favourite subject—the Good Shepherd;—it also discriminates between the symbolic or emblematic presentments of Noah sending forth the Dove,—the Three Holy Children in the fiery Furnace,—Daniel in the Lions' Den,—or the figure of Moses striking the Rock. A superb example of the last-named subject, which is in the Cemetery of Sta. Agnes, had it been discovered before the time of Raffaele, might have subjected the Divine Painter to the suspicion of deriving inspiration from it for the Moses in his own series in the Loggia. The correspondence is here even stronger than in that figure to which Massaccio is believed to have lent no mean influence; while others bear no slight resemblance to the sweet, spiritual, single figures of the school of Memmi, or the more chastened personifications of Fra Beato himself.

These examples are imagined to be of a date previous to the time of Constantine. When, however, the examples of the classic taste induced the early Christian to adopt it, we are to recollect that he did so with very great restriction,—under a peculiar understanding with himself. Living in constant intercourse with the Pagans, and amid the objects of their worship, the sanctity of his own religious sentiment must have been momentarily offended by the sensual and often immoral presentment of the mythologic theme. He sought more purified representations as the media of Divine worship and as types only for the general arrangement of the symbols of his own faith; and he adapted to his own purposes the economy and simplicity with which the heathen artist had distributed the decoration of his temple or his tomb. It was held that the Christian might substitute the emblems of his own faith for the Pagan—but that “no idolatrous images should be engraved by those who were forbidden all intercourse with idols.” That there were, even in those early times, apprehensions that the Pagan might supplant the Christian element in Art is evident from the reproof given by Tertullian to those manufacturers of idols, who defended their trade by stating that they considered their works as objects of Art and not of Religion. “Assuredly,” says he, “you are a worshipper of idols when you make them to be worshipped. It is true you bring them no victim of other things, but you make to them the offering of your mind, your sweat is their drink-offering—the torch of your cunning do you light up for them.” The mind highly excited by religious enthusiasm and set on the alert against possible misapprehension, soon became active to guard against an undue admiration of the media which Heathenism had created. It was soon feared that this admiration of Art, which had been combined with the Pagan system, and had divided the attention of its followers, might act similarly on the New Church. In the writings of the philosophers, says a French critic, “Ideas of a very different character to those of the ancient Greeks were remarked.” Ardent enemies of a religious system which had subjugated the mind by fascinating the senses, they based their teaching on a contempt for all sensuous pleasures. A re-action which ensued enlisted the co-operation of zeal in a contrary direction—to dissociate the religious from the artistic element. The material beauty with which the heathen invested all the objects of his religious worship soon came to be regarded by the Christian as too sensual and improper a manifestation of human powers to be applied to a holy purpose. That as Paganism declined, Christianity might offer a less violent opposition to the introduction of material beauty to dignify and enhance the value of religious symbolism, was possible. It was then feared that the artistic element would become too predominant for the healthful development of religious feeling—that external splendour and ornament would supplant the simple devotion of the heart—that sense and the imagination would be called into exercise more than the mind and the affections. There were, however, antagonizing forces that kept in check any such tendencies,—and, consequently, we learn that as early as the

third century religious pictures passed from private use into churches; and, at the commencement of the fourth century, a Council denounced this practice as an innovation and an abuse, and prohibited “the objects of worship and adoration to be painted on the walls.”

Later, however, in this century when persons of station and fortune desired to decorate the religious edifices which they had founded, they were anxious to express on their walls the deeds and sufferings of those martyrs to whose memories the structures were dedicated—or to adorn them with subjects supplied from the historical portions of the Scriptures. It was on the festivals of the martyrs, when great multitudes of people flocked to these churches, that these pictures were intended to serve the purpose of touching, edifying, and instructing the rude and ignorant who could not be so well taught by other means.

Others, we are told, were induced to decorate the churches with pictures from the Old and New Testaments, so that those who could not read the Sacred Scriptures might be reminded by looking at the paintings of these examples of piety, and thus be excited to imitate them. This was a course recommended to a pious individual, who had conceived the idea of ornamenting a church in memory of certain martyrs with various pictures from Nature that were to have a symbolical significance, but he was induced to substitute Scripture subjects in their stead, as it was feared the other practice might produce too sensual results. Again, in the thirteenth century—so far removed from heathen times, a certain synod to a most important extent consecrated this tendency, already so consonant to the popular taste, by declaring that Painting was the *book of the ignorant*, who knew not how to read in any other; and the characters of this popular writing were consequently multiplied without end, in every size and under all forms. The stained glass window was even employed as the medium through which “to familiarize the faithful with the facts and dogmas of religion,” as the inscription in the Church of St. Nixier at Troyes once recorded that the Curé had caused three windows to be painted, to serve as a catechism and instruction book to the people. “We painters occupy ourselves entirely in tracing saints on the walls and on the altars, in order that by this means men, to the great despite of the demons, may be more drawn to virtue and piety.” This oft-quoted reply of one of the early Italian artists gives us some idea of the mission with which they (the artists) conceived themselves to be charged.

That the artist should be a pious and worthy man was an opinion entertained by many who believed that to ensure success in the representation of sacred themes they should be executed by ecclesiastics and holy men. The same views were expressed to me by Overbeck at Rome in 1842; and that distinguished painter even went so far as to state his belief that Art was profaned when employed on any but a religious subject.

Time wore away much of the opposition that originally existed against the use of images, while Painting more immediately won favour as an agent in the exaltation of religious sentiment. The Christian world, at the outset, made far less use of Sculpture than of Painting. Having freed itself from the trammels of heathen precedent, as my previous observations will have shown, Painting became the interpreter and teacher when other modes of instruction were scant before that great instrument had appeared in Germany in the fifteenth century whose destiny was so to multiply and diffuse intelligence that the cloister should cease to be the sole centre and source of knowledge.

While Painting was subjected to the government of such restrictions, Sculpture carried her powers to the very verge of irresponsibility. It would be here out of place to make more than a general allusion to the fermentation of mind produced in consequence of the mistakes occasioned by the misapplication of the purpose for which statues were designed. The public were charged with having allowed themselves to be led into the error of making their worship too sensual, and of transferring the homage due to the object represented

in the symbol to that symbol itself; and the monks were at the same time accused of neglecting to convey proper instruction to the people. The Church teachers sought to enforce the distinction between the right use of images to excite the feelings to devotion or to instruct the ignorant masses, and the improper use to which they were more frequently applied.

In answer to an application made by a hermit to Gregory the Great for an image of Christ and other religious symbols, the Roman Pontiff sent him a picture of Christ and the Virgin Mary and pictures of St. Peter and St. Paul, accompanied by a lengthy letter, explaining his views respecting the right use of images and his warning arising out of the apprehension lest a superstitious use should be made of the sculptured forms.

Whether Christian worship or feeling necessarily required or felt indispensable to it, the absolute and sensible representation of religious objects was, I believe, held by many to be a consideration of individual sense of devotion. Authority at length, in the seventh century, interfered, and the Council of Constantinople was obliged to correct the abuse of Allegory, in order, we are informed, to give a check where the representation of Christ was concerned,—a subject on which it was thought the Greek mind would endlessly refine. “It is worthy of remark,” says M. Rio, “that the Fathers of the Council were not less orthodox on the subject of Art than in other respects.” The students of this institution will do well to reflect on the remark of this Council, that “they wished Grace to be united with Truth.” Had this Council consisted of professional artists, it could not have propounded a sounder principle.

From the foregoing observations, it is easy to understand that the painter or mosaicist, believing himself and the imitative capacities of his art to be instruments in the promulgation of divine truths, should have submitted to ecclesiastical authority, and that the ruling hierarchy should have considered him and his art as so much educational appliances;—a parallel situation, in fact, to that occupied by the artist under the domination of the Egyptian priesthood.

In one of the arguments, observes Kugler, adduced by an advocate for images in the second Nicene Council (787), it is clearly said, “It is not the invention of the painter which creates the picture, but an inviolable law, a tradition of the Catholic Church. It is not the painters, but the Holy Fathers who have to invent and to dictate. To them manifestly belongs the composition,—to the painter only the execution.” The early Fathers indisputably exercised the greatest influence on the minds of the artists. Many of their artistic dogmas are eloquent of the most profound philosophy—some of the most simple truths. Other opinions deemed the mere imitative capacities of Art to be dangerous. That such apprehensions were not groundless, we shall hereafter see. Indeed, the undue employment of imitation is thought to be among the probable reasons of the decline of Italian Art.

Later, in the ninth and tenth centuries, we hear in France of the abandonment of these scruples, and the daring indulgence of the representation even of the “Ancient of Days” as he appeared to Daniel, expressed under the aspect of an aged and benevolent man.

Manuscripts in the service of the Church furnish a great mass of pictorial evidence, and abound in most public libraries. Encaustic Painting was also active as an agent in recording sacred subjects at this time.

Another direction which Painting took, so soon as the professors of the new faith could emerge from the secret obscurities of the subterranean gloom, is to us a source of the greatest interest, as it is to this new form of expression that we are indebted for the means of establishing the connexion between the decline of Ancient and the revival of Modern Art. I refer to Mosaic Painting. For some of the earliest notices of this art we are indebted to the page of Pliny. Until the time of Claudius this mode of producing pictorial combinations had been almost exclusively devoted to the adornment of pavements. You may in West-

minster Abbey see an example of this in the pavement of Edward the Confessor's Chapel. Its brilliancy of colour and its enduring nature may have suggested it as a fitting, no less than a symbolic, means of recording sacred themes on the expansive walls and vaulted ceilings of costly basilicas, as soon as the new religion had secured a firm footing.

The difficulty and expense of this new mode of expression rendered it an exclusive privilege to be enjoyed only by the rich and noble. How largely Justinian availed himself of this new art for the enrichment of Santa Sophia you are doubtless aware. Continued to the thirteenth century, with various degrees of success, the churches were abundantly decorated by its means. Regal and other laws enforced their adornment in every available situation. Scripture themes, ecclesiastical and secular portraits, martyrdoms and allegorical emblems, crowd the religious edifice. In a recently published work on the Basilica of Justinian, you will not only have proof of the enduring nature of the process, but you will see treatments of some of the subjects I have alluded to, as popular with the early Christians of the sixth century, together with a portrait of the Emperor himself, prostrated in an attitude of homage at the feet of Christ. The Prophets, Apostles and other saintly personages are remarkable for a quiet dignified simplicity, and are not to be confounded with representations of inferior Byzantine Art, rendered worse than they really are, through exaggerated and unskilful engravings.

I have seen mosaics at Ravenna, at St. Apollinare more particularly, unsurpassed for quiet dignity. Like other arts, this was subject to much fluctuation of taste and many varieties in style; and where, as in more modern practice, the mosaicists were much employed, they evidently became indolent and careless, treated their vocation as a trade, degenerated into mannerists, and degraded their art, which in consequence declined.

An inquiry into the art of Mosaic Painting might well occupy a separate Lecture. Prevailing from the fifth to the thirteenth century, its styles have met with varied classification. By some they are divided into the Romano-Christian, or Germano-Christian, according as the dominant influence was derived from early Roman Art, or arose out of the introduction of the tastes of the North. By others they are divided into three phases:—immediate Roman influence, with its classic taste,—the Byzantine, or rigidly conventional type,—the Germano-Christian, or the return to the more vital representation of natural forms. The last has been compared “to a vigorous shoot severed from a dying trunk,—to revive and flourish in a better soil.”

Of the more rigid and conventional character, the artists of the Byzantine school, in the early part of the thirteenth century, soon began in Trans-Alpine Italy to furnish examples for the imitation, and afterwards for the emulation, of the early Pisan, Siennese, and Florentine Masters. From such sources, then, we are to date the revival of Painting. Later in this century, and at Rome, other examples convince us of the improving character of this art of Mosaic Painting. They do not, however, surpass in excellence earlier specimens still existing in Constantinople and Ravenna.

The political and religious events of the age soon wrought their impress on the arts through the agencies supplied by some of the newly established religious orders. Of these, the Franciscan and Dominican were most conspicuous. It is remarkable that these orders, distinguished for such opposite views and habits, should have furnished occupation to two men whose natures at first sight appear so much in contrast with the themes which they were called upon to execute.

Giotto, the active-minded student, so powerful in the enunciation of truth of dramatic action, strength of passion, and vigour of colour, had to treat the acts and contemplative character of the poor and humble St. Francis.

The spiritual, pathetic, quiet, unobtrusive Angelico engaged himself in the illustration of the restless, impassioned, declamatory nature of St. Dominic.

This apparent inconsistency between the nature of the artist and the theme on which he was engaged will be better understood on reflection, when we must acknowledge that a tranquil current of common sense in accordance with the known history of St. Francis, pervades the demonstrative capacity of Giotto; while the declamatory vocation of the Dominican order found its sympathetic representation in those burning, breathing expressions, and in that strength of the pathetic sense, which distinguish the various personages in the eloquent pictures of the Dominican-monk painter, Fra Angelico.

Sculpture and Painting about the end of the thirteenth century proceeded on dissimilar principles. Revived by the consideration of some specimens of the antique, Sculpture began by studying the most perfect forms within its reach, afterwards lost its integrity, formed an independent school, then became corrupt, and finally, as a Christian art, extinct. Painting, on the contrary, broke through the conventionalisms of Byzantine Art, availed herself of the co-operation of Science, which developed her powers into maturity, until her healthy progression received a powerful impulse from the discovery of objects of classic Art, by the engraftment of whose purer taste, though but for a short time, she reaped essential advantage. Facility of means, however, and the undue consideration of technicalities, ere long superseded the spirituality and earnestness of treatment which had characterized the early masters; while the injudicious expectation of reconciling or combining qualities of different and opposite natures lent to such works an air of materialism and convention. The art fell into the hands of class mannerists, and finally degenerated into facile mural ornamentation, when the *macchinisti* dragged it down to the lowest depths of manufacture. This decline, you will hereafter see, is entirely to be ascribed to the undue importance that was assigned to the imitative and mechanical capacities of the art,—to the mistaking of the means for the end.

Of the various religious orders, the Dominican has probably furnished the largest number of artists. This was an order consisting chiefly of men sprung from the upper classes of society, and endowed with superior intelligence. From their ranks have proceeded painters, sculptors, and architects, who lent their aid in the production of many most useful and permanent works, not merely in Italy, but in other countries; and the number of these artists is so considerable that the well-known work of Marchese is exclusively devoted to the record of their labours. With these, Art was, as I have said, a religious exercise. The intervals between the services of the chapel were occupied by the monk in the pursuit of his Art-studies, the illumination of his service-book, the design for a basilica, baptistery, or bridge, or the composition of an antiphonal; and when he returned from singing the mass in the choir of his own church, it was but to resume his occupation on the picture or the illuminated service-book which was to assist in its enrichment. His faith stimulated him in its production, for it was the main object that impelled him to the exercise of his powers. His professional was subordinated to his religious enthusiasm, for he considered that the talents with which he was endowed were only given him in trust, and restricted in their application to one great end, the service of his religion. He came to the exercise of his diurnal labour with humility and fasting, and even bedewed with his tears the subject on which he was employed, invoking the Divine aid, that when completed it might be deemed an acceptable oblation, and serve at the same time as a grateful acknowledgment of the superior talents with which he had been endowed.

When men gave up all temporal preferment, when the regulations of their order supplied all their necessary wants and relieved them of worldly cares, and when their social position was thus rendered distinct from that of other classes of the human family, the same attention which the Church imperiously required from her votary was a condition essential to successful achieve-

ment in Art; nor was the co-existence of the functions of ecclesiastic and artist deemed incompatible. The profession of Fine Art was in strict accordance with the spirit of his religious profession; he acknowledged its power to be most worthily applied when exercised in the service of the Church, when he could be the means of supplying symbolic personifications to arrest the attention of the devotee and guard his orisons from the intrusion of mundane circumstance, or when through its agency he could instruct the uninformed mind by means of the pictured realization of Divine revelation or Scripture history. Shut out from the artifices of the world and many of the adventitious circumstances in more recent times disadvantageously attendant on the painter's studio, his life was of that independent nature which is indispensable to the production of any excellence. His paramount responsibility as an artist was, as I have said, to his Church—the vital absorbing principle that controlled his efforts.

Outside the cloister the spiritual influence was no less potent. The Church imposed restrictions on the lay cultivators of Art no less than on the ecclesiastics. Perpetual supervision was exercised from a critical inspection of the first cartoon, during the progress of the picture—to its completion, and even extended to an occasional control over the very materials employed in its production.

From the first forms of pictorial expression in the Basilica at Asisi until the completion of the Stanze of the Vatican, the same principle of absolute ecclesiastical government, and the same quality of passive obedience in the artist, characterize the system.

We have thus explained the reason of the spiritual air that breathes out of nearly all artistic presentments in the range between these periods, and we can now understand why so little effort was made to obtain superiority in technical particular; for, as we have seen, the necessity of subordinating material aids was stringently enforced by the Church, and too great an attention to mere imitation was held to be unworthy of the sacred theme, and to interfere with its dignity and holiness.

If it be alleged that by the prescription of such conventions as the Church enjoined, one of the elements of Painting, namely, Originality, was sacrificed, I would reply, that with the exercise of the powers which great minds would bring to bear on such subjects, there was little danger that, constituted so dissimilarly and with characters so individual, the treatments would be merely generic and disfigured by such mannerism as to vulgarize the theme. Let us, for example, take Raffaele's treatment of the Spozalizio, or Marriage of the Virgin, in the Brera at Milan, and compare it with treatments of the same subject by artists of the fourteenth and fifteenth centuries. The dogmas prescribed for the treatment of the subject were in the man of genius not made to contribute to a dull routine commonplace rendering, but served rather as a suggestion for the development of his own idea. In this way Michael Angelo, in his frescoes over the altar and on the ceiling of the Sistine Chapel, when treating the History of the Life, Death and Resurrection of Man, subjects of dogmatic ordinance in the Romish Church, did not conform to any such prescriptive ideas. His independent and daring mind spurned such control. Following the bent of his own genius, he amplified, extended and enriched with every appliance of literary, scientific, and pictorial condition subjects which for three centuries had been limited in their treatment by the express rubric of the Church. The earnestness of purpose with which the leading masters or heads of schools wrought, sufficed to redeem the oft-treated subject from the charge of commonplace,—an earnestness that often not only compensates for technical deficiencies, but constitutes distinctive merits or peculiar attributes. This earnestness is also strikingly exemplified in two instances of opposite character, but alike remarkable for an absence of structural accuracy. Can we imagine a greater apparent contrast than a Crucifixion treated by Giotto and the same subject represented by Rembrandt? The contrast, on examination, is, however, not so great as might at first sight appear.

There are in both deficiencies of form and a corresponding absence of the ideal. The community of purpose exists in the earnestness of the intention. The neighbouring peasantry furnished each with his model, from which he did not deviate.

If the Contadini supplied Giotto, the Dutch boors no less furnished Rembrandt with the type for holy impersonation. Though the agency employed in portraying these was so dissimilar, the results were equally emphatic.

Earnestness of expression and the sincerity of the respective painters atone for much scholastic deficiency. What but their strength and feeling induces our admiration of works in which the forms are sometimes ungainly? It was the congeniality of his own mind, with the earnestness of feeling and simplicity of purpose displayed by the early masters, that won them the appreciation of our own Wilkie. His tolerant mind,—for he was so great as to be able to afford to be liberal,—pronounced and recorded his belief, that when these strong, natural religious impulses ceased to give direction to the labours of Art,—when the considerations of Art became too technical,—he saw the reason of its decline. It is this earnest appealing character that affects us in the presentments even of the Catacombs;—it is this quality that penetrates us in the whole range of early Italian Art. The painters were not then harassed by the necessity of complicating considerations. They wrought from sheer feeling—unimpelled by any mercenary impulse—not narrowed down to the patronage of individual caprice. So far from vulgarization or mannerism having arisen from familiarity with the theme, the idea was sublimed and the treatment improved, by the variety of minds brought to bear on it. The technical process was also much advanced. Each sought distinct avenues to express his own individuality. His personal experience and taste had to supply those deficiencies which his own freshness of fancy and perception detected as having existed in the works of his predecessors. New powers which science and philosophy had contributed, and were from time to time increasing, qualified him to contend with the physical difficulties of his art, and enabled him to enlarge the sphere of its operations.

There is a remarkable illustration of this variety in the presentment of a subject, obviously under the control of precedent, afforded in the three treatments of a Pietà, or Deposition from the Cross, placed near each other in one of the rooms of the Pitti Palace, at Florence,—yet though the general arguments appear predetermined, the variations in each express so completely the distinctive characters of their several authors that the mind is not fatigued by any sense of monotony. We admire alike the correct drawing and *soave* expression of Andrea del Sarto, the impassioned fervour of Perugino, and the grand, broad, and simple manifestation of Fra Bartolommeo. The same subject in our own National Gallery is not only one of the best-known pictures of Francia, but one of the most pathetic of these traditional treatments. I regret I am unable to present to you the engraving from the picture by Perugino; you will find it, however, in the engraved series of pictures in the Pitti Palace at Florence.

I conceive a greater triumph to result from a successful contention with a predetermined idea and arrangement in the face of recognized prejudices than from essaying a subject of partial or peculiar interest, whose claims are more especially based on its novelty—in other words, it is a greater merit to arouse our sympathies by evoking novelty of treatment out of an old subject, than to attempt to excite them by some combination savouring more of eccentricity than of originality, captivating the eye, rather than leaving an enduring impression on the mind.

The original of the picture over my head† is another striking illustration of the progression of an idea. The artist to whom the world is indebted for one of its greatest achievements was not deterred from devoting his time and powers to the subject, by any phantom of want of novelty. Called upon for the adornment of a peculiar locality, his theme,

we are to recollect, compelled his conformity with conditions which the situation itself imposed. These were restrictions, as I have already observed, precisely calculated to test the inventive powers of the great artist. One of mediocre talents might have been satisfied with a trite or routine ordering of his theme. By the man of genius it was hailed as the occasion for a victory over difficulties, and turned into a golden opportunity for the assertion of the highest powers of origination and expression. No moment within the cloister was permitted to be abstracted from serious meditation. The walls of the same refectory in which during his repast the holy brother was to listen to a pious reading from the pulpit, were also to engage his attention by a Scripture illustration. The Last Supper was deemed the appropriate adornment of such a situation. Many previous representations of the same event had been made in the almost innumerable monasteries by diversities of intelligence. I shall only now advert to those most prominent as offering striking contrasts by reason of their distinctive merits. Of early excellence, the chief example is that by Giotto in the refectory of Sta. Croce in Florence. This fresco, the parent of its kind, supplies us with some of the earliest motives of an arrangement, the most perfected of which is now before you. Severe and simple, there is in the general disposition of this fresco by Giotto a degree of solemnity that we seek in vain in many of the treatments ranging between the two epochs we are now considering.

The same subject at the Ognissanti, also at Florence, though not one of the most conspicuous works of Ghirlandajo, presents the bold and masculine character which is one of his distinctive attributes. Andrea del Sarto, with a more picturesque arrangement, failed to realize the impressive results of either of the foregoing in his fresco at San Salvi, in the neighbourhood of Florence. There is in his work an evident anxiety to dispense with the severity which the rectilinear forms had contributed to Giotto's version,—the contrast in the actions is in the nature of attitudes rather than of gestures expressive of strong emotions, of anxiety, repudiation, horror, or indignation. I place before you an unfinished engraving from a fresco by Raffaele, recently discovered near Florence, which together with the well-known print by Marc Antonio, are among the chief and best treatments of this subject.

We have seen then that the separate idiosyncrasies of the artists lent endless variety to the treatment of the same idea. There is a still greater evidence remaining of the immense variety that a single artist may impart to one given theme. I shall only have to suggest to your memory the numerous pictures of the Virgin and Child, with which the stores of Art have been enriched by the divine Raffaele. We learn through the medium of Passavant that of the Holy Family with four or more figures there are forty-two treatments,—of Holy Families and Madonnas with three figures there are thirty-three,—of Madonna pictures with two figures forty-four: making in all about 119 treatments, independent of studies and sketches of heads and other subjects derived from the history of the Virgin, all executed by the same hand. These bear no less testimony to the extraordinary fertility of that great painter's invention than to the endless variety of combination of which every subject is susceptible. Who is reminded of monotony by the arbitrary and constant repetition of the same colours, blue and red, in the dress of the Virgin? How many thousand combinations of these colours or tints have been relieved from tediousness by the variety which has been lent them by differences of form or of light and shade?

Through the whole history of mediæval Art you will recognize a perpetual aspiration. A state of gradual development exhibited in characters exemplifying this spirit of progression, coercing mighty minds to excellence by views and agencies of various import. None of the apparently restricting circumstances, to which I have already referred, either of dictation of subject, supervision of labour, or disadvantages of situation, retarded their progress, to which every energy was strung and every circumstance lent a stimulus.

Plato averred that the faculty of painters is such as not to know any end in Painting, but to find always something to change or to add; and that it is altogether impossible that Beauty and Similitude should be so exhausted as to admit of no further additions. The progression of Art was the result of an increase of practical appliances,—for its principles we know are few and simple. Nowhere is this spirit of progression better exemplified than in one of the most celebrated performances in the whole range of painting. How close is the connexion and how gradual the progress from the dawn of the idea to its fullest accomplishment in the mightiest work of Michael Angelo, 'The Last Judgment'? There is no better exemplification of some of the conditions of this progress than you may find associated together in the Cathedral of Orvieto. On its façade there is a very early revelation of the idea in that series of bas-reliefs by Pisano, illustrating the History of Man from the Creation to the Last Judgment. In its interior, the same subject, by Luca Signorelli, reflects that spirit of demoniacal mysticism which the bas-reliefs on its exterior by Pisano inspire. His art, improved by the knowledge of anatomy and perspective, aided Signorelli to represent varieties of action no less than violent foreshortening;—and here it is that we become sensible of the source whence the fresco of the Sistine had its more immediate derivation. It is in no degree a detractor of the mastery of the mighty Florentine to assert, that he caught the terrible inspirations of his 'Last Judgment' from Pisano,—his Dantesque spirit of grandeur from Orcagna in the Campo Santo or the Strozzi Chapel,—and that the language of his Art-revelation partook more of the impassioned masculine energy of Signorelli than of his master Ghirlandajo. An impatient and daring mind—such as controlled Michael Angelo—must have found it difficult to remain passive within the bounds of the quiescent forms of his instructor, rendered, though they were, with decision and vigour. Coincidences more remarkable are discernible in individual passages or groups. Every available means was sought for the amplification and enrichment of the picture. Revelation and prophecy furnished elements towards its composition. Even Pagan mythology was enlisted to contribute to the greatest Art-creation the world has yet seen. Giotto in the Arena at Padua, Spinello in his 'Fallen Angels' in the Church of St. Angelo at Arezzo, another fresco at St. Petronio in Bologna, besides others diffused through Italy, also yielded their influence.

Thus, from the humble suggestion of two small bas-reliefs on the front of Orvieto Cathedral we are able to trace the origin and growth of the mighty conception of a mind whose quality well illustrates the words of the poet—

'Tis to create, and in creating live,
A being more intense that we endow
With form our fancy, gaining as we give
The life we image.

One other state of progression, though it is but of a physical character, I must not pass unnoticed. This is singularly enough one of those returns to an elementary condition which, in the first forms of artistic existence, I pointed out to you was employed by some of the earliest nations in the yearning after greatness through the colossal scale. If the Greek sought the type of moral and physical greatness in the enlarged dimensions of Egyptian practice, it only furnished Phidias with the germ of a conception, in which were to be embodied the highest excellencies of our nature. In the hands of Michael Angelo or Raffaele it was not the mere consequence of extended view, of improved practice, of greater confidence, of the omission of minute or unessential detail, and the accompanying enlargement of style, as it was an absolute moral aspiration, which sought realization by perpetual experiment, manifested in increasing scale of dimensions.

In Raffaele this progressive enlargement of style as well as of scale is to be discerned in a single edifice—in the Vatican—from the Camera della Segnatura to the Sala del Constantino, that is to say, from the Dispute of the Sacrament to the Battle between Constantine and Maxentius at

† 'The Last Supper,' by Leonardo da Vinci.

the Pons Milvius;—in Michael Angelo it is exemplified on one surface only on the ceiling of the Sistine Chapel, beginning with the Creation of Adam and ending with the single figure of Jonah.

For estimating the enlarging power of Raffaele's style you have ample opportunity in this country by contrasting the little picture of the 'Legend of a Knight' in the National Gallery, or the 'Crucifixion' in Lord Ward's collection, or the 'Holy Family' at Blenheim with the Cartoons at Hampton Court. Of the character of 'The Last Judgment' you may form some conception by consulting M. Sigalon's copy of Michael Angelo in the École des Beaux Arts in Paris.

That greatness of style is not necessarily dependent on greatness of dimensions, Raffaele has taught us in his small picture of the 'Vision of Ezekiel.' That Michael Angelo could represent spiritual essence in a small figure as well as in those gigantic forms of the Prophets and Sibyls is equally demonstrated by that admirable statuette of an Angel on an altar in the Church of St. Dominic at Bologna. I regret I have been unable to find any engraving of this statuette to place before you.

The examples which I have adduced sufficiently prove that in the treatments of the same theme under very prescriptive circumstances there was no danger that deep-thinking and active minds would succumb to mere convention which would nauseate by constant recurrence, while there is the most convincing evidence that with the really great they have only operated as so many incentives to freshness of thought and renewed vigour of composition.

It would be impossible in the limits of a Lecture to make even a brief summary of the distinguished masters who gradually brought the art to this high degree of perfection. There is one picture, however, which I cannot omit to name for the influence it exercised over the labours of some of the greatest men. I refer to that fresco by Massaccio in the Church of the Carmine at Florence, 'The Miracle of the Boy restored to Life by St. Peter.' Massaccio it was who burst all previous bonds by combining a variety of resources in a single composition. In this fresco there is an union of excellence that surprises as much for its intention as for the time of its production. Individuality, character, dignity, expression, drawing, colour, light and shade, perspective and relief, are all combined in this remarkable work. As Dante had previously given direction to the artistic mind in subliming aspiration by symbolic and spiritualizing agencies, so in another direction, with the aids of scientific appliance, the example here given by Massaccio in the Carmine more powerfully controlled most of the master spirits of an after time in the realistic developments that constituted the attractions of near a century. Prominent in its relief from the numerous exemplifications of sacred theme, executed before this period, for the possession of an union of qualities which before this had only separate existence in different styles, with a fascinating power of reality, aided by its architectural enrichment and perspective knowledge, it is not difficult to understand why, when the historical had supplanted the doctrinal view, and with the artistic sensibilities eager in the pursuit of the most complete forms of pictorial expression, that this picture should have become the model—an Academy—indeed for study. The most distinguished in after times sought knowledge at this source, Leonardo da Vinci, Michael Angelo and Raffaele among the number,—the latter of whom disdained not to derive advantage from Masolino, the master, as well as from Massaccio, the scholar.

You will, I think, be interested in learning what aspect the city of Florence wore in those days, when the Brancacci Chapel was thronged by so many distinguished persons eager to elicit principles from this picture of Massaccio, on which their future reputations were to be founded. The goldsmith's or working jeweller's shop (*bottega*), such as it still exists in that city, was the school in which were made the preliminary studies of the artist. Here were caught the earliest inspirations of the masters of Michael Angelo and Leonardo. Here the priest, watching the progress, gossiped and whiled away his hour among the men of Art,

nourishing tastes which developed with his ecclesiastic advancement, and which he would hereafter gratify in the adornment of his altar or his church. In these shops received their education mighty artists, who raised fortress-like palaces with massive rusticated basements and grand overhanging cornices, constructed spacious arcades, threw bridges over rivers, raised fountains, designed fantastic and elegant metalwork, carved marble or glazed terra-cotta models to resemble it, painted in fresco or in tempera—where the same artist not only subscribed himself the professor of the three arts,—Architecture, Sculpture and Painting,—but wrote Goldsmith as well under his other performances, and was successful also in courting the other muses, as some of their poetry and music still "bear witness for them." Such was then the artistic atmosphere of Florence, the republic of Art as of Politics or Letters—such the genial soil in which every art took root, blossomed and flourished.

I regret I cannot offer you illustrations of some of the pictures of which I have spoken, as many of them are only given in volumes, and no separate engravings of them exist. I cannot make you any better suggestion than to cultivate an acquaintance with such specimens that help to illustrate the history of Art which you will find in Mr. Ottley's work on Painting in Italy, and in Rosini, 'Storia della Pittura,' and the engraved series of pictures which forms the collection in the Academy of Fine Art at Florence. Illustrations are also given in the last edition of Kugler's 'Schools of Painting in Italy,' one, if not the most valuable, authority on the subject of Italian Art. A print, by Bandinelli, shows the interior of an artist's studio of his day.

The naturalistic state into which Art had fallen in Florence at the time of Lorenzo de' Medici can in no better manner be ascertained than from the active part taken by the great moralist and reformer, the Dominican monk Savonarola, to repress it. Included by him in the category of Pagan and sensual manifestations which the revival of letters and the consequent pedantry exhibited in the attempts at the reproduction of classic taste (literature) had awakened in the Art-displays of his day, they had their full share in those stern denunciations in his well-known Lenten Sermons, in which no individual, from the prince to the peasant, and no occupation from that of the Podestà to the painter were spared.

The great reformer aimed at the extinction of the prevailing and absorbing naturalisms, and the effects of the reasonings of the schools of cold philosophy which the study of ancient classic writers had introduced; and he lamented in no measured terms that so much materialism had virtually suppressed spirituality and religious zeal in Art. With his influence on the Fine Arts, it is more my office to deal. That influence was designed to overcome the precise misdirection of view that then generally existed, and which his powerful eloquence only stayed for a few years.

Some of the most celebrated Florentine artists of his day were roused from their materialistic stupor by his exhortations, to a sense of the indifference into which they had allowed their art to subside. Many of them at once reformed their practices. Some even abandoned the pursuit of Art altogether, and sought refuge in the cloister.

You will perceive in the following quotation from one of the sermons of this distinguished preacher, given by Marchese and Rio, how he contended against one of those mistakes in the practices of Imitation which I discussed in my first Lecture. You will see how little importance he, a man learned no less in the writings of the ancient pagan than in the modern ecclesiastical authors, attached to the imitative or naturalistic rendering of specific fact when applied to elevated themes. Thus he speaks to the artists in Florence: "Your ideas are stamped with the grossest materialism. The beauty of things composed consists in the proportion of their parts or the harmony of their colours; but in that which is simple, beauty is transfiguration, it is light; it is, then, in something beyond the visible that we must seek for the essence of supreme beauty. The more nearly the

creature participates in and approaches to the Divine Beauty the more beautiful it is; because the beauty of the body depends, in great measure, on the beauty of the soul. For instance, if you select two women of equal beauty from among this audience, she who possesses the greatest holiness will excite the greatest admiration in the spectators, and the palm will even be awarded to her by men of carnal minds."

These naturalistic views which succeeded the spiritual, and these classic and other tastes of which the history of the times has thus explained to us the reason, are tendencies evidenced by masters no less eminent than Michael Angelo, and seen in the lower part of his 'Last Judgment' and ceiling of the Sistine, and also by Raffaele in some of the frescoes of the Vatican, and were at no distant period destined to be misapprehended and exaggerated by scholars and imitators, so as ultimately to lead to the superseding of the religious element and to become the pretext in the ornamentation of ceilings and walls, for the manufacture of allegory, and the mechanism of the decorator, and are among the reasons of the heartless and uninteresting displays of the end of the sixteenth and first half of the seventeenth century in Italy. This brief summary of some of the features in the history of Christian Art—an art which culminated in the persons of Michael Angelo and Raffaele—associates with it the melancholy reflection, that but a few brief years only witnessed the great and glorious days of full accomplishment of Leonardo da Vinci, Fra Bartolommeo, Andrea del Sarto and of Correggio—a period comprehending the operations of some of the leading artists of the world.

It would have been impossible in the time allowed me to do more than advert to some of the more prominent circumstances by which Art arrived within three centuries at such perfection. The qualities and characteristics of the distinguished men who effected this will form the subject of constant reference and illustration in my future observations. I have hitherto exclusively devoted myself to the consideration of some leading circumstances in the most important practice of the best Italian Masters, with whom the higher attributes, and the fundamental principles of our art, are exhibited in their greatest comprehensiveness and beauty.

Very rarely in the chiefest of these masters do we observe the imitative capacities of Art,—a subject which engaged us in my first Lecture, occupy any prominent or undue share of our attention. Such imitation was by them regarded only in the nature of a language. By these great artists it was considered as a means,—rarely as an end. In few of their works is our attention divided by the consideration of the degree to which special truth has been imitated,—rarely in their works do the representations of facts divide our attention or distract it from the theme. Neither are there to be discerned those egotistical displays made to court our admiration for the artist's own personal ability. It is to the introduction of these lower elements of the painter's craft that are to be assigned some of the reasons for the decline of powers, that long had almost the exclusive privilege of instructing and improving the minds as well as of increasing the religious devotion of the then most civilized portion of the human race.

Having then endeavoured to clear the way that we may in future better understand each other,—that you may know when you look at a single Italian picture, that you only regard in it a part of a great phase in the history of this particular cultivation of mind—that for a proper estimation of the value to be attached to such an object you should make an acquaintance with the circumstances associated with its production—that you may enter into its rationale, learn to separate errors from excellence and trace effects to causes, so that when, as in this country, you see a picture so far removed from its original destination and in situations so exotic, you may be in a position to apprehend its original meaning.

With this, as a preliminary exercise,—to be eventually realized by travel, where you may corroborate or compare on the spot in front of the

works themselves your previous impressions, you will afterwards in a public gallery or in a private house be in a condition to understand properly what are the special excellencies or relative merits of a collection of pictures by the Old Masters.

FINE-ART GOSSIP.—A subscription has been commenced at Hanover to erect a statue to the late King.—Art seems looking up even amongst English Dissenters, now that Wesleyans build Gothic chapels in pure mediæval taste—such erections as the blue-ribboned followers of the mad Lord George would have delighted to destroy.—Even the Continental Jews seem bitten by the same taste for ancient Art, for the Jews of Vienna have just decorated their chief synagogue with rich arabesques.

Mr. Mayall writes:—

"In reply to Mr. Thornton, who appears irate with reference to my 'discovery' of an effective plan of copying daguerreotypes by the collodion process, I beg, in the first place, to say the 'discovery' (for he gratuitously employs and italicises that word) has not been claimed by me, although, perhaps, a reference to the *Athenæum*, March 15, 1851,—a more distant period than 'the last two years,'—would show that I made the first public mention of this method of enlarging and copying. It is on record, that a certain Frenchman, in the fullness of his importance, claimed much credit to his nation for the invention of shirt-frills. An Englishman standing by replied, that that peculiar discovery might certainly belong to France, but England had the merit of adding a shirt to it. Now, I stand in the same position as the Englishman. I yield 'discovery' to any one who may claim it (to Mr. Thornton himself, if he pleases). I pretend simply to have shown the first practical result, viz., a 'presentable' copy. When Mr. Thornton observes that enlarged copies are 'coarse and ill defined' he forgets to add whether he speaks from personal experience or observation; he does not say he has seen my copies—but evidently makes the assertion generally. In this respect he may be right. It has been my labour to make an exception, and the copies I have lately produced have been so far successful that they have elicited the marked approval of many leading amateur photographers and artists. With this I may well rest content. When a man shows a new application, or, for the first time, exhibits a really useful and practical result, it is easy for an opponent to say the principle is not original, 'nor ever was.' I presume it must have had some origin; but let that pass. What I would ask is, where can I find a really 'presentable' enlarged copy taken before (we will say) the one I exhibited at the Polytechnic, and which was noticed in the *Times*, July 17, 1854? Photographs are invariably improved by re-touching; but the copies I have taken from daguerreotypes require an unusually slight amount of artistic labour. I like the practical much better than the theoretical—so I mention a fact in proof of my assertion. The artist who re-touches the copies is not particularly fond of work (the disposition is by no means new, 'nor ever was'); yet in a single day he can put in the touches a dozen copies require. This is the practical part of the business, and I have not secured it without much study and application.—I am, &c., J. E. MAYALL."

The attractions of the Louvre increase. A new room, dedicated to the antiquities of Asia Minor, has just been opened. Amongst other curiosities it contains are, a Frieze from the Temple of Diana Leucophryene, from Magnesia, and twelve Greek inscriptions from Olympos. In the Egyptian Gallery a curious statue from Memphis has just been placed. The figure is painted red; its eyes are plated bronze, incrustured with crystals. The statue has no inscription, but is supposed to be of the Pyramid age. Two coffins of kings of the eleventh dynasty are shortly expected.

Mr. Bonomi writes:—

"19, Beaufort Street, Chelsea, Feb. 20.
"Will you pardon my asking you to favour me with a little space to state what has chanced to come under my observation respecting the colouring of the Egyptian and other sculptures of the Crystal Palace. In the first place, with respect to the colossi of Abusimbel. Although very slight indications of colour are to be found outside the temple to which those statues are attached, there are few things more certain than that they were entirely painted with all that intensity of red, blue and yellow, with which Mr. Owen Jones has caused their fac-similes to be invested in the Crystal Palace. The same may be said of all the sculpture on the walls of the Egyptian courts, as any person who has been up the Nile as far as Thebes will testify. It has, however, been asserted, that statues made of basalt, or granite, or alabaster, or any other more precious and durable material than lime and sandstone, were not painted. To this it may be answered,—that as these substances are entirely unabsorbent, colour is less frequently found on them; yet there are not wanting examples of painted granite statues in the Museums of Europe,—and the stain of colour was distinctly to be seen on the head of the Young Memnon, and may even now be detected through the surface of smoke, which the statues of our national collection have acquired since their residence in Bloomsbury. Also, in favour of painted granite, may be quoted the walls of the granite sanctuary at Karnak; so that, if I may be permitted to state the conclusion to which these facts have led me, I should say, that no

Egyptian statue, whether of wood or stone, or even bronze (there being two bronze statues in the British Museum which had gilt and coloured ornaments), was considered finished without the addition of colour. With respect to the coloured architectural decorations of the marble temples of Greece, whatever may be our opinion as to the exact tint, intensity or opacity, of some or all the colours used by the Greeks, we have the accumulated evidence of all the modern investigators of civilized Europe as to the fact, viz., that the white marble mouldings and statues of the pediments, metopes and frieze of the temples of Greece were painted or stained partially or entirely. How it happened that the graceful forms of the coloured ornaments, in the cavities of the ceilings and in the protected places of the architraves, which must have been so much more distinct 100 years ago, should have been considered by Stuart to belong to a less brilliant period of Grecian Art than the temples themselves, one cannot imagine, unless, indeed, he had imbibed so strong a prejudice against coloured decorations as to become blind to their exquisite beauty;—and this reflection should make us very cautious how we absolutely condemn the attempts that have been made in the Crystal Palace to restore the colour of the frieze of the Parthenon.

"I remain, &c.,

JOSEPH BONOMI."

The French Government are about to despatch a ship to convey to France the antiquities discovered by their Consul at Nineveh. Of these the most remarkable are, a monumental gate, some extremely ancient statues, and various implements in brass and iron. They have already, with extreme difficulty, been brought to the banks of the Tigris, down which they will be conveyed on the usual native rafts. It is expected they will reach the Louvre in time for the Exhibition.

"Since my letter in the *Athenæum* of Dec. 16, two others have appeared in your paper from architects concerned in this competition, all complaining of the injustice of the Committee. I can only hope that these letters, by informing the public of the unsatisfactory results of architectural competitions as they are at present managed, may lead to the adoption of a better method. Competitions have too often ended, as this has done, in reproaches and discontent on all sides. The method that seems to me the best, and which has succeeded very well in many instances, is for Committees to invite a limited number of architects of established character to send them designs, offering to each man a moderate remuneration for his trouble, the design preferred to be carried into execution, or the author of it to be properly rewarded. This method would be satisfactory to the profession. Architects would esteem it an honour to be invited to assist in such competitions, and would enter them with confidence and zeal. And the Committees would have the advantage of comparing the designs of well-known and responsible men. The mode generally adopted is to advertise for designs in unlimited and anonymous competition. It is well known that architects in good practice seldom enter into such competitions, attended as they are with much trouble and expense, and of which the result is completely a lottery. A man of real knowledge and conscience in his art has indeed a worse chance in them than the rash beginner or the charlatan. For he knowing what really can be well done for the sum proposed, and having a character to lose, is under restrictions, which do not bind all his rivals. In anonymous competition an honourable character is of no value. He who promises the most is most likely to succeed—the most show of design is generally preferred—hence the absurd attempts at architectural display with inadequate means, the pretentious vulgarity of 'styles,' the sham antiquities,—in short, the want of modesty and common sense in design, that we see defacing our towns, especially in the public buildings. They are the results of these competitions. And if the Committees find, as they often do, that the estimates are exceeded on various pretences, and the 'style,' with its rich details, which captivated them so much, dwindles down in practice to a poor and meagre reality, of what avail is their too late experience? If another building is wanted, there will be a fresh Committee, who have the same experience to go through. Sometimes these competitions come to nothing, and all the time and anxiety spent in the designs are entirely thrown away. Not one of them please the Committee, who even refuse the prizes offered. The anonymous crowd have no redress. In the late competition for the Oxford Museum, I am sure that considerably more than a thousand pounds were thus wasted by the architects on the drawings alone that were submitted to the Committee, without taking into consideration the value of their time spent in making the designs. Is it to be wondered at, that men, who can get anything else to do, should seldom meddle with competitions? Is it for the public interest that it should be so? It may be said that unlimited and anonymous competitions encourage rising talent and bring forward those who, from want of interest, would otherwise have been unnoticed; that many able men now eminent in their profession have come forward by this means. It is true that able men have risen by this means, as they would have done by any other. Activity and intelligence must succeed. But it may depend on circumstances, and chiefly on the means adopted, whether the successful competitor be a conscientious artist or a clever charlatan. Architects must conform to the general practice, or retire from the field of public employment. They have often protested against the present system. It is for the public good that the ablest men should enter with confidence into competition for buildings which ought to decorate our cities and ennoble our public life.

"ONE OF THE COMPETITORS FOR THE OXFORD MUSEUM."

The *Athenæum Français* has commenced the issue of a weekly *Bulletin Archéologique*, which promises to increase the value of the paper. The first chapter is on Etruscan Pottery, and discusses the Sacrifice of the Dog,—a subject frequently found on the Maremma vases. The dog was sacrificed to Apollo in times of pestilence.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, Exeter Hall.—Conductor, Mr. COSTA.—FRIDAY NEXT, March 8, Mendelssohn's 'St. PAUL.' Vocalists: Madame Clara Novello, Mrs. Lockey, Mr. Sims Reeves, Mr. J. A. Novello, and Mr. Weiss.—Tickets, 3s., 5s., and 10s. 6d. each, at the Society's Office, No. 6, in Exeter Hall.

Mr. ALFRED MELLON respectfully announces that a series of Grand ORCHESTRAL UNION CONCERTS under his direction, will take place during the season at St. MARTIN'S HALL. The first on Monday evening, April 2, 1855. Subscribers' names received by Messrs. Cramer & Beale, 201, Regent Street.

DRURY LANE.—We have said enough, on former occasions, concerning the story and the music of 'L'Étoile du Nord' to absolve us from any need of attempting to describe either on the production of that opera at Drury Lane:—and well is it that we have had other means of judging M. Meyerbeer's latest work than Mr. Smith's management affords us. That he has taken some pains to produce the opera well, we concede. Of his 'adaptation' from M. Scribe's text, by Mr. Reynoldson, we decline to speak, for reasons which it is needless to explain to our readers. His orchestra, conducted by Mr. Tully, had been reinforced by some of the band from *Her Majesty's Theatre*. His chorus, on Monday, was better than the best attainable chorus of an English opera company twenty years ago. His camp scene to the second act is ingenious and picturesque, though not probable, and its exhibition was more applauded than the military *finale*, from which so much had been expected. But 'some weeks of preparation' would not suffice to prepare a musical work of such intricacy and complication as 'L'Étoile' in an un-musical theatre, even were *Aladdin* the manager. The artists engaged, besides being firm musicians, accomplished vocalists and fine actors, must thoroughly play into each other's hands, as no heterogeneously collected company can do. The orchestra must have that mixture of finish and ease which only comes of long practice and old habitation. Thus, the Londoners may be assured that no fair idea of M. Meyerbeer's music is afforded to them by that which is to be heard at Drury Lane. We were perpetually reminded of the reply made to Handel, when the latter, at an improvised trial of 'The Messiah,' vituperated his singer with "You scoundrel, did you not tell me you could sing at sight?"—"Yes, sir, but not at first sight!" Such insight into the work as was afforded on Monday was only to be got by groping, guessing, and a desperate amount of good faith on the part of the uninitiated. The entire tent-scene and the *finale* to the second act, for instance (the most important portions of the opera), must have been a puzzle to those unacquainted with the music, and was a pain to those better versed in it. Betwixt coarseness and inefficiency every effect was spoiled or sacrificed, and the temperate manner in which it passed off, considering all that is implied in "a first night," may be ascribed to the execution, not to the intrinsic qualities of the opera. Nor could the principal singers be accepted as satisfactory, save by charity in its least discriminating humour. The *Catharine* (Mlle. Jenny Baur) looks pretty and *piquante*,—she has a sufficient *soprano* voice, but she flies at passages of agility with the desperate resolution of a true German songstress having little real brilliancy, who fancies that *Catharine's* famous saying is a musical truth, and that "to will is to do." But *Catharine* did not say "To will, without learning." To accommodate Mlle. Baur's want of execution and the doleful fancy of her play-fellow, Mr. Drayton (the *Peter*), every *tempo* is so moderated that, in spite of abbreviations in the dialogue, the first act of the opera is nearly half-an-hour longer in Drury Lane than at the *Opéra Comique*. Mlle. Baur's intonation, too, is doubtful,—a fault singularly damaging to M. Meyerbeer's music, with its delicate modulations. She was encored in the *terzett* with flutes in the third

act. Her speaking of English is very good, and her acting not amiss.—Mr. Drayton, as we have more than once said, is not without dramatic intentions; but they are of the gloomy, stalking, deliberate sort. According to the bad old English fashion, he neglects the scene, or leaves the stage when his business is to be an accessory or a support to others. When he should be prominent, he seems to think that he can hardly be sepulchral enough, or long enough in bringing to an end what he has to sing. The recovery from drunkenness in his tent-scene was not badly conceived. The disclosure of himself as Czar, which quells the mutiny, was dreary, awkward, and inarticulate. His line, we suspect, to be one of the droning *Anabaptists* in 'Le Prophète,' and not a character comprising so many different lights and shades as that of the carpenter-Czar. It is hard, moreover, to understand why, when speaking serious or sentimental language, he should adopt tones of voice and fancies of pronunciation which recall the "Adelphi effects" of Mr. Paul Bedford, when on burlesque intent. Next in importance to these, are *Prasovia* (Mrs. Drayton, formerly Miss Lowe), and *Danilowitz* (Mr. Bowler, from Manchester), neither of whom has sufficient voice, or was ready enough to do justice to the music assigned to each. *Gritzenko*, the blundering Tartar general, was entrusted to Mr. Leffler, who, by contrast with some of his comrades, seemed refined and capable as a singing actor in a grotesque part. But well-a-day for the two *vivandières*. These were personated by Miss Arden and Miss Johnson,—neither lady having the slightest musical pretension, and both accordingly flagging and floundering through their scenes, which are among the brightest and best portions of the opera. For *George*, Mr. Williams had been pressed into the service;—for *Ismailoff* the Cossack, Mr. Miranda,—whose cavalry song got an *encore*. Even as our English operatic forces stand at present, such a cast as the above can by no means be accepted as the best which Mr. Smith could have obtained; and we cannot but figure to ourselves how severe would have been the mortification of the *maestro*—fastidious as he is reputed to be, and particularly fastidious over the production of 'L'Etoile'—had he witnessed in what manner his latest-born child was introduced to our public. Mr. Smith, we believe, has withstood all remonstrance on the occasion,—and, availing himself of doubts arising from the copyright law, has produced the opera without permission or privilege from the composer, making of it a spectacle, accompanied by incompetent singers. Whatever be the reception of the work, so coarse a musical travesty of it can only be regarded as one of those mishaps to Art, which tend to adjourn the establishment of an opera in English in this country, whether on a great or a small scale.

MENDELSSOHN'S 'ST. PAUL.'—While "Young Germany" is doing its best to sneer down the reputation of Mendelssohn, in favour of Herren Schumann and Wagner—and while our Philharmonic Directors, having likewise, to all appearance, "eaten nightshade," are, after a long course of selfish supineness, now proffering, on bended knees, such honours and compliments to the destructive leader as were never before by them paid to any master of his art—"Old English" loyalty and taste are going their steady way as usual, frequenting and favouring that which is good in proportion as they thoroughly understand it. Now that 'Elijah' is known by heart to our oratorio-goers, they naturally wish to hear 'St. Paul' in its turn. They may never, it is possible, adopt it so lovingly; for the earlier oratorio, with all its merits, is the less various, grand, and engaging work of the two; but it bids fair to rise into a steady esteem and frequency of performance which it has not yet enjoyed here. 'St. Paul' has been selected, we hear, for the Birmingham Festival,—it was given yesterday week at *Ecce Hall* by the *Sacred Harmonic Society*, by whom it is announced for repetition, and on Wednesday it was performed at *St. Martin's Hall*, under Mr. Hullah's direction. We have never heard his chorus so efficient as on this occasion. We have never heard the bass part much

better sung than it was by Mr. Thomas. Credit also is due to Mrs. Enderssohn, and more to Mr. Herbert (who is less experienced in our orchestras), because his duty is the more ungracious of the two, for the manner in which, on almost a moment's notice, they replaced, in the *soprano* and *tenor* parts Mrs. and Mr. Sims Reeves, who were prevented from appearing by influenza. Miss Palmer, who is rising as a singer, was *encored* in the *Contralto arioso*, 'But the Lord.'—The popular portion of St. Martin's Hall was not so much crowded, as crammed, with an audience.

HAYMARKET.—The Spanish dancers have succeeded Miss Cushman, and returned with a reinforcement of a new and increased *troupe*, which, under the direction of Señora Perea Nena, excel their predecessors in the rapidity and sparkle of their motions. Mr. Buckstone has distinguished their re-appearance with fresh and brilliant scenery, giving full effect to the two new ballets produced on Monday, by name 'The Bullfighter' and 'The Gallician Fête.' The latter is a marvel of activity and expression. In it the Señora is assisted by Señor Marcos Diaz, and they represent the bashful courtship of a rustic couple, who after doubtfully advancing and retreating, become mutually fascinated, and surrender to the tumult of passion, rudely and grotesquely displayed, and with its infinite variety dazzling the eyes and perplexing the senses of the spectators. The popularity of these *coryphées* is likely to be greatly augmented by the judicious selection of novelties now made.

LYCEUM.—'Too Much of a Good Thing' is the name of a small farce produced on Thursday week, in which Mr. Roxby performs the part of a *Captain Hector Montgomery*, who, to get free from the attentions of a too affectionate wife, feigns illness; keeps his room, has his wine and spirits sent him in medicine phials, and places a lay-figure at night in his bed, while regaling himself at Cremorne. Of course the trick is discovered, and the dummy, being transferred to his wife's bed, serves in turn to awaken his jealousy, and lead, as the result, to a better understanding in future;—"the golden mean" in love, as in other matters being, by way of tag, the moral recommended. The house was poorly attended.

SADLER'S WELLS.—'Macbeth' was reproduced on Saturday to an exceedingly numerous audience; some changes being made in the cast. Mr. F. Robinson performed the part of *Macduff* with grace and spirit; and Miss Atkinson, as *Lady Macbeth*, displayed considerable aptitude for this class of character, though as yet wanting in experience, and evidently labouring under the disadvantage of insufficient study. Mr. Phelps was exceedingly elaborate in his delineation of the ambitious Thane, and was careful to interpret every phase of the action, besides being particular to a fault in his reading of every line, pointing the meaning with elocutionary diligence. His aim was evidently to interpret the text fully, and to satisfy the numerous spectators who, with book in hand, followed every verse of the poem as pronounced by the actor, sometimes criticizing the form of expression, and always attentive to the lights and shades of emphasis, which, in Mr. Phelps's acting, is distributed with anxious significance, and, by force of long and continuous practice, with peculiar propriety. This is an advantage which the performer has gained by his perpetual repetition of the Shakspearian drama. Every word has been well considered, and its relative value and position are duly regarded and skilfully illustrated. Of all our actors, Mr. Phelps is the most judicious, if not the most startling or effective.

MUSICAL AND DRAMATIC GOSSIP.—The programme of Mr. Ella's second *Musical Evening* offered no novelty, unless the performance in public of Beethoven's first *Pianoforte Trio*—so dear to amateurs, though we do not recollect to have heard it at any chamber concert,—merits the name. Herr Pauer was the pianist advertised.

From witnesses on whom we can rely, we learn that the sudden appearance of Madame Viardot at the Italian Opera of Paris has been attended with brilliant success. Our correspondents state that she was in excellent voice, and that she took the audience by storm by her vocal execution and animated acting. Nothing comparable, we can believe, has been heard and seen on that stage for many a year. The Parisian public, though cynical, is not stupid;—and it will not surprise us if she revive the golden days of the theatre,—supposing that any acceptable novelties can be added to its repertory.

They dance in the court,
They dance in the tower,
and the following lines, which are sung by some Mussulman or Mussulwoman in Mr. Planché's 'Oberon,' run a seeming chance of being the motto of our theatrical year;—even though new Taglioni's are hard to find, and though no successor has yet caught up the mantle and the mask of Mdle. Fanny Elssler's admirable pantomime. Bayaderes have taken their place among "Adelphi effects." *Boleros* and *Bo-Peep* are, betwixt them, said to have set Mr. Buckstone's management stoutly on its feet.—Mdle. Flora Fabbri, as a flower, or some other natural curiosity, draws crowds to admire her *ballet*, at that home of dramatized wickedness, the *Théâtre Porte St.-Martin* in Paris. But the latest and the most lasting record of the reviving power of Two Legs is, a new specimen of numismatic art, which, as foreign journals state, has been just produced at Trieste in honour of Madame Guy-Stéphan. This cheerful and elastic little Lady has danced the Triestine public back to the deserted Opera-house there with such golden results that the management, rescued from ruin, and enriched by her *entrechats* and *pointes*, has gratefully commanded a medal in commemoration of the miracle, with the motto "*Stéphan sospita*." What a treasure will this coin be for antiquaries in the year of grace 2000!—Here, since *ballet* is the theme, may be mentioned the *début* at the *Grand Opéra* in Paris of Mdle. Berretta, a very young Italian lady, described as more stout than graceful, who, nevertheless, by a *pirouette* of a new pattern, is described as having succeeded in 'Le Diable à Quatre.'

We have received the following from our Correspondent at Naples.—"To the great military musical vocal movement here, I perceive you have alluded. It began on the occasion of the festivals in honour of the 'Immacolata Concezione,' and has since been continued in the provinces at holiday times of a similar character. Indeed, it may now be regarded as a permanent institution of the army, for a certain number of men have been chosen from every regiment to be trained for this purpose. Chorus-singing will gain much by this move. At Avellino, a few days since, the *Chasseurs* chanted a Hymn, composed expressly for the occasion by Mercadante. Apart from its influence on music, one can scarcely repress a smile at this curious mixture of things military and divine; but, as our troops have nothing else to do—perhaps happily so for themselves—they may as well act as body-guard to the Madonna and the Saints, and officiate as their singing men.—Is it out of place to mention a remarkable relic of antiquity which was carried in procession at La Cava a short time since—"A Hair of the Madonna?"—To this Italian paragraph it may be added, that *Maestro* Metuzzi has been appointed to succeed Signor Raimondi as Chapel-master at the Vatican;—that Signor Apolloni has produced a new opera, 'The Hebrews,' at Venice, with that entire success which appears to attend every new opera in Italy;—that Signor Gaetano Rossi, author of a century of *libretti*, lately died at Verona at the patriarchal age of ninety-seven;—and that the Modenese have been thrown into fits of rapture by the singing of "*la brava*" Cremona, a young French lady, from the *Conservatoire* of Paris, in 'Lorenzino de' Medici,' one of Signor Pacini's countless operas.

At Brussels, where the stir made about music appears to be more solemnly restless than satisfactory (the good results of the *Conservatoire*, as an instrumental school, being excepted), the *Chambre*

has refused to vote a new organ for the Cathedral, though a new organ is greatly wanted there, no tolerable instrument existing in Brussels, nor in any other town of H.M. King Leopold's kingdom; and though Roman Catholicism has in Belgium much real pomp and ascendancy.—A curious advertisement, cited in the *Gazette Musicale*, announced that Father Herrmann, belonging to the order of the Barefooted Carmelites, would first preach a sermon, on a given day, in the Church of Sainte Gudule (the Cathedral aforesaid), and afterwards execute on the organ some of his compositions. Father Herrmann, says our authority, was in his worldly days a pianist. Is this the gentleman who was in England some years ago with Dr. Liszt?—Something more interesting to antiquaries and students is the announcement of another series of Historic Concerts, about to be given in Brussels by M. Fétis.

Mr. Henry Marston has migrated from Sadler's Wells to the Shoreditch stage, in order to assist in the Shaksperian revivals at "the New National Standard Theatre," which commence this evening with the tragedy of 'Antony and Cleopatra.' Mr. Marston will represent the Roman who thought "the world well lost for love";—the heroine, it is almost needless to add, being impersonated by Miss Glyn. We shall probably bestow some attention on these doings at the East end, both in regard to the present theatre and its neighbour the City of London, which we hear is likely to produce an original tragedy or two in the course of the Easter season.

The Tipperary theatricals, which some have been used to consider as plants of true Hibernian growth, run some chance of being cast into shade by the sorrowful singings and deadly doings of many an amateur *Villikins and Corsican Brother* in London,—your thorough amateur, be it noted, always selecting that which is at once most popular, most theatrical, and most difficult of execution. Yet one more representation, in aid of the Crimean Fund, was the other evening given at the *St. James's Theatre*.—We hear, too, of entertainments in prospect which interest us even more intimately, as connected not with the victims of the sword, but with those of the pen. One of these, which may "come off" at the *Olympic Theatre* during Passion week, should be looked out and listened for, by all who have amused themselves with the light literature of the hour, and who have not sufficiently adverted to the wear of mind and fear of spirits which have gone to its incessant production. We may be enabled, perhaps, to give more positive announcements of this performance shortly.

MISCELLANEA

Colonial Book Post.—The following notice has been issued:—On and from the 1st of March [Thursday last], the regulations of the Colonial book post will, in most respects, be assimilated with those of the inland book post, and will be as follows, viz:—1. A book packet may contain any number of separate books, publications, prints, almanacs or maps, and any quantity of paper, parchment or vellum, (to the exclusion of letters, whether sealed or open;) and the books, maps, paper, &c., may be either printed, written, or plain, or any mixture of the three. 2. The packet must not exceed two feet in length, breadth, or width. 3. The name and address of the sender, and any words not in the nature of a letter, may be written or printed upon the envelope or cover of the packet, in addition to the name and address of the person to whom it may be forwarded. 4. The books, &c., may be in any binding, mounting or covering, whether such binding, &c., be loose or attached. In the case of prints or maps, rollers may accompany them; and markers, whether of paper or otherwise, may be sent with books or other printed papers. 5. If a book packet be found to contain any inclosure which is sealed or otherwise closed against inspection, or any letter whether sealed or not, the letter or other inclosure will be taken out and forwarded to the address on the packet, charged with the full postage as an

unpaid letter, together with an additional rate equal to the amount chargeable on a book not exceeding half-a-pound in weight. The remainder of the packet, if duly prepaid, will be forwarded without any extra charge. 6. If a packet be not sufficiently prepaid according to its weight, but nevertheless bear postage stamps of the value of a single book-rate, it will not, as heretofore, become liable to the letter rate of postage, but will be forwarded charged with the deficient book-postage, and an additional book-rate as a fine. 7. In the event of a book packet being posted altogether unpaid, or paid less than a single rate, it will be detained and sent to the Dead Letter Office. The following is a list of the British Colonies and possessions to which the book post has been established, and to which, therefore, these extended privileges apply; and annexed to the name of each Colony is a table of the rates of postage, chargeable on books, &c., sent under the above regulations, from the United Kingdom:—The British West Indies, Bermuda, Canada, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland, Malta, Gibraltar, Ionian Islands, St. Helena, Gold Coast, Cape Town, New South Wales, South Australia, New Zealand, not exceeding half-a-pound in weight, 6d.; exceeding half-a-pound and not exceeding 1 pound, 1s.; exceeding 1 pound and not exceeding 2 pounds, 2s.; exceeding 2 pounds and not exceeding 3 pounds, 3s.;—East Indies, Ceylon, Mauritius, Hong Kong, not exceeding half-a-pound in weight, 8d.; exceeding half-a-pound and not exceeding 1 pound, 1s. 4d.; exceeding 1 pound and not exceeding 2 pounds, 2s. 8d.; exceeding 2 pounds and not exceeding 3 pounds, 4s. No book packet exceeding the weight of 3 pounds can be sent to the East Indies or to New South Wales; but on books, &c., addressed to any of the other Colonies above enumerated, the postage for heavier packets will increase by two rates of postage for every pound or fraction of a pound. Book packets can only be forwarded to the above British Colonies and Possessions by British or Colonial mail packets, excepting in the case of Cape Town, New Zealand, and St. Helena, to which places (there being no direct packets) books may be forwarded by private ship. In no case can a book packet be sent to the Colonies (except at the letter rate of postage) through a foreign country.

The White Horse.—"In your paper of February, 3rd ult., there is a review of 'Horses and Hounds,' by Scrutator, in which occurs the following:—"The White Horse over our inn-doors is, we believe, the remnant of a compliment originally paid to the House of Hanover when it succeeded to the throne of these realms,—the horse of that colour being the badge of that House." Now, Sir, this opinion I believe to be incorrect. The sign of the White Horse we owe, most probably, to the old Saxon invaders. At all events, the White Horse was the ensign of the county of Kent centuries before England was troubled with Hanoverians. Being so, it is rather a favourite sign in that county. It is very probable that the name prevails more in Kent than elsewhere,—not only as the sign of inns, but as designating hills and vales. Where it does prevail elsewhere, I think it will often be found of more ancient date than the Hanoverian accession. I say nothing of the horses out in chalk in Gloucestershire, in Dorset, near Weymouth, &c.—Apologizing for troubling you, I am, &c.,

"W. A. R."

Back Numbers.—"I have taken the liberty of calling your attention to the following instance of sharp dealing, which I should hardly have credited of a respectable house, unless I had been fully cognizant of it myself:—In the *Athenæum* of December the 16th, 1854, page 1535, I saw an advertisement of 'Structural and Systematic Botany,'—'price 1s.,—forming six numbers of Orr's Circle of the Sciences.' The second week in January, I ordered it of a bookseller. In due time it came down; but lo! and behold! instead of 1s., the charge was 1s. 6d., or one half more than the advertised price. In the correspondence that ensued, the extortion was defended on the plea that they were *back numbers*. I directed the bookseller to send the back numbers back to the publishers.

JAMES BLADON."

"Pont-y-Pool, Feb. 12."

TO CORRESPONDENTS.—J. M. B.—L.—H. A.—S. H.—J. P. T.—I. B. R.—received.

Tinsley & Co. 12, Paternoster-row.

Price 2s. 2s. in 2 handsome 8vo. volumes, appropriately bound, and illustrated by upwards of 1,200 Heliographic and other Engravings, many of which are beautifully coloured.

THE MONUMENTAL HISTORY of EGYPT,

as recorded on the Ruins of her Temples, Palaces, and Tombs.

By WILLIAM OSBORN, R.S.L.

Author of 'Ancient Egypt, her Testimony to the Truth.'

The number of hieroglyphics and other illustrations amounts to upwards of 1,200, not one of which has been copied from any existing English work, many being taken from sketches by the author's own hand; whilst assistance has also been sought from very elaborate and costly works issued by the Governments of France, Italy, and Germany, and which are almost unknown in England. The engravers employed have been engaged in the highest walks of Art, and are the same as were occupied in the illustration of Layard's 'Nineveh,' The Abbotsford Edition of the 'Waverley Novels,' and Murray's 'Illuminated Book of Common Prayer.'

Great expense has been incurred in producing this admirable work in a style worthy of the contents. It is printed with all the care which the nature of the book requires, and with every attention to artistic elegance and typographical beauty.

Tinsley & Co. 12, Paternoster-row, London.

CURIOSITIES OF LONDON.

Now ready, in a closely-printed volume of 500 pages, price 14s. with a Portrait of the Author, from a Painting by T. J. Gullick.

CURIOSITIES OF LONDON; exhibiting the most Rare and Remarkable Objects of Interest in the Metropolis; with nearly Fifty Years' Personal Recollections. By JOHN TIMBS, F.S.A., Editor of the 'Year-book of Facts.'

"Life-long observation, books, conversation, and tradition, have each contributed to swell the facts that find a place in the 'Curiosities of London.' These facts are numerous, and well brought together; nor do we know where so much information respecting the metropolis can be found in a single volume, or even in many volumes."—*Standard*, Feb. 4, 1855.

"The plan of the work is excellent, and every page bears proof of the amount and variety as well as the accuracy of the information. The book is sure to be a standard work in the literature of the metropolis; and Mr. Timbs has crowned his long and varied literary labour by this valuable and acceptable volume."—*Literary Gazette*, Feb. 17, 1855.

"The execution is creditable to Mr. Timbs's great industry and research, and is remarkable for careful compilation and judicious observation. Juvenile readers, men of business, and antiquaries, may all profit by the 'Curiosities of London'."

Economist, Feb. 10, 1855.

David Bogue, 56, Fleet-street.

Just published, price 4s. 6d.

THE SCIENCE OF ARITHMETIC. By JAMES CORNWELL, Ph.D. and JOSHUA G. FITCH, M.A.

"This is without exception the most complete and satisfactory elucidation of the principles and the best guide to the practice of arithmetic which has fallen under our notice."

Morning Chronicle.

"This is a systematic course of numerical reasoning and computation, illustrated by very numerous examples. Arithmetic is here made an instrument of mental discipline. We have examined the little volume with some care, and feel sure that it will make not only good calculators, but good reasoners. We have seldom seen practice and theory more skillfully allied."—*Atlas*.

"A valuable practical work for educational use."—*Literary Gazette*.

"A very ample and elaborate manual."—*Guardian*.
"This book has merit—the demonstrations are very clear and good."—*English Journal of Education*.

"It is a scientific as well as a popular point of view, it is not surpassed among elementary books on the subject in the English language."—*Observer*.

"One of the best practical and compendious treatises we have met with. The book has enough merit in its logical acumen, methodical arrangement, and comprehensiveness to recommend it."—*Leader*.

"The authors remove unnecessary difficulties from the path of the tyro, and give him an intellectual equivalent for his intellectual labour."—*Tait's Magazine*.

"Incomparably superior to any other work of the same compass upon the science of numbers which we have yet seen."

Christian Times.

AN INTRODUCTION TO THE STUDY OF JURISPRUDENCE.

Being a Translation of the General Part of

THIBAUT'S SYSTEM DES PANDEKTEN RECHTS.With **NOTES** and **ILLUSTRATIONS,**By **NATHANIEL LINDLEY, of the Middle Temple, Esq., Barrister-at-Law.****WILLIAM MAXWELL, 32, Bell-yard, Lincoln's Inn, Law Bookseller and Publisher; HODGES & SMITH, Grafton-street, Dublin.****CHURCH MUSIC.**—Publishing by subscription, the **SECOND VOLUME** of the **CHORAL RESPONSES and LITANIES** of the United Church of England and Ireland. Collected from authentic sources, by the Rev. **JOHN JEBB, A.M.** Rector of Peterslow, Herefordshire. Price to Subscribers, 21s.; to Non-Subscribers, 31s. 6d. Subscriptions received by **ROBERT COCKS & Co. (Publishers to the Queen), New Burlington-street, London.****"SPEAK GENTLY."**—The Music by Miss **LINDSAY**, composer of 'Excelsior,' dedicated to Miss Dolby.—"In adapting the music, Miss Lindsay has very happily brought out the tender feeling which the language conveys. The echoing of the refrain, 'Speak gently,' by the accompaniment, has a very sweet and soothing effect. Like her 'Excelsior,' it addresses itself immediately to the heart, and awakens its kindest emotions. The symphonies are simple and flowing, and the continued accompaniment remarkable for its ease and sprightliness."—*Vide Glasgow Sentinel, 2s. 6d.*
London: **Robert Cocks & Co. New Burlington-street.**

INDISPUTABILITY.—The only complete security in Life Assurance. Price Sixpence; or by post, Eightpence. Letts, Son & Steer, Royal Exchange; Wm. Tweedie, 337, Strand.

SUN LIFE ASSURANCE SOCIETY, LONDON.

SHARE OF PROFIT INCREASED FROM ONE-HALF TO FOUR-FIFTHS.

Policies effected with this Society now will participate in FOUR-FIFTHS of the Net Profits of the Society, according to the conditions contained in the Society's Prospectus. The Premiums required by this Society for insuring young lives are lower than in many other old-established offices, and Insurers are fully protected from all risk by an ample guarantee fund in addition to the accumulated funds derived from the investments of Premiums.

Policy Stamps paid by the Office. Prospectuses may be obtained at the Office in Threadneedle-street, London, or of any of the Agents of the Society. CHARLES HENRY LIDDERDALE, Actuary.

THE TWENTY-NINTH ANNUAL GENERAL MEETING of the STANDARD LIFE ASSURANCE COMPANY was held within the Company's Office, Edinburgh, on Thursday, the 15th of February.

ANTHONY TRAIL, Esq., the Senior Director, in the Chair.

THE following statements, containing minute details of the progress of the Company, and of its position at the date of the periodical balance, were submitted to the Meeting:—

Annual Balance Sheet as at 15th November, 1854, certified in accordance with the Company's Acts of Parliament. Report by the Auditor after the examination of the Books and Accounts.

General Statement as to the progress of the Business and its results as at 15th November, 1854.

The following abstract of results exhibits the actual progress of the year.

The number of Proposals for Assurance made to the Directors during the year was 1265

The number of Proposals accepted during the same period was 1046 and with Annuity transactions accepted, to the number of 40

makes the transactions of the year 1086 being an increase of 171 Policies as compared with the largest number issued in any previous year.

The amount of sums proposed for assurance was £622,200 8 5

The amount of sums contained in policies issued was 515,117 7 0

The difference, £107,083 1 5 being the amount of the declined proposals. And it is curious to remark, as evincing the continued care bestowed in the selection of lives, that the accepted and declined proposals for many years have borne the same relative proportion.

It will also be observed that the average amount of each policy has been nearly 500l., a result which, in the management of Life Assurance Institutions, is considered a very favourable feature in the transaction of business.

The Annual Premiums corresponding to the new Assurances amount to £16,650 0 2

The amount of claims by death was £29,428 13 10

And with Bonus additions 5,932 7 2

Makes in all £95,361 1 0

The amount of claims is greater than in the previous year by 5,861l. 6s. 2d.; but it is only in proportion to the extended business of the Company.

The Annual Revenue at 15th November, 1854, had reached 218,964l. 16s. 5d., being an increase on the year of 13,934l. 2s.

The following are the Yearly Results of the New Business since 1844:—

	SUMS ASSURED.	ANNUAL PREMIUMS.
1845—Bonus Year.....	£435,026 12 10	£14,379 8 10
1846.....	393,679 7 10	12,946 4 10
1847.....	443,378 4 11	16,140 0 1
1848.....	395,864 12 5	12,200 9 5
1849.....	429,371 17 1	14,743 4 8
1850—Bonus Year.....	509,147 10 6	17,550 14 9
1851.....	467,499 8 1	15,240 2 11
1852.....	435,248 17 1	15,145 15 6
1853.....	455,248 17 1	14,883 9 3
1854.....	515,117 7 0	16,650 0 2

New Business in 10 years.....	£4,476,333 4 3	£150,382 10 5
Annual Average.....	£447,633 6 5	£15,038 5 0

The Report by the Directors, after communicating the above results, proceeded as follows:—

On the present occasion the Directors have no feature of novelty to notice. The Institution has now been extended by Agencies to every part of the Kingdom; the principles on which it is founded are not susceptible, in their opinion, of any apparent improvement; its practice has always been characterized by the most liberal dealing towards those who transact with it; and it has now become the chief duty of those entrusted with its management to maintain the Company in the high and honourable position which it has reached by the patient and steady attention bestowed on its interests by those who, during the last thirty years, have laboured to make it what it now is, one of the most successful companies of the day on the particular system on which it is founded.

The Directors hope that the Company may long enjoy the confidence of the public, and they trust that the same liberal rivalry which exists among the Offices in Scotland will continue to actuate them, a fair emulation being a wholesome stimulant, beneficial to the public and inspiring to the Offices themselves. It would be well for England if Life Assurance was in as wholesome a condition as it is in Scotland. The daily increasing evil which presses on the English public by the wholesale manufacture of new Offices, calls loudly for legislative interference; but although a Committee of the House of Commons reported, eighteen months ago, on the necessity of some check being instituted, the evil still continues, 104 new Offices having been projected, and 56 founded, during the last two years alone.

The Directors have only farther to remind those present that at 15th November, 1855, the Company will reach the period when the Fifth Investigation of its affairs is appointed to be made. The necessary calculations are now in progress, and the most anxious attention of the Board will be directed to the important duties which that inquiry involves. But they refer to the approach of that period at present, more particularly for the purpose of seeking co-operation in promoting the business of the year now current. "The Bonus Year," as it is termed, has always been a very successful one in point of business, in consequence of the inducement to enter before the division of profits; but a heavier task than usual has to be performed this year, in consequence of the very large extent of business during the past year,—the Bonus Year being no doubt expected to be, as it has hitherto been, the best of the quinquennial period. The Directors trust, therefore, that they will receive hearty support in their endeavours to make it a year of increased success.

This Report having been unanimously approved of, the Meeting then proceeded to elect new Directors in room of those who retire by rotation, and after the appointments were made, the Direc-

tion of the Company was declared by the Chairman to be as follows:—

Governor,
His Grace the DUKE of BUCCLEUGH and QUEENSBERRY.
Deputy Governor,
The Right Hon. the EARL of ELGIN and KINCARDINE.

EDINBURGH.

ORDINARY DIRECTORS.

ANDREW BLACKBURN, Esq. Banker.
THOMAS GRAHAM MURRAY, Esq. W.
JAMES VEITCH, Esq. of Elbow.
WILLIAM WOOD, Esq. Surgeon.
ALEXANDER JAMES RUSSELL, Esq. C.S.
WILLIAM MONCREIFF, Esq. Accountant.
GEORGE PATON, Esq. Advocate.
JOHN ROBERT TOD, Esq. W.S.
CHARLES PEARSON, Esq. Accountant.
JAMES CONNIE, Esq. Perth.
JAMES ROBERTSON, Esq. W.S.
JAMES HAY, Esq. Merchant, Leith.
GEORGE MORRIS, Esq. Advocate.
HARRY MAXWELL INGLIS, Esq. W.S.

LONDON.

Chairman of the Board,
The Right Hon. the EARL of ABERDEEN.

ORDINARY DIRECTORS.

JOHN LINDSAY, Esq. 26, Laurence Pountney-lane.
THOMAS H. BROOKING, Esq. 11, New Broad-street.
JOHN GRIFFITH FRITH, Esq. Austin Friars.
ALEXANDER GILLESPIE, Esq. 3, Billiter court.
ALEXANDER MACGREGOR, Esq. Arlington-street.
JOHN SCOTT, Esq. 4, Hyde Park-street.
Sir ANTHONY OLIPHANT, C.B.

A vote of thanks was presented to the Board of Directors, to the Manager and other Office-bearers, and to the Chairman; after which the Meeting separated.

By order of the Board of Directors,
WILLIAM THOMAS HOBSON, Manager.
H. JONES WILLIAMS, Resident Secretary.
London, 82, King William-street.

Every information will be given at the Offices and at the Agencies of the Company, which are established in all the principal towns of the kingdom.

LONDON.....82, KING WILLIAM-STREET.
EDINBURGH (Head Office)....3, GEORGE-STREET.
DUBLIN.....66, UPPER SACKVILLE-STREET.

THE HOUSEHOLDER'S LIFE ASSURANCE COMPANY, Adam-street, Adelphi.

R. HOBSON, Secretary.

* * * See Prospectus for full particulars.

ST. GEORGE ASSURANCE COMPANY,
118, Pall Mall, London.

Chairman—Viscount RANELAGH, Park-place, St. James's.
Deputy-Chairman—HENRY POWNALL, Esq., Ladbroke-square, Notting Hill.

Indisputable Policies, Annuities, and Provision for Families and Children on the most favourable terms. Unmarketable titles assured.

Loans granted on a new and liberal principle.
For further particulars apply at the Office as above.
W. C. URQUHART, Secretary.

THE YORKSHIRE FIRE AND LIFE INSURANCE COMPANY.

Established at York, 1824, and Empowered by Act of Parliament.

CAPITAL, 500,000l.

The attention of the Public is particularly called to the terms of this Company for

LIFE INSURANCES,

And to the distinction which is made between Male and Female Lives.

No Charge for Stamps on Life Policies.

FIRE INSURANCES

Are also effected by this Company on the most moderate terms.

LONDON AGENTS:

Mr. William Pitman, Solicitor, 34, Great James-street, Bedford-row.

William R. Turner, Solicitor, 1, Field-court, Gray's Inn.

Agencies are also established at the various Towns in the Country.

W. L. NEWMAN, Actuary and Secretary, York.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON.

Instituted 1820.
WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the Profits, are assigned to Policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future Premiums.

ONE-THIRD of the Premium on Insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the Policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of Policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect Insurances with this Company are protected by its Subscribed Capital of 750,000l., of which 140,000l. is invested, from the risk incurred by Members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the Subscribed and Invested Capital, will be seen by the following statement:—

At the close of the last Financial Year the Sums Assured, including Bonus added, amounted to £2,500,000
The Premium Fund to more than 800,000
And the Annual Income from these sources to 109,000
Insurances, without participation in Profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

Patent Stoves, with radiating hearth plates. All which he is
enabled to sell at the very reduced prices of 10s. and 12s. 6d.
First.—From the frequency and extent of his purchases; and
Secondly.—From those purchases being made exclusively for cash.

THE PERFECT SUBSTITUTE FOR SILVER.
—The **REAL NICKEL SILVER**, introduced 20 years ago by
WILLIAM S. BURTON, when PLATED by the patent process
of Messrs. Elkington & Co., is beyond all comparison the very best
article next to sterling silver that can be employed as such, either
usefully or ornamentally, as by no possible test can it be distin-
guished from real silver.

	Fiddle Thread.	King's Pattern.	Thread or Fiddle Pattern.

SHIPPING PRICES.

RUPTURES.—BY ROYAL LETTERS PATENT.
WHITE'S MOC-MAIN LEVER TRUSS is
allowed by upwards of 200 Medical Gentlemen to be the most
effective invention in the curative treatment of **HEMIA**. The use
of a steel spring, so often hurtful in its effects, is here avoided; a soft
bandage being used to support the bowels, and a powerful resisting
power is supplied by the **MOC-MAIN PAD** and **PATENT LEVER**
fitting with so much ease and closeness that it cannot be detected,
and may be worn during sleep. A descriptive circular may be had,
and the Truss (which cannot fail to fit) forwarded by post, on the
conferment of the body, two inches below the hips, being sent to
the Manufacturer, **MR. WHITE**, 228, PICCADILLY, LONDON.

ELASTIC STOCKINGS, KNEE CAPS, &c.
or **VICLOSE VEINS**, and all cases of **WEAKNESS**
and **SWELLING** of the legs, SPRAINS, &c., they are porous,
light in texture, and inexpensive, and are drawn on like an
ordinary stocking. Price, from 7s. 6d. to 16s. each; postage 6d.
MANUFACTORY, 228, PICCADILLY, LONDON.

INFANTS' NEW FEEDING BOTTLES.—
From the *Lancet*:—"We have seldom seen anything so
beautiful as the nursing bottles recommended by Mr. Elam, of Ox-
ford-street. They are adapted to milk, biscuits, and all kinds of
food; and, whether for weaning, rearing by hand, or occasional
feeding, are quite unrivalled."—**BENJAMIN ELAM**, 496, Ox-
ford-street. 7s. 6d. The bottle and mouthpiece are stamped with
my name and address.

GENTLEMEN who require their **HOUSES**
REPAIRED or DECORATED in an efficient manner and
at a moderate cost, can be furnished with Estimates free of charge.
—Applications may be made personally or by letter.
JOHN SYKES, Builder, 47, Essex-street, Strand.

DR. DE JONGH'S
LIGHT BROWN COD LIVER OIL.
Prepared for MEDICINAL USE in the LOFFODEN ISLES,
NORWAY, and put to the test of Chemical Analysis.

Extracts from Medical Testimonials.
The late **JONATHAN PEREIRA, M.D. F.R.S.E. F.L.S.**, Pro-
fessor at the University of London, Author of "The Ele-
ments of Materia Medica and Therapeutics," &c.
"I know that no one can be better, and few so well, acquainted
with the physical and chemical properties of this medicine as
yourself, whom I regard as the highest authority on the subject.
The oil which you gave me was of the very finest quality, whether
considered with reference to its colour, flavour, or chemical pro-
perties; and I am satisfied that for medicinal purposes no finer
oil can be procured."

ARTHUR H. HASSELL, M.D. F.L.S., Member of the Royal
College of Physicians, Physician to the Royal Free Hospital,
Chief Analyst of the Sanitary Commission of the *Lancet*,
Author of "Food and its Adulteration," &c. &c.
"I have more than once, at different times, subjected your
Light Brown Oil to chemical analysis—and this is unknown to your-
self—and I have always found it to be free from all impurity, and
rich in the constituents of bile. So great is my confidence in the
article, that I usually prescribe it in preference to any other, in
order to make sure of obtaining the remedy in its purest and best
condition."

Sold in bottles, labelled with Dr. de Jongh's Stamp and Signa-
ture, and with a box and certificate, by **ANS. H. HAR-
FORD & CO., 77, STRAND, LONDON**. Dr. de Jongh's sole
accredited Consignees and Agents for the United Kingdom and
the British Possessions.

May be obtained in the COUNTRY, from respectable Chemists and
Vendors of Medicine. Should any difficulty be experienced in
procuring the Oil, Messrs. ANS. H. HARFORD & CO. will forward four
half-pint bottles to any part of England, CARRIAGE PAID, on receipt
of a remittance of 10s.

Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.;
Quarts (40 ounces), 8s. Imperial Measure.

METCALFE & CO.'S NEW PATENT
TOOTH BRUSH & PENETRATING HAIR BRUSHES.
—The Tooth Brush has the important advantage of searching
thoroughly into the divisions of the Teeth, and is famous for the
hairs not coming loose. Is an improved Clothes Brush, incapable
of injuring the finest nap. Penetrating Hair Brushes, with the
durable unbleached Russian bristles, wash brushes of improved
construction and powerful friction. Velvet brushes, which act in
the most successful manner. Smyrna Sponges—By means of
direct importations, Metcalfe & Co. are enabled to secure to their
customers the luxury of a Genuine Smyrna Sponge. Only at
METCALFE, BINGLEY & CO.'S Sole Establishment, 130B,
Oxford-street, London, W.1.

Caution.—Beware of the words "From Metcalfe's," adopted by
some houses.

METCALFE'S ALKALINE TOOTH POWDER, 2s. per box.

DECORATION OF THE HEAD.—The admi-
rable taste displayed in the *Head Dresses* of some of our
leading belles, who are no less indebted to art than to nature for
their beauty, may be imitated with advantage, and with the
material to work upon. The indispensable requisite is a **GOOD
HEAD OF HAIR**. This, the skilful artist may embellish; but
the lank, weak and thin, scattered locks, laboriously and vainly
attempts to arrange in a manner befitting the requirements of the
fashionable circle. For this end, the hair must be nourished and in-
vigorated, and all relaxing tendencies overcome. *Oldridge's Balm*
of *Columbia* is the only preparation, truly efficacious, without
being in the slightest degree injurious.

By its frequent use the Hair is prevented from turning grey, is
improved in appearance, strengthened, and receives, by frequent
application, that beautiful gloss and luxuriance which so greatly
adds to the grace and dignity of the human form.

Price 3s. 6d., 6s., and 11s. per Bottle: no other prices are genuine.
Ask for **OLDRIDGE'S BALM**, 13, Wellington-street North,
Strand, London.
Sold by all respectable Chemists, Perfumers and Stationers.

DO YOU WANT LUXURIANT HAIR,
WHISKERS, &c.?—No other compound for the Hair has
maintained such an enduring celebrity as **EMILY DEAN'S**
CRINLINE. It is guaranteed to produce Whiskers, Mous-
tachios, Eyebrows, &c. in a few weeks, and restore the Hair in
brightness from whatever cause it may have been weakened, or
its falling off, and effectually check greyness in all its stages. Price
2s. per Package (elegantly perfumed); sent post free on receipt of
21 penny postage stamps, by **MRS. DEAN**, 37A, Manchester-street,
Gray's Inn-road, London. Sold by every Chemist.—"In one fort-
night it produced a beautiful set of moustachios," *Adams*.—"It
has prevented my hair falling off," *J. Hickson*.—"It has quite
checked the greyness that was coming on," *Mrs. Elden*.
Beware of imitations under closely similar names.

BEAUTIFUL HAIR, WHISKERS, &c., are
INVARIABLY PRODUCED IN TWO OR THREE
WEEKS BY COUPELLE'S CELEBRATED CRINTRIAR,
which is universally acknowledged as the only preparation to be
relied upon for the unflinching production of Hair, as also
checking Greyness, Baldness, &c., and rendering the Hair luxuriant,
curly, and glossy.—"Mr. W. Williams, a Leather-stitcher, Liverpool." "I can
now show as fine a head of hair as any person, solely from using
your Crintriar."—*Sergeant Cranen, Longford Barracks, Ireland*.—"Through
using your Crintriar, I have an excellent Moustache,"
which I could not procure before."—*Mr. Carter, Farnham,
Berks*.—"My head, which was quite bald, is now covered with new
hair."—Price 2s. per packet, through all Chemists and Perfumers;
or sent post free for 21 penny stamps, by **ROSALIE COUPELLE**,
69, Castle-street, Newman-street, Oxford-street, London.—Guard
against imitations under closely similar names. Twenty pages of
Testimonials, with list of Country Agents, post free for two stamps.

DEAFNESS and NOISES in the HEAD.—
Institution for the Cure of Deafness, 9, Suffolk-place, Pall
Mall, London. Instant and permanent restoration of hearing
guaranteed, without the use of ear-trumpets, instruments, or
causing one moment's inconvenience to the most aged or nervous
sufferer. Dr. HOLLOWAY'S new and extraordinary discovery, by
one consultation enables persons of either sex to hear im-
mediately with perfect ease the lowest whisper, and magically
removes all ringing in the ears. Hospital and private testimonials
and certificates from the most eminent Physicians and Surgeons
in England, in whose presence deaf persons have been cured, and
many hundreds of private patients cured can be seen referred to.
Hours of consultation, 11 till 4 every day. **Francis Robert**
Hoghton, Member of the London Royal College of Surgeons, May
3, 1845; Licentiate of the Apothecaries Company, April 30, 1846.

Just published,
"SELF-CURE OF DEAFNESS," for country patients; a sto-
p to empiricism, quackery, and exorbitant fees, sent on receipt of seven
stamps, free. Examination free. 9, Suffolk-place, Pall Mall.

DINNEFORD'S PURE FLUID MAGNESIA.
It has been for many years sanctioned by the most eminent of
the Medical Profession as an excellent remedy for Acidities,
Heartburn, Headache, Gout, and Indigestion. As a Mild Aperient
it is admirably adapted for delicate Females, particularly during
Pregnancy; and it prevents the Food of Infants from turning sour
during digestion. Combined with the **ACIDULATED LEMON**
SYRUP, it is a most efficacious and pleasant Remedy, which is
highly agreeable and efficacious.—Prepared by **DINNEFORD &
CO., Dispensing Chemists, (and General Agents for the improved**
Horse Hair Glosses and Belts), 172, New Bond-street, London, and
sold by all respectable Chemists throughout the Empire.

KNOW THYSELF!—Professor **BLENKINSOP**
continues to receive from individuals of every rank the
most flattering testimonials of his success in describing the CHA-
RACTERS of Persons from their HANDWRITING, pointing
out their mental and moral qualities, whether good or bad.—Ad-
dress by letter, stating age, sex, and profession; enclosing 13 uncut
postage stamps, to Dr. Blenkinsop, 344, Strand, London.

YOURSELF! WHAT YOU ARE! AND
WHAT YOU FIT FOR!—The secret Art of DISCOVERING
the CHARACTER of INDIVIDUALS from the minutiae of their
HANDWRITING, has long been practised by Miss **GRAHAM**
with astonishing success. Her startling delineations are full and
detailed, differing from anything hitherto attempted. All persons
wishing to "know themselves," or any friend in whom they are
interested, must send a specimen of their writing, stating sex and
age, enclosing 13 penny new stamps, to Miss Graham, 10, CHIL-
CHESTER-PLACE, KING'S-CROSS, LONDON, and they will
receive a minute detail of the mental and moral qualities,
talents, tastes, affections, virtues, failings, &c. of the writer, with
many other things hitherto unobtainable.—Miss Graham is a
most successful graphologist.—*Family Herald*.

RUPTURES CURED WITHOUT A TRUSS.
—DR. BARKER'S great European remedy for these alarm-
ing Complaints has been successful in curing thousands of cases
during the last sixteen years. It is applicable to every variety of
single or double Rupture, in either sex, of any age, however bad
or long standing, and causes no inconvenience in its use whatever.
Sent free post to any part of the world, packed so that no one
can know the contents, on receipt of 7s. 6d. in postage stamps,
or post-office order, payable at the General Post-office, to **Alfred**
Barker, M.D., 23, Argyle-square, King's-cross, London. Consulta-
tion hours, daily (except Sunday), from Eleven till Four o'clock.
A copy of the last Quarterly Report, with numerous cases and
testimonials, sent gratuitously to any one, on receipt of a
penny postage stamp and envelope.

RUPTURES EFFECTUALLY CURED
WITHOUT A TRUSS!—All sufferers from this alarming
complaint are earnestly invited to consult or write to Dr. **LESLEY**,
as he guarantees them relief in every case. His remedy has been
successful in curing thousands of persons during the last twelve
years, and is applicable to every kind of single and double Rup-
ture, however bad or long-standing, in male or female of any age,
causing no confinement or inconvenience in its use whatever. Sent
post free to any part of the world, with full instructions for use,
on receipt of 7s. 6d. in postage stamps, cash, or post-office order,
payable at the General Post-office, to Dr. **Herbert Leslie**, 37A,
Manchester-street, Gray's Inn-road, London.—At home daily (ex-
cept Sunday) from 11 till 4 o'clock. A Pamphlet of Testimonials
sent post free on receipt of one postage stamp.

DR. BARRY'S HEALTH RESTORING
REVALENTA ARABICA FOOD counteracts Dyspepsia
(Indigestion), Constipation and their consequences.—**Andrew Ure**,
M.D. F.R.S., London. These consequences are Nervous, Bilious
and Liver Complaints, Acidity, Heartburn, Flatulency, Salt
Headaches and General Debility, Low Spirits, Cough, Asthma,
Incipient Consumption, Nausea, &c. It is, moreover, the best
food for infants and invalids generally, as it never purges or
turns acid on the weakest stomach, nor interferes with a good
liberal diet. It imparts a healthy relish for lunch and dinner,
and restores the faculty of digestion and nervous and muscular
energy to the most enfeebled. Highly approved of by Drs.
Ure, Shorland, Harvey, Campbell, Gattacker, Wurzer, Lord
Stuart de Decies, and 50,000 other respectable persons, whose
health has been perfectly restored by it after all other means
of cure have failed.

In cisterns, 11b. 2s. 9d.; 21b. 4s. 6d.; 51b. 11s.; 121b. 22s.; super-
refined, 11b. 6s.; 21b. 11s.; 51b. 22s.; 101b. 38s. The 101b. and 121b.
carriage free on receipt of Post-office order. **Barry Du Barry**
& Co. 77, Regent-street, London; Portman, Mason & Co. Pur-
veyors to Her Majesty, Piccadilly; also, at 60, Gracechurch-street;
330 and 451, Strand; 4, Cheapside; 68, Cornhill; 49, Bishopsgate-
street; 59, Charing-cross; 44, Upper Baker-street; 63 and 150,
Oxford-street.

RELIEF FOR INFANTS IN CUTTING THEIR TEETH.
MRS. JOHNSON'S AMERICAN SOOTHING
SYRUP.—This efficacious Remedy has been in general
use for upwards of Thirty Years, and has preserved numerous
Children when suffering from Convulsions arising from painful
Dentition. As soon as the Syrup is rubbed on the Gums, the
Child will be relieved, the Gums cooled, and the inflammation
reduced. It is as innocent as effluence, tending to produce the
Teeth with ease; and so pleasant, that no Child will refuse to let
its Gums be rubbed with it. Parents should be very particular to
ask for **JOHNSON'S AMERICAN SOOTHING SYRUP**, and to
notice that the Names of **BARCLAY & SONS**, 95, Farringdon-street,
London (to whom Mrs. Johnson has sold the recipe), are on the
Stamp affixed to each Bottle.—Price 2s. 9d. per Bottle.

KAYE'S WORSDELL'S PILLS are war-
ranted free from Mercurial, and every other poisonous sub-
stance. Their purifying properties are very remarkable: they are
mild in operation, and may be taken by either sex without incon-
venience.—Sold everywhere at 1s. 1d., 2s. 9d., and 4s. 6d. Whole-
sale Depot, 22, BREAD-STREET, LONDON.

PERFECT FREEDOM FROM COUGHS.—
The only Medicine which gives immediate ease to the most
severe Cough, Asthma, &c.
DR. LOCKE'S PULMONIC WAFERS.
As the shortest trial will prove. In every Newspaper and Periodical
in the Kingdom may be seen testimonials of their wonderful ef-
ficacy. Sold by all Druggists, at 1s. 1d., 2s. 9d., and 11s. per box.

HOLLOWAY'S OINTMENT and PILLS.
CURED a fearfully BAD KNEE.—Extract of a letter from
Mr. Joseph Rogers, of the Pottery, Stoke-on-Trent, dated 18th
September 1854:—"To Professor Holloway.—Sir, I suf-
fered for months with a very bad knee, and tried every remedy
likely to benefit me without success. The joint was quite stiff, and
so swollen that I became seriously alarmed as to whether I should
ever regain the use of it. However, by the use of your Ointment
and Pills, the swelling was soon considerably reduced, and in two
weeks was perfectly cured, which enabled me to resume my work."
—Sold by all Vendors of Medicines; and at Professor Holloway's
Establishments, 214, Strand, London, and 80, Maiden-lane, New
York.

IX.

A NEW DESCRIPTIVE CATALOGUE of WORKS of EDUCATION, and WORKS in SCIENCE and GENERAL LITERATURE, published by WALTON & MABERLY. Free by Post to any one writing for it.

The object of this Catalogue is to convey a more satisfactory notion of the contents of the Books than can be drawn from reading their titles. Instead of laudatory extracts from reviews, general notices are given of the chief subjects and most prominent peculiarities of the books. The publication is designed to put the reader, as far as possible, in the same position as if he had inspected for himself, at least cursorily, the works described; and, with this view, care has been taken, in drawing up the notices, merely to state facts, with but little comment, and no exaggeration whatever.

London: WALTON & MABERLY,

DARLEY'S SCIENTIFIC LIBRARY,

FOR THE USE OF

SCHOOLS, PRIVATE STUDENTS, ARTISTS, AND MECHANICS.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics these little works will be particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

I.

FIFTH EDITION.

A SYSTEM OF POPULAR GEOMETRY;

Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading truths and great principles.

By GEORGE DARLEY, A.B.

II.

NEW EDITION.

COMPANION

TO THE

POPULAR GEOMETRY;

in which the Elements of Abstract Science are familiarized, illustrated, and rendered practically useful to the various purposes of life, with numerous Cuts.

By GEORGE DARLEY, A.B.

Price 4s. 6d. cloth.

III.

THIRD EDITION.

A SYSTEM OF POPULAR ALGEBRA;

WITH

A Section on PROPORTIONS and PROGRESSIONS.

By GEORGE DARLEY, A.B.

Price 4s. 6d.

IV.

THIRD EDITION, Just Published,

A SYSTEM OF POPULAR TRIGONOMETRY,

Both Plane and Spherical;

With POPULAR TREATISES on LOGARITHMS, and the Application of Algebra to Geometry.

By GEORGE DARLEY, A.B.

Price 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, article 'Mechanics.'*

Printed by JAMES HOLMES, of No. 4, New Ormond-street, in the county of Middlesex, at his printing-office No. 4, Took's-court, Chancery-lane, in the parish of St. Andrew, in the said county; and published by JOHN FRASER, of No. 14, Wellington-street North, in the said county; Publisher, at No. 14, in Wellington-street aforesaid, and sold by all Booksellers and News-vendors—Agents for Scotland, Messrs. Bell & Bradfoot, Edinburgh; for Ireland, Mr. John Roberson, Dublin—Saturday, March 3, 1855.

UNIVERSITY COLLEGE, LONDON.—**LECTURE COURSE OF BOTANY.**—Prof. LINDLEY will commence a Course of LECTURES on BOTANY, to a Junior Class, for the express purpose of teaching Botany in an elementary manner, especially in its relation to common things, on MONDAY, March 19, at Eight o'clock, A.M. The Lectures are confined to such an account of vegetable structure as enables the Student to understand it as regards the Flora of Europe; and will be delivered (with the exception of twelve days for the Easter Vacation) daily, at Eight A.M., until the end of April. Fee:—for the Class, 2s.; College Fee, 5s. The Course to the Senior Class will commence on the 2nd of May.

G. VINER ELLIS, Dean of the Faculty of Medicine.
A. DE MORGAN, Dean of the Faculty of Arts and Laws.
March 8, 1855. CHARLES C. ATKINSON, Secretary.

HIBBERT TRUST.—THREE SCHOLARSHIPS will be awarded on this Foundation after the next Examination in November next, provided the Candidates are deemed to be duly qualified by the Examiners. The Examination will take place at University Hall, London, on Monday, the 19th, Tuesday, the 20th, and Wednesday, the 21st of November, 1855, each day from Ten to One, and from Three to Six. The names and addresses of all Candidates must be sent to the Secretary at the Hall, before the 1st of October next. No applications can be received after that date. Candidates will also be expected to send in satisfactory evidence of Age, Graduation, and other points referred to in Regulations IV. and V., in the extracts from the Regulations, &c., published for general information. Further particulars may be obtained by application to the Secretary, D. DAVIDSON, Secretary, University Hall, London, 7th March, 1855.

BOTANICAL SOCIETY OF LONDON.—**DISTRIBUTION OF BRITISH PLANTS, 1855.**—Members are requested to send their Lists of Desiderata forthwith marked on the 4th Edition of the London Catalogue of British Plants, 20, Bedford-street, Strand, J. G. DENNES, Secretary, 1st March, 1855. N.B.—The Herbarium may be inspected every Monday, Wednesday, and Friday, from Ten until Five. The Library is open on the same days.

ARUNDEL SOCIETY.—**FIFTH YEAR'S ISSUE TO SUBSCRIBERS.**—Six large Wood Engravings, by Messrs DALZIEL, from Mr. W. OLIVER WILLIAMS'S series of Drawings, from the Frescoes by GIOTTO in the Arena Chapel, Padua, (Being the Continuation of the Eight Engravings from the same Series issued for the Fourth Year), Together with A Notice of GIOTTO AND HIS WORKS IN PADUA by JOHN RUSKIN, Part I. Annual Subscription to the Arundel Society, 11, 18, 21, Old Bond-street, JOHN NORTON, Secretary.

ROYAL ACADEMY OF ARTS, Trafalgar-square.—**NOTICE TO ARTISTS.**—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on Monday, the 9th, or Tuesday, the 10th of April next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited. PAINTERS.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass and Drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other Regulations necessary to be observed may be obtained at the Royal Academy.

Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The prices of Works to be disposed of may be communicated to the Secretary.

ARTISTS' GENERAL BENEVOLENT INSTITUTION, for the Relief of decayed Artists, their Widows and Orphans, Instituted 1814, Incorporated 1832, under the immediate Protection of HER MOST EXCELLENT MAJESTY THE QUEEN.

Patron.—H. PRINCE ALBERT, R.G. The Nobility, Patrons, and Subscribers are respectfully informed that the FORTIETH ANNIVERSARY DINNER will take place in Freemasons' Hall, on SATURDAY, the 31st inst.

THE RIGHT HON. THE LORD MAYOR IN THE CHAIR. Stewards.—Mr. Alderman and Sheriff MUGGERIDGE and Mr. Sheriff CROSLY.

W. J. KOPER, Assistant Secretary.

DEPARTMENT OF SCIENCE AND ART.—LECTURES will be delivered during the Spring Session as follows:—

GOVERNESS PUPIL.—ONE or TWO YOUNG LADIES, desirous of qualifying themselves for Governesses, will be received on very advantageous terms in a select Establishment two miles west of London. French is constantly spoken, and Professors of eminence attend.—Address V. C. Mr. Baker's, Grove-place, Notting-hill.

A GRADUATE of the University of London offers to ASSIST GENTLEMEN in preparing for Matriculation, or for the Examinations required in the Medical Profession or in the Military and Civil Service.—Address R. CLARK, B.A., 25, New Ormond-street, Queen-square.

TO SCHOOLS AND PRIVATE FAMILIES.—A Tutor, of 12 years' experience in the following branches, is open to ENGAGEMENTS:—French, German, Mathematics, Model Drawing, and Perspective. Pupils prepared for the Army and Universities. Unexceptionable testimonials and references.—For particulars address to C. B. P., 8, Cranmer-road, Brixton.

A YOUNG LADY, of the Church of England, of much experience in tuition, wishes for a RESIDENT ENGAGEMENT. She teaches English, French, German, Music, and Singing, without masters. Satisfactory references given and required.—Address A. F. Mr. Fletcher's, Stockwell-green, Surrey.

AN experienced RESIDENT GOVERNESS, having a few months unoccupied, is at liberty to make a TEMPORARY ENGAGEMENT before July. She teaches English, French, Italian, German, Music, and Drawing; she is of the Established Church. Good references can be given, and a liberal remuneration is required.—Address B. Z., Marshall's Library, Edgware-road, London.

TUTOR FOR COLLEGE.—A CLERGYMAN, M.A., late Fellow of his College and University Examiner, Oxford, who receives into his Vicarage (easily reached from London) a very few Young Men to be prepared for admission, has now a VACANCY. He offers references to a large body of distinguished Scholars and Clergymen in Oxford, Cambridge, and London, as well as to the College of former and present Pupils.—Address Rev. S. S., Clerical Association, 38, Southampton-street, Strand, London.

TO GOVERNESSES.—WANTED, a few LADIES to join a FRENCH CLASS, on the Oral and Tabular System originated in Paris by Mr. COLART, Tutor to the Royal Children of France. In addition to his classes for Young Ladies, Mr. ALFRED DU VAL, Principal, near London, Young late Mr. Colart, will commence next THURSDAY an EVENING CLASS for LADIES engaged in Tuition. Terms very moderate. 40, Somerset-street, Portman-square.

MILITARY TUTOR.—Lieutenant-Colonel ANSTRUTHER receives a limited number of GENTLEMEN candidates for Commissions in the Army, and assisted by experienced Masters, prepares in the various branches of study required by Her Majesty's Regulations. References permitted to the parents of former Pupils.—4, Chepstow Villas, Bayswater.

MILITARY EXERCISES for the SONS of CIVILIANS.—UNDER the PATRONAGE of His Grace the Duke of RICHMOND, K.G., Colonel of the Royal Sussex Militia.—At a respectable School, near London, Young Gentlemen are received as Boarders, and in addition to the usual studies of youth, are regularly instructed in Military Exercises, and the use of Sword, Rifle, and Cannon, by a well-qualified officer. Such exercises secure an erect and gentlemanly carriage, expand the chest, and fully develop the physical powers. Terms moderate. A drawing of the uniform will be sent on application to Mr. E. G. LIVESAY, Salvador House, Tooting-Graveney, Surrey.

HURST & BLACKETT,

Successors to Mr. Colburn,

HAVE JUST PUBLISHED

THE FOLLOWING NEW WORKS.

**SAM SLICK'S NEW WORK,
'NATURE and HUMAN NATURE.'**

2 vols.

"Eye nature's walks, shoot folly as it flies,
And catch the manners living as they rise."—Pope.

"Since Sam Slick's first work he has written nothing so
fresh, racy, and genuinely humorous as this. Every line
of it tells, some way or other—instructively, satirically,
jocosely, or wittily. Admiration at Sam's mature talents,
and laughter at his droll yarns, constantly alternate as with
unhalting avidity we peruse these last volumes of his. They
consist of twenty-five chapters, each containing a tale, a
sketch, or an adventure. In every one of them the Clock-
maker proves himself the fastest time-killer going."—
Observer.

The MOSLEM and the CHRIS-

TIAN; or, ADVENTURES in the EAST. By SADYK
PASHA. Revised, with Original Notes, by COLONEL
SZYRMA, Editor of 'Revelations of Siberia.' 3 vols.

"Sadyk Pasha, the author of this work, is a Pole of noble
birth. He is now commander of the Turkish Cossacks—a
corps organized by himself. The volumes on the 'Moslem
and the Christian,' partly fact and partly fiction, written by
him, and translated by Colonel Szyrma, display very well
the literary spirit of the soldier. They are full of the adven-
tures and emotions that belong to love and war; they treat
of the present time; they introduce many existing people,
and have the Danubian Principalities for scene of action.
Here are sources of popularity which the book fairly claims.
As a translation it is excellent."—*Examiner.*

"In every respect a remarkable book."—*Messenger.*

"The work possesses an unusual degree of interest."—
John Bull.

TURKEY; its HISTORY and

PROGRESS: from the JOURNALS of SIR JAMES
PORTER, Fifteen Years Ambassador at Constantinople;

to meet."—*Chambers's Journal.*

JOHN MURRAY, Albemarle-street.

LONDON, SATURDAY, MARCH 10, 1855.

REVIEWS

Polynesian Mythology, and Ancient Traditional History of the New Zealand Race, as furnished by their Priests and Chiefs. By Sir George Grey, late Governor-in-Chief of New Zealand. Murray.

WHEN the author of this curious volume arrived among the strange people whom it was his mission to govern and protect, he found himself helpless, and was wise enough to avow it. He was Governor of a land where the indomitable British Lion had tougher work of it than that wonderful animal ever expected to find. Governor Grey was anxious to do his duty impartially by all. His great difficulty lay in this, that he could not communicate satisfactorily with the natives. There was, indeed, no lack of interpreters to make intercourse easy between him and the petitioning or remonstrant aborigines; but the interpreters themselves were frequently at fault. There was a language, and there were legends and poetical fragments, employed in the addresses of some of those who came to seek redress from the Governor, of which the most skilful interpreters could no more make sense than Mr. Hamilton could of some of the Greek Choruses. The talk about rights and wrongs, land, labour, settlement and occupation, was constantly perplexed by grave allusions to mythic periods of New Zealand history, by quotations of perfectly unintelligible proverbs, and by snatches of poetical citations, —for the conclusions of which, whereby alone sense could be made of the first half, the Governor had to seek among the people of the adjacent district. The compilers who built up the 'Iliad' and 'Odyssey' out of the fragments sung by the rhapsodists had no such laborious task as that which Governor Grey undertook and achieved, in mastering their difficult language, and in gathering up the fragments of their ancient lore.

Having subdued the rugged difficulties which lay in the way of his mastering the language, the energetic Governor made acquaintance with, if we may so speak, the aboriginal clerical gentlemen of the locality. He did not, as Cardinal Ximenes with the Moorish books in Spain, wish to destroy all traces and history of the heathen past;—on the contrary, he wished to preserve and draw profit from them. He had not the feeling of Dr. Cumming, who, in his 'Finger of God,' so complacently congratulates the world on the destruction of the great Alexandrian Library. If the first Archbishop of Mexico, instead of burning all the pictorial records of Anahuac, had preserved them for future scholars to read and digest, he perhaps would have given to the world some truths sacred and important, and have thrown a light upon Aztec paths along which the old messengers of truth may once have walked.

We are then the more disposed to be grateful to Governor Grey for the arduous labour undergone. It has by no means been without results of usefulness and amusement. He has sat at the feet of tattooed Gamaliels, and learnt a world of inconceivable nonsense,—but nonsense in which there are such singular indications that it is but the corruption of the one and immutable truth, as to at once give it importance and dignity.

From the lips of New Zealand priests and cunning men he has gathered all the lore stored up in such garners. The traditionary history of the land that "shall be great hereafter" is stupendously absurd; but, as we have said, there are indications, wildly distorted, that at

some very remote period there was a better instruction than the natives have enjoyed until very recently. When we read, for instance, of the fratricide Tu-matauenga, we are reminded of him who first slew his brother. The fact that it was God who first taught and enjoined prayer to man is also here confessed; and when we learn of what wickedness "the disappearance of a great part of the dry land" was the result—and how, during the contest of opposing men, "a great part of mother Earth was submerged"—we are reminded that, even among these islanders, the record of the dread visitation has not been altogether lost. That with the preservation of the record a spirit of poetry will amply demonstrate.—

"Up to this time the vast Heaven has still ever remained separated from his spouse the Earth. Yet their mutual love still continues—the soft warm sighs of her loving bosom still ever rise up to him, ascending from the woody mountains and valleys, and men call these mists; and the vast Heaven, as he mourns through the long nights his separation from his beloved, drops frequent tears upon her bosom, and men seeing these, term them dew-drops."

Governor Grey's book proves that Scripture history is at the foundation of that of New Zealand. This is sometimes hard to discover, but the fact appears not the less certain. The details are dissimilar, but the leading point of the stories is not to be mistaken,—as in the tale of the jealousy of the brothers of Maui-tiki-tiki-o-Taranga, wherein we recognize the much-enduring Joseph.

The beauty of this lengthily-named hero is described according to the prevailing taste of the locality, and maidens are admiringly told of him, that "the skin on his hips looked mottled and beautiful as that of a mackerel, from the tatoo-marks cut on it by the chisel of Uetonga!"

In these traditionary stories the old truth is perverted in more ways than one, and not only are the deeds of old distorted in the telling, but the acts of many are heaped upon one individual. Thus it is said of Maui, the Joseph of the last story, that but for a certain matter, recounted in a very long and very prosy legend, "no more human beings would have died, but death itself would have been destroyed." But the story of Joseph is more easily traceable in the legend of Tawhaki, of whom, not his brothers indeed, but his brothers-in-law were jealous, and by these he was half slain and cast into a pit, only to rise to more exalted greatness than ever. In like manner we have the story of Sarah and Hagar in that of the jealousy of the wives of Tinirau against the young stranger whom he took to himself as an additional wife. Few, if any, of the touching episodes of Holy Writ are traceable in these wild legends; and though some of them describe characters that are not void of good qualities, yet we do not find among them such men as Isaac and Ishmael, who, though foes and of opposite religious faiths, yet became reconciled over the dead body of a father.

The traces of classical and romantic stories are equally to be discovered amid the *débris* of this legendary history. We see the god and the Bayadere, with a difference, in the story of Tawhaki and the divine girl Tangotango. One of the Labours of Hercules is traditionally preserved in the cleaning of the courtyard of Rehua by the indefatigable Rupe. We know how classical tradition tells us that the Milky Way is but the stain from the fallen bowl when Hebe lay,

a lapse of loveliness along the skies!

So here we find a certain Kaitangata bleeding, "and his blood running about over part of the

heavens stained them, and formed what we now call a ruddiness in the sky. When, therefore, a red and ruddy tinge is seen in the heavens, men say:—'Ah, Kaitangata stained the heavens with his blood.'"

If Lesbos had its Arion, who rode the dolphin as skilfully as Mr. Waterton did the Cayman, so does New Zealand boast of its magician Kae, who stemmed the waves on the back of the gentlest of whales. We may notice that in the distortion of stories which we believe ourselves to have more carefully preserved, the parts and persons are often exchanged. In our edition of Hero and Leander, it was the lover who

from before him put
The parting waves,—

and it was

by the window a sweet maiden sat,
Grave with glad thoughts.

—The antipodean minstrels tell the tale the other way, and it is the fair girl Hine-Moa who dashes into the waves and crosses the boisterous strait, as soon as her ear is struck by the soft measures from the horn of Tutanekei. Hine-Moa, too, has a way about her that strongly reminds us of that Galatea (whom Dryden, by the way, has converted into a Phyllis) who pelted Dametas with apples, and then hid herself among the willows, with a strong desire of being found out.—

"And Hine-Moa knew the voice, that the sound of it was that of the beloved of her heart; and she hid herself under the overhanging rocks of the hot-spring; but her hiding was hardly a real hiding, but rather a bashful concealing of herself from Tutanekei, that he might not find her at once, but only after trouble and careful searching for her; so he went feeling about along the banks of the hot-spring, searching everywhere, whilst she lay coyly hid under the ledges of the rock, peeping out, wondering when she would be found. At last he caught hold of a hand, and cried out, 'Hollo, who's this?'—And Hine-Moa answered, 'It's I, Tutanekei.'—And he said, 'But who are you?—who's I?'—Then she spoke louder, and said, 'It's I, 'tis Hine-Moa.'—And he said, 'Ho! ho! ho! can such in very truth be the case? let us two go then to my house.'—And she answered, 'Yes'; and she rose up in the water as beautiful as the wild white hawk, and stepped upon the edge of the bath as graceful as the shy white crane; and he threw garments over her and took her, and they proceeded to his house, and reposed there; and thenceforth, according to the ancient laws of the Maori, they were man and wife."

Anadyomene, rising from the sea, hardly looks more graceful than Hine-Moa, the shy white crane, upon the brink of the bath. The Galateas of the New Zealand pastorals have, it should be noticed, their Minerva, to teach them the handiwork most useful to them. Thus Kahukura learned the art of netting from the fairies; but the pupil was not so proud as Arachne, the dyer's daughter of Colophon, who thought herself more nimble at the needle than the very goddess of the art.

There are no really comic legends among the traditionary stories of our New Zealand brethren. There is one piece of wit, however, at which they have never done laughing, and they cannot hear it too often. It consists of hearing a chief spoken of as being mistaken for a slave, and asked to carry wood, or perform other servile offices. When this incident occurs, then do they represent "Laughter holding both his sides." Their risibility at such an idea is inextinguishable. Diggory did not laugh half so willingly, for twenty years, at Mr. Hardcastle's daily story of Old Grouse in the gun-room, as the New Zealanders do at the bare and ticklish idea of a chief being asked to work, or being spoken of as so employed. The fact is as much out of the common order of things with them as would be with us the sight of a

Prince Consort posting bills in the Strand or acting as conductor to an omnibus.

We conclude with a citation, which will serve to show of what soft material and pleasant complexions fairies are composed in New Zealand. It is only necessary to premise, that the hero and his friends had unconsciously intruded upon hallowed ground.—

"Te Kanawa, a chief of Waikato, was the man who fell in with a troop of fairies upon the top of Puke-more, a high hill in the Waikato district. This chief happened one day to go out to catch kiwis with his dogs, and when night came on he found himself right at the top of Puke-more. So his party made a fire to give them light, for it was very dark. They had chosen a tree to sleep under—a very large tree, the only one fit for their purpose that they could find; in fact, it was a very convenient sleeping-place, for the tree had immense roots, sticking up high above the ground: they slept between these roots, and made the fire beyond them. As soon as it was dark they heard loud voices, like the voices of people coming that way; there were the voices of men, of women, and of children, as if a very large party of people were coming along. They looked for a long time, but could see nothing; till at last Te Kanawa knew the noise must proceed from fairies. His people were all dreadfully frightened, and would have run away if they could; but where could they run to? for they were in the midst of a forest, on the top of a lonely mountain, and it was dark night. For a long time the voices grew louder and more distinct as the fairies drew nearer and nearer, until they came quite close to the fire; Te Kanawa and his party were half dead with fright. At last the fairies approached to look at Te Kanawa, who was a very handsome fellow. To do this, they kept peeping slyly over the large roots of the tree under which the hunters were lying, and kept constantly looking at Te Kanawa, whilst his companions were quite insensible from fear. Whenever the fire blazed up brightly, off went the fairies and hid themselves, peeping out from behind stumps and trees; and when it burnt low, back they came close to it, merrily singing as they moved—

"Here you come climbing over Mount Tirangi,
To visit the handsome chief of Ngapuhī,
Whom we have done with."

A sudden thought struck Te Kanawa, that he might induce them to go away if he gave them all the jewels he had about him; so he took off a beautiful little figure, carved in green jasper, which he wore as a neck ornament, and a precious carved jasper ear-drop from his ear. Ah, Te Kanawa was only trying to amuse and please them to save his life, but all the time he was nearly frightened to death. However, the fairies did not rush on the men to attack them, but only came quite close to look at them. As soon as Te Kanawa had taken off his neck ornament, and pulled out his jasper ear-ring, and his other ear-ring, made of a tooth of the tiger-shark, he spread them out before the fairies, and offered them to the multitude who were sitting all round about the place; and thinking it better the fairies should not touch him, he took a stick, and fixing it into the ground, hung his neck ornament and ear-rings upon it. As soon as the fairies had ended their song, they took the shadows of the ear-rings, and handed them about from one to the other, until they had passed through the whole party, which then suddenly disappeared, and nothing more was seen of them. The fairies carried off with them the shadows of all the jewels of Te Kanawa, but they left behind them his jasper neck ornament and his ear-rings, so that he took them back again, the hearts of the fairies being quite contented at getting the shadows alone; they saw, also, that Te Kanawa was an honest, well-dispositioned fellow. However, the next morning, as soon as it was light, he got down the mountain as fast as he could without stopping to hunt longer for kiwis."

This is a real Connaught legend, and we cite it as one more proof of a common origin of traditional story; and therewith we commit Governor Grey's book to the public.

Nature and Human Nature. By the Author of 'Sam Slick, the Clockmaker.' 2 vols. Hurst & Blackett.

How far either Yankee or Nova-Scotian nature—how far that wider humanity which is the same "from China to Peru"—are represented in this book, we are not in a humour to determine dogmatically. The Author of 'Sam Slick' has established a manner—a dialect—a form of sentiment, as well as a form of sarcasm—which are as consistent in their interdependence and separately as complete as the links of a perfectly fashioned chain. We are not in the very best case for maintaining that an artist's pictures are truthful, because, having become used to his hand, we thoroughly enjoy and relish them. Turner-worshippers, we know, after rhapsodizing on the scriptural, poetical, geological, and meteorological fidelity to nature of their idol, will talk of the painter's "scarlet grass," in substantiation of his exactness and in justification of their own implicit faith,—but Slick-sympathy does not carry us so far. We suspect there may be in his case exaggeration, as well as vitality. We could hint, even, that there is something like Sterne's faded sentimentality and falseness in the Clockmaker's pathos. In short, we do not swear by our old friend, though we enjoy his company—accepting him for what he is and as he is—with unabated relish. It is fair, however, to let the world hear how cleverly he characterizes and defends himself as something different from the person we have just indicated.—

"I am just a natral man. There is a time for all things, and a way to do 'em too. If I have to freeze down solid to a thing, why then, ice is the word. If there is a thaw, then fun and snow-ballin' is the ticket. I listen to a preacher, and try to be the better for his argu'ing, if he has any sense, and will let me; and I listen to the violin, and dance to it, if it's in tune, and played right. I like my pastime, and one day in seven is all the Lord asks. Evangelical people say he wants the other six. Let them state day and date, and book and page for that, for I won't take their word for it. So I won't dance of a Sunday; but show me a pretty gall, and give me good music, and see if I don't dance any other day. I am not a droll man, dear, but I say what I think, and do what I please, as long as I know I ain't saying or doing wrong. And if that ain't poetry, it's truth, that's all."

These two new volumes, like their predecessors, are a rattling, random miscellany of proverbs, sharp sayings, stories and hard hits, without plan or moral. Hear (to begin) how a sea-faring friend of the Clockmaker finishes off that annihilator of time and space, the steamboat.—

"Well," says I, "as I was a sayin', Captain, give me a craft like this, that spreads its wings like a bird, and looks as if it was born, not made, a whole-sail breeze, and a seaman every inch of him like you on the deck, who looks you in the face, in a way as if he'd like to say, only bragging ain't genteel, ain't she a clipper now, and ain't I the man to handle her? Now this ain't the case in a steamer. They ain't vessels, they are more like floating factories; you see the steam machines and the enormous fires, and the clouds of smoke, but you don't visit the rooms where the looms are, that's all. They plough through the sea dead and heavy, like a subsoiler with its eight-horse team; there is no life in 'em; they can't dance on the waters as if they rejoiced in their course, but divide the waves as a rock does in a river; they seem to move more in defiance of the sea, than as if they were in an element of their own. They puff and blow like boasters braggin' that they extract from the ocean the means to make it help to subdue itself. It is a war of the elements, fire and water contendin' for victory. They are black, dingy, forbididin' looking sea monsters. It is no wonder the superstitious Spaniard, when he first saw one, said: 'A vessel that goes against the tide, and against the wind, and

without sails, goes against God,' or that the simple negro thought it was a sea devil. They are very well for carrying freight, because they are beasts of burden, but not for carrying travellers, unless they are mere birds of passage like our Yankee tourists, who want to have it to say I was "thar." I hate them. The decks are dirty; your skin and clothes are dirty; and your lungs become foul; smoke pervades everythin', and now and then the condensation gives you a shower of sooty water by way of variety, that scalds your face, and dyes your coat into a sort of pepper-and-salt colour. You miss the sailors, too. There are none on board—you miss the nice light, tight-built, lathy, wiry, active, neat jolly crew. In their place you have nasty, dirty, horrid stokers; some hoisting hot cinders, and throwing them overboard, (not with the merry countenances of niggers, or the cheerful sway-away-my-boys expression of the Jack Tar, but with sour, cameroonian-lookin' faces, that seem as if they were dreadfully disappointed they were not persecuted any longer—had no churches and altars to desecrate, and no bishops to anoint with the oil of hill-side maledictions as of old); while others are emerging from the fiery furnaces beneath for fresh air, and wipe a hot, dirty face with a still dirtier shirt sleeve, and in return for the nauseous exudation, lay on a fresh coat of blacking; tall, gaunt wretches, who pant for breath as they snuff the fresh breeze, like porpoises, and then dive again into the lower regions. They are neither seamen nor landmen, good whips, nor decent shots; their hair is not woolly enough for niggers, and their faces are too black for white men. They ain't amphibious animals, like marines and otters. They are Salamanders. But that's a long word, and now they call them stokers for shortness."

Listen, again, to the following epigrammatic censure of a locomotive as compared with a mail-coach, put into the mouth of the obstinate, talking, shrewd, prejudiced English soldier, Jackson.—

"Warn't them mail-coaches pretty things, Sir? Hon the old King's birthday, Sir, when they all turned out with new arness and coaches fresh painted, and coachman and guard in new toggerly, and four as beautiful bits of blood to each on 'em as was to be found in England, warn't it a sight to behold, Sir? The world could show nothin like it, Sir. And to think they are past and gone, it makes ones eart hache. They tells me the coachman now, Sir, has a dirty black face, and rides on a fender before a large grate, and flourishes a red ot poker instead of a whip."

There are touches in the above that Hood himself might have signed. While we are among these definitions of new-fangled discoveries, let us make our Scottish friends happy, by indulging them with the few words bestowed by Sam Slick on their established institution, the bag-pipe.—

"Of all the awful instruments that ever was heard, that is the worst. Pigs in a bag ain't the smallest part of a circumstance to it, for the way it squeals is a caution to cats."

We are in doubt what further we shall gather out of volumes so full of fun and fancy. Some lines of real Connecticut eloquence, reported as having fallen from a trader who was busy over a matter of sale and barter, are not to be resisted.—

"Tell you what, stranger," said he, "I feel as mad as a meat axe, and I hope I may be darned to all darnation, if I wouldn't chaw up your ugly, mummyised corpse, hair, hide, and hoof, this blessed minute, as quick as I would mother's dough-nuts, if I warn't afraid you'd pyson me with your atimy, I'll be dod drotted if I wouldn't."

A capital chapter tells how the Clockmaker, in his salad days, got into trouble by saving the life of a child who was drowning,—but it is rather long and a little broad in its humour. Chapter the second in volume the second—entitled 'Female Colleges'—may be recommended as another excellent article,—not merely in right of its educational caricatures, and because it satirizes that indelicate hyper-delicacy

which Mrs. Trollope and Capt. Marryat denounced as a plant of diseased growth in America,—but because our author keeps the balance true, and after having shown us a silly, sentimental, shallow pretender, exhibits her satirist as smaller than the victim of his satire, when he pains her by a practical joke, which, though play to himself, is death to the poor woman. This tale, however, could not be reduced within manageable limits without spoiling it. Moreover, we confess to a hankering after the English soldier, with his bravery, his conceit, his exasperations, and his false aspirations,—and, accordingly, we shall conclude our gleanings from this odd and clever book by Jackson's criticism on moose deer and other products of the district in which the Clockmaker was keeping holiday.—

"You see, Sir," said he, 'the moose horns are the only thing of any size here, and that's because the moose is half English, you know. Everything is small in this country, and degenerates, Sir. The fox ain't near as big as an English one. Lord, Sir, the ounds would run down one o' these fellows in ten minutes. They haven't got no strength. The rabbit, too, is a mere nothink; he is more of a cat, and looks like one too, when he is hanged in a snare. It's so cold nothin comes to a right size here. The trees is mere shrubbery compared to our hoaxes. The pine is tall, but then it has no sap. It's all tar and turpentine, and that keeps the frost out of its heart. The fish that live under the ice in the winter are all iley, in a general way, like the whales, porpoises, dog-fish, and cod. The liver of the cod is all ile, and women take to drinkin it now in cold weather, to keep their blood warm. Depend upon it, Sir, in two or three generations, they will shine in the sun like niggers. Porter would be better for 'em to drink than ile, and far more pleasanter too, Sir, wouldn't it? It would fill 'em out."

There is more equally racy,—but the above half-dozen will suffice to show the reader that this chip of the old block is handsomely cut—also, that the old block is not so worn down as to be excused further chipping. The Author of 'Sam Slick' has the air in this book of taking leave of his public. So did Mrs. Siddons when she thought she had enough of the stage, but she took leave some dozen times,—and the public never had enough of Mrs. Siddons so long as she was able to appear. We will not, then, say "good bye" to Master Samuel. Let his faults be ever so patent, let his humour be ever so largely mixed up with stage-alloy, there are few sinners or sayers in the book-market worthier of gathering a crowd to observe and to listen than 'Sam Slick.'

The Philosophy of the Infinite, with special reference to the Theories of Sir William Hamilton and M. Cousin. By Henry Calderwood. Edinburgh, Constable & Co.; London, Hamilton & Co.

THIS book is another evidence of the great service Sir William Hamilton has rendered to Philosophy. Whether the main principles of his system be admitted or denied, it must be confessed that his ample and accurate learning and his critical sagacity have made clear what are the chief problems and hard knots in this part of science, and in what condition these at present stand. He has thus given to many an ardent scholar at Oxford or Edinburgh, in rousing him from the self-satisfied repose of the schools, the means and the occasion of pressing his research with vigour in these obscure realms. The author of the book before us "has been indebted to the instructions of" Sir William Hamilton; he has studied with care the article on Cousin in the 'Discussions on Philosophy,' and the relative places in the edition of Reid. Thus prepared, he feels himself sufficient to

pursue his own course, and at once undertakes to assail what has been taught to him:—

*Cornua nata prius vitulo quam frontibus extant
Illis iratus petit atque infensus inurget.*

What there is of thoroughly good in this book, we owe to the teaching against which it is directed. It is, in fact, Sir William Hamilton's theory put to the question: its chief merit is the quickness with which even the appearance of a weak joint in the mail is descried and hit;—its chief defect, a confident tone, which neither the capacity nor the scholarship of the author is sufficient to excuse; but greater experience will tame this down.

There is nothing more to be desired than that such questions of Philosophy should be examined in themselves, apart from supposed consequences in Theology. It seems to be such supposed consequences that have drawn Mr. Calderwood to the inquiry. "We confess," he says, "to similar uneasiness in reference to the conclusion at which Sir William Hamilton has arrived,—that man can have no knowledge of the infinite God; and we readily admit that it is mainly to test the validity of this conclusion that we have entered upon a strict examination of the arguments adduced." A dispassionate discussion is hardly to be looked for when each disputant imagines the opinions of the other to be sapping the foundations of religion or morality. The Pelagian or the Arminian seems to his adversary to be impiously denying the divine omnipotence, and, in releasing the will from all rule and government, to leave it to mere chance. To the Arminian the Gomarist seems to destroy the possibility of morality, of merit and demerit. And to this or that side a man leans often from the disposition of his own habits. The Jesuit André, a man of whom any communion might be proud, says—"The indolent make, with Epicurus, the Deity indolent like themselves, indifferent to our affairs as they are for their own; sterner minds make him, with Zeno, inexorable in the exaction of his rights, insensible to favour, inaccessible to pity; the ambitious represent him more powerful than wise; haughty and austere minds see him armed with his thunder against evil-doers; while feeble hearts conceive him as kind and gentle, having all the indulgence for their feeblenesses they have themselves." Each fashions for himself a Deity after the wishes of his own heart, and is sensible of impiety in those who contradict him. We may almost apply two lines of Hildebert, in the twelfth century Archbishop of Tours:—

*Vultus adest his numinibus potiusque coluntur
Artificum studio quam deitate sua.*

For the Infinite, surely, we may hold either side of the philosophic question without a heresy. "If we have no idea of the Infinite," says the same André, "we have no idea of Deity—we can know nothing of him by reason; and if we can know nothing of him by reason, you see where that leads us." But many to whose name no mark of irreligion could be put have thought otherwise. John of Damascus, the Aquinas of the Greek Church, shapes it thus:—"This alone can be comprehended, that he cannot be comprehended." "The Deity is above very being; therefore above and beyond knowledge, because above existence." Lipsius, whose leaning in his later years was towards superstition, adding incidents: "The Stoics are in this sagacious, and also veracious; but what we assume of Deity is of three kinds—first, *negando* and ἐξ ἀπαρίστωτος, as the Greeks say, as when we call him Infinite, Immense, Incorporeal; for we neither assert nor signify that something is, but that something is not." Addison was in his thoughts anything but irreligious; yet he found it no hard thing to say, "the nature of this eternity is utterly

inconceivable by the mind of man." "This, therefore, is a depth not to be sounded by human understanding; we are sure that there has been an eternity, and yet contradict ourselves when we measure this eternity by any notion we can frame of it." And the diffident Locke said, "When we would think of infinite space or duration, we, at first step, usually make some very large idea, as perhaps of millions of ages, or miles, which possibly we double and multiply several times. All that we thus amass in our thoughts is positive . . . but what still remains beyond this we have no more a distinct notion of than a mariner has of the depth of the sea, when, having let down a large portion of sounding-line, he reaches no bottom;" and then he adds, to extinguish all distinction between knowing as positive and comprehending,—"the idea of so much greater as cannot be comprehended, this is plain negative." Thus these instances, taken at random, show that here is no question of heretical inferences. Even should we discard the saying of the Pagan wise man, "*Nemo novit Deum*," there is sufficient in what has been written by those who are no Pagans to show that whether we hold the Infinite for known or unknown, there is nothing in either opinion inconsistent with whatever theological view may be held for orthodox.

Leibnitz, if we remember his words rightly, says, "There be two great labyrinths—the one of the origin of evil, the other of continuity and indivisibles." The first of those—one solution of which cost the Manichæans so sharp a persecution, and speculation concerning which has divided speculators into two hostile classes—is not at present our affair. The other has been a question since the days of Zeno of Elea, and we apprehend it to be the same as Democritus raised about the cone composed of planes; for if these be unequal, there will be notches in the surface; if equal, it will be a cylinder. It is the difficulty which the mathematicians have surmounted by their methods of exhaustions, of indivisibles, of differentials, of fluxions, of the *calcul des fonctions*, or, in one word, of limits, as well explained by Colin Maclaurin as by any body else, and the only true method for handling series infinite in the number of its terms or gradual variations of surfaces or motions. This, too, is accounted a labyrinth, as Fromondus of Louvain entitled his book, 'Labyrinthus, sive de Compositione Continui.' It has been rightly enough treated, by Kant and Hamilton, as a question in itself identical with that of the Infinite—that there must be the same solution of the infinitely great and infinitely little. Every number can be numerator or denominator;—for every space proportionally greater there may be a space proportionally less. Thus the infinite expansion and infinite division of space are counterparts. Finite space stands, as the mathematicians say, as a mean proportional between infinity and nothing.

Pascal, as is usual with him, explains clearly in the 'Pensées,' that it is a point agreed that we can neither conceive a line divided by an infinite number of bisections, nor a section that cannot itself be divided; "that these two contraries being both inconceivable, it is nevertheless necessarily certain that one of them must be veritable." Bayle, in his article 'Zenon,' has disjunctive syllogisms to the same purpose; it is what Kant in his 'Antinomies' has made a system of—that the pure reason of man is so limited that space or time or the series of things in time can be thought neither as infinitely divisible nor indivisible, nor as infinitely expanded nor as inexpandible, although that one of the two contradictories must be true. Kant carried this so far as his pure reason went, but for Sir William Hamilton it is a law of all thought.

It is a question which we do not affect to consider as other than difficult and important: out of it and its solutions German philosophy has raised some phantasms, and so illustrious a man as M. Cousin a theory of the impersonality of human reason; but it is better to handle it as a simple question of science, whether in truth we have any notion of infinite space or infinite time. The word Infinite is undoubtedly of the form of a negative, but it follows not that infinite space is negative,—it follows not that by abstracting all limitation or bounding in of space we annihilate space itself.

Malebranche and the Leibnitzians affirm that Infinite is prior as a notion to Finite; and as to them, and such as hold with them, it is needless to say that the Infinite is not deducible from the Finite, although the Leibnitzian doctrine of space makes it difficult to apply it. Leaving that, however, let us look at it in this way. Limited space or figure implies always something unlimited beyond. As a red space becomes a visible figure by being surrounded by some other coloured space, and that external space again by being surrounded by another coloured space becomes itself a visible figure, so does visible figure always imply a coloured space unlimited without; otherwise there would be progress to infinity:—so with all figure, as the elder Scaliger said of the angels, figure can be expanded at will and contracted at will, but still is there something unfigured beyond it, however wide you spread, and it ceases to be figure when it becomes zero:—figure is, therefore, something carved out of infinite space at will. Beyond all doubt, then, infinite or infinitely little figure is a contradiction, since it becomes figure by being limited or surrounded by a space without and with a space contained within. But mere space is not figure,—it is that thing continuous and unlimited out of which all figures can be carved. We must conceive space as continuous and unbounded before we can conceive figure at all. Those who make a difficulty *de compositione continui* conceive always figure as the prior thing, and try to show how you may make the continuous out of it, whereas continuity is already implied in the very notion of figure. The difficulties that have been raised have been entirely about figure, not about space. You neither can conceive a figure than which a greater cannot be, for to make it figure you must have figurable space without it. You cannot continue ever making figure greater and greater: that would exhaust all time; and the same with the continuous,—but space unbounded and continuous surely you may, and indeed must, think of before you think of figure at all. Limitation is but the line or surface of contrast between space within and space without.

Hume indeed is very confident as to indivisible figure existing; but it is not only contrary to the very notion of figure, but disproved by that demonstration of Euclid's, for instance, as to the side and diameter of a square not having any ratio of a number to a number which indivisibles seem to imply. Geometry is versant with figure, having, as Kepler says, "*Terminum vel circumscriptionem pro formâ, interminatum pro materiâ.*" Mathematics have no hold over infinite continuous space, but only over figure; and when it seems to be dealing with the Infinite, it is dealing only with limits; but because space undivided abstracts from all proportion because the mathematician has no hold of it, it is not therefore nothing.

The Achillean problem of Zeno is the earliest puzzle raised out of the divisibility of the continuous. Achilles, a league behind the tortoise, runs ten times as fast. When he has run through the league the tortoise is a tenth of a league a-head, when through that tenth the

tortoise is a hundredth a-head, and so on. For those who say that it will take an infinite time thus to overtake the tortoise, the answer of Gregory St. Vincent, in his book on Series, long ago given, is sufficient: the motion of both being supposed uniform, the time is a decreasing geometrical progression as well as the space, and both equally have a finite limit; for those who abstract from time, and merely say it is impossible to overtake the tortoise, the answer of Descartes is enough: "*Captio in hoc latet quod nona pars leuæ concipiatur tanquam quantitas infinita, quia nempe imaginatione dividitur in partes infinitas.*"—or, equally well, Thomas Reid, who has been unaccountably supposed by some not to have understood the thing, giving it only a passing glance in illustration of another question: "This short journey, by dividing it into an infinite number of stages, is made to appear infinite." Again, for those who merely say that one cannot pursue in thought the division until the tortoise is caught, they are in the right: it takes as long in thought to divide an inch as to divide a league, it is not thus a decreasing progression, and would really exhaust all time.

Aristotle saw well enough that the time was divisible as the space, and in proportion to it—the motion being uniform; but he seems to have inferred too rashly as general that it can never take an infinite time to pass through a finite space, even were the motion not uniform; but that case in Newton where the velocity diminishes as itself, so that the resisting force is always in the same proportion to it; and that case in Pascal, where the resisting force is proportional to the velocity directly and inversely to the time elapsed, show his error plainly enough, for in both the finite space can never be run through. If two bodies be moved, and an unchanging line be a mean proportional to their distances from a point, if that which recedes be uniformly moved, the other will pass through a finite space in an infinite time; if the other be uniformly moved, that which recedes will be moved through an infinite space in a finite time. Can these things be?—can they be conceived?—can we imagine infinite swiftness—that is, a body existing in three distinct points at the same instant of time? Our countryman, John Major, 4 Sent. 10, 9. 4, illustrates the doctrine of the Trinity by the miracle of St. Baldred's being buried in three places at once. Surely it would be as great a miracle for a body to be at once at every point between earth and sun; and yet we know no reason why it may not be.

We need not push this matter further. Our author says that the mind cannot embrace the Infinite, but that the mind may have a notion of the Infinite: we frankly confess that we neither embrace nor have a notion of his thought. We may gird one space by another; if this be not done, space stands as undivided, continuous and unlimited, though divisible. Space is a thing positive; Infinity is pure negative.

Berries and Blossoms: a Verse Book for Young People. By T. Westwood. Dalton & Co.

THERE was an old Spanish King who obtained a reputation for wisdom upon the strength of a stereotyped saying, which, indeed, he also put into action, and which was to the effect, that there were only four things necessary to man, in order that his life should be happy,—namely, old wine, old books, old friends, and old shoes. These are, it is true, four very pretty things; but wise as the Iberian monarch was, he lacked wisdom, for he should have added to this list young children. We have no doubt that Mr. Westwood loves the first four as well as the old King did; but, if we may judge from his grace-

ful verses, he seems also to find an especial happiness in loving and being loved by young children. And, in truth, the man without such love is as much behind humanity as that other individual whom the Poet has stigmatized as being less than man, for no other reason than that he has not music in his soul. Indeed, it may be said that there is no music like the voice of a happy, and no beauty like that in the face of an intelligent child. Mr. Westwood's love for the "young people" is an honest and natural conviction, and he is proud of being that of which he is so worthy of being, and yet which it is, at the same time, so difficult to be,—the Laureate of Childhood. There is earnestness of affection in his poetry; he does not "pile the love," as pseudo-solemn poets do the "agony," for effect. When he strings his pleasant lyre for "Little Bell," he does it for better and healthier reasons than influenced Lord Chesterfield when he made his celebrated display of feigned love for the child of "Comte de Wassenauer and his wife, people of the first rank and consideration."

By what we have here said, it will be seen that we have a high opinion of Mr. Westwood's powers. These, indeed, are not unknown to the readers of the *Athenæum*; and in our columns have already appeared four out of the three dozen and odd of the poems clustered in this gay volume, under the title of 'Berries and Blossoms.' It is a volume which will be widely welcome; and we hope that it is not the last we shall have from the same hand, and treating of similar subjects. It is said of Corelli, that he was once playing one of the finest of his sonatas in his very finest manner, but, unfortunately, to the very finest of company,—a company which, a century or so ago, used to be defined *par excellence*, as "the quality." The quality, on this occasion, talked to one another, instead of listening to the artist, who was discoursing most eloquent music; and, thereupon, Corelli, in his gentle way, softly placed his violin on a table, and whispered his excuses for having interrupted the conversation. We can promise Mr. Westwood a more attentive audience whenever he is disposed to charm with songs like these, sung to the little people whom he loves. It is not with them alone that he will find audience. Some one has said, that old age is the childhood of immortality; and so among the children at the extremes of life nearest to heaven will he find charmed and grateful hearers.

We have hinted at the difficulty of writing for children. It is another thing to write of them. Who has forgotten Mrs. Browning's 'Little Ellie'? that meditative little lady of whom the poetess so finely says, that—

— the smile she softly useth
Fills the silence like a speech.

—Who has not been touched by the sentiments in the lines of Coleridge, wherein the man sings so mournfully of childhood's time, when—

Life went a-Maying,
With Nature, Hope, and Poesy,
When I was young!

—How fondly familiar to us are Allan Cunningham's 'Town Child' and 'Country Child,'—the latter—

Blithe as the bird which tries its wing
The first time on the wings of Spring;—

the former—

Cabin'd and confin'd,
At once from sun, and dew, and wind!

The memories of childhood, too, have been sung by both Southey and his wife; he mournfully recalling the time—

When absence brings
Small feeling of privation, none of pain;—

she almost as mournfully singing:—

I mind me of a pleasant time,
A season long ago;

The pleasantest I've ever known,
Or ever now shall know;
Bees, birds, and little twinkling rills,
So merrily did chime;
The year was in its sweet spring-tide,
And I was in my prime.

On sleeping children, few have written lines more full of beauty than the Rev. C. Trench;—none, perhaps, have written lines on the same subject so full of beauty as Leigh Hunt. To our thinking, the verses commencing with—

Sleep breathes at last from out thee,
My little, patient boy,—

are scarcely to be matched for intensity of feeling and completeness of expression.

Mr. Westwood less reminds us of any of these poets we have mentioned than he does of Phillips,—not John of the 'Splendid Shilling,' but of honest Ambrose, who fought his battle of life so gallantly, and who not only won fortune, but deserved what he won. Those who know the lines by Phillips addressed to the youngest daughter of Lord Carteret, or the verses to Charlotte Pulteney in her mother's arms, know too as pretty poems as have ever been written in honour of the young. The first of these two pieces concludes with the lines:—

Is the silken web so thin
As the texture of her skin?
Can the lily and the rose
Such unsullied hue disclose?
Are the violets so blue
As her veins expos'd to view?
Do the stars in wintry sky
Twinkle brighter than her eye?
Has the morning lark a throat
Sounding sweeter than her note?
Who e'er knew the like before thee?
They who know the nymph that bore thee.

—These lines brought Phillips great reputation; but we think that Mr. Westwood is even happier in painting the same subject of child and mother.—

In her ivy-porch, by snatches,
Lily's mother works and watches,
Hears afar a merry humming,
Looks and sees her Lily coming,
Marks her toddling, slowly, slowly,
Down the green hill-side,
With her little net filled wholly,
And her lap beside.
Berries, apples, buds, and posies,
Glossy feathers, dewy roses,
All her wealth the child discloses;
And her mother sees,
While she gazes, smiles and praises,
These and more than these,
Sees the little eyes beam brightly,
And the forehead lifted lightly,
And a look of pleasure spreading
Over cheek and brow, and shedding
Beauty better than all other.
Happy Lily! happy mother!

Mr. Westwood evidently thinks with Willis, that

'Tis strange how thought upon a child
Will, like a presence, sometimes press;

—and all his pieces are addressed to children who think, and are written so as to excite thought in those who have not yet been aroused to it. This latter is one of the best features in a little volume, the author of which modestly avows that he is not possessed of a teaching faculty. Was it not Anaxagoras who invented half-holidays in order that children might have time to learn something? Well, Mr. Westwood is of the school of Anaxagoras, and teaches children while he sports with them. His fairy tales are as picturesque, pointed, and mythic as a Lyceum extravaganza,—and they have a moral to boot. There is scarcely a line in them for which Cruikshank might not find a happy and gleesome illustration. These will form the most popular portions of his book with young readers; and we confess ourselves that we could not conclude 'Child Barbara and the Dragon' without repeatedly thinking of Charles Lamb's query,—

And can you Barbara resist?

But we must resist further dealing with this graceful volume. It is one which might have

pleased even Milton, in his earliest days, of which he has said:—

When I was yet a child, no childish play
To me was pleasing: all my mind was set
Serious to learn and know, and thence to do
What might be public good.

—We say, this volume might have suited even that serious young sage, for from its sparkling pages he might have smilingly amassed the wisdom which he confessedly gathered with unnecessary gravity.

Grants, &c. from the Crown during the Reign of Edward the Fifth, and Two Speeches for opening Parliament; by John Russell, Bishop of Lincoln, Lord Chancellor. With an Historical Introduction, by John Gough Nichols. Printed for the Camden Society.

THE usurpation of Richard the Third and the murder of the Princes in the Tower are amongst the most striking events in our history. They have happily no parallel in our own annals, nor perhaps in those of any other country. In deep-laid treachery these incidents surpass the murder of Arthur by King John; for boldness of design and skill in execution the *coup-d'état* of the Duke of Gloucester will stand comparison with any other successful political movement upon record. We say this without hesitation, in spite of all the Historic Doubts of Walpole and Halsted, of Buc and Sharon Turner. Ingenuity and love of paradox may raise doubts in reference to some of the minor points of the history, or some of those additions which poetic fancy has interwoven with the plain details of fact,—but no ingenuity, no paradoxical sophistry, can reason away the great outlines of the terrible tragedy. It cannot be got over that Gloucester and Buckingham seized upon the person of the young king at Stoney Stratford, taking prisoners upon absurd accusations Rivers, Grey, and the others of his maternal relatives who were his attendants, and hurrying them off in custody to Pontefract Castle, where they were put to death without rhyme or reason;—it cannot be denied that at Buckingham's suggestion the young King made his residence at the Tower;—that by Richard's contrivance the Council was divided, some sitting at the Tower and the rest at Westminster, by means of which the King's friends were separated and their influence paralyzed;—that the little Duke of York was inveigled to bear his brother company in the Tower;—that Gloucester was appointed Protector;—that the coronation and parliament were adjourned to a distant day;—that Hastings was got rid of by a preposterous accusation;—that large bodies of armed men were brought up on the summons of the Protector and Buckingham from distant counties to surround and overawe the capital;—that, backed by their support, the Protector set aside his nephew, and seated himself as king in the marble chair in Westminster Hall;—and that when the indignation of the astonished people began to rouse itself, and the standard of Edward the Fifth seemed about to be raised in the provinces, of a sudden the young King and his brother disappeared. It was said they had died in the Tower—died suddenly,—and no doubt it was so.

The most arch deed of piteous massacre
That ever yet this land was guilty of,

was deemed a political necessity. The throne had been obtained, and was to be defended at any cost.

These great outlines of the guilty career of Richard and his accomplices are unquestionable; but it is an object of rational curiosity to discover more precisely the particular steps by which crimes so terrible were committed. We desire to know what were the inducements which led men who had no direct personal in-

terest in the result to assist in such astounding wickedness;—what were the formal pretences by which the loyalty and pity of the people were laid asleep,—what the temptations by which the weak were overcome,—what the rewards by which the guilty were enriched and dignified.

Some curious entries in the books of the Corporation of York, published in part in Drake's 'Eboracum,' and more completely a few years ago by Mr. Davies, two or three letters in the Paston Collection, and occasional quotations from the Book of Grants of Edward the Fifth and Richard the Third, MS. No. 433 in the Harleian Collection, are the principal additions that have been made to the historical materials for this period during many years past. The present volume is more important than any of these. It contains, printed *in extenso*, all that portion of the Book of Grants which relates to the brief reign of Edward the Fifth,—or more properly to the protectorate of the Duke of Gloucester. There are added, an abstract of the Patent Roll of Edward the Fifth, and two speeches prepared by the Lord Chancellor,—one designed to be spoken by him at the opening of the Parliament summoned to be held under Edward the Fifth, and the other the draft of a similar speech actually addressed to the Parliament of Richard the Third. The Bishop found no difficulty in suiting his advice to the altered circumstances of the royal house. His addresses were, in fact, according to the custom of the period, sermons upon the duties of subjects and the importance of concord. A text was taken from Holy Scripture, and applied with more or less ingenuity to the then present condition of Kings, Lords and Commons. Perhaps the most curious portion of these sermon-addresses is that in which he compares the functions of the Houses of Lords and Commons with the mode of transacting legislative business amongst the Romans. In the upper house, which is "the house of the senate," "one *tanquam consul* maketh the questions," whilst "in the lower house in like wise all is directed by the speaker, *quasi per tribunum*." Lord Chancellor Russell distinctly recognizes the necessity of the concurrence of the Commons in the business of legislation. The envious fire which committed sad ravages on the Cotton Library in 1731 burnt off an important part of the passage which relates to this subject; but it clearly appears, from what was left unscathed, that the two houses stood upon a par in their legislative functions. They must "agree, each to other."

Edward the Fourth died on the 9th of April, 1483. His son, the Prince of Wales, then in his fourteenth year, was at Ludlow, holding the customary court of his principedom. He remained there until the 24th of April. On the 30th his person was forcibly seized at Stoney Stratford. The present register commences on the 5th of May, when the young King had been brought by his uncle to London, and was lodged in the palace of the Bishop of London. Richard probably assumed the protectorate very shortly after the arrival of the young King in London. Mr. Nichols finds from the Patent Roll of Edward the Fifth that he was certainly in possession of that office on the 4th of May. No sooner was the King in the Tower than open endeavours were made to prepare the public mind for supplanting him. The chief value of the present book consists in its showing in what way the Duke of Gloucester began instantly to use his protectorate for his own ends. Many entries occur of the transference of the custodies of castles, gaols, and other places of importance from their old keepers to mere creatures of the Duke of Gloucester. The grants do not seem to continue after the 5th of June.

This publication is one which lies strictly within the purpose of the Camden Society, and, although not likely to be popular, is an important addition to the historical authorities for an obscure period. The name of the editor is a guarantee for editorial care; but the book would have been improved by two alterations:—1. The grants should have been arranged chronologically; and, 2. It would have been quite sufficient to have printed abridgments of the longer entries. Much of the matter they contain is merely formal.

The Camden Society should give us, in continuation of the important subject to which this volume relates, a detailed account of the grants of Richard the Third, contained in the remainder of the Harleian MS. 433. There is a long account of the contents of the manuscript in the printed Catalogue, and a complete abstract of it in the Additional MS. 11,269; but what is wanted is a tabular catalogue printed index-wise, with a good introduction on its historical uses. Mr. Nichols's books are all, like the present volume, rendered complete by good indexes, and no one could superintend such a publication better than himself.

THE WAR.

THE poetical illustrations of the War increase in number. To give the *pas* to a Lady, Mrs. Hardy has published *War Notes from the Crimea* (Routledge & Co.), in which we find some genuine echoes from the battle-ground and the tented hill; and are reminded by here a glowing image and there a pregnant line, that a true literary faculty has been at work,—though we cannot doubt that a muse so gentle as that of Mrs. Hardy would find in softer themes and gentler emotions the materials of a richer and more lasting music.

"They fell, but died not—heroes cannot die," is a good line, expressing a fine truth. The following lines have the dash and spirit of the war-ballad:—

They fought, not like demons, but heroes inspired.
They gather their energies, pause to take breath,
Ere they make a last struggle for glory or death;
Then again, with new vigour, rush on to the strife,
All sternly resolved to part dearly with life;
For the cry of the foeman is, "War to the knife."

Their bugles rang out as they dashed down the steep,
On, on, like the breath of the whirlwind they sweep;
And headlong they plunge, with victorious throes,
In the heat of the battle, the heart of their foes;
Exulting and cheering their fainting Allies,
Who convulsively chorus their conquering cries,
And shouts, shrieks, and thunders resound to the skies.

The figure of General Evans during the battle at Inkermann is vividly presented, and the exclamation at the close is worthy of the hero.—

"My body is weak, but my spirit is strong—
Were I once on my charger I'd bear me along."
The gallant old soldier! never before,
When he led the lorn hope of his country of yore,
Did he rush with such ardour, the conflict to share.
He is mounted, and waving his plume in the air:
He points to the field, "Death must follow me there!"

Mr. H. S. Stokes also sends us *Echoes of the War* (Longman & Co.), in the old ballad style, and with something of the old ballad fervour.—*Inkermann: a Poem*, by the Rev. R. Milman (Parker).—*Two Little Pieces*, by H. & F. Lushington (Macmillan & Co.), we may deliver to the reader without comment.—*Songs of the War*, by J. H. Friswell (Ward & Lock), is a collection from various writers, with some original Songs contributed by the editor. We quote a specimen of Mr. Friswell's faculty.—

Sword and Pen.

Sword and Pen were seldom friends,
But at last they've joined together;
Anxious each to make amends,
Close they join, whate'er the weather.
Pen shall prove the tyrant wrong,
Pierce each gilt and varnished lie, all
Through and through, but yet he's strong:
So the Sword shall have its trial.
Let's be up and doing then,
For they are mighty—Sword and Pen!

Pen hath stripped the specious fiend,
Shown, 'neath angel's mask a devil!
But the world is still deceived:
Right is weak, and strong the evil:
So the Sword is drawn at last;
And away is thrown the scabbard;
Pour upon his lesions fast—
Let no Briton be a laggard.
Let's be up and doing then,
They are mighty—Sword and Pen!
Steady!—he is strong and great,
Leagued with powers who hate Right:
If to fall be our fate,
All will feel the Tyrant's might.
Captain Pen for aye cashiered,
Captain Sword for ever broken:
Gagged the Press, and those great words—
Freedom—Liberty—unspokun.
Let all freemen aid them then,
Though they're mighty—Sword and Pen.

Mr. George Fowler, already known by two able compilations on Russia and Turkey, has written *A History of the War to the End of 1854* (Low & Co.), which will prove a useful handbook to the general reader, who is apt to forget dates and confuse events which are overcrowded in the memory.

Russia and her Czars, by E. J. Brabazon, (Theobald), is a compilation by a Lady, made from very common sources, all open to ordinary French and English readers. Her book is, nevertheless, of some interest from the fascination of its materials, which no unskilfulness in story-telling could altogether spoil. Our authoress, however, does not tell her story badly. What is rich in her materials she presents richly to the imagination of the reader; and threads the dark web of court intrigue with the sure tread of one who by study has realized the difficulties of the ground over which she moves in her narrative.

The pamphlets of the War we must string together with a mere line of announcement. *A War Ministry* advocates a change now effected, though not with all the details suggested by its writer.—*A Few Words addressed to his Grace the Duke of Newcastle, by an Englishman, on the proximate Causes, the Principles, and conclusive Terms of the Russian War*, (Bosworth), advocates the permanent occupation of the Crimea as a "material guarantee."—*A Letter to Col. Chesney from an old Brother Officer, who has served many years in Turkey*, (Booth), and *A Postscript to the Letter to Colonel Chesney*, by the same, criticize the operations in the Crimea rather freely, and point out what, in the author's opinion, should still be done to secure success.—*Christianity in Turkey: Correspondence of the Governments of Christendom relating to Executions in Turkey for Apostasy from Islamism*, (Partridge), revives some old stories of persecution for apostasy almost as sad as the burnings in our own Smithfield and the tortures in the Tower. But why rake up these records of the past?—Mr. Allen offers some *Suggestions on the Organization of the British Army* (Parker), in the form of a letter to Earl Grey.—A "Peelite" submits to Lord Palmerston *A Memorandum on the Organization of the War Department* (Bosworth).—The Rev. Dr. Southgate proludes on *The War: its Origin and its Consequences*, regarding it solely as a quarrel about the keys of a particular gate at Jerusalem,—as if the worthy Bishop, who is an American, had never heard of Prince Menschikoff's mission nor ever read Sir Hamilton Seymour's despatches.—Mr. Gibson's *Memoirs of the Brave* (Nelson), is a brief account of the battles of the Crimea, with biographies of the killed and lists of the wounded.—*Description of Sebastopol, Balaclava and Inkermann*, (Wyld), is a spirited sketch, to illustrate the great model of the siege works and fortifications, now on view in an ante-room of the Great Globe in Leicester Square.

Messrs. Colnaghi & Co. have issued in their War Series, Parts II. and III. of Mr. Simpson's drawings from *The Seat of War in the East*.

The work maintains its high character and its seal of authenticity. Part II. contains, 'The Heavy Cavalry Charge,' October the 25th,—'The Light Cavalry Charge,' on the same memorable day,—'Lord Raglan's Quarters at Khutor Karagatch,'—and a 'General View of Sebastopol.'—Part III. contains, 'The Second Charge of the Guards at the Battle of Inkermann,'—a 'General View of the Field of Inkermann,'—a 'Quiet Day in the Diamond Battery, with Portrait of Capt. Peel,'—and a graphic picture of the 'Road to the Camp, Commissariat Difficulties, Balaclava.' These drawings will be invaluable materials for the history of the War.

English, Past and Present. Five Lectures. By R. C. Trench, B.D. Parker & Son.

OUR recollection of the pleasure afforded by the perusal of Mr. Trench's little volume 'On the Study of Words' led us to expect much from his present one on a kindred subject; nor have we been at all disappointed. Here, as before, we discover abundant indications of a profound acquaintance with our language and literature,—their origin, early history, and gradual progress down to the present time. We observe, also, the same suggestive style of thought which gave so much interest and value to the former work. The lecturer is not content with merely communicating information, but constantly endeavours to stimulate those whom he is addressing to pursue trains of useful investigation for themselves. His remarks, though originally delivered to young persons, pre-suppose a tolerable amount of classical and historical knowledge, and may be read with advantage by all who take an interest in the study of language, particularly our own,—which has a claim upon the attentive regard of every Englishman, not merely on account of its superior capabilities as an instrument of thought, its extensive prevalence, and its containing some of the noblest creations of human genius,—but as being his birthright, the language of his country, and hallowed by all the associations of home and kindred.

The subjects of which Mr. Trench treats are the composite character of the English language,—the additions and diminutions it has undergone,—and the changes that have taken place in the meaning and spelling of words. After recommending the reader to analyze passages of English with a view to ascertain the proportion of Anglo-Saxon and Latin words, the lecturer goes on to observe:—

"The proportions which the dictionary, that is, of the language *at rest*, would furnish are very different from those which the analysis of sentences, or of the language *in motion*, gives. The notice of this fact will lead us to some very important conclusions as to the character of the words which the Saxon and the Latin severally furnish, and principally to this:—that, while the English language is thus compact in the main of these two elements, we must not, for all this, regard these two as making, one and the other, exactly the same kind of contributions to it. On the contrary, their contributions are of a very different character. The Anglo-Saxon is not so much, as I have just called it, one element of the English language, as the foundation of it, the basis. All its joints, its whole articulation, its sinews and its ligaments, the great body of articles, pronouns, conjunctions, prepositions, numerals, auxiliary verbs, all smaller words which serve to knit together and bind the larger into sentences, these, not to speak of the grammatical structure of the language, are exclusively Saxon. The Latin may contribute its tale of bricks, yea, of goodly and polished hewn stones to the spiritual building, but the mortar, with all that holds and binds these together, and constitutes them into a house, is Saxon throughout."

The discrimination of sentiment and vigour of expression combined in these remarks cha-

racterize the whole volume. Mr. Trench has no crotchets, no extreme or one-sided views. While he awards the Saxon the chief place in our language, both on account of its furnishing about twice as many words as the Latin, and being the framework of the language, he protests against the disposition to undervalue and neglect the use of Latin. Both, he rightly contends, are essential to the completeness, power, and beauty of the language. There are many excellent observations on the various modes in which words originate. One of the most interesting is the following.—

"Sometimes a word springs up in a very curious way. Here is one, not having, I suppose, any great currency except among school-boys, yet being no invention of theirs, but a genuine English word, though of somewhat late birth in the language:—I mean 'to chouse.' It has a singular origin. The word is, as I have mentioned already, a Turkish one, and signifies 'interpreter.' Such an interpreter or 'chiaus' (written 'chaus' in Hackluyt, 'chiaus' in Massinger), being attached to the Turkish embassy in England, committed in the year 1609 an enormous fraud on the Turkish and Persian merchants resident in London. He succeeded in cheating them of a sum amounting to 4,000*l.*,—a sum very much greater at that day than at the present. From the vast dimensions of the fraud, and the notoriety which attended it, any one who cheated or defrauded was said 'to chiaus,' 'chause,' or 'chouse,'—to do, that is, as this 'chiaus' had done."

The true character and philological value of provincialisms are remarkably well exhibited by Mr. Trench. In commenting upon the rustic use of "his" in connexion with inanimate objects, instead of "its," he shows that the latter is really far less correct than the former, and adds a reflection or two, which we think worth quoting.—

"Attention once called to the matter, one is surprised to discover of how late introduction the word 'its' proves to be into the language. Through the whole of our authorized version of the Bible 'its' does not once occur; the work which it now performs being accomplished, as our rustics would now accomplish it, by 'his' or 'her' applied as freely to inanimate things as to persons, or else by 'thereof' or 'of it.' 'Its' occurs, I believe, only three times in all Shakspeare, and I doubt whether Milton has once admitted it into 'Paradise Lost,' although, when that was composed, others freely allowed it. How soon all this was forgotten, we have striking evidence in the fact that Dryden, when, in one of his fault-finding moods with the great men of the preceding generation, he is taking Ben Jonson to task for general inaccuracy in his English diction, among other counts of his indictment, quotes this line from 'Catiline,'

Though heaven should speak with all *his* wrath at once.
and proceeds, '*heaven* is ill syntax with *his*,' while, in fact, up to within forty or fifty years of the time when Dryden began to write, no other syntax was known. Curious also is it to note that in the long controversy which followed on the publication, by Chatterton, of the poems which he ascribed to a monk Rowley, living in the fifteenth century, no one appealed at the time to such lines as the following,

Life, and all *its* goods I scorn,
as at once decisive of the fact that the poems were not of the age which they pretended."

The lecturer is even more decided than before in his condemnation of the phonetic system of writing, recalling concessions which he then made in its favour, and setting up a very strong argument against it—into which, however, we cannot follow him.

OUR LIBRARY TABLE.

An Essay on the Political System of Europe: its Connexion with the Government of Great Britain, and the General Policy of the European States. By the Rev. T. S. Hughes. With a Memoir. (Bell.)—In the Memoir of Dr. Hughes's ecclesiastical and literary life, which is prefixed to this volume, there is no criticism of the Essay which follows,

and which was designed as an introduction to the "History." Otherwise we should have been glad to have learnt in what light the author viewed his own production—as an original treatise, or as a compiled outline. An original treatise it can in no sense be called, consisting, as for the most part it does (though we are left to discover the secret for ourselves), of a mere abridgment taken from Heeren's 'European States and Colonies.' That work is once or twice referred to; but is, in fact, the basis of the 'Essay,' which follows it obsequiously from beginning to end. In numerous instances the words of Heeren are copied, without acknowledgment. In page 3 of Dr. Hughes we find, with no allusion to the German historian, "the craft and treachery of Ferdinand of Spain, the unconcentrated activity of Maximilian, and the blind lust for aggrandizement of Louis XII."—a passage which Heeren wrote thus—"the treachery and craft of Ferdinand, the vague and unconcentrated activity of Maximilian, the blind lust for aggrandizement of Louis." Examples of similar transcription occur continually throughout the 'Essay,' which ought, therefore, to have been entitled "An Epitome of Heeren," and not to have been offered as a new and distinct production. Dr. Hughes adopted Heeren's plan, with his chronological arrangements, his historical views, his authorities, and even his language, and was wrong in not more fully and explicitly avowing the obligation. His own share of the work was ill-performed, because he wrote with little grace or vigour; but his sympathies appear to have been liberal, and he always gave emphasis to his diction when writing in behalf of states and nations despoiled by those military leagues, which, in modern Europe, have repeated the devastations of the Goths and the atrocities of the Huns. We do not hesitate to remark that Dr. Hughes took from Heeren more than he cared to acknowledge, and that Heeren should have been allowed the merit of his own labours; but, at the same time, we are far from thinking that the German writer had struck out a good method of composing history. His plan was inconvenient in many respects,—and chiefly because it allowed of no broad and luminous reviews. He encumbered himself with so many authorities that references and quotations fell thickly into his text, like the earth into an ill-ploughed furrow. Yet Dr. Hughes's 'Essay' is Heeren's "History" abridged, and the title-page should have stated that fact.

The Family Feud. By Adam Hornbook. (Routledge & Co.)—This little book, bound in the devil's colours, black and brimstone—printed in a type as villanous as ever made the eyes of a patient reader ache—is for its freshness, vigour, and variety worth any half-dozen of the novels which come into the world with all the honours of binding and typography. Those who are not scared at the outset by its very unattractive appearance will find themselves well rewarded. The story is anything but probable; but there are such life-like descriptions, and the incidents are so romantic, that the reader is carried on to the end without delaying to criticize. The account of "the feud between the Up-hams and the Downhams,"—the origin of which nobody knows, except that it is a famous feud that began beyond the memory of man, and has been kept up ever since by succeeding generations in the good town of Quarrelton,—is given with great drollery, and affords a curious insight into much parliamentary parish business, and relieves the more serious part of the story, which is also an hereditary feud, having its rise in bitter wrong and crime. There are, moreover, two villains of genuine dye, such as we have not often the pleasure of seeing circumvented and brought to shame. Poetical justice is at last satisfactorily awarded, and all the feuds are assuaged, not exactly by brotherly love, but in a couple of happy marriages, such as one is always glad to hear about, whether in prose or verse, or in real life. The short scene in which the two old men meet and are reconciled is admirable.

The Riches of Poverty: a Tale. By Mrs. Eccles. (Bell & Daldy.)—A readable story of trial and struggle well met and patiently endured, is Mrs. Eccles's tale. The characters and incidents are not very much like those of real life: they are too

clean cut and too nicely fitted into each other—more like fine inlaid cabinet-work than the variations and inconsistencies of human nature. The description of the "Poor Brother" at the Charter House is well done, and a good deal of useful information on many subjects is well and pleasantly conveyed. Towards the end it degenerates into a common novel, rather too highly coloured for a book intended for the instruction of young people. The conclusion is hurried, and not in accordance with the rest of the story. The shipwreck, in which the lover of the chief heroine is drowned, leaves a patch of quite unnecessary blackness upon the story. The authoress was apparently afraid of making a rash marriage between the fascinating young Arab and the exemplary Mary Grey; and so, after endowing him with every good quality, and converting him from Mohammedanism, she—drowns him, and leaves Mary Grey, as a reward for her virtue, with a broken heart and a flourishing boarding-school. To be sure, there is an elderly baronet in the background, who may, in time, succeed in consoling her; but the conclusion has been evidently carelessly and hastily huddled together. We should imagine this to be a first work, and as such, it shows evidence of a talent that requires culture.

The First Four Books of Milton's Paradise Lost; with Copious Notes, Grammatical, Classical, and Critical. By C. W. Connor, M.A. (Longman & Co.)—An attempt to render Milton's poem more effective for the purposes of education. No better class-book could be fixed upon as a study in high English composition. Milton's style is always noble, pure, "glorious, and lofty." The notes consist of critical remarks by Richardson, Addison, Newton, and Mr. Connor himself,—of parallel passages from the classics, and from various modern poets,—and of explanatory disquisitions on the historical, mythological, and Scriptural allusions with which the epic abounds. Some of the commentaries appear superfluous; but in general, Mr. Connor's editing may be useful to the pupil, teachers, tutors of training colleges, and tutors in the higher class of schools, for whom it is especially intended.

Lecture on the Pendulum-Experiments at the Harton Pit. By G. B. Airy. (Longman & Co.)—The Astronomer Royal delivered this lecture at South Shields in October last, and he has added a letter containing the results of the experiments, briefly stated. Since the lecture was given extempore, and has been written from memory, it is less formal than such discourses usually are. Prof. Airy adopts a familiar style, while ascribing large importance to the results of his experiments in Harton Pit. He told his audience that he was to some unrevealed philosopher as a quarryman to an architect;—he was bringing to the surface, squaring and chiselling, a corner-stone for a new edifice of scientific truth; and he explained the ultimate purpose of his investigations to be that of giving the means of weighing, by the use of a pound-weight, not only the Earth, but also the Sun, Jupiter, and all the principal bodies of the solar system. We have no doubt that a popular explanation of the Harton-Pit experiments, from the pen of the Astronomer Royal himself, will be acceptable to the public.

Manual of Political Science, for the Use of Schools, and, more especially, of Candidates for the Civil Service. By E. R. Humphreys, L.L.D. (Longman & Co.)—We find this to be an excellent volume, though it disappoints us in one respect. It is not a 'Manual of Political Science,' for only a small division of political science is discussed. Dr. Humphreys confounds political economy with politics, that is, the part with the whole. For of what does he treat? Of the division of labour, of wealth and its distribution, of machinery, rent, demand, supply, monopolies, land, tithes, taxation, trade, population, poor-laws, emigration, money, the national debt, insurances, annuities, legislative interferences with industry;—enough, surely, to occupy a small book, yet not an enumeration of all the subjects we should expect to find discussed in a 'Manual of Political Science.' Admitting the misnomer, we may accredit Dr. Humphreys's lessons as likely to be of service. On questions of

public economy the writer seems to have adopted liberal opinions, and one of his observations embodies a very important proposition relating to a substitute for the existing poor-laws. "The expedient most generally recommended," he says, "is a general and universally accessible system of insurance guaranteed by Government security." In all other respects Dr. Humphreys belongs to the younger school of political economy, and is not proud of being either cold-blooded or inhuman. The successive topics are illustrated effectively, and the questions seem well adapted to their purpose.

Soldiers and Sailors, in Peace as in War. By Herbert Byng Hall, K.S.F. (Chapman & Hall.)—To the history of English sea-side towns Mr. Hall contributes a fragment. After wild and dangerous service with the old Fusiliers, he has settled at Luscombe, a pleasant little place near Exeter. Twenty years ago it was sequestered, quiet, and insignificant, with few constant residents, and scarcely a sign of human energy in its neighbourhood. Lately, a railroad has pierced its rocks,—new houses have been erected,—new inhabitants have established themselves,—and Luscombe, besides reading the morning papers, has set up a literary society of its own. To this literary society, Mr. Hall delivered some lectures in aid of the Patriotic Fund, and these he has published in a gay little volume. They consist of light sketches intended to exhibit the best parts of a soldier's or sailor's nature in war and peace. Mr. Hall has made use of none but very simple materials. His stories are based on mere incidents, and the style in which they are related scarcely rises above the colloquial; yet they have a warm tone and a freshness which will attract. Mr. Hall writes in behalf of the United Services, and has none but kind and cordial things to say of human nature in its military and in its marine costume.

We can safely recommend to students of French, *A Complete Course of Instruction in the French Language*, by A. Sears, consisting of three distinct parts: the grammatical course, a course on reading and translation, and a third on conversation—all well calculated to convey much instruction in a short time.—The well-known Peter Parley appears once more before the public as the author of *Capell's Home and School Geography and Atlas*. We see no necessity for the publication of *A First Latin Vocabulary and Accidence*, by J. S. Baird, which is merely a common-place grammar—or rather fragment of a grammar—with lists of Latin words and their meanings, appended to the various declensions and conjugations.—The title of *Ellisian Greek Exercises*, adapted to Dr. Donaldson's *Greek Grammar: or, Constructionis Græcæ Precepta*, sufficiently explains the nature of the work.—*Romaic and Modern Greek compared with one another and with Ancient Greek*, by J. Clyde, M.A., is the result of an eight months' residence in Greece, during which the author especially devoted himself to the study of the numerous popular dialects which all bear the name of Romaic, in contradistinction to Modern Greek, or the present literary dialect of Greece. It is all the more readable, and not the less useful to classical scholars, from being in the form of a dissertation rather than that of a grammar. To a sufficient explanation of the language of modern Greece, the author has added some interesting facts with regard to its literature, and a few specimens with translations.—A pamphlet entitled *On the Academical Study of Latin: an Inaugural Lecture delivered in the Theatre, Oxford*, by J. Conington, M.A., deserves and will well repay attention, both on the ground of its own merits, and as being the first-fruits of the Latin Professorship recently established at Oxford. If the views it contains are not startling from their novelty, they are thoroughly sound, and capable of being turned to practical account both by teachers and students. The claims of the Latin language and literature to attentive study are stated with much ability and discrimination; so also are the objects to be aimed at in the study, and the method by which they are to be secured. Mr. Conington rightly insists upon the necessity of combining the minute study of a small portion of the classics with a more rapid perusal of the

remainder. In this way alone can we steer clear of superficial smattering on the one hand, and narrow-minded pedantry on the other.

LIST OF NEW BOOKS.

Annual of Scientific Discovery, for 1855, edited by Wells, 7s. 6d. cl.
Assault of Sevastopol, Sketches by Capt. Biddulph, folio, 1s. 5s. d.
Bresslau's Compendious Hebrew Grammar, 12mo. 1s. 5s. d. (Weale.)
Bresslau's Hebrew and English Dictionary, Vol. 1, 4s. (Weale.)
Broadhead's (A. G.) The Navy as It is, 2nd edit. 8vo. 5s. cl.
Cheever's (Dr.) Wanderings of a Pilgrim in the Shadow of Mont Blanc, new edit. 8vo. 7s. 6d. cl.
Clark's (W.) History of British Marine Testaceous Mollusca, 15s.
Clytemnestra, and other Poems, by O. Meredith, fc. 8vo. 7s. 6d. cl.
Colenso's (Dr.) Ten Weeks in Natal, fc. 8vo. 5s. cl.
Communion Service (The), with Readings from Writings of Rev. F. D. Maurice, edited by Dr. Colenso, 1s.; with Rubrics, 2s. 6d.
Cowie's (Rev. M.) Scripture Difficulties, 8vo. 7s. 6d. cl.
Cuthbert's (Rev. Alex.) Infants Asleep in Jesus, 18mo. 2s. 6d. cl.
Doomed Ship, by William Hurton, fc. 8vo. 1s. 5s. d.
Drama of Life, 12mo. 1s. 5s. d.
Encyclop. Met. & Balfour's Manual of Botany, 3rd edit. 10s. 6d. cl.
English, French, Turkish, and Russian Vocabulary, 12mo. 2s. 5s. d.
Exile (The), by Philip Phosphorus, cr. 8vo. 6s. cl.
Fowler's (George) History of the War, fc. 8vo. 2s. 5s. d.
Giles's (James) English Parsing, 18th edit. 12mo. 2s. cl.
Guez, a Tale of the Alamo, cr. 8vo. 6s. 6d. cl.
James's (Rev. J. A.) Christian Fellowship, 11th ed. abridged, 1s. 6d.
Killen's (Rev. J. M.) Our Friends in Heaven, 2nd edit. 12mo. 4s. 6d.
Kinghorn's (Joseph) Memoir, by M. Hood and S. Wilkin, 8vo. 8s.
Kitt's (Dr.) Pictorial Bible, Vol. 1, new edit. 4to. 12s. cl.
Latham's Handbook of English Language, 2nd edit. cr. 8vo. 7s. 6d.
Lindsay's Inquiry into the Christian Law as to Marriage, 3s. 6d.
Lingard's History of England, People's edition, Vol. 8, cr. 8vo. 3s. 6d.
Loudon's (Miss) My Own Garden, 2s. 6d. cl.
Lumley's (W. G.) Poor Law Election Manual, 2nd edit. 12mo. 5s.
Lund's (Rev. T.) Elements of Geometry and Mensuration, 3s. 6d.
Melancthon's Life, by C. F. Ledderhose, trans. by Kretel, 6s. cl.
Montagu's (John) Biographical Memoir, by Newman, 8vo. 15s. cl.
Morris's Nests and Eggs of British Birds, Vol. 2, royal 8vo. 21s. cl.
Needle's (Rev. J. M.) Lent Legends, 18mo. 2s. 6d. cl.
Our World, 2 vols. post. 8vo. 10s. 6d. cl.
Richards (Rev. G.) The Champion, Lectures, &c., 12mo. 4s. 6d. cl.
Rook's (C. O.) Profit and Discount Tables, 3rd edit. oblong. 3s. 6d.
Rowe's (Dr.) Nervous Diseases, 14th edit. fc. 8vo. 2s. 6d. swd.
Royle's Fibrous Plants of India fitted for Cordage, &c., 8vo. 12s. cl.
Schole's Dialogues of Lucian, 14th Notes by Young, 1s. bds. (Weale.)
Sert Sisters, by C. Harwood, fc. 1s. bds.
Smith's (Dr.) Pathology and Treatment of Leucorrhœa, 8vo. 7s. cl.

ON THE LIABILITY OF THE MAGNETIC CONDITION OF IRON SHIPS TO RAPID OR SUDDEN CHANGES.

In the outset of this rejoinder to Mr. Airy's second paper, 'On the Correction of the Compass in Iron Ships,' I would take occasion to express my regret that anything in my communications of the 9th and 16th of December should have contributed to the altered tone of the paper of February the 3rd, or have interfered with a very long period of occasional pleasant and friendly intercommunication. As to one out of two passages noted by Mr. Airy, as if contributing to this much regretted effect, I am happy to be able to assure him that he is quite under a mistake as to its *personal* intention. I had been referring to the case of the Tayleur, and the evidence (with which I had no reason to suppose Mr. Airy to be fully acquainted) on which a change in her compasses—of about two points in about two days—rested. My own conviction of the weight of this evidence,—which I had before me as I wrote, in authoritative returns of Parliamentary papers on the subject, as well as in the reports of the Coroner's inquest,—led me to state this, not personal, but *general*, conviction—that "the fact of a change, great and sudden, in the case of the Tayleur stands on evidence, which, taken without preconceptions of theory or the prejudicing influence of particular personal views, could not be questioned." And the more I have considered the evidence, the more has this conviction been confirmed. In Liverpool, indeed, the loss of the Tayleur has proved the occasion of much controversy and painful excitement; but to the extent of my own opportunities of inquiry, no one of the great number of intelligent men of all classes and professions at Liverpool with whom I conversed on the subject, except one, ever attempted to deny the fact of a sudden and large change having taken place in her compasses; and that individual happily gave his reason for his denial, by quoting an experiment made by a passenger with a pocket compass, (of course in another position!) by which he had tested the ship's compasses, and proved the statements of the captain and other officers to be wrong! Mr. Airy will, therefore, I feel assured, dismiss from his mind the impression under which he quoted the passage referred to. As to another expression of

mine, to which attention has been drawn, I am willing to leave it to the feelings of the reader whether, taking our relative experience in the actual phenomena of deep sea waves, it was entitled to criticism.

It is to be regretted, in respect to the necessity of repetitions of facts or modes of reasoning, that objections taken by Mr. Airy to the fundamental principles of my former paper oblige me either again to explain and additionally to support previously adduced views, or to abandon the question under discussion in a false position. It would not be fitting, however, under the sense I entertain of the importance of the discussion, so to leave it; though many statements or opinions found in the recent communication will not need to be discussed, or, if noticed, but briefly referred to.

Of this latter class of observations, a remark at the top of col. 1, p. 146 [*Ath.* No. 1423], may be noticed, because of its apparent bearing on what I feel assured will ultimately be received by men of science generally as the true theory of the development of the more intense quality of magnetism—the *retentive*—in iron ships. Though generally acquainted with my experiments on iron, Mr. Airy observes—"He was totally unprepared by them for the intensity of magnetism which he found in wrought-iron plates as they came to his hands." This statement much surprises me; as in various cases of my examinations of plate iron, as received out of, or examined within, the stores of ironworks, or elsewhere, but a very feeble magnetic energy—when the plates were tested in the plane of the magnetic equator—was found to exist. And I am prepared to prove, that the process of fabrication cannot produce anything like an intensity of magnetic power;—on the contrary, as I have shown, ('Magnetical Investigations,' vol. ii. p. 250), it is calculated to destroy, rather than develope, such a condition; and that any accidentally acquired magnetism (unless by a stroke of lightning) may be neutralized or inverted by a few blows of a hammer, or so changed by vibrating, bending, or by strokes of a wooden mallet, under a proper position.

The cases referred to by Mr. Airy, therefore, could only consist in an extent of magnetic intensity such as would readily result from the plates being vibrated whilst standing on edge, as *possibly* might be their position in the progress of their conveyance, or, what is far more likely, by their being projected or "shot" from a cart upon their end or edge, and so becoming magnetic, as in such case they might be powerfully rendered, by percussion on the pavement.

But I proceed to more important topics comprised in the recent communication.

I. Were the question here under discussion one of mere speculative theory—or, like those of *light* and *electricity*, on which scientific men have held conflicting views, without either the progress of science or useful practical applications of these powerful agencies being hindered—I might hesitate to renew objections against the views of *waves* and *strokes of the sea* presented to the readers of the *Athenæum* by Mr. Airy, which already, I much grieve to find, have not been received with the indulgence for which I could have hoped. But the question is one of too vast importance to navigation and commerce, and to all voyagers, to be abandoned on the ground of mere personal feelings:—a question of so much importance to be determined that, if Mr. Airy be right, my views are to be held, as by anticipation they are designated, "as alarmist doctrines," or if wrong, then life and property may be fearfully endangered and sacrificed under a confiding reliance on principles of compass action and correction calculated to delude and betray.

With every desire, therefore, to follow out the amenities which I am utterly unconscious of having hitherto infringed on, I shall proceed to the reconsideration of the bearing of the new or additional views and explanations of the paper in the *Athenæum* of February the 3rd; and, first, on the statement I have made to this effect:—that Mr. Airy greatly underrates the effective violence of the sea, and as greatly overrates, according to experiments which I should have thought conclusive, the mechanical action requisite to produce mag-

netic changes in retentively-magnetized malleable iron.

On carefully reading over the portions of the two papers on the 'Correction of the Compass in Iron Ships' relating to the action of the waves, I must express my utter inability to perceive any reasonable approach to the real effects of those seas, the violent action of which I have hitherto considered, and must still fully maintain, to be abundantly adequate to the production (under the requisite circumstances of controlling terrestrial induction) of sudden, and possibly great, magnetic changes. Though I have already shown that impact, like that of the blow of a hammer, is only one of numerous modes of mechanical action by which the retentive magnetism of iron may be controlled and changed; yet I can by no means concede the conclusion of Mr. Airy's argument, that the stroke of a sea has not "the nature of impact." The argument is renewed (*Ath.* Feb. 3, p. 146, col. 2), and the ground taken as if an impact like that of a hammer were needful for connecting my experiments and the action of the waves. But it is to the conclusion, as to the effect of a stroke of the sea, to which my remarks will refer, which we find thus described:—"However great may be the pressure to which it (the striking wave) rises in a second or two, it will at first be a soft-spreading, washy impulse."

Following the example of Mr. Airy, at once more pleasant to feeling and more convenient, I will here offer to the general readers of the *Athenæum* some description, derived from no small extent of observation and experience, of the actual nature of the action of the sea by which ships, in a heavy gale, are liable to be struck. The effects of simple pressure, and the straining of a ship when much seaborne on the summit of a wave—the aspect in which Mr. Airy seems mainly to view the subject—are conditions applying to the action of what, in popular language, is described as "rollers," or the great swells of the ocean, which, however rapidly they roll forward, carry with them no corresponding motion of the body of waters,—waves which, whilst giving some impulse to a ship in the direction of their motion, have no essentially dangerous influence, nor any force "of the nature of impact."

But, associated with these rollers, or ocean swells, there are elements of motion and force which I would desire to picture to the reader, of a very different kind, at least of far greater powers, than could, I think, be at all gathered from the description of the wave-stroke just quoted,—from which tremendous effects in power and destructiveness may, and sometimes do, result. These are the *breaking crests* of deep-sea waves, which are always in operation during heavy gales. Were the object here to give an essay on the origin, development, and forms of deep-sea waves, it would not be difficult to trace the hydro-dynamical relations betwixt the cause, the wind, and the effects, the waves and breakers. And it could be easily shown why the waves in the main ocean do not spread out in extended parallelism, longitudinally, like the breakers after a storm, on a wide and gently-sloping strand,—but are broken up into the form of narrow round-backed hills, seldom extending to a length of more than a few hundreds of yards, or a quarter of a mile, in continuity.

These sufficiently huge masses of water, as I have personally determined, may rise to the height of some 30 or 40 feet of what may be called *solid water*, belonging to the ordinary unbroken wave-form. But from the coalescing or intersecting of waves, running at the same time with different velocities or in different directions, the summit waters are liable to be thrown up into a crest, often 10 feet or upwards in height above the general mass of the "roller," and to assume a velocity beyond that even of a rapidly moving wave of 25 to 30 miles an hour. The natural effect may be anticipated: the too rapidly advancing crest overruns the summit of the main wave—is thrown into a form the transverse section of which is the upper half of a *crescent*, and, then, like the in-rolling swell of the sea-shore, is projected forward in the form of a breaker.

Now, with this description the general reader

will be able to follow me in attempting some estimation, in the shape of number and force, of the nature of the concussion, shock, or impact which a ship may happen to receive from a crest of this kind when just about to break. I will assume, for this estimation, regularly running seas, such as I have actually measured,† of about 30 feet in height from the hollow to the ordinary summit, running with a velocity of, say, 30 geographical miles an hour. In a gale of wind, lasting only for a day, a sailing ship *contending against it*, would receive the action, ordinary or extraordinary, of 8,000 to 10,000 such waves,—the waves taking her mainly, perhaps, in a slight obliquity to the direction of her keel, but, not unfrequently, in direct parallelism with her broadside. In a four days' gale—no rare thing to be encountered in a winter's passage across the Atlantic—30,000 to 40,000 such waves would have to be encountered. Among this large amount, then, with their numerous breaking elongated crests, we may assume an incidental one to take the ship exactly in parallelism with the broadside, and so, in respect of time, as just to fall over, or be ready to fall over, and strike the broadside perpendicularly to its surface. Suppose the width of the breaking crest to be 30 or 60 feet, its height 10 feet (sometimes the height is greatly beyond this), and the thickness of the water at the lower part of the crest 6 feet, diminishing to a sharp edge at the top,—and then let us estimate the nature of the force and impact. The assumed dimensions, certainly not overrated, of the just breaking crest would here give, at a mean, about 30 cubic feet of water for every foot of extent, or 900 cubic feet for a crest 30 feet in width, or 1,800 feet for one of 60. A ton of sea water comprises about 35 cubic feet. Hence the mass of the two assumed crests would be, respectively, about 25 and 50 tons. These data, being followed out, should not greatly mislead us. And thus it will appear that whereas the breaking crest will attain an *actual* velocity more than equal to that of the wave's apparent motion,—the absolute momentum of this vast mass is spent in a portion of time represented by the fraction $\frac{3}{5}$ (the velocity of the wave being 50 feet per second and the mean thickness of the breaking crest 3 feet),—an interval, it will be observed—not of a second or two of time, as I understand Mr. Airy to assume—but only, in the proposed case, of about a seventeenth part of a second! The general reader will judge, then, whether a blow or shock of a mass of water of some 25 to 50 tons in weight, projected directly against, and expending its force on, the quivering broadside of any ship would not partake of the nature of impact. And the scientific reader will judge, further, whether here—taking either the ground of my experiments or of Mr. Airy's admissions—we have not a most ample and adequate force for the probable effecting of magnetic change. Our statement will, I believe, serve to recall to the mind of the well-experienced seaman who may happen to read it, the fact of his having occasionally felt his ship being struck by the sea with an impact so forcible and sudden as to give the momentary impression of a collision or stroke on the ground!

The conditions assumed in the foregoing investigation bearing on the nature of the force and impact of deep-sea "topping" waves, taken, necessarily, in certain respects, from simply estimated or conjectural quantities—are all, I believe, undeniably within range of probable and not unfrequent occurrence. But for securing myself from a possible objection founded on probabilities, as to the wave-crest striking the ship under the given circumstances, and at the *precise moment* of its breaking, it will be proper to note that such precise conjunction of the stroke and the moment for the natural *breaking* of the crest is not necessary. The wave-crest previous to its taking the form of a breaker frequently runs along with its parent wave for several seconds in a condition so near to the conditions requisite for being thrown forward, that the smallest interruption in its progress may anticipate, by many moments, the ultimate result. On these facts is founded a practice which, with

much advantage, has sometimes been adopted in boats overtaken by a heavy gale—where ships have been deserted by reason of fire, foundering, or other causes—of mooring the boat by a long rope attached to a floating spar, where the means have been at command, with the view of breaking the attenuated curved crests of the more threatening waves, by anticipation of the effect of the natural forces, and thus saving the boat from their destructive power. Hence, it is obvious—as indeed ordinary observation of the waves, before breaking, rolling upon the shore might indicate—that the condition requisite for producing the sort of impact we have described is not one of instantaneous conjunction, but embraces a considerable range of progress and time in the impulsive wave-crest.

The subject of deep-sea waves and the force of their breaking crests has now been so considerably dwelt upon on these two grounds, that Mr. Airy, in his discussion of mechanical causes likely to occasion magnetic changes, has throughout slighted or set aside what I believe to be a most powerful agency, so far at least as may be gathered from this express statement [*Athen.* p. 146, col. 2, at the foot,]—"I attach little importance to the direct action of the waves"; and that the subject of inquiry may, I hope, prove of some interest to the general reader in respect to these grand phenomena and exhibitions of power.

It is not without feelings of regret that, in pursuance of this subject, I again find occasion to turn to the results of personal experiments, under the view of their being exceedingly underrated in the paper under consideration; but the case, as it seems to me, absolutely demands it. And the regret is increased on being obliged to say that the references to papers descriptive of my experiments, and to statements in my former communication appear to indicate a surprising inattention both to the words and meaning of these documents. Mr. Airy presses the principle of a quick *percussive* action, or "jar or molecular tremour produced by blows," being necessary, on the ground of my descriptions, in order to the effecting of magnetic changes [p. 146, col. 1]; and intimates that I appear to attach no importance [p. 146, cols. 2, 3] "to the flexure of iron plates." Yet this seems very strange, when in the very section of the paper (Transactions of the Royal Society of Edinburgh, vol. ix., p. 254,) from whence reference is made to a bar being dropped on a carpet by which (as the true reading goes) it "*became sensibly magnetic*," I have stated the proposition, that "Iron is rendered magnetical if scoured or filed, bent or twisted," &c.; and when in my reply in the *Athenæum* of December 9, [p. 1494, col. 2,] I repeat the proposition of iron being magnetized retentively, neutralized, or the polarity inverted by any process of mechanical action, such as scouring, filing, bending, twisting; whilst [at p. 1495, col. 1,] I describe an actual experiment with an iron plate, where "a slight flexure, not sufficient to change the figure of the plate," had pretty nearly the same effects (differing only in quantity) as actual percussion or vibratory action. The inaccuracy of reference and deduction here, cannot, I think, be mistaken. In referring, as above, to the first of the papers giving records of some of my early experiments, (read in January, 1821), a remark is recalled to mind, which I here take leave to mention with reference to the priority of investigation of the phenomena of *retentive magnetism*—a question that has already been discussed,—that in that very paper, at page 252, I speak of this peculiar principle as "*the fixing of the magnetism of position [or terrestrial induction] in iron or steel by hammering*," &c.

A further mistake, as to the effects of mechanical action may just be noticed, because it is so easily corrected by experiment—that is, as to the assumed *suddenness* of action being an essential condition in the production of magnetic changes. Let an iron bar or long slip of iron plate, free of retentive magnetism, be fixed upright, against a post, by being gently slid within and secured by staples or clamps, at the extremities,—a delicate compass being placed near its lower extremity for testing the results. Let the bar or plate be then pressed very gradually and slowly either by the hand or

† *Athenæum* Report of the Meeting of the British Association at Edinburgh in 1850; and Report of British Association for that year, p. 26.

by well buffed screws; and no matter how slowly the pressure is applied, the magnetic effects, without any absolute change of figure, or apparent jar, will be essentially the same as in other modes of action. Even pressure over the knee of an iron bar of three quarters of an inch in thickness, or more, whilst held upright, will be found to produce a decided magnetic change, however slowly or gradually the pressure may be applied.

II. To the essential question, re-opened by Mr. Airy's objections to evidence and principles I had thought, and still think to be, conclusive, I must now again address myself;—that is, As to whether the magnetic condition of iron ships is not liable to rapid or sudden changes?

Deductions from experimental investigations, sustained by various researches on the actual facts, have, as I believe, incontrovertibly shown:—1. That the magnetic distribution of all iron ships must, as to the more permanent quality, the *retentive*, necessarily take the position of conformity with the force of terrestrial induction; and the polar axis, therefore, must proximately, if not strictly, be found in the direction of the dipping needle, in respect of the ship's position whilst being built.—2. That this is an extreme condition, not retainable after a ship is launched,—her various positions and the mechanical action to which she is constantly subjected tending, under new relations of terrestrial induction, to bring the polar axis into a vertical position, which, ultimately, must become the normal position for vessels navigating only in northern latitudes:—and 3. That whilst new iron ships, previous to the attainment of the normal magnetic axis, are specially liable to rapid or sudden changes,—all ships, under certain conditions of position, mechanical force, &c., are liable to similar, though not to so great, changes.

The first proposition, theoretically deduced from experiments ('Magnetical Investigations,' vol. ii., pp. 264–273), was verified by the actual case of the Elizabeth Harrison, as figured and described in the *Athenæum* for December 16, page 1526, with the most striking and beautiful accordance; and the second—in proving the application of the same general law—was, as I conceive, as satisfactorily shown by the other actual case of the Imperador, described in the same page of the *Athenæum*. Mr. Airy, however, equally to my surprise and regret, dismisses the deductions drawn from these striking investigations, and the actual principles of which the investigations appear to me so demonstrative, by the summary objection, that "such an argument would not be admissible in any other science,"—whereas, as far as my own perceptions thereof go, the history of the inductive sciences is crowded with similar reasonings, and the results, in certain cases, regarded as among the noblest triumphs of mathematics and general science. But it is not necessary to attempt to elucidate the views I have just expressed on this general objection, unsupported as it is by anything tangible, when we find the objection specially applied to magnetics, with a reason given for its assertion. And here, not to set mere opinion against opinion, which, in this case, could avail nothing, we may proceed with confidence of gaining something in the way of a decided result on an important case, bearing on the very foundation of the principles for which I contend.

It will here conduce to the securing of accuracy in my reply, to quote the words of the paper, where objection is taken to a comparison of the magnetic state of the Elizabeth Harrison, as on the stocks, with that of the Imperador, built in a similar position, as afloat and fitted for sea:—"From the difference (as Mr. Airy most correctly represents) between the magnetic state of one ship before she is launched and that of another after she is launched, Dr. Scoresby infers the effect of launching and fitting-up." And to what other causes, I would confidently ask,—except the denial of any principle in the original distribution of the ship's magnetism,—could the difference, or plainly inferable change, be ascribed? Mr. Airy adds,—“Such an argument would not be admissible in any other science, and appears to be specially unsuited to this, where the capricious

differences in the state of different ships are matters of daily observation." Here, it will be perceived, that the ascertained results of principle,—such as my experiments in verification of the proposition of the general polar axis of an iron ship being dependent, magnetically, on her position whilst building,—are denied being applicable for the determination of subsequent changes in any other case, on the ground of "capricious differences in the state of different ships being matter of daily observation"! It is assumed that the capricious differences, of popular notoriety, found to exist in the magnetism of different ships, apply to special or peculiar experiments, from which my conclusions were drawn. But this objection, I am prepared to show, is totally inapplicable to the case thus summarily dismissed. For Mr. Airy refers to results of experience within one description of place and limit, and my deductions are from experiments entirely beyond that place and limitation.

It is not denied or questioned that capricious differences within certain limits, speaking in popular language, as Mr. Airy doubtless speaks, are found to be matter of frequent occurrence in compass experiments on board iron ships; and these, for obvious reasons, when the compass indications are dependent on ten thousand disturbing and contending magnetic forces. In the very meagre state of our knowledge of the deviation of the compass and its causes, so long ago as the year 1817, I had then apprehended and elicited, in substance, [*Philosophical Transactions* for 1819, with additions in "Account of Arctic Regions," 1820, Vol. II. pp. 537–554], these two leading facts concerning the magnetic action of an ordinary ship's iron on the compass—that all the effects might be referred to a single focus of magnetic action; and that the ordinary general resultant (such as observed in a central position of a ship's deck remote from peculiar disturbing influences) would be overcome or upset in high northern latitudes, by the master influence of any proximate mass of upright iron;—these propositions are still found to be strictly true, even in ships built entirely of magnetic material. A reason, therefore, for the apparent capricious differences in the magnetic state of different ships, is thus satisfactorily afforded, that is, amid and among the disturbing causes or *within* the ship; but surely such a reason can have no legitimate application to the general phenomena of the entire magnetic forces as indicated by the ship's action on a compass *without* the ship.

But still, even as regards these numerous perplexing and incalculable influences *within* the ship—changing with every inch, it may be tenth of an inch, in the position selected for the compass—the result of the magnetisms of the entire fabric must be as rigidly ordered and determinately developed as the results relating to every dynamical force among the Creator's laws. The ship, as a magnetic body, and examined from *without*, is an *unity*; and the magnetic state of every part (except where there may be peculiarly projecting or disturbing masses of iron) will have a tendency to take the position due, magnetically, to the general laws of terrestrial induction. And here, as examined from without, there can be no capriciousness, nor, if we give the smallest attention to proximate masses or forms of iron, can there be any apparent uncertainty.

Hence I may conclude, and I believe with the sanction of every man of science, and of Mr. Airy personally, that a reason taken from the inextricably perplexing magnetic influences on the compass *within* an iron ship, can have no force or applicability to the magnetic condition of the general fabric as examined from *without*. And, it may be added, my experiments on the Elizabeth Harrison and the Imperador were all experiments made from without; and the results and the comparisons I draw from them, therefore, cannot be touched by the reason given for the asserted objection.

Though this reasoning must, I doubt not, have been an oversight,—as no experiments of like nature, that I am aware of, have ever been undertaken except those by me or at my suggestion—it is yet satisfactory to be able to support the principle of magnetic distribution for which I contend, by a new result of a recent experiment on a

large iron ship, undertaken, at my suggestion, by Mr. James Napier, of Glasgow. This ship, the *Fiery Cross*, (recently launched) was built with her head in the magnetic direction of S. 32° W. The equatorial lines were most satisfactorily taken from stem to stern on both sides, and projected on a longitudinal draft of the ship. On comparing their difference of level with the deductions of theory, for the single position of the main breadth section, I again obtained the beautiful result of accordance still more close than in the case of the Elizabeth Harrison; the difference of level in the *Fiery Cross* measured on the plan being about 6 feet 1 inch, and the difference by theory being 6 feet 2 inches,—an agreement which, within the probable errors of observation, may be considered as quite exact.

This new fact of experiment comes as an additional confirmation (hard, I think, to be resisted by men of science) of the soundness of my inference respecting the original position of the magnetic polar axis of the Imperador whilst building,—viz. that the polar axis in her case, under the data given [*Athen.* Dec. 16, p. 1526], must have inclined, in the central part of the ship, about 18° towards the starboard side. But after being fitted out for sea, and examined with her head in nearly the same position, the inclination of the polar axis, roughly calculated, was found to be reduced to about 6°, indicating a positive change of somewhere about 12°. This change, therefore, may be fairly referred to the new relations of terrestrial induction, elicited by mechanical action, during the process of fitting the engines and rigging out the ship with her head in the contrary direction from the position on the stocks. That this foundation principle of a ship's original magnetic axis is essentially true, and that the tendency of the polar axis, after a ship is launched and has been strained or vibrated in new positions of her head, is to assume a normal position, with a vertical polar axis in the central body,—I would appeal to experiment on ships building, and ships after being launched, or to any fair example of a single ship which may be selected, and will concede all my predilections and confidence in the principles asserted should they not be characteristically confirmed.

If these principles be found correct, as in most particulars they are proved to be,—and, I may add, are now generally recognized as the results of experience,—then will our third proposition have positive confirmation on scientific grounds to this extent—that the original magnetic condition of new iron ships is not only liable to change, but must, after the launching, inevitably change, often rapidly, and sometimes suddenly.

Torquay.

WILLIAM SCORESBY.

[The subject of this paper will be resumed and concluded next week.]

PICTORIAL COPY-RIGHT AND COPY-WRONG.

A case was brought into court at Marlborough Street on Monday, the importance of which will be self-evident to all painters and collectors.

"In 1851 Mr. Ward, the well-known artist, painted a picture, known as 'James II. receiving Intelligence of the Landing of the Prince of Orange.' The painting was purchased by Mr. —, who gave Mr. Ward the usual permission to make an artist's copy of the picture. This copy was subsequently sold to Messrs. —, picture-dealers, who again sold it to a gentleman residing near Preston. Some short time ago, Mr. Ward was informed that a picture was in the market which he was asserted to have painted. Mr. Ward made inquiry, and ascertained that this picture was a copy of the artist's copy of the James II. painting sold to Messrs. —. A copy, therefore, of the artist's copy had been made by an inferior artist, and an attempt had been made to palm it off as an original, whereby an injury was inflicted on Mr. Ward's artistic reputation, and a fraud committed on the purchaser. Now, as Mr. Ward was unable to tell how far this spurious manufacture had proceeded, and how many spurious works were in existence, he had instructed his solicitor to come to that Court and to detail the facts, in the hope that some way would be pointed out by which Mr. Ward would be protected from this kind of injury and injustice."

The solitary remedy and restraint which English law, as it stands, can administer, was stated by Mr. Ward's solicitor as under.—

"Mr. Ward might apply to Chancery for an injunction against the holder of the spurious picture, to restrain its sale as an original, but that obviously was not a remedy suitable to the case."

Mr. Darvill, says another passage of the report, threw out the following suggestion :—

"He was not sure that it would not be necessary, owing to the defective state of the law, to seek the aid of Parliament for an enactment that should provide means to check and punish fraud. Possibly that end might be obtained by declaring that original paintings should be taken to some public body—the Society of Arts, for instance—and there stamped and authenticated in such a way as to give force and validity to the genuineness of the painting."

Few matters concerning Art have come before our Courts of justice of more obvious interest than this. The idea of entering the maze of Chancery in quest of prohibitory injunctions will be as anti-pathetic to most painters as the notion of Parliament was distasteful to Handel, on diametrically opposite grounds, when the Governors of the Foundling Hospital wished to secure exclusive control over the performance of his 'Messiah.' How to maintain the value of a picture as unique without making the copyist's labour penal, is a puzzle for an Eldon's head,—regarding the solution of which we do not pretend to see our way very clearly. It is not difficult to conceive how some of the adroit imitators of the Old Masters, who hang London dining-rooms with Sciarra Titians by the score, and who have made the *Poesia* as familiar almost as our Sovereign Lady, can profitably occupy their easels by also repeating the *Cynthia* of the minute—whether it be a yawning *Mariana* to delight those who covet illustrations of the Laureate,—or some Academy study, by Etty, which has been found happy in its *pose* and luscious in its colour. There already exist sources—as we have heard—from which Turner drawings of any given period can be commissioned,—and it would seem, from Mr. Ward's case, that by diving deeper, the cheap collector might even come by a MacIse 'Cinderella' as elaborate as Mr. MacIse's own, or by a Stanfield as passionate in its sky and sea as the original landscape 'On the Gulf of Genoa.' The question is one, we repeat, which, for every one's sake, cannot be too clearly exposed, or too searchingly considered;—whether for the interest of collectors intent on maintaining the value of their collections, of artists recoiling from the idea of fraud and counterfeit, or of students anxious not to be debarred means of study.

OUR WEEKLY GOSSIP.

Lord Carlisle has resigned the Presidency of the Royal Society of Literature, on going to Ireland as Lord Lieutenant.

No form of wrong is free from inconveniences to the wrong-doer:—not even literary piracy. The Americans, who think it "smart" to undersell our legitimate productions in our own Colonies with pirated editions, are beginning to feel the effects of a piratical competition carried on from this side of the great waters. London has caught a lesson from New York; and we are not sure but that ere long the scholar will be more than a match for his master. If New York can *illegally* send its reprints of English works to Australia, London may legally send its reprints of American works to Canada, and there undersell the genuine editions. We are told by persons in the "trade" that a large business is now being done in Australia, at the Cape, and in Canada, close to the frontier, in pirated editions of American books. Thus the cycle is complete. All authors suffer alike. The Yankee writer not only loses his fair market in England, in Australia, and Canada, but he sees established near his own door, across a mere river, a system specially designed to injure his property,—is aware that no existing power can wholly prevent the introduction of the spurious editions of his books from Canada into his own country. Such a condition of things may convince even Mr. Cary that the question of literary copyright is after all somewhat of "an American question."

On no occasion since the alteration of the statutes, rendering admission into the Royal Society more difficult than it was formerly, have there been so many candidates for election as there are this year. Thirty-eight certificates are suspended in the Society's meeting-room,—of whom only fifteen can be chosen. The day of election is fixed for the 7th of June.

Heroically as our governing powers seem to hold out against the admission of men of letters to office,—still the strange ministerial changes of the past February have not been unaccompanied by changes in other portfolios than those of Colony and Finance.—The nomination of Sir G. Cornwall Lewis to the Chancellorship of the Exchequer has given a well-known blue and yellow book a new editor,—the *Edinburgh Review* having, as we learn, been placed under the superintendence of Mr. Henry Reeve.

M. Cabany, the possessor of 'Moreduin,' has written a long letter, in answer to the facts adduced by Miss Anne Scott, Mr. Skene, and Mr. Gordon, against the probabilities of 'Moreduin' being an authentic work. But its statements amount to no more than this:—M. Cabany is angry, and not convinced. We long ago expressed our own doubt, on the evidence adduced by M. Cabany himself. Evidence from the other side has, of course, not weakened that doubt. Here, then, we must leave the matter, until M. Cabany chooses to give the volume to the public, when it will come before us in the usual course.—We take the opportunity of this reference to Miss Anne Scott to correct an error in the letter published last week:—"On their return from Paris in spring 1818," should read 1826.

The books of Dr. Trithen, late chief of the Taylorian Institution at Oxford, are announced for sale.

Everybody knows the Wolffish theory of the Homeric poems; that they were the street ballads of ancient Greece, blended, fused and wrought into shape by some editor of "reliques,"—some Macpherson of bigger mould and more fiery genius. But suppose these reliques have no more authenticity than the London ballads of our own day? We confess to having been a little—just a little—startled the other night by the audacious way in which we heard a great contemporary fact described by one of Mr. Catnach's poets. The singer had for theme the Death which has occupied all thoughts in Europe for the past few days; and after touching with a vigorous rather than a graceful hand the scene of the dissolution, the poet completed his history and his lyric with this couplet:—

And the English digged him a h— of a hole,
And they buried him in Sebastopole.

We could not help feeling some of Walpole's distrust of "historical documents," and especially of historical illustrations drawn from polite literature. What will the antiquaries of 3855 do with such a lyric? What would not a Strauss make of it? For observe, it has every mark of authenticity: it is public; it is contemporary; it is dated; it is in accord with some indisputable facts,—the Emperor is dead, the English are in the Crimea, and what so likely as that he should be buried under the ruins of the great fortress, which is the prize of the war, like Priam under the mound of Troy!

The Professor of British History and Archaeology in the Royal Society of Literature has commenced a course of public lectures on 'The Domestic Life of our Ancestors,'—a subject of much interest if well treated, and one admitting of some novel illustrations. The Archaeology of the Household is a virgin subject with the general public.

Dr. Kitto's journals and papers, we understand, are being prepared for the press; and are, in the first instance, to be published by subscription for the benefit of his family.

Prof. Owen has killed another sea serpent with his remorseless anatomy. As most readers have heard, some mysterious footprints were observed in the recent snow near Exeter, which the superstition of Devonshire invested with an interest more startling than the footprint found by Crusoe on the sand of the seashore. The marks of an unrecognized foot, a hoof, were visible for forty miles—at least so the story ran at first—in a nearly straight line, showing the track of some being, natural or supernatural, over the snow. The thing seemed to have gone through hedges, walls, and hayricks, and across the Exe, without difficulty; and the Devonians being from of old

Credulous to false prints,

the track was soon known as the Devil's walk.

What was most alarming in the matter was, that the cloven foot appeared to have passed forty miles in one night over the snow towards the country house of his Lordship of Exeter! Unhappily for the superstitious, too many tongues got talking on the subject *before the snow melted*. Other prints were found in other places, not only in Devonshire, but in Somersetshire and Gloucestershire. The marvel began to interest naturalists as well as preternaturalists; and at this point we assume it will interest the readers of the *Athenæum*. A cold so severe, it is known, must have driven forth many animals otherwise rarely seen in search of food, and reputations of many kinds have been hazarded on kangaroos, bears, cats, cranes, otters, and great bastards. Prof. Owen gives his voice for the badger. He says,—"An esteemed zoological friend has submitted to me a carefully-executed drawing of one of the more perfect impressions left in the snow at Luscombe, South Devon, on or about the 8th of last month. It was of the hind-foot of a badger. This is almost the only plantigrade quadruped we have in this island, and leaves a footprint larger than would be supposed from its size. The badger sleeps a good deal in his winter retreat, but does not hibernate so regularly and completely as the bear does in the severer climate of Canada. The badger is nocturnal, and comes abroad occasionally in the late winter, when hard-pressed by cold and hunger: it is a stealthy prowler, and most active and enduring in its quest of food. That one and the same animal should have gone over 100 miles of a most devious and irregular route in one night, is as improbable as that one badger only should have been awake and hungry out of the number concealed in the 100 miles of rocky and bosky Devonshire, which has been startled by the impressions revealed by the rarely-spread carpet of snow in that beautiful county. The onus of the proof that one creature made them in one night rests with the assessor, who ought to have gone over the same ground, with a power of acute and unbiassed observation, which seems not to have been exercised by him who failed to distinguish the truly single from the blended footprints in question. Nothing seems more difficult than to see a thing as it really is, unless it be the right interpretation of observed phenomena." Thus completely, as we think, vanishes the Devil's walk in the diocese of Exeter from the records of superstition—vanishes at the touch of science, as the sea serpent faded even from the imaginations of the most credulous.

Mr. Ewart's bill for extending the provisions of the Free Library Act has been adopted by the House of Commons, and will, doubtless, pass into a law. On the question of the size of the town or district to which its provisions should be allowed to apply, some discussion arose and several interesting facts were stated. The general feeling of the House was, that a population of 5,000 was too high a limit; but, ultimately, the figure adopted by Mr. Ewart was allowed to stand. A clause was introduced specially exempting Scotland and Ireland from the operation of the Act.

We have received the following satisfactory explanation of a complaint, made by a Correspondent, as to the price of back numbers of 'Orr's Circle of the Sciences.'—

"In your last week's publication a letter appears headed 'Back Numbers,' which requires some notice to prevent misapprehension in respect to the above work. In October last it was determined, for reasons then given, to increase the price from two-pence to three-pence per number. This intention was announced in your own columns, and in other channels, as well as on the work itself, with an intimation that the change would take place on the 1st of January, and that it should apply to back as well as current numbers. This notice was given with the double object of giving subscribers time to complete their sets, and to bring the subjects in course of publication to completion at the old price. The change was generally approved of by the subscribers, I believe,—they being reasonable enough to see that the high class of literature aimed at, was worth the money demanded for it. All this, I have reason to believe, was explained to your Correspondent, when he had the option given him of returning the numbers, of which he availed himself. This notice may be useful to others, and prevent them being misled like your Correspondent, if you will kindly insert it."

Yours, &c.,

ONE OF THE PUBLISHERS.

"London, March 7."

Among the deaths of the week has been that of Mr. Copley Fielding, at Worthing. His age, as stated in the obituaries of the day, is sixty-

eight. As the most distinguished of the water-colour painters of his family—as one who has, for a quarter of a century or more, been a constant and a cardinal attraction in our exhibition rooms—as a professor whose practice no less than experience must have given to his precepts no common value—he will be much missed. Mr. Copley Fielding leaves no imitator behind him; for Mr. Bentley, who may be thought to have approached certain of his marine effects, is also gone,—and of the down and the glade landscapes, which made up the other two-thirds of this charming draughtsman's manner, there are no emulators. The above classification of Mr. Copley Fielding's favourite subjects is inevitable. Monotony was probably forced on him by some original hits, which made collectors commission from him a gray, or a golden, or a green drawing,—in proportion as the collector's fancy or necessity was gray, golden or green. Mannerism is not always the result of poverty in the resources of the mannerist:—it may also indicate his popularity and the pressure of the market. Till the amateur rates his purchase as something different or superior to a piece of china, which he buys for the sake of its pink or its pearl colour, the temptation to be mannered will always more or less beset an artist when he is in full tide of success. If Mr. Copley Fielding had not genius, his talent was of the highest order, and his self-respect was equal to his talent. We do not remember a single slovenly or slighted specimen among the score of drawings which he annually contributed to the Exhibition of the elder *Water-Colour Society*, in which he held office. Though his self-iteration became conventional, there was always storm in the sky of his shipwrecks, always air and distance in his Sussex Downscapes, always richness and depth (rather than variety) in his foliage. In short, Mr. Copley Fielding will long be referred to as having advanced and adorned water-colour art at that healthy period of its existence when the drawing had ceased to be a pen or pencil sketch tinted with slight washes of colour, and had not begun to be a composition of opaque plaster or glossy gum, employed in the vain hope of giving it the substance and brilliancy of oil painting.

The Duke de Broglie and M. Legouvé have been elected Members of the French Academy;—and in the case of M. de Broglie, at least, the Academy has again thrown occasion to the Government for asking—"Why are political celebrities elected into a body of learned and literary men?"

Government, very properly we think, refused to purchase for the nation Mr. Bernal's collection; and the auctioneer's hammer is engaged in dispersing it to the four winds. The articles are fetching good, some of them extravagant, prices. The Marquis of Bath has been a large purchaser; as has also the Department of Art, Marlborough House. A carberet, purchased by Mr. Bernal for 65 guineas, was knocked down to Lord Bath for 465*l.*; who also purchased two candelabra, with female figures and cupids, for 231*l.*—A vase, purchased at Owen's, in Bond Street, for 17 guineas, sold for 127*l.*—A gros-bleu vase and cover, with painting of Venus, Cupid, and Adonis, sold for 203 guineas.—A pair of vases and covers, with upright sides, with bouquets of flowers in medallions, brought 320*l.* In the Dresden subjects the following were interesting lots:—A coffee-pot, cover, and stand, with basin, tea-caddy, and cup and saucer; figures after Watteau, and flowers on a yellow ground, 50*l.*—A chocolate-pot and cover, with milk-pot, cover, and stand, and a cup and saucer, blue ground, with illustrations after Watteau, 23*l.*—A pair of small seaux, scalloped, each with eight small subjects of figures, 40*l.*—A pair of scalloped cups and saucers, with figures after Watteau, and flowers on gold ground, 28*l.*—A cup and saucer, with raised frieze of figures in imitation of gems, 11*l.* This lot was purchased by Mr. Bernal at a sale at Messrs. Christie's rooms for 30*s.*—A *déjeûner*, with blue borders and figures after Watteau, consisting of tea-pot, coffee-pot, and two cups and saucers. This lot was bought by Lord St. Leonards for 16½ guineas.—An oval two-handled plateau, gros-bleu, with five compositions of architecture and figures, 16*l.*—A pair of oviform vases,

the ground incrustured with forget-me-nots, each with conversations after Watteau, on gold ground, mounted in the best taste. This lot excited considerable competition, and was at last secured by Mr. Smith for 95 guineas.—An egg-shaped scalloped vase, in the same style as the preceding lot, was bought by Mr. Webb for 42*l.*—A few Sèvres objects may be instanced:—A cup and saucer, gros-bleu and green, with cupids; bought by Sir H. H. Campbell for 17*l.*—A cup and saucer, green, with Venus chastising Cupid, 26*l.*—A cup and saucer, green, with two subjects of figures and merchandise, after Lingelbach, 55*l.*—A cup and saucer similar, with children, after Boucher, 27*l.*—A beautiful écuelle, cover and stand, gros-bleu, painted with subjects of cupids. After a spirited competition, this lot was secured by Mr. Webb for 125*l.*—A fine ewer and oval dish, with baskets of flowers in compartments, realized 58*l.*—16*s.* The first three days of the sale produced upwards of 6,000*l.*

THE PORTLAND GALLERY, 316, Regent Street (opposite the Royal Polytechnic Institution). THE EIGHTH ANNUAL EXHIBITION OF THE NATIONAL INSTITUTION OF FINE ARTS is NOW OPEN from Nine till dusk. Admission One Shilling, Catalogue Sixpence. BEIL SMITH, Secretary.

NOW OPEN, Admission Free, the EXHIBITION OF PRIZE PAINTINGS to be distributed amongst the Members of the ART UNION of GLASGOW, in July, 1855, at the GALLOP OF ART, 121, Pall Mall (opposite Her Majesty's Theatre). Hours of Admission: Morning, 10 to 5; Evening, 7 to 9.

The Exhibition will close on the 24th of March.

PHOTOGRAPHIC SOCIETY.—THE SECOND ANNUAL EXHIBITION of this SOCIETY is NOW OPEN at the Rooms of the Society of Water-Colour Painters, Pall Mall East, in the Morning from 10 to 5; in the Evening from 7 to 10.—Admission, Morning, 1*s.*; Evening, 6*d.* Catalogues, 6*d.*

Last Week—Will close Saturday, 17th.

COLOSSEUM, Regent's Park.—Admission, 1*s.*—The original PANORAMA of LONDON BY DAY is exhibited daily, from half-past Ten till half-past Four. Museum of Sculpture, Conservatory, Regent's Park, in the GALLOP OF ART, 121, Pall Mall, BY NIGHT, every Evening from Seven till Ten. Music from Two till half-past Four, and during the Evening.

NOW EXHIBITING, at 57, PALL MALL, a MUSEUM of MEXICAN ANTIQUITIES, illustrative of the Mythology, the Religious Rites, and the Sepulture of the Toltec and Aztec Nations, as shown in the MUSEUM of the National Antiquities and Library Vases, Sacrificial and Musical Instruments, &c.—Admission, 1*s.*

LEICESTER SQUARE.—THE AZTECS and the EARTH MEN. The first of either race ever seen in Europe. Exhibited daily from 2 to 5, and 7 to half-past 9. Lectures at 4 and 8. Vocal and Instrumental Comedies every Exhibition.—Admission, Stalls, 2*s.*; Reserved Seats, 1*s.*; Gallery, 6*d.*

LOVE'S LENTEN ENTERTAINMENTS.—VENTRILOQUISM EXTRAORDINARY.—Fifteenth Season in London.—UPPER HALL, 69, REGENT QUADRANT, Regent Street, completely refitted for the occasion, with New Entrances, New Stage, New Cloak-rooms, &c. Every Evening at 8, except Saturday; Saturday, at 3.—On Monday and Tuesday, THE NEW ENTERTAINMENT, called 'THE LONDON SEASON,' and other entertainments. On Wednesday, Thursday, and Friday, Mr. LOVE will give a LECTURE on the OCCULT POWERS of the VOICE; followed by the entertainment called LOVE IN ALL SHAPES; with LOVE'S LABOUR'S LOST.—On Saturday at 3, Love in all Shapes, with other entertainments.—Pianoforte, Miss Julia Warman.—Stalls, 3*s.*; Area, 2*s.*; Gallery, 1*s.* Tickets at Mitchell's, 15, Abchurch Lane, and 10, Bond Street; Turner's Music Depot, 19, Poultry; and at the Rooms, between 12 and 3.

PATRON: H.R.H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION.—IMPORTANT LECTURE ON SIEGE OPERATIONS in connection with SEBASPOLI, E. E. L. L. L. (late Captain, Grenadier Guards) having kindly consented to deliver this Lecture again, on TUESDAY EVENING next, the 13th inst. at half-past Eight o'clock, notice is hereby given that the Industrial Classes will be admitted on that Evening, as on Monday Evenings, at half-price.—Monday Evening the 12th inst. Lecture by J. H. WEBER, Esq., on AUSTRALIA and EMIGRATION THERETO, being the result of his personal experience.—DRAMATIC READING by Mr. HUGH LESLIE, Thursday Evening, the 15th inst. OTHELLO.—LECTURE ON ASTRONOMY, by Dr. BACHOFEN, illustrated by a SPECTACLED DISSOLVING ORRIERY, on Wednesday, with MUSIC from the CREATION, by a BAND and CHORUS of FIFTY PERFORMERS, under the direction of Mr. W. W. WAUD, of the Royal Italian Opera. Principal Vocal Performers: Miss Julia Bleaden, Mr. Montem Smith, and Mr. Henry Buckland.—On THURSDAY, the 16th inst. The Company will sing a selection of their NATIONAL MELODIES on Monday, Tuesday, Friday, and Saturday Evenings.—THE STEAM GUN, DISSOLVING VIEWS of the WAR, DIORAMA of SINDBAD the SAILOR, COSMORAMAS, the Concert by INVISIBLE PERFORMERS, and all the LECTURES, on the NEW BANK NOTE, &c., as usual.

MEETINGS FOR THE ENSUING WEEK.

MON. Royal Academy, 8.—'On Sculpture,' by Sir R. Westmacott. Geographical, 8.—'Late Journey from El Medina to Mecca,' down the Darb el Sharke, on the Eastern Road, by Lieut. Burton.—Memoranda on Abyssinia.—Account of a Tour up the Gambia to Salum, by Mr. O'Connor.—Despatch from Mr. Gabriel, at Loanda, respecting Dr. Livingston's Exploration of Central Africa.

TUES. Syro-Egyptian, 7½.—'On some Maltese Coins,' by Dr. Lee.—'On a Sarcophagus of the Reign of Hophra,' by Mr. Marsden.—'On the Birs-i-Nimrud,' by Mr. Bouomi.

— Institution of Civil Engineers, 8.—'On the Application of the Screw Propeller to the larger class of Sailing Vessels,' by Mr. Robinson.

— Zoological, 9.—Scientific.

— Royal Institution, 3.—'On Electricity,' by Prof. Tyndall.

WED. Society of Arts, 8.—'On a New Method of teaching Drawing, involving the Principles of a Natural System of Architecture,' by Herr Kump.

— Graphic, 8.

Royal Society of Literature, 8½.—'On the Nimburs,' by Mr. Cumming.—'On the Chronicle of Tysilio,' by the Rev. E. Poste.

Ethnological, 8½.—'On the Natives of Tropical Australia,' by the late Dr. Sibbald.—'On the Australians of Twofold Bay,' by Mr. Walker.

THURS. Society of Antiquaries, 8.

Royal, 2½.

Royal Institution, 3.—'On English Literature,' by Mr. Donne.

— Statistical, 3.—Anniversary.

— Artists and Amateurs' Conversazione, 7½.

FRI. Astronomical, 8.

Royal Institution, 8½.—'On the Chemistry of the Hydro-Carbons,' by Dr. Odling.

SAT. Royal Institution, 3.—'On the Principles of Chemistry,' by Dr. Gladstone.

— Asiatic, 2.

FINE ARTS

The Harmonic Law of Nature applied to Architectural Design. By D. R. Hay. Blackwood & Sons.

THIS treatise upon a rather abstruse branch of the mathematics of architecture (read at a meeting of the Royal Institute of British Architects) has already excited considerable interest in the profession. In a few words, Mr. Hay's plan consists of a series of arguments to prove that there really does exist a mathematical law coinciding with the harmony always found in nature, and that this law can be applied in imparting beauty to architectural structure of any order or style.

These proofs have been applied to the measurements of the Parthenon, and found to be almost exactly confirmed. In the present pamphlet Mr. Hay carries the theory further, and applies it to Gothic architecture, testing the laws which produced the balance and harmony of parts in the east front of Lincoln Cathedral, as he had previously done that of the Parthenon. In both these apparently conflicting systems of Art, utterly antagonistic as Mr. Ruskin would view them, he finds the same harmonic ratios and the same universal law.

The beauty of the theory is its universality and its simplicity. In Nature, the Creator accomplished his purposes by the simplest means. If this theory holds its ground, and is further carried out, we have at least some primary basis for a philosophy of Form. We have now some hope of seeing mere Beauty, even if it be in an old form, secured as a matter of certainty by the merest workman, and considered as a capital, with which he begins to work, and not as the climax and crown of his labours. Thus the poorest Greek statue has some beauty of face, even if it be conventional,—and some beauty of form, though a beauty of imitation;—but still only the great genius shaped the Theseus or the Ilyssus. Mr. Hay's former works are already well known. His books on the 'Parthenon,' on the 'Natural Principles of Beauty as developed in the Human Figure,' his 'Principles of Symmetrical Beauty,' his 'Principles of Colouring and Nomenclature of Colours,' his 'Science of Proportions,' and 'Essay on Ornamental Design,' we have already noticed with praise as the results of philosophical and original thought. We believe that as man's knowledge widens, every form of natural beauty, from the cloud to the flower, will be found to be regulated by laws as severe as those which regulate the revolution of the planets or the growth of man. The bud and the star are both obedient to laws that regulate their appearance and their disappearance. The flower casts its seed in a prescribed curve:—the wave tosses its spray in an arch, regulated by a thousand necessities of use and beauty. Nothing in Nature is accidental or alone; but is the sequence of causes existing thousands of centuries ago. Nature is all harmony and order:—Art, except in its great successes, a feeble imitation of effects the causes of which are still unknown. The harmony of Nature is indestructible and self-restoring:—man's work begins to decay ere it is well completed.

Water-Colour without a Master. With Two Hundred Examples. By Thomas Hutton. Parts I. and II. Reeves & Sons.

THIS is an instructive book on a good and original plan. Separate objects in nature are shown, first isolated, and under various tints, and are then worked up into pictures, with trees, cattle, skies,

and distance. The plan is adapted for schools and young pupils, and the author is already known by previous books on the same subject. Hitherto there has been a great want of coloured examples for the young artist,—good Prouts or Copley Fieldings being exceedingly expensive. A youth generally plunges at once from his lithographs to highly-finished drawings, which is as great a leap as from the Chinese *swanpan* to logarithms. We have here the simple colours of simple objects gradually ripening into richer and wider combinations. Mere receipts for tints are of little use, and the eye learns quicker than the head.

Photographic Pleasures, popularly portrayed with Pen and Pencil. By Cuthbert Bede, B.A. M'Lean.

Mr. "Bede" is more likely than ourselves to know if there be a photographic public large enough to render such a book as his popular,—for if there be not, we are afraid "positives and negatives, and baths and sensitives" are terms still strange to the world at large.

The ludicrous side of Photography is fair game for the caricaturist. We all know the foggy eclipses that are called family groups,—the pale, ghostly visions that are "astonishing likenesses, but not quite successful." There is much fun in the luckless artist under the hood, unconscious of the bull that is charging him behind,—in the Irishman who is rapping at the tempting head under the daguerreotypist's tent,—in the indignant farmer who is kicking down the apparatus of the mild chemist in spectacles. We rejoice at the misery of the fat photographer on Ulverstone Sands surprised by the tide. We smile at the grim man with his head in a frame trying to look cheerful to order,—at the scientific young lady who has tattooed herself with nitrate of silver, and we dare say old ladies have entertained the mercy of photographers, believing the machine to be explosive and about to fire. The pleasures of daguerreotyping are well shown in the interesting sisters that the young artist is "focusing";—the miseries of the art in the group of children washing "Pa's bottles"—the farmer pursuing the supposed surveyor—and the village boys rushing to the apparent peep-show.

With much cleverness Mr. "Bede" has seized the salient points of the new art, and turned them into good-humoured, but rather too technical, jokes. The photographing criminals are well sketched, with much of Mr. Cruikshanks's broad-grin style. There is almost too much letter-press:—eighty-three pages on a subject not worth more than a long chapter is rather tiring, and without illustrations would be unbearable.

FINE-ART GOSSIP.—The Exhibition of the Glasgow Art-Union prizes is now open in Pall Mall, and will repay a visit. The collection comprises many admirable works by Messrs. Gilbert, Pickersgill, Jutsum, Danby, Hill, Branwhite, Haag, Harding, Frost, and others. The gem of the collection is a grand picture (life size), by Mr. J. Sant, representing three Saxon maidens watching a combat from a cliff cave. The fear-struck, eager, timid faces are painted with great power and truth. We particularly admire the face and arm of the foremost woman. The whole arrangement of the picture is grand in feeling. *Sancho Panza* as governor of Barataria, by Mr. Gilbert, is an old favourite. The mixture of perplexity, cunning, and self-satisfaction are represented by a keen observer of character. Mr. Frost has a tenderly painted *Musidora* bathing; silvery and soft.—Mr. Pasmore has some rich mottled interiors, for this artist throws poetry even over a dirty wall.—Mr. Hill's *Durham Cathedral* is a sombre-foliaged scene, with the Wear tinted by sky colours, and the temple of God high over all, beautiful as a pyramid cut into filagree. Mr. Selous's *Priest's Leap* is a Swiss scene of singular wild beauty. His scenery is not much heightened by the little black dot that represents the monk.—Mr. Herdman has a Scheffer-like power of painting pious and thoughtful faces. There is much thought in his *Beyond the Shadow*. Athwart a world barred with shade melting into glory, rises a band of angels bearing the soul of a departed child, and looking up with crowned and starry foreheads and

golden harps to the brightness that we feel, but cannot see, is beyond. A few such thoughts and Art would become a partner in the dreams of Poetry, instead of living upon the crumbs that fall from its table. Mr. Williams's shower *Passing-off* is much to our taste, and the breaking light is spread admirably over the picture.—Mr. Gale's *Sea Nymph* is very bright in colour, but the attitude is rather that of a lady calling a cab than that of a beckoning syren.—Mr. Branwhite's *Scene at Lynmouth* is a water-colour drawing, vigorous in touch and handling; and this vigour conveys the dash of water and brings a feeling of spontaneity that higher finish, where art is more evident, fails to convey. The painting has the merit of a sketch, with much of the maturer beauty of a complete painting. The colour is low-toned, like most water colour paintings where body colour is not much used.—Miss Mutrie's flowers are bolder than usual in their relief, and in the force of their colouring.

"In the present incomplete and unsatisfactory state of affairs respecting the Oxford Museum Competition, I should not trouble you with any remarks, were it not for one paragraph in your Correspondent's letter. He states, as a fact creditable to the taste of the authorities, that the six selected designs included those favourably reviewed by the *Athenæum* and the *Builder*. Now, although five out of the six were thus (more or less) favourably reviewed in both periodicals, the design finally selected (*Nisi Dominus*, &c.) received no notice whatever in the *Builder*, and was only mentioned *en passant*, and that in a deprecating manner, by the *Athenæum*. Possibly, the merit of this design lay in its extreme subtlety and inability to attract notice; but, however this may be, the facts are as stated above. While writing on this subject, I may as well assure your Correspondent that I am as innocent as he is of any backstairs influence, and that in my case, as, no doubt, in his, it has been, in all respects, a *bona fide* competition. In conclusion, I must say, that the conduct of the Delegacy, in permitting more than eleven weeks to elapse without communicating with the unsuccessful competitors, is most unbusinesslike and far from consistent with ordinary courtesy.

"ANOTHER OF THE SIX."

A white marble statue of Charlemagne, by M. Levrol, is about to be erected in the open space in front of the College of France. How long are our own streets to remain as bare as if England had produced no great men?

The Pope is about to erect a colossal statue of the Virgin Mary at Rome, in celebration of the triumph of the Immaculate Conception dogma. Three hundred medals are to be struck of virgin Australian gold.

Glasgow Cathedral is to be spared the enormity of a stone and glass screen, and is to be refitted according to Gothic rules.

The Edinburgh people have already raised 1,100*l.* of the 1,500*l.* required for the colossal bronze statue of Prof. Wilson, which is to be shortly erected.

Mr. Smith, a chemist of Aucterarder, is said to have discovered a means of transferring the impression of natural objects to glass with minute accuracy.

It is understood that specimens of Art, both from the Vernon Gallery and the New Houses of Parliament, will be sent to the Paris Exhibition.

A Marylebone lecturer, backed by Mr. Ferguson, has started a theory denying the Celtic origin of our monolithic monuments.

During some late excavations in Threadneedle Street, various fragments of Roman vases were found, together with the lid of an Early-English stone coffin and part of the tracery of a Gothic window, probably part of the church that stood here before the Great Fire.—The Milton-Club excavations laid bare the foundation of a barban tower, forming part of old London wall, a little to the south-east of the ancient Ludgate.

Mr. Gilbert Scott, of London, obtained the first premium for a Gothic design for the new Hôtel de Ville and Senate House at Hamburg.

The Chapter House at Salisbury is about to be restored;—and two of the eight stained glass windows, the gift of the late Bishop Sparke, have been just placed in Ely Cathedral for trial.—A new reredos is also nearly complete, and is to be filled with five Scriptural illustrations.

A bas-relief, in white marble, representing Esculapius at the bedside of a patient, has just been brought over, by the Phlegethon, from Cyzica, in Asia Minor, for the Museum of the Louvre.

The Collection of Mexican Antiquities remains still open. Theorists, with knitted brows, walk round the rows of idols and vases, and, to their own satisfaction, trace a clear connexion between the nation of Montezuma and the races of Egypt, India, China, and even Etruria. The last dogmatist has swept all old arguments aside, and boldly asserts, that the original Toltecs were neither Tartars nor the Lost Tribes, but Tyrians, who fled to a new world when Alexander conquered the old. This fancy, ingenious as it is, seems fashioned in imitation of the imaginative philologist, who supposed Cecrops and Cadmus were Philistine chieftains, who, flying from the blows of the followers of Joshua, never ceased running till they passed the Hellespont, and blundered, very much out of breath, into Greece. Certain it is that some of these vases have an Indian, and some an Egyptian character. They show the existence of that universal snake worship, seen in the attributes of Æsculapius, the emblems of Siva, the Scandinavian Child of Loki, the Roman Lares, and, in fact, in the legends of every mythology. The eagle was the national emblem of the Aztec, and the snake of the Toltec, just as the raven of the Dane, and the white horse of the Saxon. To our eyes, these antiquities present no traces of various eras of civilization. All have the same ornament of snakes and turtles, and rude, coarse ribbings, stamped or moulded by hand. The design of the vases, occasionally fanciful, shows generally extreme want of elegance, with one exception, in which the shape is almost Etruscan. There is also one steatite ornament, ornamented with royal portraits, which almost approach the truth and finish of early Greek gems. The only metal tools found are a bronze axe and a copper needle. The sacrificial knives, the arrow-heads, and the blades of the war-axes were all of black volcanic glass, bound to the shafts and handles. The looking-glasses were round discs of polished metal, wrought with singular care and finish. One of the most interesting objects in the Collection is a terra-cotta model of a Teocalli, or ancient pyramidal temple,—flat at the top, and divided into several stories—each having its terrace—the lowest story being ascended by a flight of twenty steps. On these huge altars the priests tore out the hearts of Cortez's men and offered them reeking to their war-god,—a dreadful idol, crowned with skulls, humming-birds' feathers and gold ornaments. On these terraces fought, step by step, the white-robed, dusky-visaged Aztecs with the stern arquebussiers that followed Bernal Diaz. Mexico will be a Nineveh to a second Layard, for, we are told, that the whole foundation of the Cathedral was formed of broken idols.

MUSIC AND THE DRAMA

MUSICAL WINTER EVENINGS.—THURSDAY, March 15. —Quartet, Spohr, Piano; Quartet, F minor, Mendelssohn; Quintet, E flat, Mozart; Melodius, Violin and Piano. Artists: Molière, Goffrie, Hill, Platti, and Lindsay Sloper.—Family Tickets, one Guinea; and single Admissions, half-a-guinea; at Cramer's, Chappell's, and Oliver's. J. ELLA, Director.

Mr. ALFRED MELLON respectfully announces, that the FIRST grand ORCHESTRAL UNION CONCERT will take place at ST. MARTIN'S HALL, on MONDAY EVENING, April 2. Vocalists, Madame Clara Novello and Herr Formes. Soloist, M. Santon (Violinist to Her Majesty).—Stalls, 7*s.* 6*d.*; Reserved Seats, 5*s.*; Galleries, 2*s.* 6*d.*; Area, 1*s.* Stalls and Reserved Seats to be had at Messrs. Cramer & Beale's, 201, Regent Street, Gallery and Area Tickets at St. Martin's Hall.

CONCERTS OF THE WEEK.—A piece of counsel anew suggested itself to us at Monday's *Amateur Concert*, which it would be no kindness to withhold from any one concerned in this thriving society. This is, that amateur *solo* players are mistaken when they measure their performances in public by that which they can manage at home. Mendelssohn's two pianoforte *Concertos*, for instance, are beyond the public reach of the best amateur players we have ever met—as demanding such force, rapidity and brilliancy of finger,—such strength of wrist,—and such unhesitating certainty of *tempo* as are not mastered even by professional pianists.

On the peculiar interest of Tuesday's convocation to the Hanover Square Rooms—the first of the four *Concerts of Sir H. Bishop's Music*—we have already dwelt in this journal.—There is no English

composer of this century who has made such a stand as Sir H. R. Bishop. Forty-six years have elapsed since, in the quartett from 'Caractacus,' he began to write those stage glees, which were the nearest approach to concerted music in English drama that our theatres then admitted. For some score of years from that time Sir H. R. Bishop rivalled in fertility the busiest of the Italian composers,—throwing out in his operas, adaptations and incidental theatrical music, some hundred pieces that will be found on the stage and in the orchestra, and at the pianoforte desk, long after the grim and dry imitations of German music which have succeeded them are forgotten. There has been nothing of the kind since so good as the opening to "Now by day's retiring lamp," from 'Don John,' or as 'Though he be now a grey, grey friar,'—the last fresh as a bugle-note blown in merry Sherwood. In Sir H. R. Bishop's unaccompanied glees,—for instance, "Come forth, sweet spirit,"—there may be too large an amount of modulation for pure vocal writing, since there the effect should be produced by grouping of the voices rather than by abrupt or hazardous changes of harmony; but, taken "for better for worse,"—especially if the composer's songs, *scenas*, and duetts are included,—there is no such body of English music, we repeat, as Sir H. R. Bishop's works furnish. We trust that the success of Mr. Mitchell's speculation, carried out, as is Mr. Mitchell's wont, by careful performance, will be such as to justify frequent repetitions of these Concerts: the repertory of which, it may be added, is capable of much extension and variety.

To introduce our remarks on the second concert of the *Harmonic Union*, which took place on Wednesday, we will have recourse to a parable. —A fantastic man in search of perfection in his house, after complaining for years that his dining-room was smoky, removed to a larger, newer, handsomer mansion, innocent of fume or vapour, and in which the distribution of caloric was found faultless by professors of chimney science. Nothing for awhile was to be heard of save the advantages of *Amphitryon's* removal. Guest upon guest swelled the chorus of congratulation. His model refectory was advertised (with pictures of working sections) in all manner of journals devoted to architectural and gastronomic progress. Time went on,—the *Amphitryon* became old—the anecdotes of his guests grew stale—his dinners were found large, tiresome and costly. Some new attraction must be hit on. While he was in his perplexity *Asmodeus* (who sometimes counsels the silly) whispered in his ear, "Try a smaller table—a smaller room—a smaller house." —The advice pleased, as reminding *Amphitryon* of his youthful days. Back, accordingly, he removed to his old quarters, and anon there was raised a chorus in praise of the change—"The old house was so comfortable—there was such a free circulation of air—as might be proved by the dining-room fire which smoked occasionally." Such an apologue as the above is really the only fit criticism on the programme of the *Harmonic Union*, and on the logic of its claims on public favour. Ever since the *Antient Concerts* died of their dullness has it been agreed that the Hanover Square Rooms are too small for choral performances; and on every occasion when the *Philharmonic Society* has attempted some variety by combining voices with orchestra, the classical and the calm might be seen wincing in different phases of execration under "that noise,"—longing the while for "some vast wilderness" (not the lodge in it), if oratorios or *cantatas* were to be given, as the only proper locality for oratorios or *cantatas*. The proportions of the modern orchestra, indeed, have been so much enlarged that no handful of singers suffices to balance its force, still less to predominate, as chorus should do in compositions written according to the old canons. Nor will railing reconcile taste to small and tranquil enjoyments. The public now will have for the execution of great works a great arena and great numbers,—and the more since it is proved that increase in space and in choral grandeur does not neutralize the individuality or impressiveness of single voices in delicate passages. It is impos-

sible to expect the *Harmonic Union* to compete with the *Antient Concerts* in its solo singers, or with the *Philharmonic Society* in its orchestra.—Its repertory, as advertised, is thoroughly familiar, one work excepted, the 'Christus' of Herr Emil Naumann. Were its chorus made up of angels, not amateurs, it would have been difficult to find a new word to say on its inaugural performance of 'The Creation,' as presenting a new feature.

Thus much in the way of criticism. To speak now of pleasanter things:—Wednesday's Concert—the second—though made up of matters no less familiar than Mendelssohn's 'Lobgesang' and Signor Rossini's 'Stabat'—was, in many points, an interesting and animated meeting. Herr Molique, whom we had not met before as chief of an orchestra, proves to be (what many another excellent musician is *not*) an excellent conductor. He is vigilant without being fidgety—spirited without exaggeration—firm in *tempo*, free in expression. Neither his chorus nor his orchestra is of surpassing quality, but he manages both with capital precision and spirit. Mrs. Weiss must be again credited on the advance lately made by her. Her voice is splendid, and she appears resolved that it shall be smooth also. Miss Lascelles, has improved. She has the finest English *contralto* voice we have ever heard,—the extent, evenness, and richness of which were displayed in the 'Fac ut portem' from the 'Stabat.' Her voice, too, is more like an Italian voice in its readiness than most English organs. Should this young Lady wisely cultivate her gifts, there is nothing (life and health granted) to stand betwixt her and the very highest success. Thirdly, Mr. Sims Reeves must be credited as having sung the tenor solo in the 'Lobgesang' admirably, with the right faith and feeling. In short, this concert sent us home with a feeling of hope as regards execution in England. There are means, there is progress, and there is poetry, among our resident artists, native and foreign; and now is the time for composers to work honestly and for directors to administer wisely. We do not fear "that Chaos will come again," that ugliness will pass for beauty, or ignorance for strength of mind, so long as such good performances as Wednesday's are the rule, and not the exception, in London.

STANDARD.—To the profoundest students of Shakspeare, the tragedy of 'Antony and Cleopatra' has appeared the most deserving of admiration. Others of his plays are sublime, beautiful, terrible, or pathetic, but this is "the wonderful." So thoroughly ideal is it in its elements that the critic was accustomed to believe it altogether ineligible for stage-representation; and that in particular the character of Cleopatra could not be even tolerably impersonated. Some few seasons ago Mr. Phelps, however, dared to think otherwise, and conceived that he had the means in the then state of his company for producing the drama with effect. He was not disappointed. Miss Glyn proved that she had at least aptitude for the character of the Egyptian queen, and the tragedy became remarkably attractive. When at length the young actress left the nest in which she had been reared, and took her flight into the provinces as a London celebrity, she was anxious to exhibit the part wherever the experiment was possible. She now returns to London to renew our acquaintance with it—not at the West End, where no performer, if not leasing a theatre, can hope to appear in any important venture—at the East End, at a cheap Shoreditch theatre,—which had already gained a reputation for having engaged theatrical stars, for almost fabulous sums, to shine for certain periods during the long night of the drama in England. The present theatre we have now entered for the first time, and may therefore describe it. It is a handsome building, of large dimensions, capable of containing five thousand people. So numerous an audience in such a neighbourhood must needs be very miscellaneous, and the scale of prices, which is very curious, has been apparently adapted to this condition. It consists of no fewer than ten different rates, varying from half-a-crown to ninepence, eightpence, sixpence, and threepence,—thus suiting even to the penny the pockets of its

humbler customers. To such a throng of the working and shop-keeping people was a high poem presented last Saturday; and so little was there to fear that the appeal would not be answered, that the different compartments of the theatre, each devoted to its especial class of spectators, were crowded to excess. The play was heard throughout with attention; there were no signs of impatience; the applause which occurred at wide intervals was generally judicious, and that at the fall of each act-drop enthusiastic. The poetic drama rejected by the frivolous and the fashionable has yet a home in the heart of the working man; and can operate as an influence, even when not understood, on the imagination of the masses. Miss Glyn, whose frequent readings have given a rapidity and finish to her style, which enable her to deliver the text with a succession of glancing lights and minute shades that keep the watchful spectator in perpetual surprise, acted with a refinement only to be gained by practice pursued under favourable circumstances. The caprices, the transitions, and the suggestions of which the dialogue accorded by the poet to *Cleopatra* consists were humoured or dared, as the case may be, and supported by a wealth of histrionic resources lavished with a befitting prodigality on the luscious poetry intended for the lips of a world-renowned beauty. The performance was brilliant and fascinating. Mr. H. Marston, who performed the amorous *Antony*, looked the part well, and acted it with his usual intelligence; as he warmed into the passion and situation of the character, he became pathetic, and so won on the sympathies of this great multitude of spectators that, at the end of the third act, he was called for, but abstained from appearing. Among the other actors, Mr. Dale, who was the original representative of Sir T. Talfourd's *Adrastus* at Covent Garden, may be mentioned with commendation for his judicious assumption of *Pompey*; and Mr. John Bradshaw with decided condemnation for his singular and bizarre manner of pronouncing the part of *Octavius Caesar*. *Enobarbus* was played naturally though rudely by Mr. E. B. Gaston. The scenery was well painted, appropriate, and new; the dresses rich and picturesque,—constituting a spectacle but little inferior to the "standard" specimens of the kind so frequently witnessed in Oxford Street.

LYCEUM.—'Take that Girl away,' a free translation of 'Otez votre fille, s'il vous plait,' is the title of a new drama produced on Monday. Mr. Charles Mathews as an artist, named Mr. Charles Rocket, is the soul of the trifle, and by his vivacity carried through a bustling piece of inconsistency with success. Nothing Hill is the scene, and the lady—*Isabel* (Miss M. Oliver)—is the daughter of one Mr. Puddle (Mr. F. Matthews), a citizen, who, by her father's orders, stands on the balcony of the villa for the benefit of her health, to the great annoyance of his opposite neighbour, Mr. Rocket, who wishes "the girl taken away,"—whereat old Puddle is remarkably indignant. Anon, the complainant becomes the lover; but the lady is already provided with a suitor, Mr. Scollup (Mr. Swan), a Colchester oyster-bed proprietor,—with whom Rocket has a quarrel, and feigns to be wounded. Poor Isabel faints into a chair, and is wheeled off by the clever painter, who locks her up in one of his own apartments. The cross-purposes that arise out of this state of things occupy the second act. Rocket gets the best of the affair, and obtains the father's consent to marry Isabel; but the artist is fickle-minded, and then takes a sudden fancy to Jenny, his betrothed's sister, who, meanwhile, has been affianced to Mr. Scollup,—thereupon entering into an engagement with the latter to change partners. But the ladies will not consent,—and Isabel, proving herself not to be so tame a person as Rocket had imagined, wins back his affections; nevertheless, his natural disposition for change continues to the last, and even at the fall of the curtain he ventures an opinion that the other arrangement might have been preferable. All this manifestly is "a tale told by an idiot, signifying nothing,"—but Mr. C. Mathews's animation imparted an extrinsic interest which will make the performance attractive.

ST. JAMES'S.—The Czars and Czarinas of Russia are the favourite subjects of such theatres as aim at immediate popularity; and Mr. Markwell has accordingly provided for the exigencies of the present a translation from the French, under the title of 'The Northern Star,' in which Miss Elsworthy, an amateur, attempts Mdle. Rachel's part of "the Czarina," *Catherine*. The drama is of the immoral school, and deals with the last intrigue of the Empress with a French chevalier, and ends with the death of *Peter the Great*. Mr. Marcus Elmore, a provincial actor of reputation, performed the character of the Emperor, and merited the favourable reception which the audience accorded to his performance. The drama, which is merely respectable, is in four acts. The house was well attended.

MARYLEBONE.—The 'Winter's Tale' was revived on Monday; the parts of *Leontes* and *Hermione* were performed by Mr. and Mrs. W. Wallack for the first time. Considerable new business was introduced, and an air of originality was thrown over the whole. The statue-scene was greatly applauded. Mr. Wallack's *Leontes* was remarkable, elaborate, and effective.

MUSICAL AND DRAMATIC GOSSIP.—This day week a letter from Mr. Smith, of Drury Lane Theatre, appeared in the *Times*; protesting against a statement made in that journal, which set forth that the lessee of Drury Lane had withstood remonstrance from M. Meyerbeer, in his production of 'L'Étoile.' So far from this, says Mr. Smith, he offered M. Meyerbeer five hundred guineas to come hither, and superintend the cast and the production of that opera. This proposal M. Meyerbeer declined,—stating as his reason that he had already made other arrangements in respect to the performance of 'L'Étoile' in London. Mr. Smith adds, that no permission to represent 'L'Étoile' was asked by him of M. Meyerbeer,—since none was required.—It may be inquired in return, why, if the co-operation of the composer was sought in earnest by Mr. Smith, no attempt was made by the manager to avail himself of the translation of the opera into English, made at M. Meyerbeer's express stipulation a twelvemonth since. The five-hundred-guinea proposal, if it meant anything, implied an invitation to M. Meyerbeer to wrong the London publishers to whom he had disposed of his score,—by himself presiding over the performance of a version, rightly called some months ago by the *Athenæum* "unauthorized."

Another performance of Mr. H. Leslie's 'Immanuel' is to be given, at St. Martin's Hall, on the 29th of this month, conducted by the composer.

We are informed that Herr Formes has signed an engagement for three years with Mr. Gye, and that he will appear at the *Royal Italian Opera*—at M. Meyerbeer's request—as *Peter*, in 'L'Étoile.'—Rumour, also, begins to mention the return of Signor Mario, and to promise a dozen more "very last nights" of Madame Grisi. We hope that the second rumour is wrong, and that the lady will be better counselled than to drink her cup to the very dregs.

Our *Royal Academy of Music* (we learn from a contemporary) gave, on the 27th of last month, a Concert. The report of this meeting offers a point or two open to remark, since the conduct of the solitary incorporated establishment for instruction in music which London possesses is a matter of importance. The pupils performed Dr. Spohr's 'Last Judgment.' Why was this?—because that oratorio contains some of the least pure vocal writing which exists among the works of recognized composers? The Directors of the Royal Academy may rest assured that no singer will be formed or furthered in the art of singing by practice of Dr. Spohr's music. M. Sainton or Mr. Blagrove would hardly propound to their pupils the most awkwardly-written music for the violin. That which a cultivated singer may be trained to do without faltering, and that which cultivates the singer, belong to different periods—to different responsibilities. Let the Academy pupils be

trained to execute Handel's 'Chamber Duets' perfectly, and they will be thereby qualified to sing most other vocal music, ancient or modern.—'The Last Judgment' included.—Again, we observe with surprise, that Mr. Herbert sang the tenor part. Why was this? Has Mr. Herbert entered the Academy as a pupil? or was he called in to assist because he is obliging, and the Academy has no tenor pupils fit for exhibition? Questions, we know, are inconvenient things;—but the above concert, as a reported exhibition of our Academy under its new management, cannot be allowed to pass without question.

The *feuilleton* of *La Presse* records that the success of Madame Viardot, as the Spanish gipsy in 'Il Trovatore,' has been extraordinary, and has had a wondrous influence on the treasury of the Italian Opera.—As preparation for the coming season, we have glanced at the pianoforte score of 'Il Trovatore' without being able to find the music of Signor Verdi's opera "*ben trovato*," or to perceive that, as regards invention, its writer exhibits much advance on his former works. There are combinations in it, however, which may prove effective on the stage.

Madame Grisi and Signor Mario have returned from America.—Madame Goldschmidt is, at present, giving concerts in Holland.—Letters from the East Indies, which speak of the great success gained by Miss Katharine Hayes at Calcutta, assert, also, that her voice has gained in power and equality during her absence from Europe, and that her style has not deteriorated by her having sung in wild places and to imperfectly-refined audiences.

The week's news from Paris announces that M. Halévy has undertaken to contribute a new opera to the *Théâtre Lyrique*;—that the Prince de la Moskowa's 'Yvonne,' an operetta in one act, is coming out at the *Opéra Comique*;—that Madame Borghi-Mamo is bespoken to open the Italian season at Vienna;—and that a "*proverbe*," with music, by that best of harpists, M. Godefrid, was the other evening produced in a private theatre with the utmost success.

A Correspondent has obligingly forwarded to us a number of the *Gazzetta Musicale* of Naples, for the sake of an article commending a stringed Quintett by Signor Pappalardo, which was performed at an *accademia* there, with great applause, at the close of last year. Some years ago another correspondent called attention to the music of this composer as a rarity, superior in quality to most of the new productions current in Italy. To judge from the notice in question, Signor Pappalardo's fame must have spread since his writings were mentioned in the *Athenæum*.—An opera by him, 'Il Corsaro,' is, we perceive, advertised in the same number of the *Gazzetta*.—While speaking concerning operas and Italian composers, from whom the world has been bidden to expect good things, we may ask what has become of Signor Peri, who, also, some years ago, was largely praised to us,—and a score by whom, on perusal, justified the auguries of promise put forth by his friends and well-wishers.

According to the *Morning Post* Mdle. Rachel will give some representations in London on her way to America. The lady seems to find it difficult to get clear of law before quitting Paris, since the difference betwixt her and M. Legouvé, author of 'Medée,' was only the other day finally decided by the *Cour Impériale*, which sentenced the actress to pay, not the original forty thousand *francs* to which she was condemned, but five thousand *francs*, as compensation to the author for her refusal to fulfil her engagement to play his tragedy,—and, in addition to the above damages, to bear the costs also.

TO CORRESPONDENTS.—J. S.—Hain Sirmoon.—R. S.—J. C.—C. E. F.—T. A.—J. T.—D. M.—J. B., Liverpool.—Young Memon.—S. W.—C. W.—A. S.—H. M.—B. T.—received.

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received at BAUMY'S LIBRARY, 3, Quai Malaquais, Paris, or at the Publishing Office, 14, Wellington Street North, Strand, London. For France and other Countries not requiring the postage to be paid in London, 28 fr. or 14.2s. the year. To other Countries, the postage in addition.

NEW BOOKS AND NEW EDITIONS.

AN ENQUIRY into the CREDIBILITY of EARLY ROMAN HISTORY. By the Right Hon. Sir G. CORNEWALL LEWIS, Bart. M.P. 2 vols. 8vo. [In a few days.

POPULAR PHYSIOLOGY. By P. B. LORD, M.B. Cheaper Edition, carefully revised, 5s.

On MEDICAL TESTIMONY and EVIDENCE in CASES of LUNACY. With an Essay on the Conditions of Mental Soundness, by T. MAYO, M.D. F.R.S., Fellow of the Royal College of Physicians. 3s. 6d.

On the ACADEMICAL STUDY of LATIN: an Inaugural Lecture. By J. CONINGTON, M.A. Professor of the Latin Language and Literature, Oxford. 1s.

PRACTICAL GEODESY: Comprising Chain Surveying, the Use of Surveying Instruments, Levelling, Trigonometrical, Mining, and Maritime, Estate, Parochial and Railroad Surveying. By BUTLER WILLIAMS, C.E. Cheaper Edition, revised. 8s. 6d.

The STRUCTURE and USE of the SPLEEN. The ASTLEY COOPER PRIZE ESSAY for 1853. By HENRY GRAY, F.R.S., Demonstrator of Anatomy at St. George's Hospital. 8vo. With 64 Illustrations. 15s.

London: JOHN W. PARKER & SON, West Strand.

INSTRUCTION IN ART. MR. J. D. HARDING'S EDUCATIONAL WORKS ON ART.

Second Edition.
LESSONS ON ART.

By this Work every one may learn to draw either with or without a Master. Size, imperial 8vo., in Six Parts, paper sides, or One Volume imperial 8vo. 15s. cloth. Containing 127 Lessons, 155 pages of Text, 48 Lithographic Plates, and 103 Woodcuts.

NEW WORK. GUIDE AND COMPANION TO LESSONS ON ART.

In one volume imperial 8vo. price 12s. 6d. cloth, containing 178 pages of Text, 15 Lithographic Plates (some Tinted), and 57 Woodcuts.

The above Works are approved by the Department of Science and Art.

Fourth Edition.
Size, imperial 4to. price 2s. cloth.
ELEMENTARY ART.

Containing 97 pages of Text, 24 Plates in Lithography (many Tinted), and 45 Woodcuts.

Second Edition.
Size, imperial 4to. in Six Parts, paper sides, or One Volume, cloth, price 1s.

LESSONS ON TREES.

Containing 12 columns of Descriptive Text, and 63 Lessons in 30 Lithographic Plates.

The whole of the above Works are greatly improved, and much reduced in price.

Mem.—Any of the above Books sent carriage free on receipt of Post-Office order.

London: Day & Son, Lithographers to the Queen, 17, Gate-street, Lincoln's Inn-fields. To be had of all Printers, Booksellers and Artists in the Kingdom.

TO TEACHERS OF DRAWING, &c. &c.
NEEDHAM'S LANDSCAPE ALBUM.
A Series of STUDIES of LANDSCAPES and TREES, printed with Tints and High Lights.

On paper, 15 in. by 22 in. Price each Study, 1s. 6d.—Twelve Plates already published.

Messrs. Day & Son recommend these Studies to Teachers and Pupils. There does not exist a series of English Landscape Studies to compare with these for artistic ability, and the minuteness with which the distinguishing characteristics of every kind of wooded scenery is treated.

London: Day & Son, Lithographers to the Queen, 17, Gate-street, Lincoln's Inn-fields.

SIR EDWIN LANDSEER, JOHN ABSOLON, HARRISON WEIR, E. H. WEHNERT, and WILLIAM LEE. Five Fac-similes of Drawings by the above Artists, produced by the Chromatic Process, in neat wrapper, price 2s. 6d.; or separately, 6d. each.

Henry Vernon, Publisher, 168, New Bond-street, adjoining the Clarendon.

Now ready, price 2s. 6d.
LENT LEGENDS: Stories for Children, from Church History. By the Rev. J. M. NEALE, M.A., Warden of Sackville College. So arranged as to have a reference to some passage in the Epistle, Gospel, or Lesson for the Sundays in Lent.

By the same Author.
Tales of Christian Heroism. 2s.
Tales of Christian Endurance. 2s.
The Followers of the Lord. 2s.
Evenings at Sackville College. 2s.
The Egyptian Wanderers: a Tale of the Tenth Persecution. 2s. 6d.

London: J. Masters, Aldersgate-street, and New Bond-street.

Just published, post 8vo. price 6s. each,
SKETCHES OF LANCASHIRE LIFE and LOCALITIES.

By EDWIN VAUGH. London: Whittaker & Co. Manchester: Galt & Co.

Just published, fcap. 8vo. cloth, price 3s. 6d.,
SONNETS ON ANGLO-SAXON HISTORY.

By ANN HAWKSHAW. London: John Chapman, 8, King William-street, Strand.

Recently published, 2 vols. large post 8vo. 16s.
THE POSITIVE PHILOSOPHY of AUGUSTE COMTE.

Freely translated and condensed by HARRIET MARTINEAU. London: John Chapman, 8, King William-street, Strand.

Just published, large post 8vo. cloth, 10s. 6d.
THE RISE and PROGRESS of CHRISTIANITY. By R. W. MACKAY, M.A., Author of 'The Progress of the Intellect as Exemplified in the Religious Development of the Greeks and Hebrews.'

London: John Chapman, 8, King William-street, Strand.

CURIOSITIES OF LONDON.
Now ready, in a closely-printed volume of 800 pages, price 14s. with a Portrait of the Author, from a Painting by T. J. Gullick.

CURIOSITIES OF LONDON; exhibiting the most Rare and Remarkable Objects of Interest in the Metropolis; with nearly Fifty Years' Personal Recollections. By JOHN TIMBS, F.S.A., Editor of the 'Year-book of Facts.'

"This book may fairly be pronounced the most complete and comprehensive of the many contributions to the illustrative history of London; and the management of the details indicates qualities superior to any which have been hitherto brought to bear upon mere archaeology—the qualities of a first-rate scholarly intellect."

The Leader, March 3, 1855.
David Bogue, 86, Fleet-street.

Now ready,
BALFOUR'S BOTANICAL WORKS:—

I. CLASS BOOK OF BOTANY (the Text-Book used by the Professor's Pupils), in One large Volume, 8vo. cloth, with 1,800 Illustrations, 31s. 6d.

NEW BOOK ON THE CRIMEA.
Will be ready in a few days, fcap. 8vo. fancy cloth, with Maps and Engravings, price 3s. 6d.

A SHORT HISTORICAL ACCOUNT of the CRIMEA, from the Earliest Ages to the Russian occupation; and a Description of the Geographical Features of the Country, and of the Manners, Customs, &c. of its Inhabitants; with Appendix, bringing down the History to the Present Time. Compiled from the best authorities by

W. TURCKHARDT BARKER, Esq. M.R.A.S. Author of 'Lares and Penates,' the 'Turkish Reading-Book,' 'Turkish Grammar,'

And many years resident in Turkey on an official capacity.

In the Map attached to this work, which contains the ancient and modern names of places, will be found marked out the entrances into the Crimea besides that by the Isthmus of Perekop, which may be, and have been, used for military purposes, and which are alluded to in the leading article of the *Times* of Jan. 16.

Hertford: Stephen Austin. London: Trubner & Co. Paternoster-row.

Just published, bound in cloth, price 4s.
THE RIGHTS of EMPLOYER and EMPLOYEE; or, How to Reconcile Conflicting Interests. By MERIUM J. USITTIA, Mechanical Engineer. The adoption of the arrangements proposed in this work will assure to capitalists the best security and profits, yield to workmen the largest rate of wages with permanent situations, and for ever prevent strikes. Magistrates should see it on the new system for the treatment of juvenile and adult criminals—a system profitable to rate-payers. Philanthropists and Christian Ministers are earnestly solicited to read it, because it points out the means that will aid in their mission of evangelizing the world.

Published by Simpkin, Marshall & Co. London; and sold by all Booksellers.

NAPOLEON AT ELBA.

Now ready, and at all the Libraries, in One Volume 8vo. with Coloured Illustrations, 12s.

THE ISLAND EMPIRE; OR, THE SCENES OF THE FIRST EXILE OF NAPOLEON I.

Together with a NARRATIVE of his RESIDENCE on the ISLAND of ELBA, taken from local information, the Papers of the British Resident, and other authentic sources.

By the AUTHOR of 'BLONDELLE.'

"A monograph which we have read with deep interest. . . . Many of his (Napoleon's) remarks read like prophecies, and have an interest as pressing in our time as when they were uttered."—*Athenæum*.

"A fresh subject, treated freshly, without being overdone. It has an interest in reference to present affairs."—*Spectator*.

"It has an historical value of real significance for political readers, and a lively interest for all."—*Leader*.

"For many other remarkable observations on the then state of European powers, we recommend to our readers the second division of this volume, hoping that they will experience the same amount of pleasure in the perusal which we have ourselves derived from it."—*Guardian*.

London: THOMAS BOSWORTH, 215, Regent-street.

Just published, price 4s. 6d.

THE SCIENCE OF ARITHMETIC.

By JAMES CORNWELL, Ph.D. and JOSHUA G. FITCH, M.A.

"This is without exception the most complete and satisfactory elucidation of the principles and the best guide to the practice of arithmetic which has fallen under our notice."—*Morning Chronicle*.

"This is a systematic course of numerical reasoning and computation, illustrated by very numerous exercises. Arithmetic is here made an instrument of mental discipline. We have examined the little volume with some care, and feel sure that it will make not only good calculators, but good reasoners. We have seldom seen practice and theory more skilfully allied."—*Atlas*.

"A valuable practical work for educational use."—*Literary Gazette*.

"A very ample and elaborate manual."—*Guardian*.

"This book has merit—the demonstrations are very clear and good."—*English Journal of Education*.

"In a scientific as well as a popular point of view, it is not surpassed among elementary books on the subject in the English language."—*Observer*.

"One of the best practical and compendious treatises we have met with. The book has enough merit in its logical acumen, methodical arrangement, and comprehensiveness to recommend it."—*Leader*.

"The authors remove necessary difficulties from the path of the tyro, and give him an intellectual equivalent for his intellectual labour."—*Tait's Magazine*.

"Incomparably superior to any other work of the same compass upon the science of numbers which we have yet seen."—*Christian Times*.

London: SIMPKIN & Co.; HAMILTON & Co. Edinburgh: OLIVER & BOYD; W. P. KENNEDY.

Mr. S. W. FULLOM'S NEW WORK.

Now ready, in 2 vols. post 8vo. dedicated, by permission, to Her Majesty the Queen of Hanover,

THE HISTORY OF WOMAN,

AND HER CONNEXION WITH RELIGION, CIVILIZATION, AND DOMESTIC MANNERS, FROM THE EARLIEST PERIOD.

By S. W. FULLOM,

Author of 'THE MARVELS OF SCIENCE,' 'THE GREAT HIGHWAY.'

"The history of woman is necessarily a history of society in all its stages of development, from earliest infancy to the maturity of the present age; and Mr. Fullom has travelled rapidly, but profitably, over this vast field of historical investigation. No writer of our own day possesses in a greater degree the faculty of appropriating the popular elements of his subject, and presenting them to his readers in new and attractive guise. Whatever he touches bears the impress of original genius, and is rendered by his eloquent pen familiar and imposing. Hence the extreme popularity of the books he has previously published, and hence also the peculiar fascination of the present narrative. Commencing with the antediluvian ages, and gathering such fragments of information as have been handed down to us concerning the social position and influence of woman, even from the remotest antiquity, our author marches onwards through centuries rendered famous by the wars and adventures of the Israelites, by the rise and fall of Egypt and Assyria, and by the grandeur and the decay of Ancient Greece and Rome, until he arrives at the period when Christianity begins to diffuse its rays. Thence he advances through the dark and Middle Ages to the dawn of the Reformation, and traces the effects of that great event down to these latter days. Throughout this interesting progress he never loses sight of the main purpose of his book, nor ever neglects a fitting opportunity of sketching national characteristics. He has produced a faithful panorama of the world's history, introducing into the successive scenes the heroines of every age and country."—*Morning Post*.

"The history of woman is a boundless theme. To render it justice, a refined taste was demanded, governed and guided by a cultivated intellect. With much eloquence, Mr. Fullom has placed before our eyes the history of the better half of mankind. The pages of his interesting work display considerable learning and research, which have never degenerated into pedantry. The 'History of Woman' promises to rival in popularity the author's last book. In this admirable work he has occupied himself with the history of the fair sex, and with pointing out the influence they exercised upon the religion, civilization, and domestic manners of mankind from the earliest down to the latest times. In the performance of this duty, Mr. Fullom has acquitted himself with great credit; and the results of his labours will be the means of diffusing much useful historical information, in a style at once concise, pleasing, and instructive."—*Morning Chronicle*.

London: LONGMAN & Co.

Published this day, price 2s. 6d.

BALDER.

By the AUTHOR of 'THE ROMAN.'

Second Edition, with Preface.

"In this poem we read a magnificent portrait against the tendency of our age to materialism and positive philosophy and the apotheosis of mechanism and intellect. An age which everywhere manifests a blind atheistical dedication of force and power. The age to which of all others that trumpet-tongued text, 'What shall it profit a man if he save the whole world and lose his own soul?' needs to be preached and sung. There are two hundred and eighty-three pages in this book, and not one but contains fine thoughts, magnificent imagery, striking similes, or searching reflections. Of the wealth of thought revealed we can scarcely trust ourselves to speak; it is so great. We consider 'Balder' to be the first and worthy part of a great poem—one of such a degree of greatness, that it has scarce an equal in our country, and one that will take the public opinion some years to arrive at that greatness. To those who cannot see its purpose, we may say, as the old chroniclers wrote of Shakespeare,—"Read it again and again, and if so be you do not understand it then, there is manifest danger that you are not quick of comprehension."—*Eclectic Review*.

"Genius is so unmistakably present in every page of the strange book before us, that to give examples from one, without injustice to the others, we find to be beyond possibility in the limits of a magazine review. We cannot, however, resist a passing allusion to the absence of all melo-drama in those scenes which nevertheless reach the very bounds of the dramatic, and to the instinctive avoidance of the horrible and attainment of the terrible, under circumstances of the highest tragedy. These general facts infer a quality of intuition in the author, which only the true critic can properly estimate; and in such passages as the portrait of Amy in scene twenty-eight, and the *chœur* of scene thirty-seven, or scene twenty-four, he will recognize the same wonderful truth of instinct at work, in the calmest nooks and most pastoral quietudes of the many-coloured landscape of life."—*Fraser's Magazine*.

"The lesson to be taught would make a grand theme for poetry, but only a crowned singer could hope to teach it. Let some large and wealthy mind study the darker possibilities of his own being—then the question may be meetly handled. Some such denizen of Parnassus—understanding by experience the peculiar temptations of high poetic temperament—knowing well all those airy illusive tongues that 'syllable men's names' in the haunted wilderness of a nation—looking steadily down that wrong turning, the gloomy avenue of that *via mala* he himself might have chosen—such an one could address his brethren, and all of us, with happiest effect. Qualifications adequate to an enterprise so worthy, Mr. Yendys unquestionably possesses; to some such purpose he appears to have devoted himself in the present poem, and, in our judgment, with signal success."—*British Quarterly Review*.

Recently published, in post 8vo. price 5s. cloth,

THE ROMAN.

By the AUTHOR of 'BALDER.'

"Should any one after the preceding extracts doubt whether we have a new poet amongst us, we should almost despair of his conversion. But we should not abandon the attempt while we had such an argument in reserve as the ensuing description of the Coliseum."—*Athenæum*.

"How far the merit corresponds with the magnitude of the work there may be some difference of opinion, but none as to the genius and power of the author."—*Literary Gazette*.

"Any man might be proud to be the author of this poem, which, if the first production of an author hitherto unknown, is full of the richest promise; and at any rate shows that we have poets still amongst us, who, if they would but take equal pains with our older writers, are capable of achievements not any way inferior to theirs."—*Guardian*.

"The hand that has struck this lyre is the hand of a master."—*Sum*.

SMITH, ELDER & CO. 65, Cornhill.

Now ready, in crown 8vo. price 2s.

ESSAY on the POLITICAL SYSTEM of EUROPE, and its Connection with the Government of Great Britain. By the Rev. T. S. HUGHES, late Canon of Peterborough, and Author of 'The History of England from the Death of George II. to the Accession of Queen Victoria,' with a Memoir of the Author, and Portrait.

London: George Bell, 186, Fleet-street.

BOOKBINDING.—F. SILANI & CO. (successors to the late T. ARMSTRONG), 23, Villiers-street, Strand, solicit every description of Work relating to their Art. A List of Prices for Cloth, Half-calf, Calf, Morocco, or Antique Binding, can be had upon application, or will be forwarded for one stamp.—Bookbinding for the Trade.

BOOKBINDING.—W. HOLMES, Practical Bookbinder, 195, Oxford-street, London. Books bound in Morocco, Russia, or Calf, both plain and elegant, on the lowest terms. Gentlemen waited upon with patterns. Estimates given for large or small Libraries.—Address, 195, Oxford-street.

ROSS'S PHOTOGRAPHIC PORTRAIT and LANDSCAPE LENSES.—These Lenses give correct definition at the centre and margin of the picture, and have their visual and chemical action focal coincident.

Great Exhibition Jurors' Report, p. 274.

"Mr. Ross prepares lenses for Portraiture having the greatest intensity yet produced, by procuring the coincidence of the chemical, actinic and visual rays. The spherical aberration is also very carefully corrected, both in the central and oblique pencils."

"Mr. Ross has exhibited the best Camera in the Exhibition. It is furnished with a double achromatic object-lens, about 3 inches in aperture. There is no stop, the field is flat, and the image very perfect up to the edge."

Catalogues sent upon application.

A. Ross, 2, Featherstone-buildings, High Holborn.

XYLO-IODIDE of SILVER, exclusively used at all the Photographic Establishments.—The superiority of this preparation is now universally acknowledged. Testimonies from the best Photographers and principal scientific men of the day, warrant the assertion, that hitherto no preparation has been discovered which produces uniformly such perfect pictures, combined with the greatest rapidity of action. In all cases where a quantity is required, the two solutions may be had at Wholesale prices in separate Bottles, in which state it may be kept for years, and exported to any climate. Full instructions for use.

CAUTION.—Each Bottle is stamped with a Red Label bearing my name, RICHARD W. THOMAS, Chemist, 10, Pall Mall, to counterfeits which is felony.

CYANOGEN SOAP, for REMOVING all kinds of PHOTOGRAPHIC STAINS. The genuine is made only by the inventor, and is secured with a red label bearing this signature and address, RICHARD W. THOMAS, CHEMIST, 10, PALL MALL, Manufacturer of pure Photographic Chemicals; and may be procured of all respectable Chemists, in Pots, at 1s. 2s., and 3s. 6d. each, through Messrs. Edwards, 67, St. Paul's Church-yard; and Messrs. Barclay & Co., 95, Farringdon-street, Wholesale Agents.

THE NEW COLLODION, manufactured by BLAND & LONG, 153, Fleet-street, London, will bear comparison with any other preparation known to Photography. Price 9d. per oz. Can be had separate from the Iodizing Solution. Nitrate of Silver, 4s. 6d. per oz.; Pyrogallie Acid, 1s. 6d. per drachm; Glacial Acetic Acid, 6d. per oz.; Hyposulphite of Soda, 1s. per lb. CAMERAS, LENSES, and every description of Apparatus, of first-class workmanship.

Chemicals of ABSOLUTE PURITY, and every material required in the Photographic Art, of the finest quality. Instruction in all the processes. Catalogues sent upon application.

BLAND & LONG, Opticians, Photographical Instrument Makers and Operative Chemists, 153, Fleet-street, London.

THE IODIZED COLLODION, manufactured by J. B. HOCKIN & CO., 289, STRAND, LONDON, still remains unrivalled for sensitiveness and density of Negative—it excels all others in its keeping qualities and uniformity of constitution.—Albumenized Paper, 17s. by 11. 5s. per quire; Waxed ditto, 7s. of very superior quality.—Double Achromatic Lenses, equal in all points to those of any other manufacturer. E. R. FOSTER, Resident Director.

ANDREW FRANCIS, Secretary.

GREAT WESTERN RAILWAY.—COALS.

Orders for the best RUABON HOUSE COALS, equal to the finest Durhams, may be executed at 26s. 6d. per Ton (cash price), delivered within 4 miles of the Paddington Station. These Coals are bright and durable in burning, and contain only one-half per cent. of dust.

They are now for the first time introduced into the London Market by the recent opening of the Great Western Railway into North Wales. Address the Superintendent of the Company, Paddington Station.

MORGAN'S PATENT PAPER and MILLBOARD CUTTING-MACHINES—SHARP, STEWART & CO. (sole Manufacturers) are now prepared to execute orders for the above Machines, in all sizes.—ATLAS WORKS, MANCHESTER.

PAINLESS TOOTH EXTRACTION, without Chloroform.—Mr. WALTER BLUNDELL is at home daily, from Ten till Four, for Dental operations under his new patent process.—29, New Broad-street, City.

F. DENT, 61, STRAND, and 34 and 35, ROYAL EXCHANGE, Chronometer, Watch, and Clock Maker, by appointment to the Queen and Prince Albert, sole Successor to the late E. J. Dent in all his patent rights and business at the above Shops, and at the Clock and Compass Factory, at Somerset Wharf, Maker of Chronometers, Watches, Astronomical Turret, and other Clocks, Dip-thermometers, and Patent Ship Compasses, used on board Her Majesty's Yacht. Ladies' Gold Watches, 8 guineas; Gentlemen's, 10 guineas. Strong Silver Lever Watches, 6l. 6s.

WATHERSTON & BROGDEN caution the Public to have the carat gold stated on the invoice, and redress is obtainable in a County Court. Watherston & Brogdén's Gold Chains are sold on this principle only, at manufacturer's prices.—Crystal Palace, Central Transit Gallery, and Manufactory, 18, Henrietta-street, Covent-garden. Assays made of chains and jewelry for 1s. each.

ELKINGTON and CO., PATENTERS of the ELECTROPLATE MANUFACTURING SILVER-STEEL, BRONZE, &c. Respectfully urge upon Purchasers to observe that each article bears their Patent Mark, "E. & Co. under a crown," as no others are warranted by them.

The fact frequently set forth of articles being plated by "Elkington's process," affords no guarantee of the quality. These productions were honoured at the late Great Exhibition by an award of the "Council Medal," and may be obtained at either Establishment.

22, REGENT-STREET, LONDON;

NEWBATH-STREET, BIRMINGHAM;

Estimates, Drawings, and Prices sent free by post.

Replating and Gilding as usual.

Their new Ware-rooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms, to the newest and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture.—HEAL & SON'S ILLUSTRATED CATALOGUE of BEDSTEADS, and PRICED LIST of BEDDING, sent free by post.—HEAL & SON, 136, Tottenham Court-road.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter: FROM SIR RAYMOND D'JARY IS, Bart. VENTNOR, ISLE of WIGHT. "Second Testimonial.—March 9th, 1852.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years; and I am informed that it is to be added greatly in the south where they are being erected here."

N.B. From this Testimonial it will be seen that the CORROSION WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.

THE GUTTA PERCHA COMPANY, PATENTERS, 18, WHARF-ROAD, CITY-ROAD, LONDON.

HOLLOWAY'S OINTMENT AND PILLS.
 Peculiar Remedies for WOUNDS or TUMOURS.—Mr. Clark, Druggist, of Bowling, states, in a letter to Professor Holloway, that a young man residing at Laister Dyke, with whom he was acquainted, had a large tumour on the side of his neck which seemed to be incurable, as he tried various remedies without any good effect; but by the use of Holloway's Ointment and Pills a sound and permanent cure was effected, and he is now a strong and healthy man. Mr. Clark can vouch for, as he was an eye-witness to this marvellous cure.
 —Sold by all Venders of Medicines; and at Professor Holloway's Establishments, 244, Strand, London, and 10, St. Maiden-lane, New York.

MR. NEWBY'S NEW PUBLICATIONS.

Now ready, in 3 vols. 42s.

THE LITERARY LIFE AND CORRESPONDENCE OF THE COUNTESS OF BLESSINGTON.

By R. MADDEN, Esq.

Author of 'Travels in the East,' 'Life of Savonarola,' &c.

"Dr. Madden has not only produced a work of intense interest, but the very best contribution to literary history which has been given to the world during the present century. Letters from all the celebrated men of the era may be found in it, forming a collection of wit and wisdom unrivalled in any modern published literary correspondence, for variety, extent, and interest. It will take permanent rank in the world of letters, not merely as the life of one individual, but as a miniature biographical encyclopædia of all the modern celebrities of England."—*Dublin University Review*.

"Almost every man of mark in the world of intellect and fashion appears with more or less of prominence, and with the effect of a gallery of celebrated portraits. The book contains a variety of matter bearing upon the social history of the century, which it is well to have preserved."—*Spectator*.

"It will provide abundance of food for the curious in search of information and amusement."—*Morning Chronicle*.

"The friends of Lady Blessington were well advised in committing the laborious task to the genius and judgment of Dr. Madden. It is one of the most interesting epistolary collections in the English language, and illustrates in a remarkable degree the history of our times. It will have an historical value apart altogether from the light it sheds on the career of Lady Blessington."—*Freeman's Journal*.

"It is by far the most interesting work published."—*Perth Advertiser*.

"It has more than a merely speculative interest. It is in the highest degree instructive, forcibly illustrating the folly of human wishes and human ambition. It is not only the most interesting work of the day, but also the most interesting work of the class to which it belongs."—*Evening Packet*.

"We may, with perfect truth, affirm, that during the last fifty years there has been no book of such peculiar interest to the literary and political world. It has contributions from every person of literary reputation—Byron, Sir E. Bulwer (who contributes an original Poem), James, D'Israeli, Marryat, Savage Landor, Campbell, L. E. L., the Smiths, Shelley, Jenkyn, Sir W. Gell, Jekyll, &c. &c.; as well as Letters from the most eminent Statesmen and Foreigners of distinction, the Duke of Wellington, Marquis Wellesley, Marquis Douro, Lord Lyndhurst, Brougham, Durham, Abinger, &c."—*Morning Post*.

"The book is interesting in matter which must interest, and will furnish its quota of anecdote to the literary records of the first half of the century."—*Athenæum*.

"Since the 'Life of Haydon' this is the most interesting biography which has been published. Dr. Madden knows how to make a book readable."—*Standard Advertiser*.

"This book will be found to answer expectation. It contains something about every one who has been anybody for the last quarter of a century, of either sex and all countries, from the Duke of Wellington to Lola Montes—from Brougham to Bonaparte—from 'Boz' to Rachel—from Charles Matthews to the Queen of England."—*Liverpool Journal*.

"A most interesting work."—*Birmingham Journal*.

"It is without exception the most valuable book of the last half-century."—*Tribune*.

"The volume is full of biographical anecdotes and traits which will secure them a general reading."—*Manchester Advertiser*.

"Comprises letters from every illustrious name who has taken a permanent or temporary seat in the Temple of Fame."—*Leader*.

"These volumes are highly amusing, containing much of the 'gossip' of fashionable and literary life which is so agreeable to read."—*Naval and Military Gazette*.

MARRIED WOMEN.

By the AUTHOR of 'BROOMHILL.'

"Mr. Newby is indefatigable in his endeavours to produce novels of real worth; and those endeavours have been crowned with complete success. This book should be read by every married woman and every spinster—it will instruct by its moral, and deeply interest by its story."—*Herald*.

THE WARHAWK.

By the AUTHOR of 'THE TWO MIDSHIPMEN.'

"Mr. Newby commences the year with an admirable novel, 'The Warhawk'—a novel that will please all readers; and the author more firmly establishes his position as the successor of the late Capt. Marryat."—*Guardian*.

"It opens with a bit that might pass for Scott."—*Spectator*.

"It is intensely interesting and exciting."—*Sun*.

THE QUICKSANDS OF FASHION.

By Mrs. LUCAS.

Author of 'Treachery,' 'Gabiella Witherington,' &c.

THE STORY OF A NUN.

By the AUTHOR of 'THE LADY OF THE BEDCHAMBER,' &c.

THE COUNTY MAGISTRATE.

By LORD B*****.

Author of 'Masters and Workmen.'

"The best of Lord B.'s surpassing clever novels."—*Herald*.

NOTICE.

THE PUBLISHING BUSINESS.

MR. SKEET,

PUBLISHER, 10, KING WILLIAM-ST., CHARING-CROSS,

BEGS TO ACQUAINT WRITERS

OF NAVAL and MILITARY NARRATIVES, VOYAGES and TRAVELS, NOVELS and ROMANCES, HISTORICAL and BIOGRAPHICAL WORKS, &c., that he has made such arrangements as will insure the Publication of their Works with the greatest Accuracy and Despatch, and they are respectfully invited to submit to him their MANUSCRIPTS, which shall receive his prompt attention.

IMPORTANT TO AUTHORS.

In consequence of his Connexion with the UNITED STATES, Mr. SKEET enjoys peculiar facilities for negotiating the SALE of an EARLY EDITION of the WORKS of ESTABLISHED WRITERS for the AMERICAN MARKET—a desideratum long felt and acknowledged, and which AUTHORS in GENERAL will, he has no doubt, fully appreciate. It is indispensable, however, that Mr. Skeet should receive early advice, so that the Works appear almost simultaneously in England and America.

NEW WORKS in PREPARATION.

I.

LIGHTS and SHADOWS of ENGLISH LIFE.

By the AUTHOR of 'CLARA CAMERON.' 3 vols. [Just ready.]

II.

HARRY BERESFORD;

OR, A YOUNG OFFICER'S LIFE.

One in Midwifery and the Diseases of Women and Infants	100l.	G. Owen Rees, Esq. M.D. F.R.S.
One in Materia Medica and Pharmacy	100l.	

The present Examiners are eligible, and intend to offer themselves, for re-election.
Candidates must announce their names to the Registrar on or before the 11th of April.
Marlborough House, March 13, 1855. By order of the Senate, R. W. ROTHMAN, Registrar.

GEOLOGICAL SOCIETY.—In consequence of the General Fast appointed to be kept on MARCH 21, there WILL BE NO MEETING of the Society on that day. The NEXT MEETING will be on APRIL 4.

BOTANICAL SOCIETY OF LONDON.—DISTRIBUTION OF BRITISH PLANTS, 1855.—Members are requested to send their Lists of Desiderata forthwith marked on the 4th Edition of the London Catalogue of British Plants. 20, Bedford-street, Strand, G. E. DENNES, Secretary. 1st March, 1855. J. T. SYME, Curator.
N.B.—The Herbarium may be inspected every Monday, Wednesday, and Friday, from Ten until Five. The Library is open on the same days.

ROYAL ACADEMY OF ARTS, Trafalgar-square.—On Wednesday, the 14th inst., at a General Assembly of the Royal Academicians, EDWARD MATTHEW WARD, Esq., was ELECTED an ACADEMICIAN, in the room of John James Chalon, Esq. deceased.
J. P. KNIGHT, R.A., Secretary.

ROYAL ACADEMY OF ARTS, Trafalgar-square.—NOTICE TO ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on Monday, the 9th, or Tuesday, the 14th of April next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.
FRAMES.—All Pictures and Drawings must be in gilt frames. Oil Paintings under glass and Drawings with wide margins are inadmissible. Excessive breadth in frames as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other Regulations necessary to be observed may be obtained at the Royal Academy.
JOHN PRESCOTT KNIGHT, R.A. Sec.
Every possible care will be taken of Works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package.
The prices of Works to be disposed of may be communicated to the Secretary.

ARUNDEL SOCIETY.—FIFTH YEAR'S ISSUE TO SUBSCRIBERS.
Six large Wood Engravings, by Messrs. DAZIEL, from Mr. W. OLIVER WILLIAMS's series of Drawings, from the Frescoes by GIOTTO in the Arena Chapel, Padua.

He offers references to a large body of distinguished Scholars and Clergymen in Oxford, Cambridge, and London, as well as to the Friends of former and present Pupils.
Address Rev. S. S. Clerical Association, 36, Southampton-street, Strand, London.

BEDFORD GRAMMAR SCHOOL.—The Office of MASTER of the above School will be VACANT on the 24th of June next, by the resignation of the Rev. Dr. Brereton. Applications and testimonials may be sent to the Rev. the Warden, New College, Oxford, on or before Saturday, March the 24th.
The Entrance Scholarships will be conferred by order of Vice-Chancellor Sir W. P. Wood, dated the 12th of March, 1855.—
"The Master and Second Master of the said Grammar School for the time being shall always be Fellows of New College, or Clergymen of the Church of England, being Graduates of one of the Universities of Oxford, Cambridge, Dublin, London, or Durham, properly qualified to teach the Latin and Greek Languages."
"There shall be allowed and paid to the future Master the yearly sum of 300l., and so many additional sums of 5l. each as will be equal to the number of Boys up to and not exceeding 140, who shall have been bona fide educated at the said Grammar School for at least six months in each year."
The Master may, with the consent of the Warden and Scholars of New College and the Trustees respectively, take 30 Boarders.
There is a residence (rates and taxes free), kept in repair by the Trustees of the Bedford Charity.

ST. JOHN'S-WOOD PROPRIETARY COLLEGIATE SCHOOL, 25, St. John's Wood Park.
Head Master—The Rev. THOMAS MARKBY, M.A., late Scholar of Trinity College, Cambridge, and Classical Master in King's College School.
Second Master—H. DEIGHTON, Esq. M.A., Scholar of Queen's College, Cambridge.
The School is supported by the Proprietors subscribing 21l. each, and by the fees paid by the pupils.
Each Proprietor has the right of nominating one pupil at a time to the School.
Half-Term commenced Monday, March the 5th.
R. HODSON, Hon. Sec.
* * * The Second Master RECEIVES BOARDERS, at 24, Bounding-road.

HOME EDUCATION for BOYS in DELICATE HEALTH.—A Fellow of the London College of Physicians (a Wrangler at Cambridge, and late Scholar of his College), residing at the Seaside, within three hours' distance from Edinburgh, RECEIVES FIVE BOYS into his family to be educated with his own sons. An excellent resident Tutor (a Graduate in classical honours at Oxford) assists him in the general management of the studies of his pupils, to whose health and physical education special attention is paid. The locality is remarkably dry and healthy, and there are admirable sands and good bathing within five minutes' walk from the Advertiser's house. References, if required, can be given to the most eminent physicians in London and Edinburgh. There is at present ONE VACANCY. Terms from 100 to 150 guineas per annum, according to age.—Address F. R. S., Parthenon Club, London.

SUPERIOR EDUCATION.—BATH-PLACE, READING, Berks.—Mrs. WILLIAM BINFIELD (Miss Welch) continues to RECEIVE under her care a LIMITED NUMBER of YOUNG LADIES, whose religious instruction, intellectual improvement, and domestic comforts are objects of her unremitting attention. Terms, 70 guineas, including accomplishments by eminent masters. This establishment offers peculiar advantages for the general cultivation of Music, which is entrusted to Mr. William Binfield, a Paris and London Professor, who also gives Finishing Lessons in Singing and on the Pianoforte.

SOLDIERS' INFANT HOME, for the Maintenance and Education of the Children of Soldiers, orphans or not.
Vice-Presidents.
The Archbishop of Canterbury. The Archbishop of York.
The Lord Bishop of London. The Lord Feversham.
The Lord Berrers. The Lord Lilford.
The Hon. Arthur Kinnaird, M.P.
The Chaplain-General.
Vice-Patronesses.
The Countess of Manners. The Lady Lilford.
The Countess Cathcart. The Lady William Wynn.
Dowager Lady Willoughby de Broke. The Hon. Mrs. Adams.
The Lady Leigh.
Honorary Secretary.—The Rev. W. H. Fox, St. Simon's Parsonage, Bethnal-green, (late Military Chaplain at Gwalior).
Chairman of Committee of Management.—Major the Hon. H. L. Powys.
Bankers.—Messrs. Masterman & Co.
Office (pro tem.), 9, Waterloo-place, Pall Mall, London.
The Committee most urgently appeal to the Clergy and Dissenting Ministers for their help on the Fast Day, that a portion of their Collections may be devoted to the growth and establishment of this Infant Home.

W. M. THACKERAY, Esq. will deliver a LECTURE on HUMOUR AND CLARITY, at the MARYLEBONE LITERARY INSTITUTION, 17, Edwards-street, Portman-square, on THURSDAY EVENING, March 22, to commence at Half-past Eight o'clock.—Tickets to be obtained in the Institution. Reserved Seats, 5s.; Area, 2s.
JOHN R. WARREN, Secretary.

TOTTENHAM LADIES' COLLEGE.—The ELMS.—Under the general superintendence of the MISSES WILSON.

Particulars, with an entire List of the Professors and Teachers from which the following is extracted, may be had on application as above:—
The Bible and its Literature.—Rev. W. H. Stowell, D.D.
Botany and Mental Philosophy.—Rev. J. Hoop, LL.D. F.R.S.
History, Geography, and Natural History.—Trevelthan Spicer, LL.D.
Latin, English, and the Mathematics.—Mr. Orlando Balla.
Portoforte.—Under the direction of Mons. Jules Benedict.
Drawing.—Mons. Pelletier.
Dancing and Calisthenics.—Mons. Rola.
Special arrangements are made for the preparatory training and accommodation of the Junior Pupils.
The Term will COMMENCE April 10th.

LADIES' COLLEGE, the WOODLANDS, UNION-ROAD, CLAPHAM-RISE.

The Second Term will commence on Monday, March 26th.
On Tuesday, April 17th, at half-past 2 o'clock, Dr. Lankester will commence a Course on Botany.
The Rev. Henry Clissold will give a Course of Lectures during this Term.
The French Class will be conducted by Mademoiselle Cadart, assisted by her sister, who will be ready to assist the Pupils for the purpose of improving them in French Conversation.
After Easter a Lecture will be delivered on Reading, with illustrations, by James Harris, Esq.
Fourteen Young Ladies are received as Boarders.

A GOVERNMENT desires a MORNING ENGAGEMENT in Bromton, or its vicinity. With the general routine of English study, she instructs in French, Music, and the Rudiments of Drawing.—Address G. S., Mr. Murray's, Bookseller, &c., 179, St. James-street, Knightsbridge.

THE GOVERNESSES' INSTITUTION, 34, Soho-square.—Mrs. WAGHORN, who has resided many years abroad, respectfully invites the attention of the Nobility, Gentry, and Principals of Schools to her Register of English and Foreign GOVERNESSES, TEACHERS, COMPANIONS, TUTORS, and PROFESSORS. School Property transferred, and Pupils introduced in England, France, and Germany. No charge to Principals.

ART-UNION OF LONDON.—By ROYAL CHARTER.—Prizeholders select for themselves from the Public Exhibitions. Every Subscriber of One Guinea will have besides the chance of a Prize, an Impression of a Plate of "A WATER PARTY," by J. T. Willmore, A.R.A., after J. J. Chalon, R.A., and a Quarto Volume of Thirty Illustrations of Byron's Child Harold. The Prints are ready for delivery, and the Volume may be seen at the Office.—Subscription closes 31st inst.
GEORGE GODWIN, Honorary Secretary.
LEWIS POCOCK, Secretary.
44, West Strand.

DR. ALTSCHEL'S LECTURES and READINGS.—To Literary Institutions, Schools, and Families.—LECTURES (in English), combined with Dramatic and Literary Readings, are delivered by Dr. ALTSCHEL, M. Ph.D., Examiner Royal Coll. Preceptors, Professor of the German, Italian, and French Languages and Literature.—Chandos-st., Cavendish-square.

ORIENTAL LANGUAGES.—The Rev. G. SMALL (ten years in India) gives INSTRUCTIONS in HEBREW, ARABIC, SANSKRIT, HINDUSTANI, PERSIAN, and BENGALI, either at his own house, St. John's-grove, Croydon, or Coleman-street, City; or at the Pupils' residences. Terms moderate.

MILITARY TUTOR.—Lieutenant-Colonel ANSTRUTHER RECEIVES a limited number of GENTLEMEN, candidates for Commissions in the Army, and, assisted by experienced Masters, prepares in the various branches of study required by Her Majesty's Regulations. References permitted to the parents of former Pupils.—1, Chepstow Villas, Bayswater.

Paris, March 1, 1855.
Hotel Brabant, Rue Bailly.
MR. CURT, of London, ANTIQUARY, &c., will shortly return to Town, for a few days only, with some interesting Ancient Coins and Antiquities obtained recently. The Raoul-Rochette, Greppe Coin Sales, and another, will take place during April; Mr. Curt will attend them all. Commissions executed at ten per cent. as usual.—Address (post paid) as above; or 15, Lisle-street, Leicester-square, London.

A TEACHER of the PIANOFORTE.—A LADY RECEIVES PUPILS, or attends Schools and Private Families.—L. B. 60, Arlington-street, Camden Town.

MISS DOLBY begs to announce that she has RETURNED TO TOWN for the Season.
2, Hinde-street, Manchester-square.

MISS BIRCH and Miss ELIZA BIRCH beg to announce that they have REMOVED their RESIDENCE to 83, BAKER-STREET, PORTMAN-SQUARE, where they continue to give Lessons in Singing, and have Vocal Classes for Ladies' Part Singing, once a week.

A MARRIED MEDICAL MAN, retired from practice, and residing in a healthy village in Surrey, within an hour's distance from Town by railway, and ten minutes' walk from a station, RECEIVES a SINGLE INVALID PATIENT.—For terms, address, and references apply to Mr. NEWBY, Publisher, 39, Welbeck-street, Cavendish-square.

TO SECRETARIES OF CLUBS and PUBLIC INSTITUTIONS.—WANTED, by a Young Man, accustomed to the charge of a Library, Parliamentary Papers, Stationery, &c., a SITUATION as UNDER LIBRARIAN, or in a similar capacity. Reference unexceptionable.—Direct A. B., Mr. Coole's, 54, Mount-street, Grosvenor-square.

ARCHITECTURAL PUBLICATION

SOCIETY.
Part IV. of the DICTIONARY of ARCHITECTURE will be ready for delivery at the end of this month. The Seventh Year's issue is in progress. Annual subscription, One Guinea. Thomas L. Donaldson, Esq., Bolton Gardens, Russell-square, W. WALTER PAWORTH, Hon. Sec.
14, Great Marlborough street, March 12.

GOVERNESS PUPILS.—One or two Young Ladies, desirous of qualifying themselves for GOVERNMENTS, will be received on very advantageous terms in a Select Establishment west of London. French is constantly spoken, and Professors of eminence attend. Address V. C., Mr. Baker's, Grove-place, Notting-hill.

GRESHAM LIFE ASSURANCE SOCIETY.
—A VACANCY having occurred in the Office of SECRETARY, by the resignation of Mr. T. A. Pott, Candidates for the Office are requested to address their applications to the Chairman, W. TANNER, Esq., No. 157, Brompton-street Without, marked Private.

TRAVELLING or RESIDENT MEDICAL ATTENDANT.—A Gentleman, who has been travelling in Italy during the last winter with an English nobleman, wishes for a RE-ENGAGEMENT. He is 30 years of age, highly educated, generally as well as professionally, has been several times on the Continent, and speaks French fluently. Unexceptionable references as to character and ability.—Address M. R. C. S., Mr. C. H. May's, 24, Gracechurch-street, City.

HYDROPATHY.—MOOR PARK MEDICAL and HYDROPATHIC ESTABLISHMENT, near Farnham, Surrey, within two miles of the Camp at Aldershot. This Institution is now open for the reception of Patients under the Superintendence of Dr. EDWARD W. LANE, A.M., M.D., Edin. Dr. Lane may be consulted in London every Tuesday between half-past 12 and 2, at 61, Conduit-street, Regent-street.

BRIGHTON.—A HOME for INVALID and ORPHAN CHILDREN of the Higher Classes, in a superior Mansion in the most delightful and healthy part of Brighton. Only a limited number taken, and from the age of one month to twelve years. A Governess, Nurses, and every suitable accommodation. References permitted to several eminent Medical Men and Clergymen. Address A. C. L., care of Mr. Wallis, 5, Bartholomew-st., Brighton.

INSTITUTE of PHOTOGRAPHY, 179, REGENT-STREET.—Portraits, Copies of Pictures, Sculpture, &c. taken, and INSTRUCTION in the Art given daily, by Mr. ARCHIBALD LEWIS COCKE. Photographic Apparatus of all kinds, with the necessary Chemicals, constantly on Sale.

MAYALL'S PORTRAIT GALLERIES, 224, REGENT-STREET, Corner of Argyl-place.
DAGUERRETYPE and STEREOSCOPIC MINIATURES in the highest style of Art taken daily.

"Mr. Mayall has proved his mastery over the art by producing photographic portraits of the full size of life ** without the slightest sacrifice of definition, or the smallest approach to distortion. He added, the colours and peculiarities of our impressions appear to be corrected."—*Athenæum*, July 22, 1854.

"Mr. Mayall's portraits represent the high art of the daguerretype: they are as superior to the generality of such pictures as a delicate engraving is to a coarse woodcut."—*Art-Journal*, Nov. 1853.

"More pleasing, and far more accurate than the generality of such pictures."—*Times*, July 17, 1854.

OSBORNE'S SCUTARI will be ready in a few days.—In consequence of the numerous applications, the Publishers cannot receive orders for the first edition after the 15th inst.—Dickinson Brothers, 114, New Bond-street.

Charles Edward Mudie, 510, New Oxford-street, London.

ON SALE, a COLLECTION of ASSYRIAN SCULPTURES, from the mounds of Nimroud, comprising 13 large Slabs, with the surfaces in fine preservation, and well adapted to line a large gallery in any Nobleman or Gentleman's House.—For particulars apply to W. HOWARD, 4, Corbett-court, Gracechurch-street.

TO BE SOLD, a PORTABLE TRANSIT INSTRUMENT, by ROBINSON, of Devonshire-street, complete, in Oak Box. Object-glass by TULLY, one and four-tenths inch aperture, twelve inches focal length.—To be seen at HAZARD'S, Optician, 114, Jernyn-street, St. James's.

PARTNERSHIP.—To BOOKSELLERS, STATIONERS, and Others.—A Bookseller and Stationer, with an old-established Trade at the West End, is willing to admit a Gentleman, Active or Dormant, with 700l.—Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

PARTNERSHIP.—To STATIONERS, LIBRARIANS, and Others.—The Proprietor of a long-established Trade within four miles of the City, returning about 3,000l. per annum, is desirous of retiring, and would wish for an active Man to join his present Partner. About 1,200l. required; time will be given for one-third of this amount if required.—Apply to Mr. PAGE, Auctioneer and Valuer, 8, Coleman-street.

PARTNERSHIP, or otherwise.—The Manufacturer of an article in large consumption, having commanding Premises in a beautiful district within two hours' ride from Town per rail, is desirous of obtaining a Gentleman with 2,000l. as Active or Dormant Partner, or the advertiser would give Security for the like advance in lieu of Partnership. To any person desirous of the enjoyment of a Country Residence, the above presents an opportunity rarely to be met with.—Apply to Mr. PAGE, Valuer and Auctioneer, 8, Coleman-street.

PARTNERSHIP, within a Period to be agreed upon.—A WHOLESALE and MANUFACTURING HOUSE in the CITY are willing to admit a Gentleman with from 4,000l. to 5,000l. to an appointment in the house. The security will be undeniable, with the object of Partnership. References of the most satisfactory character will be given and required.—Apply to Mr. PAGE, 8, Coleman-street.

PARTNERSHIP, or otherwise.—A Wholesale and Manufacturing STATIONER, having a large Country connexion, is willing to admit a Partner or to dispose of the concern. The above presents a most favourable opportunity to any one with from 2,000l. to 3,000l.—Apply to Mr. PAGE, Valuer to the Trade, 8, Coleman-street.

PARTNERSHIP.—A BOOK-WORK and **JOBING PRINTER** at the West End, having Machinery, several Iron Presses, and an extensive assortment of Type, is willing to dispose of the half-stock to a practical man with *skill*. The returns are excellent, and can be extended.—Apply to Mr. PAGE, Valuer to the Trade and Auctioneer, S. Coleman-street.

"A welcome addition to our comparatively scanty Art-literature."—Art Journal.

A. Hall, Virtue & Co. 27, Paternoster-row.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists and Mechanics.

It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our common ideas as possible; the demonstrations of propositions are made plain for the mind and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

1. A System of Popular Geometry; containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and fundamental Principles. By George Darley, A.B. Fifth Edition (now ready). 4s. 6d. cloth.

2. Companion to the Popular Geometry; in which the Elements of Abstract Science are familiarized, illustrated and rendered practically useful in the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.

3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d.

4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Third Edition, 5s. 6d. cloth.

Walton & Maberly, Booksellers and Publishers to University College, 28, Upper Gower-street, and 27, Ivy-lane, Paternoster row.

DEDICATED BY SPECIAL PERMISSION TO THE QUEEN.

ANNE, OF BRITTANY,

TWICE QUEEN OF FRANCE.

By MISS LOUISA STUART COSTELLO.

OPINIONS OF THE PRESS.

Morning Post.

"Miss Costello's heroine will win general sympathy and admiration. The dual crown of Brittany graced her youthful person very early age; and she was only fourteen when, at the head of her troops, she fearlessly approached the walls of a rebellious town. . . . Miss Costello has done justice to her character."

Morning Chronicle.

"Few stories possess more interest than does that of the last Duchess of Brittany. . . . The circumstances attending the difficulties which surrounded Anne in her early life, and those of her subsequent prosperous and happy career, are related in a graphic and pleasing manner."

Morning Herald.

"We know of no character during the chivalrous and eventful times in which she lived so entirely entitled to our sympathy and admiration as that of the youthful daughter of Francis, last Duke of Brittany. . . . In Miss Costello's interesting narrative, the fortunes of Anne are well followed with eagerness and sympathy by the reader. Her character is described with consummate skill and judgment."

Athenæum.

"Miss Costello has been lucky in her selection of a heroine, and she has told her story briefly, rapidly and gracefully. . . . For the record of the times and of their moving accidents, we refer our readers to the most agreeable volume for which we are yet indebted to the pen of Miss Costello."

London: W. & F. G. Cash, 5, Bishopsgate-street Without.

Just published, price 2s. 6d.

A NEW AND REVISED EDITION, for General Circulation, of

JOHN HOWARD.

By HEPWORTH DIXON.

"The adventures of Howard are recorded in a loving and energetic spirit. The reflections are just, often ingenious and eloquent, almost always striking. The book contains many satisfactory evidences of an independent and vigorous intellect."—*Examiner*.

"A fresh perusal of the book has impressed us with a full conviction that we cannot do the community a better service than by heartily recommending it to public notice."—*Gentleman's Magazine*.

JACKSON & WALFORD, St. Paul's Churchyard.

MR. SHEIL'S LEGAL AND POLITICAL SKETCHES.

Edited, with Notes, by M. W. SAVAGE.

"These volumes will delight the student and charm the general reader. They will in no respect suffer by contrast with the Essays of Macaulay and Stephen, Mackintosh and Sydney Smith, and other brilliant literary worthies."—*Messenger*.

"Those who remember Mr. Sheil as he appeared in his latter days in the House of Commons will recognize in these volumes much of the vehemence and fire by which that eloquent orator was distinguished. They give proof of the hold which his native country had over his mind. We have sketches of the ornaments of the Irish Bar at that day—Bushe, Saurin, Joy, Leslie, Foster, Lord Norbury, &c.; together with papers on the state of Ireland, and the conduct of the men who then wielded her destinies. Altogether these volumes will constitute an interesting monument of the memory of their author, as well as a vivid picture of a state of society which is fast passing away."—*Morning Chronicle*.

Also, now ready, in 1 vol. with 1,500 Engravings of Arms,

3. **DIARY in TURKISH and GREEK WATERS.** By the Right Hon. the EARL OF CARLISLE. Fourth Edition. Post 8vo. 10s. 6d.

4. **The GOLDEN COLONY;** or, Victoria in 1854: With Remarks on the Geology of the Gold-Fields of Australia. By G. H. WATHEN. Illustrated by the Author. Crown 8vo. with Woodcuts, 9s. 6d.

5. **AUTOBIOGRAPHY of FRANCIS ARAGO.** Translated from the French, by the Rev. BADEN POWELL, M.A. V.P.R.S. &c. 16mo. price 1s.

6. **The ANGLER and his FRIEND;** or, Piscatory Colloquies and Fishing Excursions. By JOHN DAVY. M.D. F.R.S. Fcap. 8vo. 6s.

7. **CORSICA, in its PICTURESQUE, SOCIAL, and HISTORICAL ASPECTS:** Being the Record of a Tour in the Summer of 1852. By FERDINAND GREGOR-VIUS. Translated by RUSSELL MARTINEAU, M.A. 16mo. price 3s. 6d. cloth; or in 3 Parts, 1s. each. [On the 31st inst.]

8. **An ART-STUDENT in MUNICH.** By ANNA M. HOWITT. 2 vols. post 8vo. 14s.

9. **The DEVELOPMENT of the RELIGIOUS IDEA in JUDAISM, CHRISTIANITY, and MOHAMMEDANISM:** Considered in Twelve Lectures on the History and Purport of Judaism, delivered in Magdeburg, 1847. By Dr. LUDWIG PHILIPPSOHN. Translated from the German, with Notes, by ANNA M. GOLDSMID. 8vo. 8s.

10. **SHARON TURNER'S HISTORY of the ANGLO-SAXONS,** from the Earliest Period to the Norman Conquest. *Seventh Edition;* with the Author's final Corrections. 3 vols. 8vo. 36s.

11. **SHARON TURNER'S HISTORY of ENGLAND during the MIDDLE AGES.** *Fifth Edition;* with the Author's final Corrections. 4 vols. 8vo. 50s.

12. **SHARON TURNER'S SACRED HISTORY of the WORLD.** *Eighth Edition;* with the Author's final Corrections. 3 vols. post 8vo. 31s. 6d.

13. **ROBERT SOUTHEY'S POETICAL WORKS.** The first Collected Edition, thoroughly revised by the Author; with Portrait and 19 Plates, 10 vols. fcap. 8vo. 3s. 6d. each.

The Works may be had separately, as follows:—
JOAN OF ARC, 3s. 6d. BALLADS and METRICAL TALES, 2 vols. 7s.
JUVENILE and MINOR POEMS, 2 vols. 7s. CURSE of KEHAMA, 3s. 6d.
THALABA, 3s. 6d. POET'S PILGRIMAGE to MADOC, 3s. 6d. WATERLOO, and MISCELLANIES, 3s. 6d.
RODERICK, 3s. 6d.
..* An Edition complete in One Volume, 8vo. with Portrait and Vignette, price 21s.; morocco by Hayday, 42s.

14. **A GUIDE to GEOLOGY.** By JOHN PHILLIPS, F.R.S. F.G.S. Deputy-Reader in Geology in the University of Oxford, &c. New Edition, corrected. Fcap. 8vo. with 4 Plates, 5s.

15. **MR. MACAULAY'S WORKS.**
LAYS of ANCIENT ROME..... 16mo. 4s. 6d.
Illustrated Edition..... Fcap. 4to. 21s.
The HISTORY of ENGLAND, from the Accession of James II. Vols. I. and II. 8vo. 32s.
CRITICAL and HISTORICAL ESSAYS.
Library Edition..... 3 vols. 8vo. 36s.
Complete in One Volume..... Square crown 8vo. 21s.
In volumes for the Pocket..... 3 vols. fcap. 8vo. 21s.
The People's Edition..... 2 vols. crown 8vo. 2s.
SPEECHES, corrected by Himself..... 8vo. 12s.
Speeches on Parliamentary Reform in 1831 and 1832 .. 16mo. 1s.

16. **Dr. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES:** Containing a clear Exposition of their Principles and Practice. *Fourth Edition,* enlarged and corrected throughout; with about 1,600 Woodcuts. 2 vols. 8vo. 60s.
"These volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be universally resorted to as authoritative,—as indeed the former editions have been,—as well by artists and manufacturers as by British and foreign scientific writers. The author has throughout the entire work kept most seriously before his mind the one object of promoting the best and most economical developments of the arts and manufactures; and has produced a work which altogether surpasses every other of its kind with which we are acquainted."
Mechanic's Magazine.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE
STANDARD NOVELS
AND
ROMANCES.

Now ready, in fcap. 8vo. volumes, with an Illustration,
3s. 6d. each.

The most Popular NOVELS of

GODWIN,	MISS MITFORD,
THEODORE HOOK,	CAPT. CHAMIER,
GALT,	MADAME DE STAËL,
DANIM,	MORIER,
MISS EDGEWORTH,	BULWER,
MISS AUSTEN,	LOVER,
MRS. TROLLOPE,	GLEIG,
MRS. MARSH.	ALBERT SMITH, &c.

are also published in this Collection.

"In no other language nor in any other collection does
there exist a body of fiction so unexceptionable in point of
taste, and impressed throughout with so pure a spirit of
morality."—*Morning Herald*.

"This collection, extending to 126 volumes, is unrivalled
for diversity of subject and treatment, and may be justly
described as

THE MOST ATTRACTIVE FAMILY LIBRARY
of entertainment."—*Morning Herald*.

London: RICHARD BENTLEY, New Burlington-
street.

13, GREAT MARLBOROUGH-STREET.
HURST & BLACKETT,
Successors to Mr. Colburn,
HAVE JUST PUBLISHED
THE FOLLOWING NEW WORKS.

SAM SLICK'S NEW WORK,
'NATURE and HUMAN NATURE.'
2 vols.

From the *Athenæum*.
"We enjoy our old friend's company with unabated relish.
These two new volumes, like their predecessors, are a
rattling, random miscellany of proverbs, sharp sayings,
stories, and hard hits. They are full of fun and fancy."

From the *Examiner*.
"These volumes are full of merry stories, told in Mr.
Slick's peculiar vein. Every page of the book is amusing."

From the *Observer*.
"Since Sam Slick's first work he has written nothing so
fresh, racy, and genuinely humorous as this. Every line
of it tells, some way or other—instructively, satirically,
jocosely, or wittily. Admiration at Sam's mature talents,
and laughter at his droll yarns, constantly alternate as with
unhalting avidity we peruse these last volumes of his. They
consist of twenty-five chapters, each containing a tale, a
sketch, or an adventure. In every one of them the Clock-
maker proves himself the fastest time-killer agoing."

**The MOSLEM and the CHRIS-
TIAN; or, ADVENTURES in the EAST.** By SADYK
PASHA. Revised, with Original Notes, by COLONEL
SZYRMA, Editor of 'Revelations of Siberia.' 3 vols.

"Sadyk Pasha, the author of this work, is a Pole of noble
birth. He is now commander of the Turkish Cossacks—a
corps organized by himself. The volumes on the 'Moslem
and the Christian,' partly fact and partly fiction, written by
him, and translated by Colonel Szyrma, display very well
the literary spirit of the soldier. They are, full of the adventures
and emotions that belong to love and war; they treat
of the present time; they introduce many existing people,
and have the Danubian Principalities for scene of action.
Here are sources of popularity which the book fairly claims.
As a translation it is excellent."—*Examiner*.

"In every respect a remarkable book."—*Messenger*.
"The work possesses an unusual degree of interest."
John Bull.

**TURKEY; its HISTORY and
PROGRESS:** from the JOURNALS of SIR JAMES
PORTER, Fifteen Years Ambassador at Constantinople;
continued to the Present Time, by his Grandson, SIR
GEORGE LARPENT, Bart., &c. 2 vols. 8vo. with Illus-
trations, 30s.

"These volumes are of an authentic character and enduring in-
terest."—*Athenæum*.

THE NEW NOVELS.

CONSTANCE HERBERT. By
GERALDINE E. JEWSEBURY, Author of 'Marian
Withers,' 'Zoe,' &c. 3 vols.

**MAMMON; or, the Hardships of
an HEIRESS.** By Mrs. GORE. 3 vols.

"We prefer 'Mammon' to either of the other novels which Mrs.
Gore has given to the public since her re-appearance in print."
Athenæum.

**The SECRET HISTORY of a
HOUSEHOLD.** By the Author of 'ALICE WENTWORTH.'

"A good novel. It shows with terrible truth the misery as well
as the guilt of evil doing. Great skill and ability are displayed
both in the conduct of the story and the delineations of the several
characters."—*Literary Gazette*.

"This tale abounds with passion and power. The author has
wrought out a natural subject with feminine tact and graceful
eloquence."—*Messenger*.

"This tale is powerfully told, and an intense interest is sus-
tained from first to last."—*John Bull*.

THE WIFE'S TRIALS.

3 vols. [Just ready.]

OAKLEIGH MASCOTT. By
L. HOWE. Dedicated to Prof. Aytoun. 2 vols. 21s.

"A very clever romance. The style throughout is fluent and
forcible, and many of the scenes are sketched with considerable
graphic power."—*Morning Post*.

HERBERT LAKE. By the
Author of 'ANNE DESART.' 3 vols.

**GEORGE ROUTLEDGE & Co.'s
NEW PUBLICATIONS.**

GERSTAECKER'S NEW WORK.

In 1 vol. price 5s. cloth gilt,

FRANK WILDMAN'S ADVENTURES
by WATER and LAND. With Eight tinted Illustrations by
Harrison Weir.

LEIGH HUNT'S STORIES IN VERSE.

In 2 vol. price 3s. 6d. cloth lettered,

STORIES IN VERSE. By LEIGH
HUNT. With Two Illustrations by Edward Corbould.

NEW WORK ON AMERICA.

In 1 vol. price 1s. 6d. in boards,

AMERICA and the AMERICANS.
By W. E. BAXTER, Esq. M.P.

LONDON, SATURDAY, MARCH 17, 1855.

REVIEWS

Works of Samuel Warren, D.C.L. 4 vols.—*Miscellanies, Critical, Imaginative and Juridical*, contributed to '*Blackwood's Magazine*' by Samuel Warren. 2 vols. Edinburgh and London, Blackwood & Sons.

WHEN an author collects his works—as we have more than once lately remarked—he thereby deliberately offers himself to close inspection, as one aspiring to rise from the counter of the circulating library to the shelf of the library. The fear of the trunk-maker is no longer before his modesty. He has visions of a portrait in shop windows,—of a bust in classic vestibules,—of a house that foreigners shall desire to visit as a shrine,—of a monument which shall be neat or stately, as his genius has been smart or sublime. He has, in fact, begun already to talk to Posterity. Nevertheless, some may be found bold enough to ask, "*Why* should these works be collected?" If the answer be "Because of their popularity," such examiners may reply, that popularity is permanent or is ephemeral in proportion as the public reached is scholastic and imaginative or coarse and feeble. There is one popularity for '*The Heart of Midlothian*,' another for '*Tom and Jerry*,' and a third for '*The Women of England*.' 'Jack Sheppard' has drawn more money to the theatres than '*The School for Scandal*';—'Pop goes the Weasel' has been carolled more largely in our highways than '*Vedrai carino*.' Mr. Warren's popularity ranges with that of the Monieriffs and Fitzballs, rather than with that of the Scotts and Sheridans.

Let us glance at the prose here revised, annotated, explained and admired by its author, in order that our reasons for the above classification may seem to others as clear as they are to ourselves. Mr. Warren will not heed our censures, so strong is he in his certificates. "An excellent nobleman, since dead," admired the '*Diary of a Late Physician*,' and wished to reprint one of its papers at his own expense. A gentleman, formerly of Kentucky, "now occupying a high position in American society, and who recently filled an important and responsible office in the State," christened a little daughter *Kate Aubrey*, after "that glorious Kate" in '*Ten Thousand a-Year*.'—Mr. Warren "has never heard an objection" to 'Now and Then' "from either Protestant or Catholic, Churchman or Dissenter, but, on the contrary, has repeatedly received from each strong expressions of gratification and a desire to see the work circulating widely among the humbler classes of society."—An Italian translator has described '*The Lily and the Bee*' as "a work which, on account of its originality, has been exposed to the extremes of criticism by the eminent men of a great nation," and has added, that "such a work vindicates its claim to be judged of by nations at large." We have small fear of grieving an author who, despite his renunciation of "the modern system of puffing," so complacently advertises his own genius and virtues in the praise of Peers and the appreciation of Kentucky Kate Aubreys.

It was in the first of the works here collected by Mr. Warren—the '*Diary of a Late Physician*'—that our author burst forth into the full glory of that style which—applied to such subjects as cancer, consumption, madness and less poetical diseases—made him a favourite contributor to *Blackwood's Magazine*. On looking over this repulsive volume, the secret of its acceptance by certain readers is not hard to discover. Hideous as the subjects are, the pre-

text for displaying them was to do good. Who does not know the tricks which pass under cover of the preacher's cloak? Mr. Warren early caught the true admonitory twang. His physician's tales remind us of nothing so much as of those tracts,—happily now-a-days rejected,—in which the denunciatory style of the tub-orator was wrought out in fiction. In these we were shown how Young Thomas went out in a boat, when he should have been elsewhere; because of which there came a storm of thunder and lightning, which struck young Thomas dead!—or some other such reverential illustration of cause and effect, crime and punishment. Their style was a strange mixture of what is coarse with what is prosy,—of fierce exaggeration with dull prolixity. Yet, with the multitude, their exaggerations passed for solemn force,—their prolixity for conscientious minuteness. Mr. Warren is a proof that readers higher in culture than the cottagers and mechanics who were to be terrified by this tract literature, are not secure against exaggeration,—provided the ranters sets about his business with an earnest-looking scowl,—provided the button-holder does not indicate mortal weakness by stopping to wheeze. With self-confidence, persistence and the plea of a good motive, there is no leek so rank or so rotten that a large public of the tribe *Pistol* may not be compelled to eat it. The proof lies in this very '*Diary*.' We have objected to certain episodes in Mr. Dickens's novels, where the horrors of physical pain are too unscrupulously worked,—we have protested against the effects got by M. Eugène Sue out of such a delicate excitement as cautery for the cholera,—but neither the one nor the other romancer has approached, in spasm or in scream, the outcries vented by Mr. Warren during some of his dances round the death-beds of diseased sinners, or within the cells where faithless wives expiate their want of fidelity by the frenzies of lunatic despair. That evidence may not be wanting, the reader is requested to bear with the following account of the last sayings of "a man about town," from which we have still left out a line or two here and there as too outrageous to be printed:—

"He did little else than rave and howl, in a blasphemous manner, all the while they were present. He seemed hardly to be aware of their being his brothers, and to forget the place where he was. He cursed me, then Sir —, and his man George, and charged us with compassing his death, concealing his case from his family, and execrating us for not allowing him to be removed to the west end of the town. In vain we assured him that his removal was utterly impossible—the time was past—I had offered it once. He gnashed his teeth, and spit at us all!—'What! die—die?—I won't die here—I will go to — Street. Take me off!—Devils, then do you come and carry me there!—Come—out, out, out upon you! * * * You have killed me, all of you!—You're throttling me!—You've put a hill of iron on me—I'm dead—all my body is dead! * * * George, you monster! why are you laddling fire upon me?—Where do you get it?—Out, out—out!—I'm flooded with fire!—Scorched—Scorched! * * * Now—now for a dance of devils—Ha—I see! I see!—There's —, and —, and —, among them!—What! all three of you dead?—W—! Where are your loaded dice?—Filled with fire, eh? * * * So, you were the three devils I saw sitting at the table, eh?—Well, I shall be last—but, by —, I'll be the chief of you! * * * What—what's that fiery owl sitting at the bottom of the bed for, eh?—Kick it off—strike it!—Away—out on thee!—I shall make thee sing presently!—Let in the snakes—let the large serpents in—I love them! I hear them writhing up-stairs—they shall twine about my bed!—He began to shake his head violently from side to side, his eyes glaring like coals of fire, and his teeth gnashing. I never could have imagined anything half so frightful."

Surely, in point of literary execution, the above dying speech can rank no higher than some terrific last act of retribution at the Victoria Theatre, or than one of those masterpieces of tragical fiction which, as Mr. Mayhew assured us in his book, are so dear to the costermonger public. Yet it is Mr. Warren's own delight. "Its Editor," says he, referring to the tale so wondrously closed, "knows well that this narrative" (including dancing devils, fiery owl and large serpents, by way of tail-piece) "has wrought the most satisfactory effects upon minds and hearts by themselves thought irreclaimably lost." He avers that "The Man about Town" will continue long to be a beacon." May it be so!—may it be a beacon to warn young authors disposed to enter the dissecting-room, the charnel-house, the ward of violent patients, which way they are *not* to go. We should, however, have insisted less earnestly on its abominations were the example cited the solitary specimen which "the Late Physician," on virtuous teaching bent, has regaled himself withal. His '*Diary*' is full of like sweets and savours. Should any one be still disposed to fancy us too severe, let us recommend to his candour the dialogue, song and chorus, closing '*The Destroyer*' (closing, also, the '*Diary*'), and fit to honourably figure in any Norton-Wolgate opera.

The second and third volumes of Mr. Warren's collected productions are devoted to '*Ten Thousand a-Year*,'—its author's longest and most complete work. Mr. Warren is seen to his best advantage in this novel. The tricks of "sharp practitioners" expounded in it, we have been told, show an intimate and masterly knowledge of the mean trickery of legal pettifoggers. Though we never have a fear that Titmouse is to die possessed of his ten thousand a-year,—though, from the first, we are satisfied that virtuous squirearchy (in the Aubreys) is sure to "enjoy its own again," issuing from the ordeal superior to the temporary triumph of shopocracy,—there is no denying that our novelist has grasped his subject more firmly than many novelists do. The result is a certain curiosity and patient attention on the part of his reader totally distinct from anything like pleasure or sympathy. Such absence of enjoyment may be accounted for by Mr. Warren's weakness in the conception of character.—Let us again have recourse to comparison. We have protested against Mr. Thackeray's love for showing blemishes; but let any one compare his evil *Becky* with Mr. Warren's hero,—his human *Dobbin* with the sublime Aubreys in '*Ten Thousand a-Year*,'—and the richness and reality of one set of characters will foil the thinness and melo-dramatic falsity of the other with a contrast sufficient to illustrate the judgment just offered. There is not a trace of humour in Mr. Warren's low life. His Oxford-street creatures are grovelling enough;—but they have not even a trait of individuality. When Tagrag quits the shop to put on his Sunday finery and hospitality,—when Huckaback goes to stir up the lawyers, who have undertaken the cause of his friend Titmouse—which is *his* cause, because Huckaback has lent Titmouse ten shillings on an I.O.U.,—they act as puppets, not as men. We do not complain of this as those do who on principle protest against the admission of low company. Some of our dearest friends are far from genteel:—*Sam Weller* is not high—neither is *Miggs*—nor *Mr. Guppy*—nor Hood's *Unlucky Joe*, in '*Tydney Hall*.' Mr. Warren's low comedians are simply tiresome. The same objection, again to compare, may be laid against them as may be laid against the clowns and drolls of Theodore Hook's novels—a repulsive want of humanity. But the Author of '*Gilbert Gurney*' commanded

the brightness of a punster and the fun of a farce-writer. Hook's chambermaids, and bagmen, and strolling players, and bandy-legged hairdressers do not "hang on hand." We cannot love or weep for them, but we must laugh at them. Mr. Warren's mean persons are so many wooden figures, whose evolutions are soon learnt by heart, and thus soon become fatiguing. On the other hand, his seraphs and sublime folk—his persons of family, persons of culture, persons of heart, and persons of virtuous suffering, wear a fatal air of the hairdresser's window—a bright-eyed and cherry-cheeked beauty—a waxen grandeur—more noticeable than edifying. The sayings of the ousted Aubreys remind us of the remark made by Scott's *Mrs. Dolly Dutton*, in 'The Heart of Midlothian,' when, on the occasion of the English milkmaid being frightened in a Highland boat, she professed that "it is a beautiful thing to have learned to write and read, for one can always say such fine words, whatever should befall them." Great labour has been bestowed by Mr. Warren on the figure that stands midway betwixt the vileness of Titmouse and the virtue of the Aubreys: we mean, of course, Mr. Gammon,—and he is preferable to most of his playfellows, because he speaks more sparingly than they do; but such power as he exercises over the reader is to be ascribed to the closeness with which the tissue of incident is woven—not to any precision with which his character is delineated.

Volume the Fourth of this Collected Edition is one-half devoted to 'Now and Then.' This novel, Mr. Warren complacently assures us, was the result of a few nights' labour, and has given the highest satisfaction to persons of every religious persuasion. Since it was reviewed in the *Athenæum* [No. 1054], some of the exuberances in its dialogue,—protested against by us,—have been removed. The fall of Heaven's thunderbolt on "your *Lordship*," in the clergyman's address to the distressed Peer,—which diverted us at the time,—is gone; though no magic could purge Mr. Warren's tale of the spirit which was symbolized by that stupendous figure of speech. The glow of implicit reverence with which he regards ermine and strawberry leaves,—the deeper prostration still with which Royalty is approached, on bended knees, by him,—the tone of rich and sincere sycophancy, in short, with which Rank and everything appertaining thereunto are lauded,—are too thorough-going, too obviously part and parcel of his "morning hymn and evening song," to undergo any change with time or experience. Those who speak evil of these solemnities, we are aware, run the risk of being exposed to awful flourishes of *Mr. Bumble's* mace. The last year's experience might have taught rash critics that there are such chastisements in store for the heterodox as rotten eggs, made none the sweeter because they have been commissioned to do their avenging work by consecrated hands! But be our line of comment high or be it low, and be its consequences what they may, 'Now and Then,' after revision, is still simply what we pronounced it to be on its first appearance—an interesting story, told in the feeblest and most inflated phraseology of 'The Tuft-hunter's Pocket Companion.'

Passing over Mr. Warren's 'Discourse on the Intellectual and Moral Development of the Present Age,'—a few words remain to be said on the fourth production included in this collection of his works. A man of a less resolute mind than himself might have put away his dithyrambic on the Crystal Palace, as the offspring of a false excitement,—good only to be forgotten when the fit was over. Not so our
